No argument is necessary to prove that the work of the Tariff Commission has a vital bearing on agriculture, says Fred Brenckman, Washington representative of the National Grange, who points out that there are now eleven agricultural cases pending before the commission.—E. E. R.

THEY LOSE NO TIME

Leaders Push Budget Recommendation for Bureau of Animal Industry—Place-Hunters Disappointed.

Harrisburg, Pa.

NO TIME is to be lost by the state administration and legislative leaders in advancing the bills carrying money for the payment of all claims for cattle killed because of tuberculosis and to get the operations of the State Bureau of Animal Industry into full swing for the coming season. The $2,000,000 budget recommendation for such work in the coming two-year period appears to be generally favored. The state authorities will also urge on the legislature the whole budgetry recommendation for the department. Preparation of the bills to carry out the budget is under way in legislative committee rooms. The State Taxation Commission is expected to have its legislation in hand this week and there will be other measures from various sources.

Looking Them Over

The State Administration, experienced in legislative matters, is having all bills introduced scanned as rapidly as they come from the printer. All bills dealing with departmental matters are being looked over by William A. Schnader, Deputy Attorney General, and who is also in charge of amendments dealing with the administrative code. There will be a number of changes to this law, but except in the Governor's office they will not make much difference in administration of public affairs. The Department of Agriculture will not be much affected.

Wild Rush Stayed

Action of the State Administration in having each department head make a survey of his branch of the government and determine what should be done about staff and practice and refusal of the Governor's office to be stampeded into making appointments until data on departments is in hand has had the effect of stopping the march of place hunters on Capitol Hill. The administration has been in office about a month and very few appointments, nothing like what was predicted, have been made. Indications are there will be more attention given in the next month to preparation of legislation than to appointments and reorganization of departments, if extensive in the last analysis, may be deferred until the general assembly begins its final work.

To Continue Work

State Sanitary Water Board authorities have announced intention to continue studies with industrial concerns and associations for removal of wastes from waters and to follow up the policy of classification of streams. Some of the rural members of the legislature have in mind legislation of their own on streams in what is called the country.

Must File Statements

The Department of Agriculture has been advised in an opinion from the Attorney General's office that persons having claims against the state for rabies must file formal complaints and establish injury before they can recover for loss of livestock. —E. C.

ORGANIZE DAIRY CLUB

Guernsey Breeders Perfect Plans and Elect Officers—Loans Cost Less—Cranberry Picking Simplified.

Trenton, N. J.

GUERNSEY breeders in Salem, Cumberland and Gloucester Counties formed the South Jersey Guernsey Breeders' Club at a meeting in Salem in late January. The organization voted to work with the Tri-County Holstein-Friesian Association operating in the same territory. The officers of the new organization elected for the coming year are: President, Herbert Borden, Mickleton; vice president, Miss Jessie Colson, Daretown; secretary-treasurer, Roy C. Patrick, Quinton; project committee, Walter Shute, Bridgeton; James J. Pettit, Salem, and Thomas M. Atkinson, Bridgeton.

Land Bank Rate Lower

The Farm Bureau office at Trenton reports generally favorable comment about the state over the reduction of the Federal Land Bank loan rate in New Jersey from 5½ to 5 per cent. Under this ruling it is possible for a farmer to secure a loan, pay his interest and his amortization charges for a flat cost of 6 per cent. Secretary H. E. Taylor, of the New Jersey Federation of County Boards of Agriculture, states that this reduction has been made possible thru lower selling cost in placing land bank bonds. Some $5,000,000 in loans have been made in New Jersey and the reduction in interest benefits 19 branch loan associations in the state.

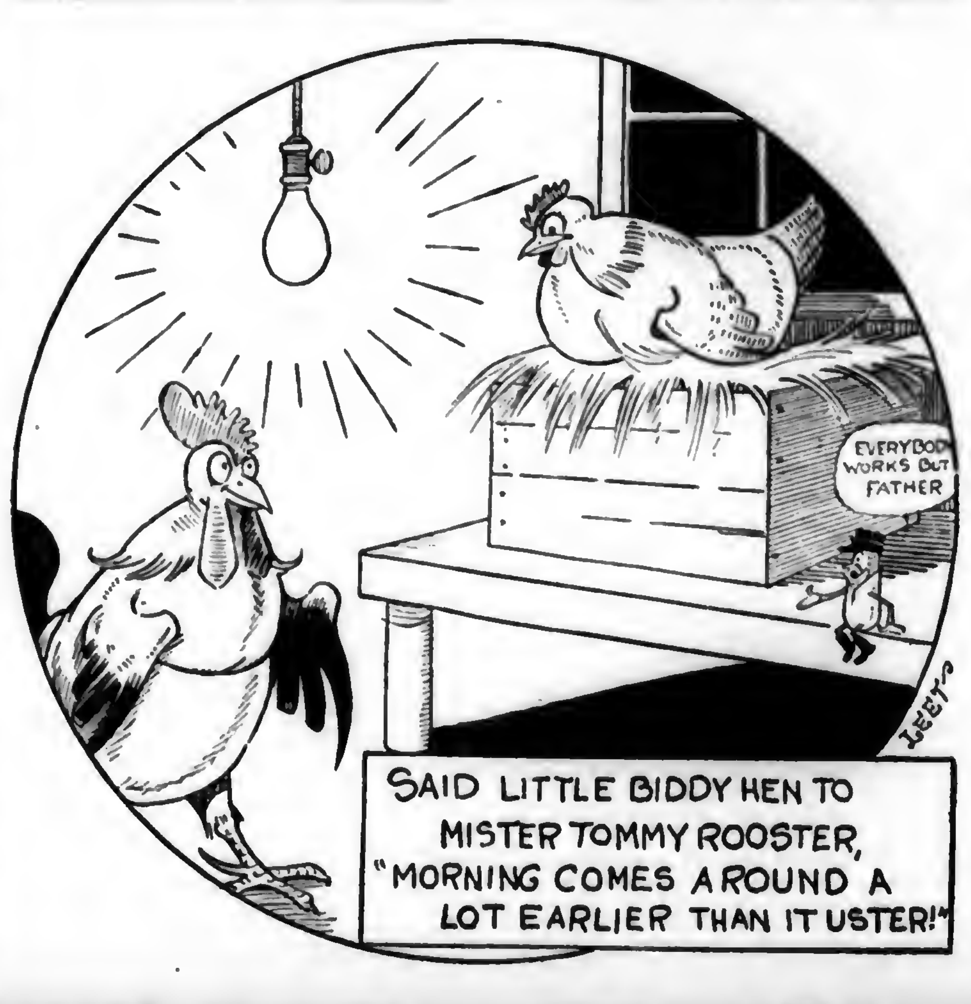
Cranberry Picker Saves Help

At the recent annual meeting of the New Jersey Cranberry Growers' Association, the development of new mechanical equipment to aid growers was reported. One of the principal improvements in this regard is the development of a mechanical picker for use in the New Jersey bogs which will do the work of 20 to 25 pickers. The Exchange points out that this will enable the crop to be harvested in a much shorter season than at present and will indirectly give the berries a longer growing season which will enhance their color. Officers of the association elected for the coming year are: President, Theodore Budd, Pemberton; vice president, Isaac Harris, Harrison; second vice president, Miss Elizabeth White, New Lisbon; secretary and treasurer, Charles Beckwith, Pemberton.

Movies for Poultrymen

Active poultry plans for the coming year were discussed at a meeting of the Mercer County Poultry Association in Trenton on February 8th. A series of meetings at various points thruout the county are being planned for the coming year, with the view to building up strong local groups of the county associations. The operations of a large hatchery were shown at the meeting by a moving picture lent by C. Z. Drum, of one of the large commercial hatcheries in the county.—B.

HAVE YOU TURNED ON THE JUICE IN THE HENHOUSE?



SAID LITTLE BIDDY HEN TO MISTER TOMMY ROOSTER, "MORNING COMES AROUND A LOT EARLIER THAN IT USTER!"

INTEREST WANES

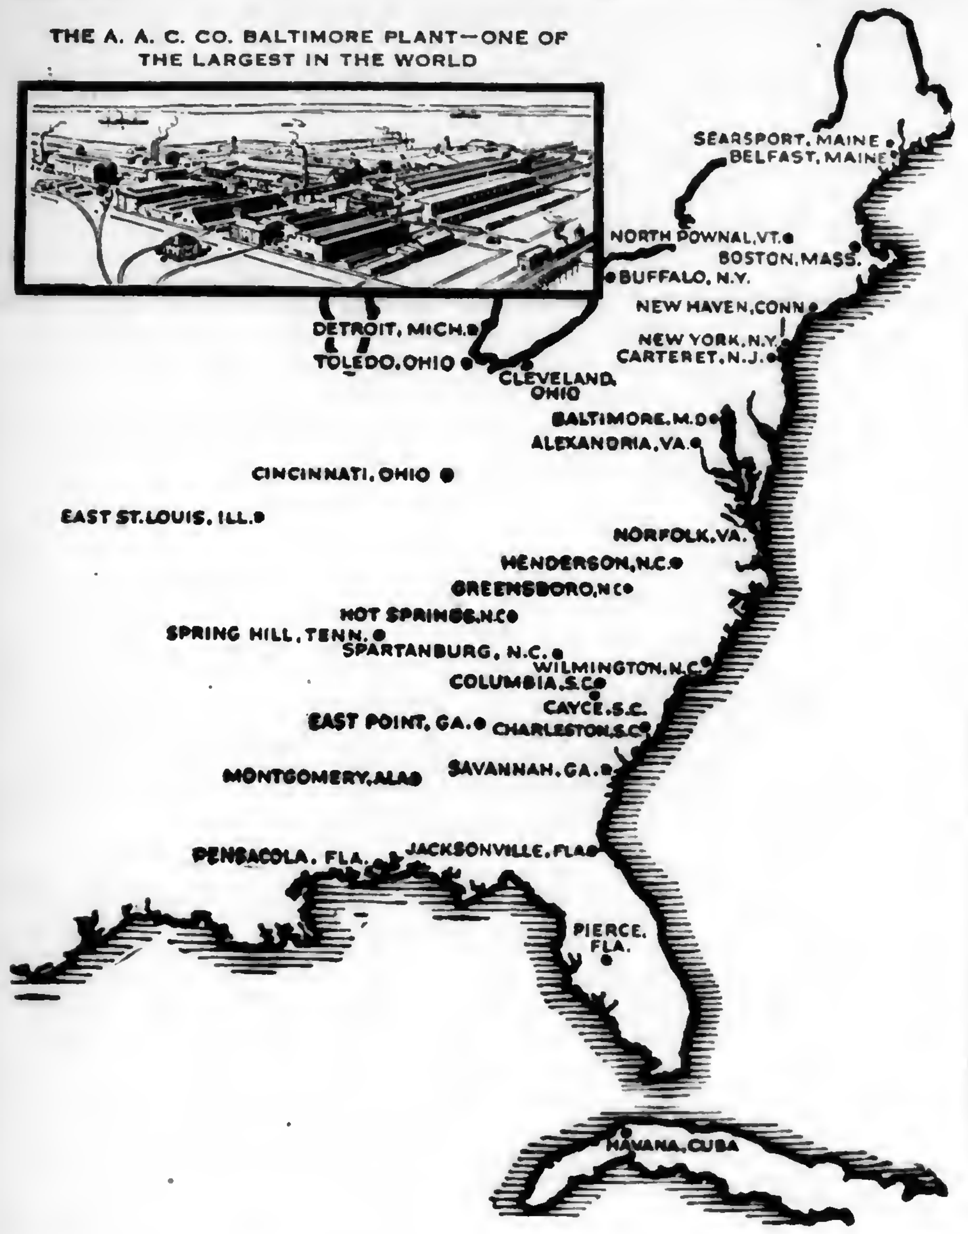
Consolidated School Plan No Longer Burning Issue Now It is Better Understood—Premium List Revised.

Ithaca, N. Y.

OFFICIALS at the annual regional conferences of district school superintendents report that interest in the consolidated school plan as an issue, so bitterly contended for several years, is waning. Rural people are learning that the law is a liberal one, not enforcing consolidation, but giving increased state aid where the patrons by their own vote decide on consolidation, and permitting the districts to continue their one-room schools for the lower grades. So well do all the farm organizations think of the new plan, which was secured under the Cole bills, that their representatives, in session as the State's Agricultural Conference Board, have asked the legislature to permit no changes in this law until it has been given a fair trial.

Increased Fair Premiums

Work in revising the state fair premium lists has begun. Premiums will be increased in important dairy classes and reduced in those of less importance to the state. Holstein get-of-sire classes will be better financed. All Guernsey premiums will be increased, tho they will not be as great as the Holstein premiums. —M. G. F.



THE AMERICAN AGRICULTURAL CHEMICAL COMPANY
AA
QUALITY
FERTILIZERS
"The World's Best by Every Test"

These thirty-two modern plants guarantee *Production, Quality, Service*

THIS map tells its own graphic story. Thirty-two "A.A.C." factories in 15 states, from northern Maine to Florida.

Their convenient location assures you quick deliveries.

Their manufacturing equipment, unsurpassed in the industry, guarantees you quality fertilizers.

Their great storing capacity, the largest in the country, makes possible the proper ageing and curing that means perfect mechanical condition.

PRODUCTION — QUALITY — AND SERVICE have made The American Agricultural Chemical Company, since its beginning over sixty years ago, the largest manufacturer of fertilizers in the world.

And hand in hand with the business of making fertilizers The American Agricultural Chemical Company, through its Agricultural Service Bureau, has been gathering helpful information on all crops. Take advantage of this vast fund of knowledge. Your dealer will supply you, free of charge, books and pamphlets that will help you make more money on the crops you raise.

"AA QUALITY" FERTILIZERS

Manufactured only by
THE AMERICAN AGRICULTURAL CHEMICAL COMPANY
Executive Offices: 2 Rector St., New York

Common Vegetable Varieties

Newer and Better Strains Are Appearing Constantly

THIS list of varieties is planned to contain a suggested list of those that are generally accepted and offered. It is believed there is no variety so perfect, so well suited that it will not be replaced by better ones. The gardener, therefore, must watch the newer varieties. Try some each year yourself, watch your neighbor or the variety demonstration carried on by your county agricultural agent. You will find a continual change for the better in varieties and strains of vegetables.

Planting Vegetables

FOLLOWING is a lisct of kinds of vegetables arranged in order of time of planting and also showing something of the manner of planting.

In hot beds for early transplanting:

Cabbage
Celery
Onions
Kohl Rabi
Parsley

In hotbeds for second early transplanting:

Tomato
Eggplant
Peppers
Leek
Okra
Brussels Sprouts
Celeriac
Cauliflower
Beets
Endive
Muskmelon
Sweet Potato

Planted in frame or bed for late transplanting:

Late Cabbage
Late Cauliflower
Late Celery
Late Brussels Sprouts

First open ground planting:

Peas
Lettuce
Spinach

Second open ground planting:

Beets
Parsnip
Onion
Carrots
Salsify
Potatoes
Mustard
Radish
Turnip
Swiss Chard

Third open ground planting:

Beans
New Zealand Spinach
Early Corn

Late planting:

Corn
Cantaloupe
Lima Beans
Watermelon
Pumpkin
Squash
Cucumber

Late summer planting:

Kale
Chinese Cabbage
Radish
Turnip

—W. T. Tapley.

Concrete Hotbeds

VERY satisfactory hotbeds are made of planks of reinforced concrete 1½ inches thick, 1 foot wide, and 8 feet long. These planks are set up on edge to form the front and back walls of the beds. Two planks are used for the high side and one for the low side. Specially shaped planks are used for the ends of the hotbeds. Stakes of 2 inches by 4 inches are used at the joints of the planks, and no nailing is necessary.

Clean sand is essential. The mixture found best is 1 part of cement to 1½ or 2 parts of sand. Three ¼-inch rods are generally used for reinforcing, one along each edge and one in the middle, running the full length of each plank.

The width of sashes is usually 3 feet, but if another width is used the length of the planks is changed to just double the width of the sash, so that each plank supports 2 sashes placed side by side. Experience has shown that the hotbeds can be taken up, stored, and replaced each year with very little breakage.—New Jersey State College of Agriculture.

Take Off Your Hat To The MYERS
PUMPS · WATER SYSTEMS · HAY TOOLS · DOOR HANGERS

A Guarantee of Reliable Service
Known to Farmers Everywhere Since 1870

FOR more than half a century the name Myers has been an unfailing symbol of dependable service. Your grandfather and quite possibly your father's grandfather had complete confidence in the Myers, "The Best Pump Built!" Down through the years the quaint old trade-mark showing the mischievous girl and the hatless youth has always been associated with ***products of outstanding quality and value.*** And today Myers Pumps for Every Purpose, Myers Water Systems, Myers Hay Tools and Myers Door Hangers are unquestionably the leaders in their field.

A Living Trust That Charges *"Carry On!"*

A heritage of fine manufacture and fair dealing has been handed down to the present members of the Myers organization — and with it a definite responsibility towards the countless thousands of farmers who have learned to look for efficient performance and the limit of wear from ***all*** products carrying the Myers Mark of Quality.

If you are using Myers Products of any kind you fully realize that the ideals of the founders of this business are still being maintained. We take just pride in the fact that today we are known as "World Headquarters for Pumps for Every Purpose, Hay Tools and Door Hangers" — and we are grateful indeed for the splendid opportunity handed down to us to serve the farm public through the national organization of Myers distributors and dealers.

"Take Off Your Hat to The Myers" is more than a well-known trade-mark. It is a ***quality challenge*** and an ever-present reminder to every member of the Myers organization of the vital necessity of "Keeping up the good work" so that the name of Myers may always be a guarantee of reliable service and fair dealing.

See your dealer or write us today for his name—the Myers Catalog—and complete information about the Myers Products that interest you.

Professor Fred C. Sears favors *consistent* orchard fertilization

SAYS Professor Fred C. Sears in "Progressive Orcharding":

> "Usually the man succeeds in proportion as he fertilizes. The man who fertilizes year after year, whether he has a crop of fruit on his trees or not, is the man who usually has a crop."

That's why it's easy to tell, almost at a glance, whether or not an orchard has been consistently fertilized. The condition of the trees tells the story.

A generous supply of quickly available nitrogen in the form of Arcadian Sulphate of Ammonia is needed before blossom time to increase the amount of fruit set, enable the tree to carry a full crop of well-sized fruit to maturity and promote fruit bud formation for next year's crop.

A dime or a quarter spent each year for Arcadian Sulphate of Ammonia on each tree for a period of five years is bound to show a handsome profit.

Results prove the availability of the nitrogen in

Fruit Spraying Schedules

Delayed Dormant—This is the first spray on apples, pears and cherries. Use a rather coarse drenching spray aiming to wet the ends of the buds as the lice are in those places. Peaches must be sprayed while the buds are fully dormant to control leaf curl.

Pre-Pink and Pink—These are the important sprays for scab on the stems of young blossoms and leaves. Unless this is applied large numbers of young apples are likely to drop and in some varieties it may result in the loss of the entire crop. Aim to hit the blossom stems and leaves.

Petal Fall—The important spray for codling moth as well as scab and the first red bug spray. Use a drenching spray to hit the red bugs hiding in the terminal leaves and blossom clusters. Should be applied before the calyx closes in order to get poison inside the calyx cup for codling moth.

Cluster Apple—The second red bug spray and important for diseases. Other sprays than lime-sulphur will russet the fruits at this time. Apply a rather drenching spray for red bugs. Be careful not to drive the spray in one place too long or burning may result.

Mid-Summer—Important for fungus diseases on all fruits, codling
late feeding insects on apples.

Methods and Materials—Use
pounds pressure with a spray
sure the engine has power enough
the work. A 3½-horsepower
necessary.

The strength of concentrate
phur varies so widely that it is
say 1 to 8 or 9, and 1 to 38 or
expression "dilute to test 1.03 to
used to indicate the correct strength
dormant and summer sprays
This does not mean that every
material should be tested. Because
the variations in strength of various
centrates it is absolutely necessary
a specific gravity hydrometer to test
barrel of concentrate. When the
of the concentrate is known, divide
decimal of concentrate by the
the desired spray. For example:
concentrate shows a density of
we are spraying for scab in the
which requires a spray of a

APPLES

Period for spraying	Insects and diseases controlled	Material for 100 gal of spray
Delayed Dormant—When leaves of blossom buds are out ⅛ to ½ inch.	San Jose Scale Oyster Shell Scale Scurfy Scale	Lime-sulphur to test Sp. G.
	Rosy Apple Aphis	Nicotine sulphate, ¾ pi
	Bud Moths Leaf Roller	Arsenate of lead powder,
Pre-Pink—When the first tint of red shows in central flower bud.	Apple Scab Frog-eye	Lime sulphur to test Sp. G.
Pink—When majority of cluster buds have separated.	Bud Moth Leaf Roller Curcullo	Arsenate of lead powder,
	Apple Scab Frog-eye	Lime-sulphur to test Sp. G.
Petal Fall—When most of the petals have fallen.	Codling Moth Curcullo	Arsenate of lead powder,
	Red Bug	Nicotine sulphate, 1 pint
	Apple Scab Frog-eye	Lime-sulphur to test Sp. G.
Cluster Apple—Two weeks later or when the young apples are the size of hazelnuts.	Apple Maggot Curcullo Codling Moth	Arsenate of lead powder,
	Red Bug	Nicotine sulphate, 1 pint
	Apple Scab Apple Blotch † Frog-eye Bitter Rot †	Lime-sulphur to test Sp. G.
Mid-Summer—Late in July or early in August.	Codling Moth Curcullo Late Apple Worms	Arsenate of lead powder,
	Fruit Spot Sooty Fungus (cloud) Apple Blotch Bitter Rot †	Lime-sulphur to test Sp. G.

† Where bitter rot or apple blotch is serious substitute 3-4-50 Bordeaux for the lime-sulphur in the cluster apple and repeat in two weeks leaving nicotine.

CHERRIES

Period for spraying	Insects and diseases controlled	Materials for 100 gal of spray
Delayed dormant—When green ends of blossom buds show.	Scale †	Lime-sulphur to test Sp. G.
	A	Nicotine sulphate, 1
Petal fall—When petals fall.	Curcullo	Arsenate of lead powder pounds.
	Leaf spot Brown rot	Self-boiled lime-sulphur
Calyx drop—When shucks have dropped.	Curcullo	Arsenate of lead pounds.
	Leaf spot Brown rot	Self-boiled lime-sulphur
Fruit—Just before cherries turn red.	Fruit fly	Arsenate of lead pounds.
	Leaf spot	Self-boiled lime-sulphur
After picking.	Cherry slug	Arsenate of lead powder
	Leaf spot	Self-boiled lime-sulphur

† Sour cherries are rarely attacked by scales and, therefore, in spraying the lime sulphur may be omitted and four or five pounds of soap substituted.

PLUMS

Periods for spraying	Insects and diseases controlled	Materials for 100 gal of spray
Dormant—While buds are dormant.	San Jose Scale	Lime-sulphur to test Sp. G.
Calyx drop—When shucks have dropped †	Curcullo	Arsenate of lead powder pounds.
	Brown rot Leaf spot	Self-boiled lime-sulphur
Ten to twenty days later.	Curcullo	Arsenate of lead powder, pounds.
	Brown rot Leaf spot	Self-boiled lime-sulphur
Before fruit ripens.	Brown rot Leaf spot	Self-boiled lime-sulphur

† Where curculio is severe make earlier spray as petals have dropped using same materials.

(Peach, pear and grape schedules will be found on page 25)

Vegetables Preferred

THE Extension Service in Vegetable Gardening at the Pennsylvania State College has been conducting comparative demonstrations during the past seven years on the farms of vegetable growers in which a number of different sources of seed are compared under exactly similar conditions. These comparisons may include different varieties or different strains of the same variety.

SWEET CORN

A comparison of 10 varieties of yellow sweet corn during 1926 matured in the following order:

First, Golden Orange, very early, small but bigger than Bantam.

Second, Golden Dawn, very early.

Third, Golden Bantam.

Fourth, Whipple's New Yellow, very good.

Fifth, Golden Giant, irregular ripening.

Sixth, Golden Cream, not very satisfactory.

Seventh, Golden Country Gentlemen, not satisfactory, small, lack of quality.

Eighth, Golden Rod, good.

Ninth, Golden Evergreen, good.

Tenth, Sunnybrook, largest ears, best for late.

CELERY

Golden Plume celery was reported as almost entirely replacing Golden Self Blanching. In a comparison of 12 sources of Golden Plume the average weight per stalk after it was stripped and prepared for market ranged from .92 pound in the poorest to 1.52 pounds in the best.

CABBAGE

Golden Acre cabbage proved very popular as first early, cutting about fifty per cent of the crop at the first cutting while Early Jersey Wakefield cut about twenty per cent.

TOMATO

The Marglobe tomato introduced several years ago is past the experimental stage, it being hard to beat as a second early and main crop tomato.

Spray Mixtures

TO MAKE BORDEAUX MIXTURE

Dissolve five pounds copper sulphate (blue vitriol) in hot water, using a wooden or earthenware vessel. Slake six pounds fresh lime. Pour these together into a 50-gallon barrel and fill up with water. If hydrated lime is used, use about one-fourth more. The lime solution should be strained.

If large amounts are to be used, dissolve 50 pounds of copper sulphate in 50 gallons of water, and slake 60 pounds of lime and add water to make 60 gallons. To make a 50-gallon barrel of spray material, use 5 gallons of the copper solution and 6 gallons of the lime solution and fill up with water. If chewing insects are present, add 3 pounds of lead arsenate paste to 50 gallons of spray; if dry arsenate is used, add 1½ pounds.

Bordeaux mixture for melons, tomatoes and other tender vegetation should be only two-thirds or three-fourths as strong.

TO MAKE SELF-BOILED LIME-SULPHUR

Start 8 pounds of lime slaking, sift and thoroly stir in 8 pounds fine sulphur, using just enough water to prevent burning and allow to boil from heat of lime for fifteen minutes. Add water to make 50 gallons and apply.

An excellent substitute for this fungicide on peaches in summer is one made by mixing 5 pounds of atomic sulphur in 50 gallons of water, without lead arsenate.

To Make Ant Poison

Arsenate soda, 125 grains; sugar, one pound; honey, one tablespoonful; water, one quart.

Add arsenate soda and sugar to water and boil until both are dissolved, then add honey. When cool, place in shallow dishes with a crust of bread or bits of sponge.—K

Spray Requirements

Estimating Amounts of Spray Materials

The amounts of materials that are suggested are based on the average number of gallons of dilute spray which should be applied to a tree if the fungicide or the insecticide is to be effective as a means of control.

Approximate Amounts of Dilute Spray per Tree

Age Years	Apple gals	Pear gals	Peach gals	Plum gals	Sour Cherry gals.
Under 3	½	½	1-2	½	½
3-4	1	½	2	1	1
4-5	2	1	3	1	1½
5-6	4	1½	5	1	2
8	5	2	7	2	3
10	6	3	10	4	4
15	10	5		6	8
20	12	10			10
25	15	12			12
30	17	12			15
35 and over	20-25	12			

For delayed dormant spraying a 50-gallon barrel of lime sulphur concentrate 1.26 sp. g. diluted to 1.03 sp. g. will make approximately 434 gallons of dilute spray. A 50-gallon barrel of miscible oil diluted 1-15 will make 800 gallons of dilute spray.

DUSTING POTATOES *The Niagara Way*

Has become the accepted practice of the most successful growers; the men who study modern economical methods, for they have found that Niagara Dusting not only protects the crop from blight and insects, but as many claim, stimulates the growth of the plant itself.

Dusting the Niagara Way means the use of Dusting Machines developed to sturdy perfection by years of actual practical use. The use of Dusting materials known the country over for quality and effectiveness. The use of both dusters and dusts to the best advantage through scientific co-operation from Dusting Headquarters.

Write us about your individual problems or talk with your dealer and let the Niagara Specialists make recommendations as to the right Model Hand, Traction or Power Duster, and the right dusts to furnish you the most economical protection.

DUSTS and DUSTERS

PAN-A-CE-A

Conditions your breeders at mating time

THE time to prepare for strong, vigorous chicks that will live and grow into fine fowls is now—before the hatching eggs are laid.

Strongly fertile eggs and strong chicks can come only from healthy, vigorous parent stock. Like produces like. This is Nature's unchangeable law.

Pan-a-ce-a gives vigorous health and condition to mating fowls. You see its effects in the proud strut, the red combs and wattles, the merry singing and cackling.

Add Pan-a-ce-a to the ration regularly — one pound to every fifty pounds of mash or feed. You will be rewarded with big hatches and strong chicks. They will not be "dead in the shell" or hatch out too weak to withstand the little-chick ailments.

Pan-a-ce-a is a tonic. It has iron for the blood, laxatives and diuretics to carry off waste materials, and minerals essential to full development of fowls and chicks.

The price of just one egg

pays for all the Pan-a-ce-a a full-grown fowl needs for sixty days. There's a right-size package for every flock. Use it under this remarkable guarantee:

If Pan-a-ce-a does not give you bigger hatches and stronger, better chicks, return the empty container to the dealer and get your money back. We reimburse the dealer.

MAGIC BROODER

SAFE — ECONOMICAL — IT SATISFIES

The Double heat control, Gas Chamber and coal magazine so constructed, it works like MAGIC. Substantially built of high-grade castings and heavy steel deflector. It spreads the heat keeping chicks warm and healthy.

Made in Three Sizes

The New Giant size beats the world for raising broilers. Our Improved Roof Pipe adds greatly to the efficiency of the brooder, as it catches condensation above roof keeping flues open for good draft.

Useful Tables

Linear Measures

1 mile = 63,360 inches = 5,280 feet.
1 mile = 1,760 yards = 320 rods.
1 rod = 16.5 feet.

Area

1 square mile = 640 acres = 1 section.
1 acre = 43,560 square feet = 160 square rods.
1 square yard (carpenter's measure) = 9 square feet.

Volume

1 cubic foot = 1,728 cubic inches.
1 cubic yard = 27 cubic feet.
1 board foot (B. M.) of lumber = 144 cubic inches or the equivalent of a board 1 inch thick having an area of 1 square foot.
1 cord of wood = 8 ft. x 4 ft. x 4 ft. = 128 cubic feet.
1 ton hay = 500 cubic feet.
1 ton loose straw = 600 to 800 cubic feet.
See also WATER and BUSHEL.

Water

1 gallon = 8.33 pounds = 231 cubic inches.
1 cubic foot = 59.84 pints = 29.92 quarts.
1 cubic foot = 7.48 gallons.
1 cubic foot = 62.4 pounds.
1 cubic inch = .0361 pounds.
1 cubic yard = 202 gallons.
1 barrel = 31.5 gallons.
1 barrel = 4.21 cubic feet.
1 pound = 27.7 cubic inches.
1 pound pressure = 2.31 feet in height.
1 foot in height = .433 pounds pressure.

Bushel

1 bushel = 2150.4 cubic inches = 1.24 cubic feet.
1 bushel = 1.25 cubic feet of small grain or shelled corn.
1 bushel = 2.5 cubic feet of ear corn.

To Find Weight of Crops in Storage

To find bushels of grain in bin divide cubic feet by 1¼. For ear corn divide cubic feet by 2½. To find tons of hay in mow divide cubic feet by 500 if hay is well packed. (Ranges from 400-550 cubic feet per ton according to depth of mow and kind of hay.)

Whitewash Mixture

THE New Jersey College of Agriculture advises that whitewash may be made durable, hard, glossy, and practically waterproof by the addition of salt, alum and sulphate of zinc. Such a mixture is good for both interior and exterior use.

To make it, 1 bushel (62 lbs.) of quicklime is slacked in 12 gallons of hot water. Then another solution is made up of the following: 1 pound of sulphate of zinc, 1 pound of alum, 2 pounds of salt, dissolved in 2 gallons of boiling water. These two solutions are then mixed together and 2 gallons of skimmed milk are added. Keep the mixture thoroughly stirred while applying.

here's just the feed for february chicks

FUL-O-PEP CHICK STARTER

CONTAINS BOTH COD LIVER OIL & COD LIVER MEAL

Give those February chicks a Springtime chance to thrive! Give them Quaker Ful-O-Pep Chick Starter and see them overcome the handicaps of short daylight and chill, cloudy weather. For this great chick starter contains both Cod Liver Oil and Cod Liver Meal. Chicks respond to it just as they do to sunshine and June weather.

The combination of Cod Liver ingredients prevents leg-weakness, toe-picking and kindred ailments and at the same time helps the little birds to develop strong digestions, husky frames, and firm flesh.

Follow the Ful-O-Pep feeding method and you'll get earlier, better market poultry. You'll get a fine bunch of pullets, that will grow into heavy-layers. You'll get vigorous cockerels.

The good oatmeal base and other materials, the pure mineral and animal protein content, are just the things baby chicks need, and in just the form small mouths and sensitive craws should have them. No individual can hope to mix at home a ration so good, so complete, as Ful-O-Pep Chick Starter.

Near you is a dealer who has a fresh, new stock of Ful-O-Pep Chick Starter and the other Ful-O-Pep Poultry Feeds. Arrange right away — today, or this week — to have Ful-O-Pep Chick Starter and Ful-O-Pep Fine Chick Feed on hand for your February or March chicks.

Send for the Ful-O-Pep Poultry Book. The new 1927 edition will give you lots of valuable, up-to-date information. It's free!

There is only ONE KLEANBORE —Beware of Imitations

REMINGTON KLEANBORE CARTRIDGES PREVENT RUST, PITTING, AND CORROSION

NOW'S the time of year, before the planting season, to pick off the rats and other vermin that prey on your grainery and poultry. There is fine sport to be had, as well as useful work to perform, with a .22 rifle. But the chores are always with us. If the rifle isn't cleaned soon after shooting, it will rust and pit the bore and ruin the barrel. Rifle cleaning adds another chore.

Remington Kleanbore Cartridges make cleaning unnecessary. This marvelous new ammunition absolutely prevents rust, corrosion, and pitting. Remington Kleanbore Cartridges are different from ordinary ammunition because the priming mixture does not contain salts that attract moisture and cause rust. It contains ingredients that seal the pores in the steel and make the bore of rifle barrels rustless and stainless. By keeping the bore in perfect condition Kleanbore Cartridges will improve the velocity and increase the accuracy of your rifle.

If you have been shooting ordinary ammunition, clean the bore of your rifle thoroughly with boiling water to remove all traces of the injurious salts. Then shoot Remington Kleanbore Cartridges exclusively and you will not have to clean the inside of the barrel.

Caution: For your own protection, be careful to avoid substitutes. You can identify the new ammunition by the name, Remington Kleanbore, on the green box. They are the only cartridges that will do what we claim for them.

And think,—Remington Kleanbore Ammunition costs the same as ordinary cartridges. Get them from your dealer in .22 shorts, longs, and long-rifle.

How to Tell Roup Canker

Poultry Flu, Coccidiosis and other poultry diseases

It's mighty important to know what's wrong when birds take sick. The disease may spread thru the entire flock almost overnight. Quick action is needed to stop loss. Our poultry book tells how to recognize different poultry and chick diseases,

and What to Do

This book has SAVED poultrymen thousands of dollars. It's really so easy and costs so little to prevent disease by feeding B-K in the drinking water and spraying with the famous B-K smoky vapor. It's simple, it's safe, it costs little and thousands of poultrymen know it's dependable.

B-K is a non-poisonous germ killer and disinfectant. Clean, clear, colorless. Leaves no odor. B-K is concentrated. Costs about 1½c per gallon of dilution ready to use. Order a jug from your dealer today—money back if not satisfied.

Ration for Chicks

FEEDING trials during 1926 on the experiment station poultry farm at Rutgers University have shown that by means of a new ration it is possible to make White Leghorns average one and a quarter pounds in weight when eight weeks old and show steady gains to a maturing weight of four pounds.

The new ration used was designed to meet all nutritive requirements of birds raised in confinement for the prevention of coccidiosis, black head, round worms and tape worms, and consisted of the following ingredients:

20 lbs. wheat bran
20 lbs. red dog flour
20 lbs. yellow cornmeal (whole corn ground)
20 lbs. ground rolled oats
10 lbs. meat scrap (50 per cent)
5 lbs. dried milk
2 lbs. oyster shell meal
1 lb. salt
1 quart cod liver oil

The scratch ration consisted of two parts of fine cracked corn and one part of fine cracked wheat.

For poultrymen who wish to use this ration the Poultry Department gives the following directions:

For First 3 Days—Give milk to drink, either sour skimmilk or a commercial condensed skimmilk or buttermilk. These two commercial products must be diluted one part in seven parts of water. It is preferable to continue feeding the milk indefinitely, thus promoting best possible growth.

Three Days to 1 Week—Feed mash in pans twice daily, all the chicks will eat in 20 minutes, scratch feed 3 times daily all they will eat in 20 minutes.

One Week to 20 Weeks—Furnish plenty of mash hopper space, add fresh mash daily. Give scratch feed three times daily. Green food must be tender and succulent; feed small amounts at start, then increase to what the chicks will eat in 15 minutes. Infertile eggs from the incubator, boiled, make a splendid delicacy for the chicks.

When birds are in confinement allow 300 chicks to a brooder pen, 10 by 12 feet in size.

When the birds are given free range allow 350 to 400 chicks to the flock.

Remove all males 4 to 5 weeks of age. Furnish perching space early to prevent crowding.

Preserving Eggs

THERE are numerous methods of serving eggs but the use of the water and salt solution or the glass solution seems to give the be sults.

Lime Water and Salt Method.— four pounds of good quick-lime in quantity of water, then mix with gallons of pure water, add two of salt. Stir the mixture thoro allow it to settle. The clear liquid off is the part in which eggs are preserved. This mixture should be cient to preserve thirty dozens of the number varying with the the vessel in which they are placed.

Water-Glass Method.—Mix one one-half quarts of commercial glass solution with eighteen quarts pure water. Stir this mixture and pour it into the receptacle which to be used. An earthen jar is the suitable altho an odorless tub may used. This solution should be enough preserve thirty dozens of eggs. less than thirty dozens of eggs are preserved a proportionate amount of tion should be made up. If more water needed to cover the eggs as much as quarts can be added to the amount sary to preserve thirty dozens without pairing the solution.

Friendly Talks.

By EDGAR L. VINCENT

A RAW spring night. When we did the chores at evening time, we put the sheep all in on the big barn floor, because we have learned that sometimes on just such nights as this some wee lambkin will come, and if it is not cared for it may be chilled and die before morning.

Often wife and I have crept out of bed in the small hours of the night, and made our way thru the cold to see if everything was all right with the sheep we love so well. Many a little one we have gathered up in our arms and carried to the house to be wrapped in warm cloths, placed in a box or crate and set behind the kitchen stove, to bring back the life fluttering in the balance.

Love Has Many a Hard Task

Two men I know went out into the street of a big city in the night, looking for a man they knew would at that hour be in danger. He had wandered before and they felt sure that he might do so again. And they did find him away down where the tide of life runs thick and black. They put their arms about him, took him away, and in a room with no other eye to see but that of God, they wooed the weak man back to himself and saved his soul from destruction. It was not easy to do. Love has many a hard task to do, and love alone ever wins the reward.

It is winter in the life of many a man and woman in these days in which we live. The nights are cold. Up and down life's streets pass these wanderers, laughing, gay, mocking at everything that is good, and yet they are freezing to death and they do not know it. You have been so cold yourself sometimes, it may be, that you did not realize your danger. The chilled lamb down at the barn may be beyond the point of suffering, and these men and women of the night do not know, and they do not care, that they are dying in the dark! And if you tell them their danger the only answer you will get will be a scoffing laugh.

Lambs Within Reach Need Guidance

But does love stop at rebuffs like that? I have seen sheep before now that would fight the one who came to save the life of her lamb. Men are quite like the creatures of the farm in many ways. And because we love them and long to help them we stand right by, even tho driven away again and again.

But what if we say, "It is nothing to me! Let them go! They must look out for themselves!" Why, then a life may go out on the stormy sea and be lost on the rocks. And someone will have to bear the blame! and the blame may be costlier than we know.

What about the lambs that are within your reach? You know how dark the night is. You cannot help understanding what it may mean to stand by the side of the road and see them go on down the primrose path to destruction. And yet we may smile into the faces of the sin-fascinated friends; we may put out a kindly hand; we may speak a tender word, and who knows what may come of it?

What joy there is in saving the life of a wee one of the flock! How much greater happiness to keep some one we know from perishing! And we cannot forget this: It may be no word we speak that counts. Just to live the right life is all we can do; and that is enough!

Buick owners enjoy the savings of leadership

In purchase price and daily use, Buick saves your money.

The price of a Buick is moderate, but it buys a car built to the very finest quality ideals—one that would cost you considerably more, if it were not for Buick leadership.

For years, the savings provided by great volume have been used to increase Buick value.

And for years, Buick owners have had a more dependable motor car—one in which high quality lessens upkeep expense.

Buy a Buick! It is an investment in economy and satisfaction.

25 Broad Street New York

I never dread the freshening period now~

WHAT a relief! No more troubles at calving! No sick cows from Retained Afterbirth. No losses from Barrenness due to injuries to the genital organs when lowered in vigor. No lay-off with sickness when the milk crop should be at the peak.

If you have been accustomed to leaving the health and vigor of freshening cows to chance, you know something of the troubles you can avoid by simply giving Kow-Kare two to three weeks before and after calving. The best dairymen in the country make it a regular practice—would not think of getting along without it.

Kow-Kare builds up the vigor of the digestion and the genital organs so that the unusual strain of calf-birth becomes a safe, natural process. The cow comes back to generous milk giving; the calf is a money-asset from the start. Used with unfailing results for over 30 years. A concentrated medicine that costs you nothing to use. The certain milk gain pays for it many times over.

Thousands of dairymen use Kow-Kare sparingly during winter feeding for all their cows. It helps them turn more of their heavy feeds into milk—keeps them responsive, healthy, vigorous. Kow-Kare brings back to health cows troubled with Barrenness, Retained Afterbirth, Abortion, Bunches, Scours, Lost Appetite, etc. Try Kow-Kare once and you will not keep cows without it.

DAIRY ASSOCIATION CO., Inc., Lyndonville, Vermont

Makers of Kow-Kare, Bag Balm, Grange Garget Remedy, American Horse Tonic, etc.

KOW-KARE

FAMOUS CONDITIONER OF MILCH COWS

Feed dealers, general stores, druggists have Kow-Kare—$1.25 and 65c sizes (six large cans, $6.25). Full directions on can. Mail orders sent postpaid if your dealer is not supplied. Our valuable free book on cow diseases sent free, on request.

Score Card for Dairy Cows

Scale of Points — Standard

CHARACTERISTICS INDICATING DAIRY FORM:

(A) STYLE AND GENERAL APPEARANCE, 20 Points:

1. **Head**—Erect, clean cut; neck slender, eye prominent, alert and placid
2. **Back**—Straight and strong; wide apart and level
3. **Rump**—Long, wide and thurls wide apart and level tail setting 5
4. **Legs**—Straight, bone fine 3
5. **General** build rugged and large for the breed without coarseness; Jerseys, 950 lbs.; Guernseys and Ayrshires, 1100 lbs.; Holsteins, 1350 lbs. 5

(B) DAIRY TEMPERAMENT, 15 Points:

6. **The cow** should be clean cut with feminine appearance; absence of tendency to lay on fat 5
7. **Shoulders, withers, vertebra, hips, and pin bones**—Prominent and free from fleshiness (period of lactation to be considered) 4
8. **Loin**—Wide; ribs long and wide apart 3
9. **Disposition**—Active, with good nerve control 2

CHARACTERISTICS INDICATING CONSTITUTION, VIGOR AND CONDITION, 15 Points:

10. **Chest**—Broad and deep with well sprung ribs 8
11. **Nostrils**—Large and open 2
12. **Condition**—Thrifty and vigorous, in good flesh but not beefy 5

CHARACTERISTICS INDICATING ABILITY TO CONSUME AND DIGEST FEEDS (capacity), 15 Points:

13. **Muzzle**—Large, mouth broad 1
14. **Skin**—Mellow, loose, medium thickness showing good circulation and secretion; hair soft 4
15. **Barrel**—Deep, wide and long, well supported; ribs far apart 10

CHARACTERISTICS INDICATING WELL DEVELOPED MILK SECRETING ORGANS, 35 Points:

16. **Udder**—(a) Capacity—large in size 7
    (b) Quality—pliable, free from lumps 7
    (c) Shape—extending well forward and well up behind, level on floor, not pendulous, quarters full and symmetrical 6
17. **Milk-veins**—Large, long, crooked and branching; milk wells large and numerous 7
    Milk veins on udder crooked, numerous and large 3
18. **Teats**—Convenient size, uniform and well placed 5

Total 100

NOTE:—In case of any marked deficiency or any serious abnormality, as many as fifty points may be deducted from the total score of the animal.

Dairy Rations

THE grain mixtures listed below are based on low cost per unit of protein and energy, consideration being given to palatability, bulk, variety and physiological effect. It is desirable to use as large a number of different grains as possible in order to afford a variety of proteins.

The use of clover or alfalfa hay will greatly decrease the cost of the grain mixture. Silage or other succulence is desirable to all rations. For spring pasture use a Class III ration. For summer pasture use a Class II ration. Cows on good pasture and producing less than 15 pounds of milk daily need no grain. Higher producing cows on good pasture should receive about half the winter allowance of grain.

In addition to all the roughage a cow will eat, feed the proper grain mixture at the following rate: To a Jersey or Guernsey cow feed 1 pound of grain for approximately 3½ pounds of milk; to a Holstein, Ayrshire, Brown Swiss or Shorthorn cow feed 1 pound of gr
approximately 4 pounds of milk.

GROUP I—When the roughage is
leguminous as timothy hay, or
hay and corn stover, or timothy hay
corn silage, or mixed hay and corn
age, or mixed hay and corn stover:
100 lbs. wheat bran, or ground oats
standard wheat middlings, or p
of each.
.. lbs. gluten feed or buckwheat
dlings (few hulls) or portions of
100 lbs. cottonseed meal, or gluten
or portions of each.
100 lbs. linseed oil meal, or soy bean
or peanut meal or portions of

GROUP II—When the roughage is
leguminous as mixed clover and
hay, or clover hay and corn silage
clover hay and corn stover, or alfalfa
and corn silage:
100 lbs. corn meal, or corn and cob
or hominy feed, or ground barley
ground wheat, or portions of two
more.
100 lbs. wheat bran or ground oats
standard wheat middlings, or
of two or more.
100 lbs. cottonseed meal, or gluten
or portions of each.
100 lbs. linseed oil meal or soy bean
or peanut meal, or portions of
more.

GROUP III—When the roughage
tirely leguminous as clover hay,
hay, or soy bean hay:
200 lbs. corn meal or corn and cob
or hominy feed, or ground barley
portions of two or more.
100 lbs. ground oats or wheat bran
standard wheat middlings or
of two or more.
100 lbs. gluten feed, or buckwheat
dlings (few hulls) or portions

Dry Cows—For dry cows that
put in condition for freshening
the clover or alfalfa hay and
they will eat and 8 to 12 lbs. of
lowing mixture daily: 200 lbs.
or hominy feed, 200 lbs. ground
lbs. wheat bran, 100 lbs. oil meal
days before date of freshening
the silage and the corn meal and
amount of grain fed to one-half
lowance. This mixture without
can be fed the first week or
after calving.—Dairy Department

BREEDING ANIMALS—LARD HOGS

Scale of Points — Standard

GENERAL APPEARANCE, 29 Points:

1. **Weight**—Estimated .... actual .... pounds. Score according to age 5
   OBJECTIONS—Undersize, overgrown, coarse, slow to fatten.
2. **Form**—Deep, broad, low, arched back, medium length, symmetrical, compact, standing squarely on legs 8
   OBJECTIONS—Narrow hams, broad, heavy shoulders, loosely jointed, unsymmetrical, weak back, crooked legs.
3. **Quality**—Bone clean, hair silky, skin fine 8
   OBJECTIONS—Bone large and coarse without taper, pasterns long, hair coarse, harsh, not evenly distributed.
4. **Disposition**—Easy to handle, male aggressive but not vicious; female, quiet, docile 2
   OBJECTIONS—Cross, restless, wild.
5. **Style**—Active, graceful, carriage ... 1
6. **Sexuality and Breed Character** 5

HEAD AND NECK, 6 Points:

7. **Snout**—Medium length, not coarse ... 1
   OBJECTIONS—Long, thick and coarse.
8. **Face**—Short; cheek full 1
   OBJECTIONS—Long, narrow between eyes.
9. **Eyes**—Full, mild, bright 1
   OBJECTIONS—Small, dull, deepset, vision impaired by wrinkles.
10. **Ears**—Fine, medium size, soft 1
    OBJECTIONS—Large, coarse, long or large knuckle, difference in size or position one with another.
11. **Jowl**—Strong, neat, broad 1
    OBJECTIONS—Light, flabby, rough, deeply wrinkled, not carrying fulness back to the shoulder or brisket.
12. **Neck**—Thick, medium length 1
    OBJECTIONS—Long, flat, lacking in fulness and depth.

FOREQUARTERS, 13 Points:

13. **Shoulder**—Broad, deep, full, compact on top, smoothly covered with firm flesh 6
    OBJECTIONS—Lacking in depth or width, thick beyond the line of sides and hams, or extending above line of back, shield too coarse and prominent.
14. **Breast**—Advanced, wide 2
    OBJECTIONS—Narrow, contracted.
15. **Legs**—Short, strong; feet medium size; hoof erect and capable of bearing good weight 5
    OBJECTIONS—Legs long, slim, coarse, crooked; hoof long slim weak, unable to bear weight of animal without breaking down.

BODY, 32 Points:

16. **Chest**—Broad, deep, large girth ... 6
    OBJECTIONS—Flat, pinched, breast bone crooked.
17. **Sides**—Deep, lengthy, closely ribbed, evenly and firmly fleshed .. 7
    OBJECTIONS—Flat, thin, not full at bottom as on top, drawn in at shoulders, tucked up, lumpy or uneven surface.
18. **Back**—Broad, slightly arched, thickly, evenly, firmly fleshed .. 7
    OBJECTIONS—Narrow, creased back of shoulders, hollow or humped, too long or tapering at the hams.
19. **Loin**—Wide, strong, thickly, evenly, firmly fleshed 7
    OBJECTIONS—High, narrow, depressed or humped up.
20. **Belly**—Straight, wide and full 3
    OBJECTIONS—Narrow, saggy or flabby.
21. **Flank**—Even with underline, full .. 2
    OBJECTIONS—Thin, tucked up or drawn in.

HINDQUARTERS, 20 Points:

22. **Hips**—Wide apart, equal to width of shoulder, smooth 2
    OBJECTIONS—Narrow, peaked.
23. **Rump**—Long, rounding from loin to root of tail, width well carried back, evenly and firmly fleshed. 5
    OBJECTIONS—Flat, narrow and peaked at root of tail, too steep.
24. **Hams**—Wide, deep, running down to hocks, firmly fleshed 8
    OBJECTIONS—Narrow, short, thin and not coming down full to hock, cut up too high in the twist, straight from root to hock, buttocks light, thin or flabby.
25. **Legs**—Straight, short, strong; feet medium size 7
    OBJECTIONS—Legs long, thin, coarse, crooked; hoofs long, slim, weak, unable to bear weight of animal without breaking down.

How do you rate the De Laval Milker as an investment compared with other Farm equipment you own?

This question, among others, was recently asked of thousands of De Laval Milker users. A great many replies were received, and

58.53% said "The best."
19.56% said "One of the best."
10.47% said "Good."
2.51% said "Fair."

Surely when 78% of a large group of De Laval Milker users say it is the best, or one of the best investments on the farm, it must be so.

82% also said the De Laval Milker saves an average of 2½ hours per day; more than 98% that it agrees with their cows; 99% that it produces as much or more milk as compared with hand milking; 89% that it is easy to keep in a clean and sanitary condition.

If you are milking five or more cows a De Laval Milker will soon pay for itself, and put more pleasure, satisfaction and profit into the milking of cows.

See your De Laval Agent or send for full information.

Free Trial of Proved Swedish Abortion Treatment

Famous Foreign Formula quickly relieves badly infested herds. Gives amazing results in cases believed hopeless.

Thousands of American Farmers say the Froberg Swedish Abortion Treatment has saved their herds from destruction. This remarkable treatment has been used with complete success in the big dairy herds of Sweden for many years, and has cleaned up whole districts over there literally rotting with contagious abortion.

It was only after great expense of time and money that this secret formula was made available to American Farmers. During the past nine years the treatment in American herds has given all the amazing results that made it so famous abroad. Herd after herd has been rid of this disease. Even cows considered hopeless by veterinarians have yielded to its healing qualities and been restored to health and produced fine vigorous calves.

SAVED HIS HERD

David Mohr, Jenison, Michigan, says: "Last year I raised only one good calf out of 14 cows bred, all other calves were aborted. I was desperate. I used your C.C.C. treatment. This year with the same herd I have not lost a single calf. It's wonderful. My neighbor lost 3 calves in a few days—I gave him some C.C.C. and it stopped the trouble right there."

The fame of Cow Calf Control (C.C.C.) the name of this treatment has spread from breeder to breeder. Today it is put out only on an absolute binding guarantee that it will stop every case of abortion; that every cow treated will deliver a normal calf, or the treatment cost is refunded. Two reliable banks stand behind our guarantee. You can't lose, C.C.C. is practically 100% successful.

SEND NO MONEY

Mr. John W. Froberg, a native of Sweden and a large dairy owner, is responsible for introducing C.C.C. into this country. He has made the treatment easy to give, and at a cost per animal that every farmer will gladly pay.

Write today for full details explaining our free trial offer. Just send your name and address without further obligation to Froberg Remedy Co., 16 Lincoln St., Valparaiso, Ind.

Grain Rations for Draft Horses

Heavy Work

1.

Timothy or mixed hay—1 pound per 100 pounds weight.
Oats—1¼ pounds per 100 pounds weight.

2.

Timothy or mixed hay—1 pound per 100 pounds weight.
50 pounds oats
50 pounds corn
10 pounds oil meal or cottonseed meal

Grain fed at rate of 1¼ pound per 100 pounds live weight daily.

Light to Medium Weight

1.

Timothy or mixed hay 1 pound per 100 pounds live weight.
Oats ¾ of pound per 100 pounds live weight.

2.

Timothy or mixed hay—1 pound per 100 pounds weight
50 pounds oats
50 pounds corn
10 pounds oil meal or cottonseed meal

Grain mixture fed at rate of ¾ pound per 100 pounds live weight.

Idle Horse

Timothy or clover hay at rate of 1½ pounds per 100 pounds of live weight
½ pound of oats or grain mixture per 100 pounds of live weight

Stallion

Timothy or mixed hay at rate of one pound per 100 pounds live weight
50 pounds oats
50 pounds corn
20 pounds bran
10 pounds oil meal

Fed at rate of 1 pound to 1¼ pound per 100 pounds live weight, depending upon amount of exercise and service of stallion.

Brood Mares

Clover, mixed or alfalfa hay
50 pounds oats
50 pounds corn
20 pounds bran
10 pounds oil meal

Hay and grain in amounts to keep mares in thrifty condition.

Suckling Foal

Clover or alfalfa hay
40 pounds crushed oats
40 pounds crushed corn
20 pounds bran
10 pounds oil meal

Grain and hay fed in such amounts as the colt will clean up daily.

Colts After Weaning

Alfalfa or clover hay during winter. Good pasture during summer.
50 pounds oats
50 pounds corn
20 pounds bran

Grain allowed at rate of ½ to ¾ pound per 100 pounds live weight daily. If timothy or mixed hay is fed add 10 pounds linseed oil meal to above grain combination.

Rations for Swine

BROOD SOWS—WINTER—DAILY

1.

Ear corn—1 pound per 100 pounds live weight daily.
0.3 pounds tankage or fish meal.
Alfalfa hay or clover hay in rack.

2.

Ground corn or barley	35 parts
Ground oats	30 parts
Wheat middlings	30 parts
Digester tankage or fish meal	5 parts

Fed in amounts so sows will gain from ¾ to 1 pound daily during gestation period. Usual requirement—one pound concentrates per 100 pounds live weight daily.

Young bred gilts should be fed about 1.5 pounds concentrates daily per 100 pounds live weight.

BROOD SOWS—SUMMER RATION ON PASTURE

Good clover, alfalfa, or rape pasture.
1 pound corn per 100 pounds live weight daily.
5 per cent of weight of corn.
Allowance of tankage or fish meal.

BROOD SOWS SUCKLING LITTE

1.

Corn or barley	70
Wheat middlings	15
Tankage	10
Chopped alfalfa or clover	5

2.

Corn or barley	50
Ground oats	30
Wheat middlings	20
Tankage	10

These combinations should be fed such amounts as the sows will clean daily. Simple mineral mixtures can fed to advantage.

3. On Pasture

Corn or barley	75
Ground oats or middlings	15
Tankage or fish meal	10

PIGS BEFORE WEANING

Ground corn or barley	50
Wheat middlings	40
Tankage or fish meal	10

GROWING PIGS AFTER WEANIN
20 TO 100 POUNDS

1.

Corn meal or barley	40
Wheat middlings	30
Fish meal or tankage	10

Free access to pasture, if possible.

2.

Corn meal or barley	40
Wheat middlings	30
Skimmilk or buttermilk, for each pound of grain	3

Free access to pasture, if possible.

RATION FOR FATTENING PIGS 100 POUNDS AND UP

Corn or barley	100
Fish meal or tankage	10

HOGGING DOWN CORN

Free access to corn.
¼ pound tankage or fish meal per daily.

GROWING BREEDING GILTS

Corn or barley	40
Ground oats	30
Wheat middlings	20
Fish meal or tankage	10

HERD BOARS

Corn or barley	40
Ground oats	20
Wheat middlings	30 pound
Tankage or fish meal	10 pound

Free use of pasture, if possible.

Feed enough grain to keep in thrifty condition.

DRY SOWS

Dry sows can be maintained during summer on good pasture and a small allowance of corn. During the winter should have a small amount of tankage fish meal added to supply the necess amount of protein.

Simple Mineral Mixture

Salt	20 pound
Steam bone meal	40 pound
Ground limestone	40 pound

Rations for Sheep

BRED EWES

1.

Shelled corn	50 pound
Oats	20 pound
Wheat bran	20 pound
Oil meal	10 pound

2.

Corn	40 pound
Oil meal	10 pound

3.

Oats	15 pound
Wheat bran	10 pound

All combinations fed at rate of ½ to 1 pounds per head daily.

Silage not to exceed 3 pounds per head daily.

Alfalfa or clover hay.

All bred ewes should have a yard for exercise.

BREEDING RAMS
1. During Breeding Season

Oats	20 pound
Wheat bran	10 pound

Fed at rate of one pound per head daily. Good pasture.

2. During Winter

Corn	30 pound
Oats	30 pound
Bran	30 pound
Oil meal	10 pound

(Continued on next page)

Horses like to romp in the snow, too. The picture was taken on the of Mr. C. F. Smith, Butler County, Pa.

Fed at rate of ½ to 1 pound per head lly.
Free use of clover or alfalfa hay and ll amount of silage.

LAMBS BEFORE WEANING

ound or crushed oats	20 pounds
ound corn	20 pounds
meal	10 pounds
eat bran	10 pounds

ed in such amounts as they will clean daily. Plenty of good clover or alfa hay as roughage.

HOT HOUSE LAMBS

ound corn	50 pounds
meal	10 pounds

ed in creep.
lover or alfalfa hay.

LAMBS FOR BREEDING STOCK

lled corn	30 pounds
ts	30 pounds
t bran	30 pounds
meal	10 pounds

ed in such amounts as necessary to p lambs in thrifty condition. During er good pasture. During winter ty of clean, bright clover or alfalfa and small amount of silage.

FATTENING LAMBS

1.

n	70 pounds
tonseed meal	10 pounds

2.

n	50 pounds
meal	10 pounds

e use of clover or alfalfa hay and

ations—Beef-Cattle

BREEDING COWS—WINTER

ge	30 pounds
er or alfalfa hay	5 pounds
onseed meal or oil meal	1 pound

e access to straw or shredded corn er is desirable, and will reduce the of other feed consumed.

GROWING CALVES NURSING—PUREBREDS
Grain Ration

corn or barley	4 parts
oats	2 parts
oil meal or cottonseed meal	1 part

ous allowance of clean bright hay and silage. Grain to be fed in amounts as necessary to keep calf thrifty condition.
ture during summer.

STOCKER CATTLE—YEARLINGS

silage	15 pounds
stover	15 pounds
ed meal or linseed oil meal	1 pound

FATTENING STEERS—500 TO 750-POUND STEERS

unlimited.
—1 pound per 100 lbs. live weight.
ed meal or oil meal, 3 pounds per 1000 pounds live weight daily.
increased during latter part of feeding period.

FATTENING CATTLE—750 TO 1000-POUND CATTLE
Limited Grain Ration

silage allowance—40 to 55 lbs.
or linseed oil meal—2½ pounds per 1000 pounds live weight daily.
access to straw or corn stover.
may be added during last two months of feeding period

FATTENING CATTLE—750 to 1000-POUND CATTLE

Where Freight Rates and Passenger Fares Go

A SUMMARY of the income and expenditures of Class 1 American Railroads, based on the official reports of the railroad companies to the Interstate Commerce Commission for 1924, the latest available data furnished by the Bureau of Railway Economics.

I OPERATING RECEIPTS

The public paid the railroads:

For FREIGHT transportation $4,345,971,078
48,527,227 carloads of freight, each car averaging 27 tons. Average receipts per ton-mile: 1.11 cents.

For PASSENGER transportation 1,076,024,307
932,678,462 passengers, each carried an average distance of 38.7 miles. Average receipts per passenger-mile, 2.97 cents.

For EXPRESS transportation 143,388,606
188,250,227 shipments carried in passenger service.

For MAIL transportation.... 97,961,371
Approximately 18 billion pieces, the cars containing which were hauled an aggregate distance of about 530,000,000 miles.

For ALL OTHER SERVICES 258,144,738
Including ferry service, transportation of milk, etc., dining-car, and all other incidental transportation services.

TOTAL OPERATING RECEIPTS FROM ALL SOURCES $5,921,490,100

II OPERATING EXPENSES

Total operating receipts to be accounted for....... $5,921,490,100

Out of these receipts the railroads paid:

For WAGES 2,624,618,637
An average of 1,751,324 employes thruout the year. These employes also received additional wages of $201,406,593 charged to improvements to the property.

For LOCOMOTIVE FUEL.. 437,141,694
119,925,606 tons of coal and 2,475,896,579 gallons of fuel oil. Fuel consumed in 1924 was 14,400,000 tons less than in 1920, due to increased efficiency of operation.

For MATERIALS and SUPPLIES 1,132,451,239
Their purchases under this and other heads make the railroads the largest customers of the basic industries of the country.

For LOSS and DAMAGE, INJURIES AND INSURANCE 107,775,220
Loss and damage claims alone were reduced from $119,833,127 in 1920 to $45,975,675 in 1924.

For RENT of CARS and COMMON FACILITIES 97,131,286
Such as Union Stations, yards, etc.

For DEPRECIATION and RETIREMENTS 208,161,300
Cars and locomotives have a limited life. A charge representing the probable depreciation must be made each year against the time when old equipment must be retired and replaced by new.

Total expense to keep the property physically going $4,607,282,136

For TAXES 340,336,686
1924 was the fourth year since 1920 in which taxes have exceeded cash dividends by a substantial margin. While national taxation is going down, state and local taxation is still rising. Three-fourths of all railroad taxes are state and local.

TOTAL OPERATING EXPENSES and TAXES. $4,947,619,122

Balance of Operating receipts to be accounted for.... $973,870,978

III FIXED CHARGES

Balance of Operating Receipts still to be accounted for $973,870,978

Out of the above balance (known as net railway operating income) the railroads had to pay:

For RENT of LEASED ROADS 141,092,254
Most large railroad systems have one or more parts which could not be bought outright, but for which rental is paid under a lease covering a long term of years. The payment of these rentals is necessary to keep these systems unified operating organizations.

For INTEREST on BORROWED MONEY 445,829,714
Paid to more than 1,000,000 persons owning bonds representing investment in track, stations, yards, shops, etc., and equipment trust certificates representing investment in cars and locomotives.

TOTAL FIXED CHARGES. $586,921,968
Net—all duplications eliminated.

IV DIVIDENDS AND SURPLUS

Balance of operating receipts still to be accounted for $386,949,010

Less DIVIDENDS on RAILROAD STOCK ... 320,429,767
An average return of less than 3½ per cent on the total railroad stock outstanding—a very inadequate return on securities representing nearly half of the invested capital of the railroads, owned by over 950,000 stockholders.

Balance of Operating Receipts 66,519,243

Add NET MISCELLANEOUS INCOME 14,402,038
Mainly miscellaneous rents. Interest and dividends received by one railroad from securities owned in another railroad are excluded. Since they were paid out of receipts which have already been accounted for, to include them again would be to count them twice as income.

TOTAL BALANCE (about 1 1-3% of total receipts) $80,921,281
Available for investment in new railroad facilities—or for making up deficiencies incurred in previous years—or to help create reserves against bad years in the future.

To Take Inventory

THE best time to take a farm inventory is when the least figuring has to be done. For general crop and stock farms, this is usually between January 1 and when the spring work starts. For poultry farms, the best time to take it probably is just after the pullets have been put in winter quarters. For those who have to comply with the income tax regulations, January 1 is the best date.

No specific date is set for taking such an inventory, but any convenient time will do if it is taken at approximat same time each year.

The inventory should includ estate, horses, cattle, sheep, hogs, try, farm tools and equipment, and plies on hand such as hay, straw, and silage.

In placing values, a conservativ mate of what an animal or article sell for, with a reasonable length o in which to dispose of it, is the bes This is about comparable to what it bring at a well-attended farm sal

After inventorying all the farm erty, list other assets such as Bonds, certificates of indebtedne ceivable bills and cash. Shares o in corporations should be includ market value.

After inventorying all resourc debts such as mortgages, notes, an owed, including with the notes and gages the dates of maturity.

After a complete list of all that is et and all that is owed is made, summary showing the total value kind of farm property.

Compute the total resources, and this, subtract the total liabilities then, represents the net worth or th financial standing.—Farm Man Department, New York State Co Agriculture.

To Find Size of Pull

THESE are very simple rules the fact that the size and sp the driving pulley multiplied equals the size and speed of the pulley multiplied together.

To find size of driven pulley— size and speed of driving pulley and divide by **speed of driven pulle**

To find speed of driven pulley— size and speed of driving pulley and divide by **size of driven pulley.**

To find size of driving pulley— size and speed of driven pulley and divide by **speed of driving pu**

To find speed of driving pulley— ply size and speed of driven pulley gether and divide by size of driving ley. Pulley sizes should be inche

Genuine Cork Linoleum Rugs in NEW—DIFFERENT—PRETTIER Patterns

On the floor: Armstrong's Jaspé Linoleum Rug with over-laid border, No. 706

"I *never dreamed a smooth-surface rug could be so beautiful*"

NEW BEAUTY in Armstrong's Linoleum Rugs . . . a brand new idea in rug design, something entirely different from anything you have seen before. New colors, new patterns, prettier than anything you ever dreamed of having in a smooth-surface rug of real linoleum.

No words can picture the unusual beauty of these new Armstrong Rugs. Nothing less than your own personal inspection at a floor covering store will do them justice. Ask to see the genuine Jaspé rugs with the over-laid borders, the rugs with the two-toned field, and the rugs with the unit borders. Again Armstrong has achieved a new style and vogue in rug design!

Only the patterns have been changed. Armstrong's Linoleum Rugs are still made of genuine cork linoleum from the printed surface right through to the sturdy burlap back. They are just as long-wearing, just as easy to clean, and just as flexible and easy to handle as ever. They are just as inexpensive and economical to buy as they always have been.

Above: Pattern No. 961. Right: Pattern No. 717, Jaspé Linoleum with over-laid border

These new rug patterns can be obtained only in Armstrong's genuine linoleum rugs. Designs for every room—in all sizes up to 12 ft. by 12 ft. and 12 ft. by 15 ft. Remember to ask for Armstrong's by name. Any furniture or rug merchant can get them for you if he does not have them in stock.

"RUGS OF PRACTICAL BEAUTY"

This attractive booklet, printed in colors, illustrates the new patterns. It is free. Write for it to the Armstrong Cork Company, Linoleum Division, 1012 Jackson St., Lancaster, Pa.

Total expense to keep the property physically going $4,607,282,136

For TAXES 340,336,686
1924 was the fourth year since 1920 in which taxes have exceeded cash dividends by a substantial margin. While federal taxation is going down, state and local taxation is still rising. Three-fourths of all railroad taxes are state and local.

TOTAL OPERATING EXPENSES and TAXES $4,947,619,122
Balance of operating receipts to be accounted for .. $973,870,978

III FIXED CHARGES

Balance of Operating Receipts still to be accounted for $973,870,978
Out of the above balance (known as net railway operating income) the railroads had to pay:

For RENT of LEASED ROADS 141,092,251
Most large railroad systems have one or more parts which could not be bought outright, but for which rental is paid under lease covering a long term of years. The payment of these rentals is necessary to keep these systems unified operating organizations.

For INTEREST on BORROWED MONEY 445,829,717
Paid to more than 1,000,000 persons owning bonds representing investment in track, stations, yards, shops, etc., and equipment trust certificates representing investment in cars and locomotives.

TOTAL FIXED CHARGES $586,921,968
Net—all duplications eliminated.

IV DIVIDENDS AND SURPLUS

Balance of operating receipts still to be accounted for $386,949,010

Less DIVIDENDS on RAILROAD STOCK 320,429,767
An average return of less than 3½ per cent on the total railroad stock outstanding—a very inadequate return on securities representing nearly half of the invested capital of the railroads, owned by over 950,000 stockholders.

Balance of Operating Receipts 66,519,243

Add NET MISCELLANEOUS INCOME 14,402,038
Mainly miscellaneous rents. Interest and dividends received by one railroad from securities owned in another railroad are excluded. Since they were paid out of receipts which have already been accounted for, to include them again would be to count them twice as income.

TOTAL BALANCE (about 1 1-3% of total receipts) $80,921,281
Available for investment in new railroad facilities—or for making up deficiencies occurred in previous years—or to help create reserves against bad years in the future.

To Take Inventory

THE best time to take a farm inventory is when the least figuring has to be done. For general crop and stock farms this is usually between January 1 and when the spring work starts. For poultry farms, the best time to take it probably is just after the pullets have been put in winter quarters. For those who have to comply with the income tax regulations January 1 is the best date.

No specific date is set for taking such an inventory, but any convenient time will do if it is taken at approxim same time each year.

The inventory should include real estate, horses, cattle, sheep, hogs, ... tes, farm tools and equipment, and ... ties on hand such as hay, straw and silage.

In placing values, a conservative estimate of what an animal or article sell for, with a reasonable length in which to dispose of it, is the bes ... is about comparable to what it bring at a well-attended farm sa

After inventorying all the farm property, list other assets such as Li Bonds, certificates of indebtedn receivable bills and cash. Shares in corporations should be inclu market value.

After inventorying all resources, debts such as mortgages, notes, a owed, including with the notes and mortgages the dates of maturity.

After a complete list of all that is owned and all that is owed is made, summary showing the total value of each kind of farm property.

Compute the total resources, and from this subtract the total liabilities. The balance then, represents the net worth or the financial standing.—Farm Manage Department, New York State Colle Agriculture.

To Find Size of Pull

THESE are very simple rules ba the fact that the size and spe the driving pulley multiplied tog equals the size and speed of the d pulley multiplied together.

To find size of driven pulley—Mu size and speed of driving pulley tog and divide by **speed of driven pulle**

To find speed of driven pulley—Mu size and speed of driving pulley tog and divide by **size of driven pulley**

To find size of driving pulley—Mu size and speed of driven pulley tog and divide by **speed of driving pull**

To find speed of driving pulley—Mu ply size and speed of driven pulle gether and divide by **size of driving** ley. **Pulley sizes should be inche**

Free Farm Bulleti

THE Pennsylvania Department of culture at Harrisburg has av for free distribution to farmers th lowing bulletins. Address requests **Bulletin Editor, State Department of riculture, Harrisburg, Pa.,** giving n and name of publication wanted.

Bulletin Number	Subject
[illegible]	Sour Soils and Liming.

Genuine Cork Linoleum Rugs
in NEW-DIFFERENT-PRETTIER *Patterns*

On the floor: Armstrong's Jaspé Linoleum Rug with over-laid border, No. [illegible]

"I never dreamed a smooth-surface rug could be so beautiful"

NEW BEAUTY in Armstrong's Linoleum Rugs . . . a brand new idea in rug design, something entirely different from anything you have seen before. New colors, new patterns, prettier than anything you ever dreamed of having in a smooth-surface rug of real linoleum.

No words can picture the unusual beauty of these new Armstrong Rugs. Nothing less than your own personal inspection at a floor covering store will do them justice. Ask to see the genuine Jaspé rugs with the over-laid borders, the rugs with the two-toned field, and the rugs with the unit borders. Again Armstrong has achieved a new style and vogue in rug design!

Only the patterns have been changed. Armstrong's Linoleum Rugs are still made of genuine cork linoleum from the printed surface right through to the sturdy burlap back. They are just as long-wearing, just as easy to clean, and just as flexible and easy to handle as ever. They are just as inexpensive and economical to buy as they always have been.

These new rug patterns can be obtained only in Armstrong's genuine linoleum rugs. Designs for every room—in all sizes up to 12 ft. by 12 ft. and 12 ft. by 15 ft. Remember to ask for Armstrong's by name. Any furniture or rug merchant can get them for you if he does not have them in stock.

"RUGS OF PRACTICAL BEAUTY"

This attractive booklet, printed in colors, illustrates the new patterns. It is free. Write for it to the Armstrong Cork Company, Linoleum Division, 1012 Jackson St., Lancaster, Pa.

INTENTIONAL SECOND EXPOSURE

If you ask *me*, P. A. is great tobacco!

I'VE DONE a lot of pipe-pioneering. There's hardly a brand or a blend that I haven't tried out at some time or other. As man to man, I want to say that there is just one tobacco that gives me the solid, deep-down enjoyment I demand of a pipe—*Prince Albert.*

When I opened my first tidy red tin and got a full breath of that rich, mellow P. A. aroma, I said to myself: "Old Son, this is *tobacco!*" The first pipe-load proved the aroma was no false prophet. I'll never forget that day. It has meant a lot to me.

I stick by Prince Albert because Prince Albert sticks by me. Its fine, full-bodied flavor is a genuine joy. I smoke it from morning to midnight and enjoy every fire-up. There's no more bite or parch in P. A. than you'd find in a honey-dew melon, and it's just as sweet.

The one regret I have about P. A. is that I didn't discover it sooner. I'm telling this to you now so that you may profit by my experience. You may think you are perfectly satisfied with your present brand. So did *I* . . . until I tried Prince Albert!

P. A. is sold everywhere in tidy red tins, pound and half pound tin humidors, and pound crystal-glass humidors with sponge-moistener top. And always with every bit of bite and parch removed by the Prince Albert process.

PRINCE ALBERT

—no other tobacco is like it!

The dependable Radiola 20
enriches every side of farm life

There's the business of farming—the interest of learning—the joy of living! And in it all, Radiola 20 takes a central place around which the days revolve.

When the weather reports are being broadcast, a single turn of a finger brings them in clearly. Whenever there's produce to sell, there's news of its market price, just for the tuning in. You can count on a Radiola 20, without tinkering or fussing or servicing. It is one of the products of a quarter century of radio pioneering; and throughout a considerable period of trial, testing and perfecting, it has proved it will stand up, and give steady, dependable performance.

It has a special "amplification" that gives it the distance reach of much bigger sets. And it is twenty times as selective as the ordinary radio set!

It has a power tube, too, that means you can turn up the volume, without losing the clear, undistorted tone. Mother can listen to the home talks, while she works across the room. In the evening, the lectures from the colleges are loud enough for the whole family to listen to. And a world of fine music comes in vividly and clearly, giving life new pleasure.

It is in music that tone quality counts most. Tune in dance music or finest symphony concert, and Radiola 20 challenges even high priced competitors to any test of tone! It is a moderate-priced set, but it has proved that quality of performance is not a matter of price, but of design and manufacturing skill. Not only RCA, but its associates, General Electric and Westinghouse, have contributed to making this Radiola so remarkably fine that, when you hear it, you will be satisfied with nothing less in radio!

Radiola 20, with Radiotrons, ... $115

Judith of Blue Lake Ranch

By JACKSON GREGORY

Copyright Charles Scribner's Sons

The Story Thus Far

JUDITH SANFORD, part owner in Blue Lake Ranch since the death of her father, Luke Sanford, fired Bayne Trevors, general manager, because he wasn't square. The men grumbled. Trevors made trouble in every way possible. Bud Lee, horse foreman, and old Carson promised to stay. Judith could depend on them and on "Doc" Tripp, veterinarian and a friend of her father.

Busy days followed. Mrs. Simpson took up her duties caring for the ranch house and Pollock Hampton, part owner of the ranch, arrived with his guests—Major and Mrs. Langworthy and Marcia, their daughter; Marshal Rogers, lawyer, and Frank Farris, artist.

On May 30 Charlie Miller, returning from Rocky Bend with the pay roll, was robbed. To avert a walkout, Bud Lee covered 80 miles in six hours and put the money into Judith's hands in time in spite of smokeless powder and a silencer that put his horse out of business.

Next day, while searching for clews of the holdup, Bud Lee and Judith came upon three of the troublemakers. In the fight that followed Bill Crowdy was injured and Chris Quinnion, the man Judith believed responsible for the death of her father, and Shorty besieged the cabin in which Lee and Judith barricaded themselves. Pollock Hampton and Tommy Burkitt, Bud Lee's helper, went in search of the two missing. Hampton, after a chase, captured Shorty. Lee and Burkitt stayed at the cabin to guard Crowdy while the others took Shorty home and locked him in the grain house. During the night Shorty escaped. Someone on the ranch was double-crossing. Sheriff Sawyer couldn't get anything out of Crowdy so he sent him to jail. A week later, in an attempt to escape, Crowdy was killed without "snitching on a pal."

Bud Lee liked Judith but she certainly wasn't the lady of his dreams. Then he met Marcia in flounces and pink parasol down in the meadow. Three days later Lee came upon Judith in the cabin crying. Over the coffee, when she asked him to stay on the ranch, he promised to stick.

Continued from last week

SPEAKING thoughtfully, Judith explained: "It's a gamble, with us bucking the long odds. Dad left me a third interest, clear, valued, counting stock, at a good deal more than four hundred thousand dollars. He left me no cash. Dad never had any cash. Just as soon as he got his hands on it he put it to work. I knew he had planned taking over another one-third interest, and I went on with his plans. I mortgaged my share for two hundred thousand dollars, which I got at five per cent. That means I have to dig up each year, just interest, ten thousand dollars. That's a pretty big lump, you know."

"Yes," he admitted slowly. "That's big; mighty big."

"With the money I raised," Judith continued, "I bought out the third owner, Timothy Gray. He let his holdings go for three hundred and fifty thousand. It was a bargain for me—if I can make a go of it. I still owe, on the principal, one hundred and fifty thousand dollars. I owe on my mortgage two hundred thousand. Total of my indebtedness, three hundred and fifty thousand dollars. And that's bigger, Bud Lee."

"Yes. That's bigger figures than I can quite get the hang of."

No wonder she had been crying. Even if everything went smooth on the Blue Lake she, too, had her work cut out for her.

"Now," she ran on, her voice stirring him with the ringing note in it, "I can make a go of it—if they will just let me alone! I am playing close to the table, Lee, close! I have a little money in the bank, enough to run along for two or three months, that's all. I said that dad left no cash; I didn't mention his insurance." Her eyes grew suddenly wet but she did not avert them from Lee's face, going on quietly: "That was ten thousand dollars. Close to seven thousand had to go for his current obligations. I have about two thousand to run on."

"Close hauled," grunted Lee. And to himself, he remarked as he had remarked once before: "She's got her sand."

QUITE naturally Bud Lee thought swiftly of his horses. He had told Trevors he wanted to make no sale for at least six months. Given until then—if Judith could make a go of it without forcing a sale—he'd show her the way to at least seven or eight thousand, with a good percentage of clear profit.

"To begin with," Judith's voice interrupted his musings, "I am going to have trouble with Carson. I admit that he's an exceptionally good cattle foreman; I admit, too, that he has his limitations. He is of the old school, and has got to learn something! Already he has his weather-eye cocked for the lean season; he'll be coming to me in August or September, telling me I've got to begin selling. That's the way they all do! And the result is that beef cattle drop and the market clogs with them. What I am going to do is make Carson start in buying then. Oh, he'll buck like one of his own red bay steers but he'll buy!"

"We're pretty well stocked up," Lee offered gently. "Turning the hills over to the hogs makes a difference, too. We're going to be short of feed long before September is over."

"Short of range feed, yes," she retorted warmly. "But we're going to put our trust in our silos, Lee, and make them do such work for us as they have never done before. Then, when other folks are forced to sell off for what they can get, we'll hold on and buy. We won't sell before December or January, when the market is up."

He shook his head. Tho not of the old school which had produced Carson, still he put little faith in those tall towers into which alfalfa and Indian corn were fed to make lush fodder.

"I don't know a whole lot about silos," he admitted.

"Neither does Carson," said Judith. "He looks at such things as silos and milking machines and tractors and fences even as the old Indians must have looked at the inroads of the white men. But, do you know where he has been these last few days?"

"In San Francisco? Heard him say he was going to take a few days off."

Judith laughed.

"That's Carson for you! He wouldn't admit where he was going. I sent him down to Davis where the state experimental farm and laboratories are. He's going to see silo, study silo, think silo until he gets a new idea into his head. I have ordered a big extension in our irrigated area, I have begun the construction of two more silos. When Carson gets back he's going to look around for some more Shorthorns at bargain prices. I have an idea it wouldn't do you any harm either, to look over what we are doing down at the Lower End."

Again she paused. Then, her eyes suddenly darkening, she told him what, after all, lay topmost in her mind.

"I have said that if I am given the chance, I can make a go of this. It's up to you, Bud Lee, to help see that I get that chance. An attempt was made to spread the lung-worm thru my calves. Now it's the hogs. Do you know what the latest news is from the pens? There's cholera among them."

"Where did it come from?" he demanded. "Tripp's been keeping the health of our stock up right along."

"Where did it come from?" Judith repeated after him. "That's what I don't know. We've been so careful. But where did the calf sickness come from? Bayne Trevors imported it."

The inference was clear. He stared at her with frowning eyes.

"I don't see how he could have done it without Tripp's getting on to it. He hasn't bought any new hogs."

"But you understand now why I wanted to talk to you? If I win out in the thing I have taken on my shoulders, it is going to be by a close margin. I've thought it all out. We can't slip up in a single deal! But, it's up to you to give me a hand. To find out for yourself such things as where did the cholera come from! And to look out, that the next time they don't burn us out, when the range is dry. To see that nothing happens to your horses. To keep your two eyes wide open. To help me find the man, working with us right now, who is double-crossing us, who turned Shorty loose, who is watching a chance to do his knife act again somewhere else. Do you get me, Bud Lee?"

"I get you," replied Lee.

FROM without, gay voices, calling merrily, interrupted them. Lee went swiftly to the door while Judith finished her coffee and pulled her broad hat a little lower to throw its shadow in her eyes.

"Ahoy, there!" It was Pollock Hampton's voice. "We saw your horses and thought we'd catch you picnicking. Got a fire going, too! Say, that's bully. Come ahead, Marcia."

Marcia, a long riding-habit gathered in one hand, her cheeks flushed with her ride, her eyes bright as they rested upon the tall form in the doorway, came on behind Hampton. As the eyes of the two girls met, a sudden hot flush flooded Judith's cheeks. She hated herself for it; she wondered just how red her eyes were.

"Say, Judith," called Hampton, "I'm glad as the dickens we found you. Sawyer, the sheriff telephoned just now. Said to tell you he'd located Quinnion. The funny part of it is that we made a mistake. It wasn't Quinnion at all that tried to shoot you and Bud up the other night."

"How's that?" demanded Lee. "Who says it wasn't?"

"Sawyer. Found Quinnion at a sheepman's place thirty or forty miles north of here. The sheepman swore Quinnion had been with him two weeks, was with him that night."

"A sheepman can lie," grunted Lee.

Judith's brief moment of confusion passed, she ushered Marcia into the cabin. True to her promise, Miss Langworthy, tho she flashed a quick look toward Lee, did not speak to him. He found himself flushing quite as hotly as Judith had done.

"We've just finished our lunch," Judith was saying. "And we've left you half our coffee."

"I've been simply dying to see this place!" cried Marcia impetuously. "I told Pollock that it was a sure sign he didn't love me any more if he wouldn't bring me. And you and—and one of the men," her eyes on Judith's, "actually were in here, being shot at! Judith, dear, you are just the bravest girl in the world. If I'd been here I'd have simply died. I know I would."

Perhaps she would. At any rate she shuddered delightfully. She found a bullet-hole in the door and put a pink forefinger into it, giving a second little shiver. She managed to keep her back full upon Lee.

"Oh, by the way," said Hampton, busy opening the parcel of lunch they had brought with them, "Marcia's heard all about you, Bud. You said you wanted to meet Lee, Marcia. Well, here he is, tall and handsome in a devilish reckless way, looking at the dimple at the back of your neck. Miss Langworthy, Mr. Lee. Golly, Judith, that coffee smells good!"

"You are a naughty little boy, Pollock," said Miss Langworthy coolly. Nevertheless she turned smiling to Lee and put out her hand to him. "Mr. Hampton really makes quite a hero of you," she said composedly. "I think I have seen you—from a distance, you know."

The small whiteness of her hand was swallowed up in the lean brown of his.

"Hampton's a prevaricator," he said gravely, as he looked down into the merry blue eyes turned up to him. "But he's a gentleman I have to thank for the introduction. I am very happy to know you, Miss Langworthy."

"And now," cried Marcia, slipping her hand out of Lee's and going to a chair near the table, "do tell me all about that terrible, terrible night. But do you think we are quite safe here now, Mr. Lee?"

To herself Judith was saying: "Just the type to be Bud Lee's ideal lady!"

When they left the cabin, an hour later, Judith challenged Hampton to a ride and so left Marcia and Bud Lee to follow leisurely.

MRS. SIMPSON had made a discovery. It was epoch-making! It was tremendous. Nothing short of that! So, at the very least, Mrs. Simpson was prepared to maintain stoutly in the face of possible ridicule.

Tho, as Judith's housekeeper, she had sufficient household duties on her plump shoulders to send a less doughty woman creeping wearily to bed with the chickens, she found time before the dawn and long after nightfall to keep her eye upon that

Black Spanish and his recruit and treacherous ally, Fujioki.

One morning, very early, Mrs. Simpson, from the thick curtains of the living-room, saw Jose "prowling around suspicious-like in the courtyard!" She thrilled at the sight. She always thrilled to Jose. The half-breed had gone silently, "sneaking-like," by Judith's outer door. He had paused there, listening. He had gone back to the courtyard, hesitating, pretending that he was looking at the roses! Such a ruse on the part of so black-hearted a villain inspired in the scarcely breathing Mrs. Simpson a vast disgust. As if he could fool her like that, pottering around among the roses!

She, too, sought to move silently in his wake, tho under her ample weight the veranda creaked audibly. Still, making less noise than usual, she peered thru the lilacs. She saw Jose at the base of the knoll, going swiftly toward the stables. She saw another man who, evidently, was a third of the "gang," and who, of course, had risen early to creep out of the men's bunk-house before the others were awake, to meet Jose. Screening herself behind the lilacs, her heart throbbing as it had not done for many a long year, she watched.

JOSE and the other man did meet. Jose stopped. The two exchanged a few words, too low for Mrs. Simpson to hear at that distance. But she made out that the other man had something in his hand, something white. A pigeon! For, suddenly released, it fluttered out of the man's hands and, circling high above Mrs. Simpson's head, flew to join the other birds cooing on the housetop!

"A carrier-pigeon!" gasped Mrs. Simpson. "Taking a message to the other cutthroats!"

From that instant there was no doubt in her mind. This fitted in too well with her many suspicions not to be the clew she had sought long and unceasingly.

Jose went on, the man from the bunk-house went back to it, and Mrs. Simpson fled to the house and hastened excitedly to Judith's room. Judith, rudely awakened, came hurriedly to her door in her dressing-gown, her eyelids heavy with sleep. When she heard, she laughed.

"You dear old goose!" cried Judith joyously. "I just love you to death. You put fresh interest into life."

Despite Mrs. Simpson's earnest protests, Judith hugged her and pushed her out again, saying that since she was awake now she would want her breakfast just as soon as she could get it. The housekeeper shook her head and retreated heavily.

"You've got to show some folks a man cutting their throats," she muttered to herself, "before they'll believe it. It is a carrier-pigeon and I know it. And that Black Spanish—ugh! He makes my blood curdle, just to look at him!"

"Carrier-pigeons!" laughed Judith, as she began a hurried dressing. "The dear old goosie! And poor old Jose. She'll get something on him yet. I wonder why she—"

Suddenly Judith broke off. She was standing in front of a tall mirror, still only half-dressed. As she looked into the bright face of the smiling girl in the glass, a sudden change came. Pigeons! Doc Tripp had said that Trevors had got them; had remarked on the incongruity of a man like Trevors caring for little cooing birds. It was rather odd. Carrier-pigeons—carrier—

Judith whipped on her dressing-gown again and, slipperless, her warm, bare feet pat-patting upon the cold surfaces of the polished floors, she ran to the office.

"Send Jose to me," she called to Mrs. Simpson. "In the office. I want him immediately."

A warm glow came into Mrs. Simpson's breast. With a big kitchen poker behind her broad back, she hastened out to call Jose. Judith, at the telephone, called for Doc Tripp.

"Come up immediately," she commanded, "prepared to make a test for hog-cholera germs, Doc. No I am not sure of anything but I think I begin to see where it came from and how. Hurry will you?"

To Jose she said abruptly:

"Go down to the men's quarters, Jose. Tell Carson and Lee to come right up." And as Jose turned to go she added carelessly: "Seen any of the men yet?"

"Si, senorita," answered Jose. "Poky Face is up."

"Poker Face? All right, Jose. The others will be about, then."

Jose took little more time for his errand than for his elaborate bow. Carson and Lee came promptly, Carson a score of steps in advance, for Lee had tarried just long enough to wash his face and brush his hair; Carson had not.

"Tell me," demanded Judith, looking at her cattleman with intent eagerness, "what do you know about Poker Face?"

"One of the best men I've got," answered Carson heartily.

"Square, you think?"

"Yes. If I didn't think so he'd have been on his way a long time ago."

"How long has he been here? Who took him on?"

"Trevors hired him. About the same time he hired me."

Bud Lee, entering then, wondered what new thing was afoot. He glanced down and saw a bare foot peeping out from the hem of Judith's heavy red robe; he saw the hair tumbled in a glorious brown confusion over her shoulders. She was amazingly pretty this way.

"I want you two men to just stick around until I send for you again," said Judith, her eyes upon Carson alone, a little pink, naked foot suddenly withdrawn and tucked somewhere under her in her chair. "And keep your eyes on Poker Face. Keep him here, too, Carson. By the way, did any of you boys come in late last night? Or early this morning?"

"Why, no," answered Carson slowly. "An' yes. None of the reg'lar boys, but a man from down the river, looking for a job. Heard we was short-handed. Blew in early. Just got in a few moments ago, Poker Face said."

Quick new interest flew into Judith's eyes.

"Keep him here, too!" she cried. "And I'll give you something to do while you wait; bring me all the pigeons you can get your hands on—white ones. Shoot them if you have to. And be careful you don't rub the dust off their feet."

CARSON'S eyes went swiftly to Bud Lee's. In Carson's mind there was a quick suspicion: The strain of life on the ranch was proving too much for a girl, after all.

Judith, reading his thought, turned up her nose at him and, seeking to keep her feet hidden as she walked by sagging a little at the knees, went to the door. Turning there, she saw in Lee's eyes the hint of a smile, a very approving admiring smile.

"Impudent!" she cried within herself. Looking very tiny, her knees bent so that her robe might sweep the floor, she continued with all possible dignity to the hallway. Once there, she ran for her room, her gown fluttering widely about her. In her room, tho she dressed hurriedly, she still took time for a long and critical examination of two rows of little pink toes.

"Just the same," she said to the flushed Judith in the mirror, "they are very nice feet—Bud Lee, I'd just like to make you squirm one of these days. You're altogether too—too—oh, scat, Judy. What's the matter with you?"

IN LESS than half an hour Doc Tripp, showing every sign of a hurried toilet, rode into the courtyard. He came into the office, bag in hand. Judith, waiting impatiently for him, lost no words in telling him her suspicions. And Doc Tripp, hearing her out, swore softly and fluently, briefly asking her pardon when he had done.

"I'm a jackass," he said fervently. "I always knew I was a fool, but I didn't know that I was an idiot! Why, Judy, those damned pigeons have been sailing all over the ranch, billing and cooing and picking up and toting cholera germs. Any fool can see it now. I might have known something was up when Trevors bought the infernal things. It's as simple as one, two, three. Now this other jasper, pretending to look for a job, brings on some more of them, so that the disease will spread the faster. Let me get my two hands on him, Judith. Lead me to him."

But, instead, she led him to the dozen white pigeons which Carson brought in.

Tripp, all business again, improvised his laboratory, washed the pigeon's feet, made his test, with never another curse to tell of his progress. Judith left him and went into the courtyard, where in a moment, Carson came to her.

"You better tell me what's up," he said sharply. "I know something is. The new guy that just come in is darned hard to keep. Just as quick as I grab a shotgun an' go to shooting pigeons he moseys out to the corrals an' starts saddling his horse."

"Don't let him go!"

Carson smiled a dry, mirthless smile.

"Bud is looking out for him right now," he explained. "Don't you worry none about his going before we say so. But I want to know what the play is."

Judith told him. Carson shook his head.

"Think of that?" he muttered. "Why, a man that would do a trick like that oughtn't to be let live two seconds. Only," and he wrinkled his brows at her, "where does Poker Face come in? We ain't got no call to suspicion he's in on it."

"You watch him, just the same, Carson. We know that somebody here has been working against us. Some one who turned Shorty loose. Maybe it isn't Poker Face, and maybe it is."

"He plays a crib game like a sport an' a gentleman," muttered Carson. "He beat me seven games out'n nine last night!" And, still with that puzzled frown in his eyes, he went to watch Poker Face and the new man. To have one of the men for whom he was responsible suspected hurt old Carson sorely. And Poker Face, the man with whom he delighted to play a game of cards—it was almost as tho Carson himself had come under suspicion.

"You're going to stick around just a little while, stranger," Bud Lee was saying quietly to a shifty-eyed man in the corral. "Just why, I don't know. Orders, you know."

"Orders be darned," snarled the newcomer. "I go where I please and when I please."

He set a foot to his stirrups. A lean, muscular hand fell lightly upon his shoulder and he was jerked back promptly. Lee smiled at him. And the shifty-eyed man, tho he protested sharply, remained where he was.

A thin, saturnine man whose lips never seemed to move, a man with dead-looking eyes into which no light of emotion ever came, watched them expressionlessly from where he stood with Carson. It was Poker Face.

"No," Poker Face answered, to a sharp question from the persistent Carson.

"Sure, are you?"

"Yes."

(To be continued next week)

Still on the Job at Eighty-Four

Belford B. Elwell, Cumberland Co., N. J., a road man for twenty years and a farmer for fifty. He will be eighty-four years old next fall.

Did you ever hear this one?—

A Large Party

Ex-President Taft tells a story on himself of when he was in a small town and there was no train scheduled to stop until the next morning. He telephoned the executive offices somewhat as follows: "Will you please have the express train which is due to go thru this town at 10:20 tonight stop in Hicksville? There is a large party here which will go thru to the end of the road."

Promptly at 10:20 the express pulled up and Mr. Taft was the only one on the platform. The conductor swung off the train, looked hurriedly thru the station, came back to Mr. Taft and wanted to know where the large party was for which the express was stopped. Mr. Taft replied, "Here he is."

Seeing and Hearing

Two negroes were telling about their ability to see and hear. Then one said:

"Does you see dat house ober dar on de horizon?"

"Yes."

"Can you see dat fly walkin' eround on de roof?"

"No, niggah, but I kin hear de shingles crack when he steps on dem."

Sugar-Coated Dope

"What's the result of the examination, doc?"

"You're all run down—my advice is that you lay off golf for a while and get a good long rest at the office."—Life.

Tailor (having measured customer for suit): "And how would you like the pockets, sir?"

MacTavish: "Well—just a wee bit deeficult to get at."

A Beastly Trick

Mrs. Smith (after ten minutes' conversation)—Well, Mrs. Brown, I must be getting along to the plumber. My husband's home with his thumb on a burst pipe, waiting till he comes.

A bootlegger suggests that Americans should boost home trade by buying moonshine instead of imported liquor. Here is a good chance to die for your country.

Letters from Forum Members and Friends

Dear Cousin Ruth and Forum Friends:—I live about ten miles from Gettysburg on a large fruit farm. I like arbutus. There is a field of it not far from home and my two sisters and two neighbor girls and myself went for it one Saturday. We took one umbrella and the neighbor girls took a small one. We got to the arbutus fields and had quite a lot when it started to rain and we had to put the arbutus in our umbrellas so we had to throw it all out and take the umbrellas for ourselves. We got a little bit wet but we had a good time, anyway. I hope we will have as good a time this year again. I am sending some riddles.

We got a new flagpole at our school and are going to have appropriate exercises for raising the flag. —Marian W. Garretson, (X), Adams County, Pa.

Dear Cousin Ruth:—I have been wanting to write to the Forum for ever so long, but I never got so far. Now, at last, my sister has promised to write for me as I have hurt my thumb so badly. I caught it in the cogs of my father's corn fodder cutter. Because of this I am unable to go to school and now I get so lonely I do not know what to do to pass the time.

I raised about 300 chickens this summer but we have sold about 100 by this time. Dad goes to Reading every week and we often dress chickens for market.

ON OUR YARD FENCE
E. Irene Ernst, (X), Berks County, Pa.

I am enclosing a snapshot of myself sitting on a post. My sister took it this summer. While posing for the picture a yellow-jacket buzzed around so we had quite a time till the picture was taken.—E. Irene Ernst, twelve (X), Berks County, Pa.

Dear Cousin Ruth:—I have received your birthday card which you have sent me and I am thanking you for it very much. I am sending you a picture of myself.

I have a little pet calf, it is two weeks old and I call it Bess. I say come Bess, come, and she runs right to me. My sister, Dollie, has a pet calf, too. It is just four days old. My pet calf is red and white, Dollie's is all red. She calls it Queen. It is cold, isn't it? I went to school yesterday and it was very cold. We have had examinations in all books. —Helen Mermon (X), Washington County, Pa.

I'm so sorry your picture wasn't clear enough to use on the page. Haven't you a clearer one that shows that same happy smile?

COUSIN RUTH.

Dear Cousin Ruth and Forum Friends:—In summer I raise little chickens and have a small garden of my own. We have three little fox terrier puppies.

We often take our sleds to school and coast. We got a sled for Christmas. When we take our sled to school we slide down a hill where there is a puddle of water, the boys fall off the sled and fall in the water and get wet.—Janet N. Ritchey, (X), Bedford County, Pa.

Dear Cousin Ruth:—I have a pet dog. Her name is Rose. I am teaching her many tricks and she is very cunning and when I am coming home from school and she sees me coming she comes and runs to meet me.

I have a pet cat. When I get up in the morning to go to school she comes and begs me to give her some bread. I have a cow that gives a gallon of milk at a milking. A railroad runs right past our house.

My little sister likes me so well that every night I have to go to bed with her and if I don't go she will cry until I go.—Evadale Spieker, thirteen (X), Mercer County, Pa.

OUR YOUNG PEOPLE'S FORUM.

Dear Cousin Ruth:—I live on a large farm. I help my father and mother. I milk two, and sometimes three, cows twice a day. I also go to school. I have seven books. I am in the highest grade. I missed a few days of school this last week to help my sister do the barn work while my father is sick.

Cousin Ruth, you should be with us to see our little calf jump us. Nearly every year we raise two calves.

Cousin Ruth, you should be with us when we butchered. We butchered two pigs and a bull. We can go skating around here at the present time.—Lida Moore, thirteen (X), Lancaster County, Pa.

Dear Cousin:—We have three horses. We do not have the electric light. We have a dog named Dick. We have two cats, one is a tom cat, he is a gray cat and the other one is a black one.

We went to the Farm Show at Harrisburg. There we saw all kinds of animals. My father has a car.

My brother Allen and I are trapping and we caught six muskrats, one 'possum, three skunks, one weasel and one groundhog.—Clarence B. Hollinger, (X), Dauphin County, Pa.

Dear Cousin Ruth:—I surely do like to sled. I fall off and hurt myself but I keep it up till I get too cold. I went to my grandpa's house for Christmas dinner. Santa brought me a nice doll and a work basket. I would like to learn to embroider.

I go to Sunday school and the child who goes every Sunday gets a gold star but I will not be the one to get it as I cannot get there so often because of the bad roads.

A COUNTRY LASSIE
Helen Line, (X), Cumberland Co., Pa.

I went with my mother to Philadelphia and we went up on Billy Penn. I enjoyed it but did not like the long elevator ride.—Helen Line, (X), Cumberland County, Pa.

Dear Cousin Ruth:—We have three horses and one mule. The mule is 24 years old. We have 84 chickens. They are doing about fifty per cent. They lay around 18 eggs. My brother and I have three rabbits.

I am very fond of reading. I read almost every book in the house. I like the "Tom Swift" series best.

I often wished we had a radio. We live on a high hill and it would be an excellent place to have a radio set. I would build one if I had the money.

My brother and I go trapping in the winter. We caught some muskrats and skunks. We caught Mr. 'Possum, too. We were at the Farm Show at Harrisburg. We attended the Bible Institute.—Allen Hollinger, twelve (X), Dauphin County, Pa.

CHRISTMAS TREES
Mary J. Thomas, (X), Franklin Co., Pa.

Dear Cousin Ruth:—I guess the other boys and girls are having fun sledding. We boys and girls of Lancaster County have no snow.

We have a dog that is six years old. When he was five months old the train caught him and cut his tail off. His name is Dewey.

If you were here I would play for you on my ukelele, Cousin Ruth.—Mary Hummer, fourteen, Lancaster County, Pa.

Dear Cousin Ruth and Forum Friends:—It is very icy around here. Old people are liable to fall very easily. I cannot go to school part of next week and did not go all this week because I ate too much candy and got sick. Forum friends, do not eat too much candy but keep well and enjoy outdoor sports. Cousin Ruth, do you like sleigh riding? I do. It is my favorite sport in winter.

I live close to woods which I love to roam in. I like to go May-flowering. This spring when trailing arbutus blossoms I'll press some for you if you wish me to do so.—Eva I. Maurer, thirteen (X), Schuylkill County, Pa.

Dear Cousin Ruth and Forum Friends:—I live on a farm with my uncle. One calf belongs to me. She is kind and gentle. She is the oldest of the calves. She was one year old on January 8th. My calf's name is Bessie. She is black and white.

Now I will tell you about my pup that died not very long ago. He was black and white. When he died we dug a grave for him. After we dug a grave for him we got the stone ready, then we made a box. We put some cloth on it and then we put him in the grave and said "Good-bye pup." Then we buried him. For a while we kept putting flowers on him and got tired so then we put more ground on him and put more flowers. — Elizabeth Rosati, (X), Butler County, Pa.

Dear Cousin Ruth and Forum Friends:—One of my dogs gets the cows from pasture. The other two are hunting dogs. We have great fun sledding. I have two sisters, they are smaller than I am. They go sledding, too. I feed our chickens every morning and evening. I love to help my father milk best of all.—Blanche C. Harrison, Carroll County, Md.

OUR LITTLE FOLKS PUZZLE CORNER

DEAR LITTLE FOLKS:—Looks like a foreign language, doesn't it? They say that some languages are something like that mostly consonants. But, by adding other letters to each line in the little square (reading across, of course,) you will have a word in the language you all speak. Then, when you read the words in the order in which I have placed them, you will have another well-known saying. I say "another" because we had one last month but this one is to be worked out quite differently and I think you will have no trouble with it.

To help you, I'll tell you that you will need to add the letter "O" four times; the letter "A" twice, the letter "E" twice and the letter "I" once. Just write out the sentence on a postcard or in a letter, making your answer look as neat as possible, and let me have it by February 26th. BE SURE TO SAY HOW OLD YOU ARE, and please remember to tell me the name of the county where you live and when your birthday comes. The prizes go to the ten children, sending in the correct answer, whose cards or letters are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia.

The answer to the puzzle published in the January 29 issue (the drawing from dot to dot puzzle) is: A BEAR.

The prize winners are: Helen P. Bisline, age 8, Newburg, Pa.; Edna Borneman, age 11, Schwenksville, Pa.; Sheridan Gladhill, age 8, Fairfield, Pa.; Virginia Montgomery, age 9, Alburtis, Pa.; Nick Plesiuski, age 11, McKees Rocks, Pa., Shirley Raeder, age 10, North East, Pa., Lester N. Rodgers, age 8, Christiana, Pa.; Edward Sidehamer, age 5, Mt. Pleasant, Pa.; John Weaverling, age 7, Huntingdon, Pa.; Margaret Welfe, age 9, Lewisburg, Pa.

PASSING EVENTS IN PICTURES

(Copyright by Underwood and Underwood)

1. Mrs. Minnie Miller has gained a reputation as one of the foremost ranchwomen by the prize-winning stock which she raised by scientific methods on a bare, unimproved tract of Idaho land. Mrs. Miller turned to stock raising after she had become a grandmother.
2. "The Kate Adams," the last of the old Mississippi side-wheelers to ply the lower part of the river, burned recently near Memphis, Tennessee. "Kate" was a favorite with the plantation workers along her course.
3. An unusual picture of grass snakes emerging from the eggs, which was taken at the Zoological Gardens in London.
4. The Duke and Duchess of York, who are making a tour of the British dominions on the H. M. S. Renown, arriving at the Yacht Club at Las Palmas, in the Canary Islands.
5. "Queen Titania," the smallest entry in the annual Pekinese Dog Show in New York City is quite comfortable in the prize cup.

Baby's Time Card

AGE ONE YEAR TO EIGHTEEN MONTHS

AFTER the first birthday has been reached and the beautiful first birthday cake enjoyed—by the parents—baby is ready for the grown-up regime of three square meals a day. Now his day goes like this:

7:00 A. M.—Wash and dress. Brush teeth.
7:30—Breakfast: Cooked cereal with milk and a little sugar; toast; coddled or soft-boiled egg; crisp bacon occasionally; boiled whole milk.
8.15—Play.
9:15—Plain cod liver oil, then orange juice or tomato juice.
9:30—Bath.
10:00—Out of doors till dinner. Sun bath and long nap in sun.
12:00 noon—Dinner: Fresh green vegetable; baked potato or rice or plain boiled macaroni; simple pudding; boiled whole milk.
1:30—Out of doors as long as season permits, in sun except on very hot days. Short nap if needed.
3:30—Boiled whole milk. Play.
5:00—Undress for night. Wash.
5:15—Plain cod liver oil, then orange juice or tomato juice.
5.30—Supper: Cooked cereal or rice; milk-vegetable soup or boiled whole milk; toast; stewed fruit. Brush teeth.
6.00—Bed, lights out, windows open.

If you would like a complete set of "Baby's Time Cards" from infancy to 2 years of age in chart form, write to the Children's Bureau, U. S. Department of Labor, Washington, D. C., and ask for Chart 14.

"Safety First" Kit

EVERY mother needs a few handy articles when she is called upon to help bring comfort to someone with a bad bruise or sprain, a sting or burn, or any other of the many accidental wounds that are liable to bob up at the least unexpected moment.

Plan to keep within easy access a box containing adhesive tape, several rolls of bandages of varying widths, sterile gauze or old linens sterilized, absorbent cotton, a good healing salve, a relief ointment for burns, a pair of scissors, a bottle of iodine and a bottle of boracic acid solution.

It is well in addition to the above essentials to keep with this kit odd pieces of flannel, soft and old to use for hot compresses. With such equipment you are able quickly to administer to any one in distress.

TO RELIEVE BURNS:—Use a three per cent mixture of bicarbonate of soda in vaseline. After any burn from heat or acid apply this mixture to gauze and lay on the burns. Keep in place with gauze bandaging.

FOR BRUISES AND BUMPS:—Apply hot and cold compresses using each in succession. After this treatment for an hour dress the wound with a permanent compress of witch hazel.

FOR INJURY TO THE EYES—Until a doctor can be found to care for the case, the eye may be safely bathed in a four per cent solution of boracic acid in water.

FOR OPEN CUTS AND WOUNDS:—Iodine is useful here. Use a three per cent alcoholic solution for dropping into the cut, and paint around a wound with a seven per cent alcoholic solution.

FOR NOSE BLEED:—Place the patient in an erect position with head back. Place cold compresses on the nose and on the back of the neck. Roll up small plugs of cotton, dip them in a weak solution of salt and vinegar and place up in the nostril openings.

To Remove Stains

THE removal of most stains is not difficult if we know what to use and keep it handy. A shelf in the laundry, or near where such work is done, is a great boon to the housewife, and this reference sheet may be useful hanging nearby.

FRUIT AND GRASS STAINS—On white or fast color goods, boiling water will usually remove all trace of stain if used at once. If the stain has dried and set, strong ammonia, followed by boiling water, is best. Lemon juice and oxalic acid help sometimes with most stubborn stains. Dissolve oxalic acid crystals in as much water as needed, using as much acid as the water will take. Lukewarm water is best.

Delicate fabrics which might be ruined with the above treatment can be safely handled with wood alcohol or denatured alcohol.

GREASE SPOTS—Alcohol, ether, chloroform, or gasoline will do the work. First brush out all possible dust. Apply the solvent you choose from the above list, and blot it away with absorbent cotton or blotters as it dissolves. Pat it clean with fresh cloths.

INK SPOTS—Acids such as lemon juice, sour milk or cream of tartar, or the oxalic acid solution described under grass stains, will do the work. Use a sprinkling of salt and apply the solution. Lay the garment in the sun, and repeat the applications until the spots disappear. Rinse out thoroly in warm water.

IODINE STAIN, and nearly all stains resulting from medicine, will yield to boiling water containing a little ammonia. If stubborn try Javelle Water. To make this, put one pound washing soda in an agate pan and add one quart boiling water. Dissolve one-half pound chloride of lime in two quarts cold water. Let settle thoroly, then pour all of the clear solution into the dissolved soda. Keep tightly corked and better use a colored bottle for storage as the strength is affected by light. Follow dampening with Javelle water with liberal use of boiling water.

MILDEW if fresh can be removed by using sour milk or lemon juice. Sponge the stains with either and place in the sunshine to bleach out. More than one application may be necessary. If the stains are old, Javelle Water will remove them from cottons, but should silks or woolens need rigid treatment, use a solution of potassium permanganate, washing the colored solution away with oxalic acid solution described under grass stains.

PAINTS—Apply chloroform, benzine, gasoline, kerosene or turpentine. Place blotting papers under the spots and apply in drops any of the above-named remedies. It is wise to scrape away all that is possible if the paint is thick.

PERSPIRATION—These stains will disappear entirely in the general wash if moistened with lemon juice before being placed in soapy water.

PEACH STAINS vary with the variety of fruit but even the meanest ones will yield to camphor treatment if they are noticed while the juice is fresh. Dampen the spots well, then wash with soap and water.

RUST SPOTS can be removed by using weak acids. Refer to treatment for INK and follow the same instructions.

TAR and similar stains from such HEAVY OILS or CREOSOTE are removed by first softening the stain with lard or butter. Then apply turpentine on heavy materials or chloroform for dainty clothing.

Food for Mothers

EXPECTANT mothers need the best of food to maintain their own health, furnish necessary materials for a healthy baby, and later to enable them to nurse the babies. For these reasons they should eat each day the five classes of foods listed here:

1. **Milk** is the most vital, and a quart a day is needed. It may be made into soups or desserts, and several glasses a day provide splendid between-meal nourishment.

2. **Whole grain cereals and whole wheat,** graham and bran breads are best. Toast is wisely used twice a day for the preservation of teeth and gums.

3. **Fruits** are very necessary and should be eaten twice daily. Use fresh fruits if possible, otherwise substitute canned and dried varieties.

4. **Vegetables** are most important. Eat every kind that you can easily digest. The green leafy vegetables, such as spinach, beet and turnip tops, Swiss chard and cabbage, ought to be eaten once daily. A raw vegetable daily, also: lettuce, cold cabbage slaw, celery, tomatoes and carrots fall in this class.

5. **Meats and fats** should be eaten under the guidance of the attending physician. It is safe to eat butter, at least in moderation.

Dr. McCollum, the great expert on foods and health, tell us in his new book, "Food, Nutrition and Health," to eat less of the refined foods and more milk and leafy vegetables.

Time-Table for Canning Fruits

THE times given for processing in boiling water apply only to places with altitudes of 1000 feet or less. For all altitudes above 1000 feet the time should be increased 20 per cent for each additional 1000 feet.

When half-gallon glass jars are used, add 5 minutes to times given for pint and quart glass jars. —Table prepared by U. S. Department of Agriculture, Bureau of Home Economics.

Product	Method of treatment before processing	Processing period in boiling water	
		Pint and quart glass jars.	No. 2 and No. 3 tin cans.
Apples	Slice, quarter, or halve, then pack in containers and cover with boiling sirup.	15 minutes	10 minutes
	Or boil whole in sirup, or bake as for serving, and cover with sirup, and pack hot.	5 minutes	5 minutes
	Or pack hot in form of apple sauce	5 minutes	5 minutes
Blackberries Blueberries Dewberries Huckleberries Logan blackberries Raspberries	Pack in containers. Fill with boiling hot, medium sirup.	20 minutes	15 minutes
	Or precook and pack hot	5 minutes	5 minutes
Cherries	Pack in containers, cover with boiling sirup, using thick sirup for sour cherries, and medium for sweet.	25 minutes	20 minutes
	Or remove pits, add sugar as desired, bring to boil and pack.	5 minutes	5 minutes
Currants	Same as berries.		
Gooseberries	Pack in containers. Fill with boiling hot, thick sirup.	20 minutes	15 minutes
	Or prepare sauce, using sugar as desired. Fill hot.	5 minutes	5 minutes
Peaches	Scald, dip into cold water, and peel. Cut into size desired, removing pits. Fill containers, then add sirup of desired consistency, in which one cracked peach pit for every quart of sirup has been boiled.	20 minutes for ripe fruit. 25 minutes for firm fruit.	16 minutes
Pears	Pare and cook for 4 to 8 minutes in boiling medium sirup. Pack hot in containers and fill with the boiling sirup.	20 minutes	20 minutes
Pineapples	Peel, core, remove eyes. Cut into convenient cross sections. Pack in containers. Fill with boiling thin sirup.	30 minutes	25 minutes
Plums	Prick. Fill in containers. Cover with boiling medium sirup.	20 minutes	15 minutes
	Or bring to boil, using sugar as desired. Fill hot into containers.	5 minutes	5 minutes
Rhubarb	Cut in half-inch lengths. Add one-fourth as much sugar as rhubarb by measure. Bake until tender in covered baking dish. Pack in hot containers.	5 minutes	5 minutes
	Or pack uncooked with boiling sirup	20 minutes	15 minutes
Strawberries	To each quart add 1 cup of sugar and 2 tablespoons of water. Boil slowly for 15 minutes. Let stand overnight in the kettle. Reheat to boiling. Fill containers hot.	5 minutes	5 minutes
Tomatoes	Scald and peel. Pack whole or cut in pieces. Cover with hot tomato juice. Add 1 teaspoon salt to each quart.	45 minutes	35 minutes
Pickled beets	Precook, peel, and slice in containers. Cover with mixture of vinegar and sugar, boiling hot.	30 minutes	30 minutes
Pimientos	Heat in hot fat or oven to loosen peel. Peel and pack in small containers. Add one-half teaspoon salt to each pint.	40 minutes pint glass jars.	30 minutes No. 1 or No. 0 tins.

Family Health Chart

1. Brush your teeth every day.
2. Eat fruit every day.
3. Drink plenty of fresh water daily—at least four glasses.
4. Eat two vegetables other than potatoes each day.
5. Use four or more glasses of milk every day.
6. Bathe several times each week—each day if possible.
7. Sleep with your windows open.
8. Play a little every day—out-of-doors.

Mince Meat

- 4½ lbs. lean beef boiled tender and cooled in its own liquor
- 4 cups good apples chopped fine
- 2 cups seeded raisins picked apart
- 2 cups currants thoroly cleaned and washed
- 1 cup chopped citron
- 1 cup beef suet chopped fine
- 2 teaspoons salt
- 2 cups sugar
- 1 tablespoon each ground cloves, cinnamon and nutmeg
- 1 cup strong coffee
- 1 cup meat stock

Cut the cold beef into small pieces and add to it the other ingredients. Simmer for one hour, stirring occasionally. Then seal in sterilized jars. These measurements make five pint jars.

Apple Jelly Table

CORNELL UNIVERSITY offers the following helpful table to folks who make apple jelly. In a series of experiments conducted in their kitchens it was found that five pounds each of the apples specified, with three extractions of juice, yielded sufficient jelly to fill the number of five-ounce jelly glasses here indicated.

Variety of apple.	Number of glasses
Rhode Island Greening	[illegible]
Esopus (Spitzenburg)	[illegible]
Baldwin	[illegible]
Strawberry	[illegible]
Red Astrachan	[illegible]
Tompkins King	[illegible]
Oldenbury (Duchess)	[illegible]
Northern Spy	[illegible]
Fall Pippin	[illegible]
McIntosh	[illegible]
Ben Davis	[illegible]

Kitchen Equivalents

HOW often we who are cooking or canning have wondered just how much by weight would equal a certain amount by measure. Keep this reliable table and you will know.

3 teaspoons = 1 tablespoon.
4 tablespoons = ¼ cup.
2 cups = 1 pint.
4 cups flour = 1 pound.
3 cups cornmeal = 1 pound.
2 cups rice = 1 pound.
2 cups granulated sugar = 1 pound.
2 2-3 cups brown sugar = 1 pound.
2⅔ cups powdered sugar = 1 pound.
3½ cups confectioner's sugar = 1 pound.
2 cups chopped suet or chopped meat = 1 pound.
2 cups butter or lard = 1 pound.
3 cups raisins = 1 pound.

Measurements that are reliable are always level. This table has been arranged strictly on level measure. Teaspoonfuls are measured and leveled off with a knife. Cups vary in size and it is wise to use a measuring cup for all cooking.

Ivy Poison Remedies

THORO washing soon after exposure to poison ivy reduces the danger of injury, says the United States Department of Agriculture. The poison usually requires some time to penetrate into the tender layers of the skin, and until such penetration has taken place much or all of it can be removed.

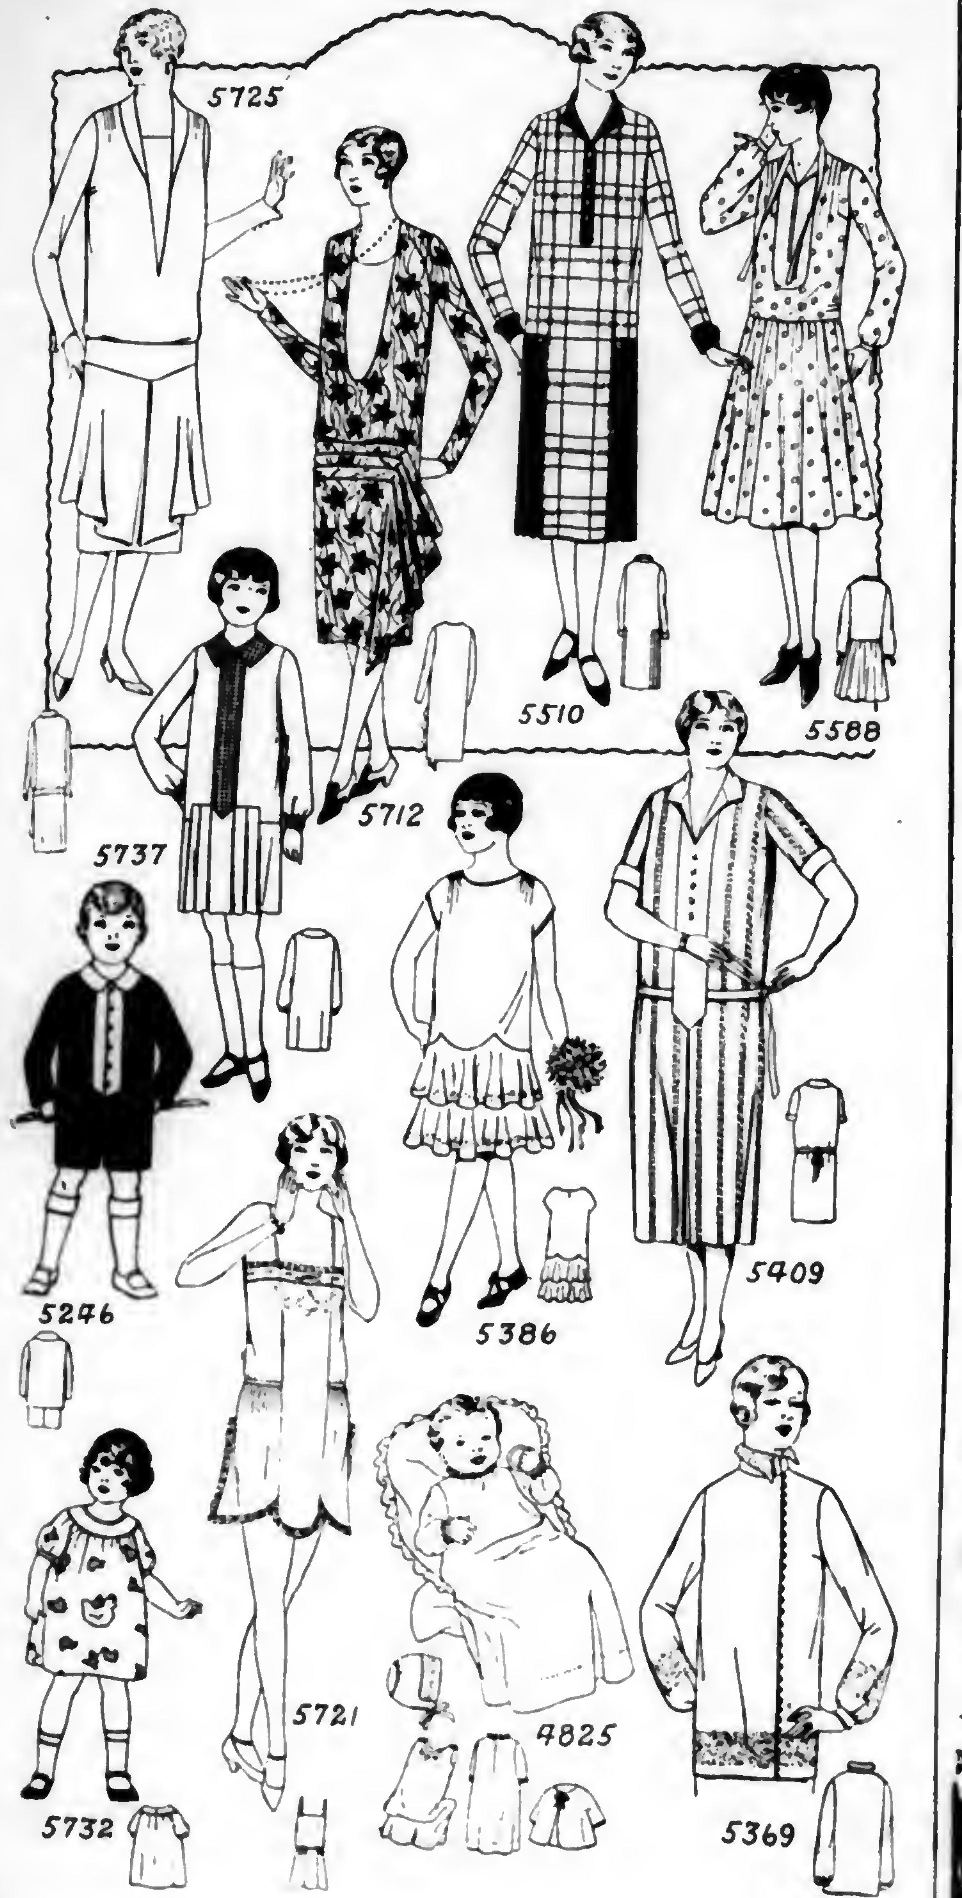
Make a thick lather and wash several times, with thoro rinsing and frequent changes of hot water, using ordinary alkaline kitchen soap. Running water is preferable for this purpose. If a basin is used, the water should be changed frequently.

A simple poison ivy lotion recommended after extensive investigations by Dr. J. B. McNair, of the University of Chicago, is composed of a 5 per cent solution of ferric chloride in 50 per cent alcohol or in a 50-50 glycerine water mixture. This is harmless to the skin and is not at all irritating. If the skin is rubbed with this mixture before going into the woods or after coming in contact with ivy, it is said to neutralize the ivy poison so thoroly that no skin irritation follows.

Another iron lotion that is quite effective is a rather strong solution of iron sulphide in water. This keeps well.

Spring Is Just Round the Corner

And Everybody Wants Something New in Readiness



Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5725.—With a Flare.—Nine sizes: 38, 40, 42, 44, 46, 48, 50, 52 and 54 inches bust measure. A 42-inch size requires 5⅛ yards of 40-inch material. Price 10c.

5712.—For Dress-up Occasions.—Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 4 yards of 40-inch material with ¼ yard of contrasting material. Price 10c.

5510—A Practical Style.—Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 2 yards of plaid and 1⅞ yard of the plain material 54 inches wide, if made as illustrated in the large view. Price 10c.

5588.—Junior or Miss.—Four sizes: 14, 16, 18 and 20 years. A 16-year size requires 3⅝ yards of 40-inch material with ½ yard of contrasting material. Price 10c.

5246.—Boy's Suit.—Three sizes: 2, 4 and 6 years. A 4-year size requires 1⅛ yard of 40-inch material with ¼ yard of contrasting for collar and vest portions. Price 10c.

5737.—School Dress.—Four sizes: 6, 8, 10 and 12 years. A 10-year size requires 2½ yards of plain material with ½ yard of contrasting material 36 inches wide. Price 10c.

5386.—When There's a Party.—Four sizes: 6, 8, 10 and 12 years. A 10-year size requires 3 yards of 40-inch material. Price 10c.

5409.—Every Day and All Day.—Nine sizes: 38, 40, 42, 44, 46, 48, 50, 52 and 54 inches bust measure. A 42-inch size, as illustrated, will require 1 yard of plain material and 4⅛ yards of striped material 32 inches wide. Price 10c.

5732.—Dainty Frock.—Five sizes: 1, 2, 3, 4 and 5 years. A 2-year size requires 1⅛ yard of 27-inch material with ⅜ yard of contrasting material 14 inches wide for facing on sleeve bands and yoke. Price 10c.

5721.—Ladies' Undergarment.—Four sizes: Small, 34-36; medium, 38-40; large, 42-44, and extra large, 46-48 inches bust measure. A medium size requires 1⅞ yard of 36-inch material. Price 10c.

4825.—Infant's Set.—One size. The dress will require 1½ yard. The petticoat 1⅛ yard. The sack ¾ yard and the bonnet ⅜ yard of 42- or 36-inch material. Price 10c.

5369.—Ladies' Blouse.—Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 2½ yards of 32-inch material. Price 10c.

Beef and Pork Recipes

If Kept Handy They'll Save Time for Busy Butchers

SWEET PICKLE OR BRINE-CURED PORK

For each 100 pounds of meat use:

9 pounds salt
2½ pounds sugar or 4 pounds molasses or sirup
2 ounces saltpeter
4½ gallons water

If the weather is warm 10 pounds of salt is preferable.

Allow four days for curing each pound of ham or shoulder and three days for each pound of bacon and smaller pieces. For example, a 15-pound ham will take 60 days; a piece of bacon weighing 10 pounds, 30 days.

All the ingredients are placed in the water and thoroly stirred. The brine mixture should be prepared the day before it is to be used, so that it will be completely dissolved. Place the hams on the bottom of the container, shoulders next, bacon sides and small cuts on top. Cover with boards weighted down with stones or bricks, as iron rusts and stains the meat. Pour the pickle in and be sure that it covers the meat thoroly. In seven days take out all the meat, remove the pickle, replace the meat in container, weight it down, then cover again with the pickle. Repeat this process every seven days until cure is completed.

If the pickle becomes ropy, take out all the meat and wash it and the container thoroly. Boil the ropy pickle, or, better, make new pickle. When each piece of meat has received the proper cure, remove it from the pickle and wash in lukewarm water. String it and hang it in the smoke house. The temperature of the smoke house should not exceed 120 degrees F. Smoke the meat until it has a good chestnut color.

PICKLED PIGS' FEET

The feet may be used for pickled pigs' feet or pig's-foot jelly.

In preparing pickled pigs' feet, place them in salt pickle for several days. Then boil them for a varying length of time, depending upon the size of the feet, taking care to remove them from the kettle before the separation of the meat from the bones. Split the feet lengthwise, place them in a jar or other receptacle, and cover with vinegar to which bay leaves, allspice, and whole black pepper have been added.

Pig's-foot jelly is prepared by curing the feet for several days in salt pickle, after which they should be boiled until the meat separates from the bone. Add vinegar, allspice and pepper and pack into molds.

PURE PORK SAUSAGE

65 lbs. fresh lean meat
35 lbs. fat
1¾ lbs. salt
2 ounces fine sage
1 ounce ground nutmeg
4 ounces black pepper

Cut the meat into small pieces, mix and add the spices, and then put thru the grinder, using the small plate. After it is well ground, mix thoroly to be sure that it is uniformly seasoned. No water should be added if the sausage is to be stored away in bulk. If it is to be stuffed in casings a little water may be necessary to soften the meat so that it will slip easily into the casings.

HEAD CHEESE

The head is frequently used for making head cheese. The head should be shaved clean, the snout skinned and nostrils cut off in front of the eyes. Cut out the eyes and ear drums. The fattest part should be used for lard. When the head is cleaned, soak it in water for some time to extract the blood and dirt. After the head is thoroly cleaned cover it with water and boil until the meat separates from the bones. Tongues may be cooked with the head. When thoroly cooked take out the meat, saving the liquor for future use. Chop the meat up fine. Season with the following for every 50 pounds of meat:

2 gallons of the liquor
1½ lb. salt
3 ounces black pepper
1 ounce red pepper
4 ounces ground cloves

All should be mixed thoroly so that the proper seasoning is obtained. If casings are available, stuff the mixture into large beef casings. A hog stomach, after it is thoroly cleaned, may be used. If the meat is stuffed into casings it should be boiled again in the same liquor in which the meat was boiled. The meat in the casings should be boiled until it floats, then placed in cold water for a short time. Store it away in a clean, cool place on a shelf or table. Place a board over the meat in the casings with a weight on top in order to hold the shape and to prevent the moisture from collecting in one spot. If there are no casings available in which to stuff the meat it should be kept in shallow pans.

LIVER PUDDING

All the odds and ends of trimmings not used for sausage, resulting from cutting up the hog carcass, may be used in making liver pudding. The head, if used, should be cleaned as previously described under "Head Cheese." The jowl should be cut off and salted down. The head, liver cut into slices and some beef or veal, if any is at hand, should be put into a kettle and boiled. The skin which has been cut from the fat also can be boiled with this meat. They will cook more quickly than the meat, so that it should be put into a cloth sack and removed when thoroly cooked. Livers also cook in a very short time and should be removed. The meat should be cooked until it falls from the bones. All the meat except the skin and liver should be ground, using the smaller grinding plate. To 40 pounds of meat add about 1 gallon soup (the broth the meat was cooked in) and the following seasoning:

1½ lbs. salt
3 ounces marjoram
1 ounce allspice
1 ounce black pepper
Garlic or onion, if desired

The seasoning should be worked into the meat. This finished product can be put into jars covered with paraffin or stuffed into beef rounds. When stuffed into casings it should be cooked until it floats in the same water in which the meat was cooked. Then place in cold water until it is thoroly cooled.

PICKLED TONGUE

Clean tongue thoroly by scraping, soaking and repeated rinsing. Soak in brine. Leave in brine two or three weeks according to size. Then cover with hot spiced vinegar.

CORNED BEEF

Any piece of beef can be used for corning, but the cheaper cuts are the parts generally used for this purpose. The plate, rump, and parts of the chuck are generally used, altho the ribs, loin, and round may also be used. The pieces for corning should be cut into pieces of convenient size, say four or five inches square. If they are cut much larger, they will not cure very well as the pickle will not work in soon enough. They should be cut as nearly the same size as is possible so they will pack in even layers in the barrel or jar.

Then as the meat is thoroly cooled, it should be corned as quickly as possible. Weigh the meat and allow 10 pounds of salt for each 100 pounds of meat. Sprinkle a layer of salt a half inch deep over the bottom of the jar in which the meat is to be placed. Rub each piece of meat with good clean salt. Pack each layer of meat closely in the bottom of the jar, and sprinkle a layer of salt one-fourth to one-half inch deep on each layer of meat before the following layer of meat is placed in the jar, and cover the top layer of meat with a good layer of salt. After it has stood over night, cover with a brine made as follows; for each 100 pounds of meat use:

6 ounces baking soda
4 pounds sugar
3 ounces saltpeter

Dissolve in a gallon of water that has been boiled and cooled until it is tepid. Three gallons more of boiled, tepid water should then be added. Meat from fat animals makes choicer corned beef than that from poor animals. Under no circumstances should meat be corned while it is frozen.

DRIED BEEF

The round and shoulders are the parts most commonly used for dried beef. The pieces should be cut with the grain, so that the muscle fibers will be cut crosswise when the dried beef is sliced for table use. It should be cut in about the

Fish	...	90 "
Fruits:—		
Pears (hard)	...	15 "
Pineapples	...	45 "

same sizes as for corned beef and packed in vessels in the same manner. The pickle should be made as follows: for each 100 pounds of meat weigh out:

6 pounds table salt
3 pounds granulated sugar
2 ounces saltpeter

Mix these ingredients thoroly. Before the meat is placed in the jar, each piece should be well rubbed with the spice mixture. Dissolve the remainder of the spices in 4 gallons of boiled water that has been allowed to cool. Pour this pickle solution over the meat in the jar until it is completely covered. Weight the meat down, as in the case with corned beef. The pickle solution should be watched and, in the case of tendency to become ropy, should be handled as in corning beef.

After 10 days, the meat should be removed from the pickle and hung up in an airy out-house to drip and dry. When dry, which should be in about 24 hours, it can be smoked, as in the case of smoking ham. The drier the climate, the more easily can the meat be dried and smoked.

SCRAPPLE

Both head and feet of hogs are generally used in making scrapple but it can also be made from any other hog meat. Clean and dress the head and feet. Put them in a vessel with water to cover and cook until the meat separates from the bones. Drain off the broth, pick out the bones and chop the meat very fine. Then put it back into the broth and [illegible]ing corn meal until the mixture is as thick as mush. Put the [illegible] and stir vigorously to avoid lumps. When the mixture is smooth boil it one hour and pour it into shallow pans or molds. When cold it can be sliced and fried.

SMOKED OR COUNTRY SAUSAGE

65 pounds lean pork
35 pounds beef
1½ or 2 lbs. salt
4 ounces black pepper
1 ounce red pepper
1 ounce sweet marjoram
1 ounce [illegible]

Cut the meat into small pieces and sprinkle seasoning over it, then run it thru the grinder, using the small plate. Put it away in a cool place for from 24 to 36 hours, then add a little water and stuff into hog casings and smoke in a very cool smoke until a dark-mahogany color is obtained.

FRANKFURT OR VIENNA SAUSAGE

70 lbs. beef
30 lbs. pork (not too lean)
20 lbs. water
1½ or 2 lbs. salt
2 ounces nutmeg
¼ ounce black pepper
1 or 2 ounces of red pepper

Cut the beef into small pieces, salt it and allow it to cure for 48 hours in a cool place. Cut the pork into small pieces and put the beef and pork thru the grinder together. Put into a container and add the water and spices. After it is all mixed put it thru the grinder again using the fine plate. Stuff into sheep casings. After the sausage is stuffed into the casings by means of the thumb and forefinger, press the casing together at about 4 inch intervals. Twist the first link two or three times. The next link made should be twisted in the opposite direction to keep the casing from untwisting. After it is twisted into links hang it in the smokehouse for about 2 hours at a temperature not to exceed 125 degrees F. After it is smoked boil it for 5 or 10 minutes; then plunge it into cold water and hang it in a cool place.

BOLOGNA-STYLE SAUSAGE

60 lbs. cured beef
40 lbs. pork
20 pounds water
1½ or 2 lbs. salt
2 ounces [illegible]
1 ounce coriander
4 ounces black pepper

Grind the beef and let it cure for 24 hours in a cool place, then grind it very fine. Put the pork thru the grinder, using the medium plate. Then put the beef and pork together into a container and add the spices and water. Mix thoroly until it takes on a dull color and becomes sticky. Stuff into weasands, large beef casings, or in beef rounds. This sausage can also be stuffed into muslin bags and paraffined. It will keep perfectly prepared in this way. Allow it to hang about 20 minutes in a cool place. Smoke for about 2 hours or until a good color is obtained at a temperature not to exceed 110 degrees F. After the bologna is smoked it should be cooked, the weasands and rounds about 30 minutes and the larger bolognas about 1½ hours at a temperature of 160 degrees F. To tell when bologna is cooked enough squeeze it in the hand and if done it will squeak when the pressure is released. Place in cold water for about 30 minutes and then hang it up in a cool place to keep.

BLOOD SAUSAGE

25 lbs. cured back fat or shoulder fat
7 lbs. cured fat skins
8 lbs. blood
½ lb. onions
1 lb. salt
½ ounce white pepper
1 ounce sweet marjoram
¼ ounce cloves

Cook the fat, which has been dry-cured or sweet-pickled, for about 1 hour and the skins 2 hours at a temperature of 200 degrees F. When cooked, put thru grinder, using small or medium plate. Put into container, add blood and seasoning and mix thoroly. Stuff into large beef casings and boil, in the same water that the meat was cooked in, until the sausage floats. Dip the sausage into cold water and hang away to cool.

How Savings from Co-operative Purchasing Reduce Your Shopping Expenses

NOT far from your home one of 773 J. C. Penney Company Department Stores offers you the identical advantages of personally selecting your family needs that formerly applied only to more conveniently located city women.

Whether you seek newest styles in clothing, shoes, millinery or whether you wish sturdy, practical furnishings for workaday hours—you will find everything you require at this modern store.

At your J. C. Penney Company Store you can SHOP before you buy! Here you can scrutinize Quality, Style and Fit. Here you can examine Texture and those important little things which constitute Value.

And equally important are low prices! Remember, your J. C. Penney Company Department Store is one of 773 similar establishments which are solving the shopping problems of farm families all over the country.

Huge savings effected through Co-operative Buying are reflected in every item and make your shopping dollar spread further than ever before.

"I Save 3 to 5 Gallons of Gas a Day," says Mr. Robby

Mr. Paul Robby, Lakefield, Minn., installed a Pickering Governor on his 15-30 McCormick-Deering Tractor. Listen to what he says:

"Received your letter of Nov. 3d where you wanted to know how I was coming on with your Governor on my 15-30 'McCormick-Deering' Tractor.

"I received the Governor Sept. 30th, put it on Oct. 1st, and threshed about 25 days with it. Also used Tractor on corn picking and corn shelling yesterday and today.

"I can truthfully say it never failed to work or do all you claim for it. I have watched the Tractor on even and uneven loads AND THE MOTOR WORKED PERFECT. I SAVE THREE TO FIVE GALLONS OF FUEL A DAY AND NOT WORK MY MOTOR AS HARD AS WITH THE OLD GOVERNOR ON THE SAME LOAD. I WOULDN'T TAKE IT OFF FOR TWICE THE PRICE, AS THIS TRACTOR WORKS TWICE AS GOOD. THE MANUFACTURERS SHOULD INCLUDE YOUR GOVERNOR AT FACTORY."

Pickering Governors are made for every standard tractor. Send coupon for free pamphlet 8-C which tells about the Pickering Governor for your make of tractor.

Eastern States Farmers' Exchange

Here—Chick, Chick

In a few weeks now the husky, healthy chicks you placed on range will be running to meet you when you approach with the daily rations. How many of the chicks you start under the hover in the brooder house will be alive to come running—will be vigorous chicks at 6 weeks of age?

That will depend very largely upon what you feed the fluffy, peeping balls from the first. Although diseased stock is doomed to high mortality no matter what you feed it, healthy stock is also doomed to high mortality unless you feed it right. By using only feed and grain of unquestioned quality, you reduce to a minimum the mortality among healthy well-housed chicks. By securing all your feed through the Eastern States Farmers' Exchange you are assured a constant supply of such feed.

One of our members who has plenty of home-grown corn is feeding his corn to hogs and is buying his corn for his chicks and hens in Eastern States poultry rations. Why? Because he knows that his home-grown corn is running extremely high in moisture and that the Eastern States Farmers' Exchange is using only old crop No. 2 corn of the highest quality obtainable in the Scratches for chicks and hens and also in the Mashes for chicks and hens.

The Eastern States Farmers' Exchange, being owned solely by the farmers it serves, seeks profits for those farmers in the form of maximum efficiency of supplies delivered them. To the poultryman at this time of the year the all-important question is that of quality. The Eastern States Farmers' Exchange is taking care of this question by delivering to him ingredients of unquestioned quality blended in accordance with the recommendations of the poultry authorities.

For laying hens Eastern States Scratch Grains and Eastern States Egg Mash, and for young chicks from the start the Eastern States Growing Mash and Eastern States Chicks Grains.

Where records are kept Eastern States Feeds prove their worth.

For information on the Eastern States feed service—a cooperative feed service which should not be confused with car door service offered by private manufacturers through dealers or groups of farmers—write the office.

Eastern States Farmers' Exchange
A non-stock, non-profit organization, owned and controlled by the farmers it serves.

Salt Pork

MY FATHER was a butcher—an olden-time butcher—one who preserved his own meats, and his nephews, who now conduct the business, use his methods and recipes with that same unfailing success. Here are his salt pork secrets

In salting down pork to keep, remove carefully every bone. Even one bone, however small, may cause the brine to sour. Rub the well-cleaned containers all over the inside with salt. (He used barrels.) Put a layer of salt one inch deep in the barrel bottom. Rub each piece of pork thoroly with salt, then pack in the barrel as solidly as possible. When one layer has been arranged, add a layer of salt an inch deep and fill all cavities with salt. Continue alternating rubbed pork and salt until all are well packed.

If cool weather favors you let alone for three or four days, but if warm, make the brine next day. Boil water in large kettles and when at boiling point, start adding salt and stir and add until the water can dissolve no more. Do not let it scorch. Keep it boiling for another half hour, then cool. When very cold, pour it over the salted pork. Have the meat well weighted down before adding the brine. Freshen in cold water about 24 hours before using.

In my own home I use these methods and can go to the store room for salt pork all the year round. Be sure to use clean, dry stones for the weighting.—Clarice Raymond, N. Y.

Souse

Souse, to be extra delicious, should be made of meat half lean, so I often add lean pork. Some folks cut the feet with lean above the knee.

4 pig's feet	1 teaspoon celery salt
1 head	1½ tablespoon salt
2 ears	1 gallon water
1 pound lean pork	½ teaspoon white pepper
1 cup average strength vinegar	

With a hatchet chop off the nails and discard. Scald the feet and ears. Then scrape with knife or scraper until clean. Put feet, head and ears in large kettle and cover entirely with water. Let come to a boil, then simmer gently until they are very tender. After the first hour of cooking add the lean pork. Continue cooking till lean is tender. Remove from fire and let cool until you can handle. Keep it warm as possible, however. Take out the bones and remove the skin. Grind meat, using medium blade. Mix well with the other ingredients and add the liquor in which all was cooked. If boiled down add water to make 2½ quarts of liquid. Pour into pans, dishes or bowls where it may remain. This jelly keeps indefinitely in a cool place and is delicious. It is ready for use as soon as set. Cut in slices to serve with any dinner or supper Arrange on greens for salad. If cut thin it provides an excellent sandwich filling.—Betsey Ford, Md.

Published by the American Child Health Association.

Bed Bugs.—A good insect powder is effective. One can perhaps more easily get into crevices with a liquid. Using a spray of oil of lavender does the work. To spray with turpentine one day and kerosene the following day will kill all bugs and eggs, too.

Carpet Pests.—If a mixture of equal parts table salt and sulphur is sprinkled along the edges of rugs and carpets, these bugs will flee.

Moths.—Cleanliness plays a tremendous part in the work of moths. They eat many woolens and furs because of the dirty bites to be obtained. Put away only clean garments using moth balls, camphor or chloroform and you need have no fear.

Roaches.—Avoid having wet mops or damp rags about. If Mrs. Roach is already there, fight her with hot soapy water—then sprinkle borax about liberally.

Free College Course

A COLLEGE course is yours if you will but follow it up. You may have a fine correspondence course in Home Economics or in Agriculture. Four courses are devoted to Economics—namely, Canning and Preserving, Garment Making, House Furnishing, and Principles of Cookery. In Agriculture, women would be interested in Home Floriculture, Home Vegetable Gardening, The Study of Milk and many other courses. There is no charge for enrolment or instruction. All lessons are FREE, and students have no expense except for stationery and stamps used in sending in reports to the college. A marvelous opportunity! Write to Thomas I. Mairs, Director Correspondence Courses, State College, Pa.

Two or three weeks later.	†Oriental Peach Moth Curculio Scab Brown Rot	† Nicotine sulphate, 1 pint. Arsenate of lead powder, 2 lbs. Self boiled lime-sulphur.
Two weeks later.	†Oriental Peach Moth	† Nicotine sulphate, 1 pint; naphtha laundry soap, 4 lbs., or self-boiled lime-sulphur.
Four or five weeks before fruit ripens.	†Oriental Peach Moth Brown Rot	† Nicotine sulphate, 1 pint. Self-boiled lime-sulphur.
11 weeks after calyx drop—For late varieties.	†Oriental Peach Moth	† Nicotine sulphate, 1 pint, naphtha laundry soap, 4 lbs.

† Do not spray for Oriental peach moth except in the southeastern counties where the Oriental peach moth is abundant.

PEARS

Period for spraying	Insects and diseases controlled	Materials for 100 gallons of spray.
Cluster bud—When blossom buds separate in cluster.	Scale Psylla eggs Scab Black Spot	Lime-sulphur to test 1.03 Sp. G. Lime-sulphur to test 1.03 Sp. G.
Petal fall—Just after petals have fallen.	Psylla nymphs Codling moth Scab Black spot Leaf spot	† Nicotine sulphate, 1 pint. Arsenate of lead powder, 3 lbs. Lime-sulphur to test 1.008 Sp. G.
Cluster pear—Two weeks after petals have fallen.	Codling moth Scab Black spot Leaf spot	Arsenate of lead powder, 3 lbs. Lime-sulphur to test 1.008 Sp. G.
Emergency spray—For Psylla nymphs. Apply when infestation is serious during the summer.	Summer brood of nymphs.	Lime, 30 lbs. Copper sulphate, 2 lbs. Nicotine sulphate, 1 pint.

† If psylla nymphs are abundant make a separate application of the nicotine and four pounds of dissolved soap, or a 2% nicotine contact dust.

GRAPES

Period for spraying	Insects and diseases controlled	Materials for 100 gallons of spray
Just as flower buds open.	Rose Chafer	Arsenate of lead powder, 4 lbs. Confectioner's glucose, 25 lbs.
Just after berries have set.	Berry Moth Mildews Black rot Anthracnose	Arsenate of lead powder, 3 lbs. Resin fish oil soap, 3 lbs. Bordeaux mixture, 8-8-100.
About 10 days † after berries have set.	Berry Moth Root worm Rots	Arsenate of lead powder, 3 lbs. Resin fish oil soap, 2 lbs. Bordeaux mixture, 8-8-100.
When maximum leaf-hopper nymphs are on vines—(about July 15th).	Leaf Hoppers Rots	Nicotine sulphate, ½ pint. Bordeaux mixture, 8-8-100.

† In sections where rots have been prevalent in past years, Bordeaux mixture 8-8-100 should be applied every ten days after third spray until fruit begins to color.

Field Seed Planting Table

Seeds	Weight per bu.	Pounds per acre	Time of seeding
Alfalfa	60	15-20	April-May—August-September
Alsike	60	8-10	February-June—August-November
Barley	48	72-96	April—June
Blue Grass	14	30-35	April-June—August-September
Buckwheat	48	48-60	May—June
Cane, Sorghum	50	60-65	May—June
Corn	56	8-10	May—June
Corn, Ensilage	56	20-35	May—June
Corn, Sweet	46	10-15	May—July
Clover, alfalfa	60	15-20	April-May—August-September
Clover, Alsike	60	8-10	February-June—August-November
Clover, Crimson	60	15-20	July—August
Clover, Red	60	10-12	February-April—August-November
Clover, Sweet	60	20-[illegible]	April-May—August-September
Clover, White	60	6-8	April-June—August-October
Lawn Grass	25	100-150	April-June—August-October
Meadow Fescue	24	25-35	April-May—August-September
Millet, German	50	40-50	May—July
Millet, Hungarian	48	40-50	May—July
Millet, Japanese	35	25-40	May—July
Oats	32	50-75	March—May
Orchard Grass	14	20-25	April-May—August-September
Peas, Canada, broadcast	60	90-120	February—April
Peas, Cow, broadcast	60	90-120	May—July
Peas, Cow, drilled	60	60-70	May—July
Permanent Pasture	25	20-30	April-June—August-October
Rape, D. E.	50	6-10	April—August
Red Top, Solid	32	8-12	April-June—September-November
Rye, Spring	56	50-65	March-May
Rye, Winter	56	76-90	September—November
Rye Grass	24	25-35	April-June—August-October
Soja Beans, broadcast	60	60-90	May—August
Sudan Grass	40	20-25	May—July
Timothy	45	8-12	April-June—August-October
Vetch, Spring	60	50-70	March—May

Top-Dress Grain Crops *with* **Nitrate of Soda**

100 pounds of Nitrate of Soda per acre top-dressed early in the spring produces 5 to 10 bushels per acre increase in wheat, 15 to 20 bushels per acre increase in oats, also a large increase in the amount of straw, as much as 40 per cent. in hay, and makes pasture lands 50 per cent. better.

200 pounds Nitrate of Soda per acre, side-dressed on corn when knee-high increases the yield by 10 to 30 bushels per acre.

We have the evidence.

Profitable Crops

May we send you our new pamphlets telling how to fertilize grain and other crops, as well as timely suggestions from our State Manager who is in touch with your local conditions? *Cut out this advertisement,* write your address in the margin, naming your principal crops and mail to our nearest office. 2306

Book of Farm Seeds

DESCRIBES heavy-yielding varieties of standard farm crops, gives cultural pointers on Alfalfa, Soy Beans, Cow Peas, etc.

Lists 10 kinds of Seed Corn for silo and crib. Tells all about our "Lancaster County Sure Crop", the best all-around silo and crib corn. Our Seed Corn is well-matured, thoroughly dried, germinates 90% to 95% or better.

Seed Oats: Six heavy-yielding kinds, both "tree" and "horse-mane" types, including our famous "Shadeland Climax".

Alfalfa—"Grimm" and "Northwest": Looks like a good year to start an Alfalfa field. We have some very fine "Grimm" strain—every bag sealed and certified by Idaho State officials. Our "Northwest" Alfalfa is very reasonable in price—has thousands of friends among those who have used it.

Red Clover— Genuine American-grown; also Northern European-grown, suitable for Eastern farms. Good Clover Seed is scarce, better order early.

Sweet Clover, 2-yr. White Blossom, scarified to make germination easy. All the other clovers—finest qualities.

Legal Weights for New Jersey

IT IS illegal to sell products by dry measure in New Jersey. They must be sold by weight or count. The following table has been prepared by the New Jersey State Department of Weights and Measures to show the approximate weight equivalents of commodities that were formerly sold by dry measure.

Apples, cabbage, cucumbers, peaches pears and plums may be sold by numerical count. Beets, carrots, onions and similar vegetables formerly sold by the bunch, may still be ordered and sold in this manner. Small fruits and berries may be sold in standard quart and pint containers evenly filled thruout.

Commodity	Lbs. per bu	Lbs. per ½ bu.	Lbs. per pk	Lbs. per ½ pk	Lbs. per ¼ pk.	Lbs. per quart
Alfalfa seed	60	30	15	7½	3¾	1 lb. 14 oz.
Apples	48	24	12	6	3	1 lb. 8 oz.
Apples, dried	25	12½	6¼	3⅛	1 lb. 9 oz.	12½ oz.

Concrete Mixtures

First column refers to cubic feet (one sack) of Portland Cement; 2nd, cubic feet of sand; 3rd, cubic feet of pebbles or broken stone (aggregate). Thus, a 1:2:3 mixture, is made in the proportion of 1 sack of cement with 2 cubic feet of sand and 3 cubic feet of pebbles.

Use	Mixture	Max. size aggregate
One-course walks, barnyard pavements, floors	1:2:3	1½"
Fence posts	1:2:3	1½"
Watering troughs and tanks	1:2:3	1"
Water reservoirs, tanks, cisterns, etc.	1:2:3	1"
Steel reinforced concrete walls, floors, beams, columns	1:2:4	1"
Silo walls, grain and coal bins, building walls, manure pits	1:2½:4	1½"
Dipping vats, hog wallows	1:2½:4	1"
Backing of concrete block	1:2½:4	¾"
Foundations for small engines, culverts, dams	1:2½:5	2"
†Inside finish of water tanks, silos, etc.	1:1½	
†Scratch coat of exterior plaster, (cement & stucco)	1:2½	
†Intermediate and finish stucco coats	1:3	
Facing concrete blocks, ornamental work	1:2	¼"
Concrete drain pile and pipe where coarse aggregate is not used	1:3	¼"

†To pass thru No. 8 screen.
—From Portland Cement Association.

Good fences make a big difference in the size of acres measured *in profits.* The biggest acres in profits always belong to the farmer who rotates crops and raises hogs, cows and chickens. *More acres* simply mean more taxes, but *bigger acres* through modern farming keeps down taxes, saves hired labor, increases profits and adds to the fertility of the soil. See your dealer now for those fences you need to make your farm yield larger profits.

SuperZinc-ed REG. TRADE MARK **"Pittsburgh Perfect" and Columbia Fences**

mean bigger acres and larger farm profits because they provide the first essential to modern, diversified, profitable farming, which is hog-tight enclosures. They are made of special formula steel and Super-Zinced against rust by an extra heavy coating of zinc so closely bonded to the steel that it will not crack or peel. They enable you to have complete control over crops and live stock, and to operate your farm with the utmost economy and profit.

Super-Zinced Fences meet every requirement for field, poultry, garden and lawn enclosures and are *guaranteed unexcelled in quality and durability.* For the same high standard of quality insist also upon our brands of barbed wire, gates, steel posts and wire nails. Be sure to send for your copy of our new vest pocket booklet "Farm Records" which will be mailed free, together with Super-Zinced Fence Catalogue and name of nearest Super-Zinced Fence dealer.

"I Do As Much Work With 3 Horses As Others Do With 4 or 5"

Mr. Allen Eggers, R. R. No. 2, Roachdale, Ind., writes us about a Clark "Cutaway" Double Action disk harrow he bought 10 years ago. Listen to what he says:

"I have one of your harrows that has been in use some 10 or 12 years. It is doing as good work today as it ever did except the bosins are worn. Please send me prices on bosins.

"I can do as much work in a day with 3 horses as my neighbors can do with 4 or 5 horses to the same size harrows of other makes. Quite a few neighbors have asked where they could get one. I cannot recommend the Clark 'Cutaway' too highly."

Clark Double Action harrows do a thorough and economical disking job because rear disks cut exactly half way between front disks and at same depth. Possible only with harrows constructed like the Clark "Cutaway." Light draft. Turns corners easily. Disks (Cutout or Solid) of cutlery steel, forged sharp for better work and longer service. Several sizes in tractor and horse-drawn models. Free: Valuable illustrated book, "The Soil and Its Tillage," and catalog of tillage implements. Mail coupon.

THE CUTAWAY HARROW COMPANY
109 Main St., Higganum, Conn.

Send me FREE catalog and book, "The Soil and Its Tillage."

Millfeed firm, demand moderate, supply small.

GRASS SEED—WHOLESALE PRICES

Toledo, Ohio, February 11, 1927.

Cloverseed, cash, foreign, $21.50; domestic, $21; February, $17.75; March, $17.65 asked; October, $17.25. Alsike, cash, $22.60; March, $22.75. Timothy, cash, $2.85; Febenary, $2.85 asked; March, [illegible] asked; April, $2.95 asked; Mary, [illegible] asked.

Review of Week Ending February 12

LIVESTOCK—The Chicago hog market was steady to strong during the week while beef steers were about 25c higher. Heifers and cows were also higher but vealers dropped $1. Stockers and feeders were weak and lower toward the end of the week. Fat lambs were strong but feeding lambs were irregular. Fat ewes and yearlings were higher.

GRAIN—Prices of grain averaged lower than last week. Wheat prices declined due to heavier offerings in foreign markets. Corn was lower in most markets with offerings fully ample for the demand. Oats were also slightly lower.

FEEDS—The feed markets were generally steady altho some markets reported slight advances. Wheat feeds held steady to slightly higher. Less favorable weather in the Southwest increased consumption in that section. Cottonseed meal was higher on account of increased export business.

HAY—Light demand resulted in a weakening of the hay markets and prices were generally lower. Receipts were light and accumulations were less at most markets. The best grades of alfalfa hay were in good demand.

COUNTY NEWS AND COMMENT

Armstrong County, Pa.—This locality experienced a continuance of low temperatures thruout January but February, thus far, has been decidedly unusual for spring-like weather and continuous rains. During the first week of the month we have had noon-time temperatures as high as 65 degrees. Of course, we have sharp freezing at night. The result is complete "browning" the grain. Almost all frost is out and dirt roads are nearly impassable. Orchard spraying is under way. Both lime-sulphur and the miscible oils are being used. Certified seed potatoes are being ordered in large quantities and are costing about $2.25 per bu. at point of shipment. Much ear corn did not keep well in cribs. Wheat has strengthened about 5c the bushel, now selling at $1.30, and eggs have declined sharply. Veal calves are also off about 2c per lb., live. Poultry maintains its holiday range.—W. M. P., February 7.

Centre County, Pa.—After eight weeks of solid winter weather we had a breakup and the ice and snow melted off of the fields. The late-sown grain is not looking good. So many stormy days have put farm work practically at a standstill. The wise farmer is looking over his tools and machinery, getting them in repair, ready for the busy days of spring. He also finds time to read and listen-in on the radio. Quite a number of broken bones have resulted from falls on the slippery walks. Local prices have changed but little since last month.—A., February 7.

Clearfield County, Pa.—We have had some real winter, with good sledding on the country roads. A heavy ice was formed on the streams but with recent rains this has gone out, doing considerable damage along the larger streams. More ice than usual was stored by farmers who use it in their dairy operations. The winter grain looks thin and considerably frozen. The market is pretty well supplied with the common grades of apples and no improvement in price. There is demand for potatoes at about $1.75, but consumers hesitate to buy many at a time as they are inclined to rot. There is considerable inquiry for hay, the price in ton lots is $28@30 delivered. All meats seem to be in fair demand at the same prices as prevailed earlier in the winter. Farm butter, 50@60c; eggs in good demand at 50c. Grange and farm meetings are few these days.—D. H. W., February 4.

Indiana County, Pa.—This has been just as exceptional a season as the preceding summer. Roads very bad now and the frost almost all out of the ground, due to much rain. Wheat looks well considering its late start and the extreme conditions of the weather. Many farmers complaining about rotted corn fodder and soft and spoiled corn. A very slack winter for work in general. Many men are about out of hay and other feed. Hay, $20; corn, 50c; oats, 60c; wheat, $1.30. Hog prices have not gone over 12c around Indiana. Eggs slowly decreasing in price, about 45c now. Chickens laying well. People are slowly awakening to the fact that the corn borer is coming and are holding meetings to talk over means of preventing its spreading.—H. A. N., February 7.

Juniata County, Pa.—We have been having real spring weather for the past two weeks, about four weeks ahead of time, but with freezing and thawing which is likely to do damage to the fruit. Chickens are all doing well owing to the warm days causing a decline in egg prices. The roads are in very bad condition. The wheat fields look very brown and bare. Eggs, 31c; butter, 35@40c; potatoes, $1.75.—C. B. L., February 10.

Lackawanna County, Pa.—We've had a very changeable January,—an abundance of snow, with a break up during the middle of the month with rain and fog, ice and wind. There were eight clear days, five partly cloudy days and eighteen cloudy days. Prevailing direction of wind during the month was south and maximum velocity from the north on the 26th was 26 miles. Total snowfall, 8.5 inches. Farmers are putting up ice, getting out wood for summer and hauling manure and fertilizer. The Farm Bureau, under the direction of L. E. White, county agent, held their annual meeting in Malta Hall, Clark Summit, Pa., on February 2nd. R. H. Bell, assistant agricultural director at State College, was the principal speaker at the morning session. The women held a separate meeting under the direction of Miss Ruth Patrick. There was the largest attendance at this meeting of any previous meetings. Eggs, 60c; potatoes, $1.60, wholesale; retail, $1.75@2; butter, 54c.—E. A. K., Feb. 4.

Tioga County, Pa.—We have had some severe winter weather during the past month but the greater part of it has been milder than for the preceding four weeks. There was the usual January thaw. Sleighing is gone and cars are getting about again on the hill roads. The severe weather in January made splendid ice and most farmers got a supply. Some lumbering being done in a small way. A well attended and instructive meeting of the Dairymen's League was held February 3 at Tioga. Quite a bit of interest being shown in cow testing associations. Eggs, 32c; butter, 50c; hay, $12@14; potatoes, $1.25; veals, $12.—P. W. L., February 8.

Butter Markets

THE markets have followed an erratic course during the week ending February 11th. At the close of the week previous all four markets ruled steady to firm with price advances at New York and Boston and on Monday further advances were effected on all markets except New York. As the week progressed the early strength was lost and prices were reduced only to have sufficient buying activity develop later in the week to advance prices again on some markets.

The tone and trend of prices has become more of a reflection of localized supply and demand. The majority of receivers feel that the present level of prices is too high to arouse very much speculative support and that the strength of the situation will depend upon how well consumptive demand keeps pace with the fresh supply. As a result this has been a week of advancing and declining prices with each market apparently working independently.

Reserve Stock Light

Reductions in the storage holdings in the four markets during the first nine days of February have been exceptional considering the light reserve stocks and exceeded movement of a like period last year by 1,022,885 pounds. The cold storage report on stocks of butter in storage in the United States was released February 11 and showed holdings of 17,967,000 pounds as of February 1, 1927. This was a shortage of 21,414,000 pounds as compared with stocks in storage on February 1, 1926.

The out-of-storage movement of butter in the entire country during January, 1927, was 16,380,000 pounds and exceeded the movement of January, 1926, by 2,976,000 pounds. This would indicate that consumption has been fairly well maintained and that production has not yet reached a point equal to the demand at the existing level of prices.

Production of butter has continued to increase from week to week in most of the producing sections. There is some irregularity according to the sections reporting, but the southwestern territory has been showing favorable increases. Increases were also reported in the north central dairy sections but on the basis of available figures were not up to the level of last year's production.

The production report of the American Association of Creamery Butter Manufacturers for the week ending February 5 showed respective increases of 5.9 per cent over the week previous and 2.7 per cent the corresponding week last year. The Land o' Lakes Creamery, Inc., for the same period reported an increase of 3.837 per cent over the previous week but a decrease of 6.033 per cent under the corresponding week of a year ago.

While the foreign markets have held at a level that detracted from purchasing any volume of foreign butter for speculation it has had at times a depressing influence particularly on the New York market. A boat load of approximately 41,000 boxes of New Zealand butter is reported due at New York the first of next week, of which 16,000 boxes are expected to be unloaded and the balance destined for Canada.—Bureau of Agricultural Economics, U. S. D. A.

McCormick-Deering Tractors

Two sizes, 10-20 h. p. for 2 plows, and 15-30 h. p. for 3 plows. Fully equipped, 4-cylinder tractors, with ample power at belt, drawbar, and power take-off.

Next Spring— Summer, Autumn, Winter—Profit with McCORMICK-DEERING Tractor Power

EVERY YEAR McCormick-Deering Tractors stand stronger with the farmers. The name McCormick-Deering has become the symbol of reliable power farming because it stands for carefully built, practical, many-sided, long-lived farm power.

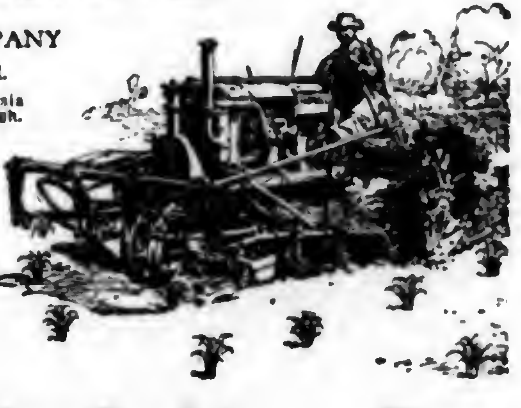
That is so in your community and everywhere. Men who have used International Harvester tractors—for months or for years—are steadfast friends of McCormick-Deering farm power. They will recommend McCormick-Deering when you come to buy. Other men, who risked using cheaper, lighter tractors, found themselves underpowered. They fell short of reaching full production with the least possible labor and in the shortest possible time. After this experience they were ready for new and better power. There are thousands like these, too, who will recommend McCormick-Deering when you make your power investment.

McCormick-Deering gives you your choice of three tractors—the McCormick-Deering 10-20, the 15-30, and the new all-purpose row-crop tractor, the FARMALL. All are quality tractors, built to last many years. Any one of them will work for you with *drawbar, belt,* and *power take-off* the year around. Any one of them will cut your producing costs and add to your profits. Look them over at the dealer's store. *Catalog will be sent on request.*

INTERNATIONAL HARVESTER COMPANY OF AMERICA (Incorporated)
606 S. Michigan Ave. Chicago, Ill.
93 Branch Houses in the U. S.; the following in Pennsylvania Farmer territory—Elmira, Harrisburg, Philadelphia, Pittsburgh.

The FARMALL!

The remarkable new 4-cylinder McCormick-Deering FARMALL, designed to handle cultivating and planting of row crops, as well as all other farm power work.



Most Popular — Most Profitable — Best McCORMICK-DEERING *for* 1927!

Grafting Wax

THERE are several formulas for making grafting wax, one of which is the following:

Melt together four parts, by weight, of unbleached rosin, two parts of beeswax, and one part of beef tallow; pour into water, and, when sufficiently cool, work into a mass with the hands until it assumes a buff color; make into rolls and wrap in paraffined (waxed) paper. The hands should be greased before touching the wax to prevent sticking. This is a good wax for cleft grafting.

Grafting cord and grafting paper and cloth for other kinds of grafting may be made by dipping cord, paper, or muslin in melted grafting wax. Such material should be kept in a cool, moist place.

Estimating Hay in Mow

Multiply the length by height by width in yards and divide by 15, if hay is well packed. If hay is shallow or rather loose in mow, divide by 18. These figures should vary from 15 to 18, depending on the packing. Quotient will be approximate number of tons.

Feed your skin when you wash it with PURE PINE TAR

THE more you are exposed to sun and wind, the rougher and dirtier your work, the more you need to feed and restore your skin with the bland, healing qualities of virgin Pine Tar, Nature's greatest skin remedy.

Since '78 millions of people have obtained this valuable skin food through the use of Grandpa's Wonder Pine Tar Soap, which is genuine pine tar and rich cocoanut oil.

Try it 10 days and see how it relieves smarting, chapping, tenderness. See how it clears and nourishes the skin. Mild and soothing yet so thorough, so antiseptic, that it kills body odors. It gives life and vigor to hair and scalp.

Start now to improve your appearance with this wonder soap. At your dealer's, or *Send 10c for Big, Full Size Cake.*

Draft Horse Score Card

Scale of Points

Age—Indicate the age after examining the teeth ....

Standard

A—GENERAL APPEARANCE, 18 Points:

1. **Height**—Estimated hands.......... Actual hands ....
2. **Weight**—1800 lbs. a standard. Estimated weight..............Actual weight 4
3. **Form,** broad, deep, massive, low set, well proportioned 4
4. **Substance,** abundance of bone, broad joints, right proportions 3
5. **Quality,** bone clean and hard, tendons and joints well defined, skin and hair fine, features of head clearly defined.......... 4
6. **Temperament,** energetic; disposition good 3

B—HEAD AND NECK, 7 Points:

7. **Head,** lean in proportion to size, lower jaw wide-angled......... 1
8. **Muzzle,** fine; lips thin, even and trim; nostrils large 1
9. **Eyes,** prominent, large, bright, clear 1
10. **Forehead,** broad, full 1
11. **Ears,** medium size, pointed, set close 1
12. **Neck,** medium long, muscular, not thick, arched, throat-latch clean; windpipe large 2

C—FOREHAND, 25 Points:

13. **Shoulders,** sloping, smooth, extending well into back 2
14. **Arms,** short, muscular, extending forward, elbow in 1
15. **Forearms,** strongly muscled, wide, long 2
16. **Knees,** broad, deep, straight, strongly supported 2
17. **Cannons,** short, wide, lean, tendons large, defined, set well back.... 2
18. **Fetlocks,** wide, straight, strong, well supported 1
19. **Pasterns,** oblique, about 45 degrees, of moderate length, strongly carried 3
20. **Feet,** large, round, uniform, straight; bars strong; sole concave, frog large and elastic; slope of wall parallel to pastern; heel wide, one-third length of toe; horn dense, smooth 8
21. **Leg position,** viewed from in front, a perpendicular line dropped from the point of the shoulder should divide the leg and foot into two lateral halves; a perpendicular line dropped from the bony prominence on the shoulder blade should pass thru the center of the elbow joint and meet the ground at the center of the foot ....

D—BODY, 10 Points:

22. **Withers,** well defined and muscular
23. **Chest,** deep, wide, low, large girth
24. **Back,** short, broad, strongly supported ....
25. **Loin,** short, wide, strongly coupled
26. **Ribs,** long, well sprung, close....
27. **Flanks,** low and full, showing low underline ....

E—HINDQUARTERS, 30 Points:

28. **Hips,** wide, smooth, muscular.....
30. **Tail,** attached high, well carried..
29. **Croup,** long, wide, not markedly drooping, muscular ....
31. **Thighs,** muscular and deep, thick in the quarters; stifles prominent, well set ....
32. **Gaskins,** wide, muscular ....
33. **Hocks,** straight, wide, deep, clean cut, point prominent, well supported ....
34. **Cannons,** short, wide, flat, tendons large, set well back ....
35. **Fetlocks,** wide, straight, strong....
36. **Pasterns,** oblique, medium length, smooth, strongly carried ....
37. **Feet,** large, round, uniform, straight, bars strong; sole concave; frog large and elastic; slope of wall parallel to pastern; heel wide and one-third length of toe; horn dense, smooth ....
38. **Leg position,** view from the rear, a perpendicular line dropped from the point of the buttock should divide the leg and foot into lateral halves; viewed from the side, this same line should touch the point of the hock and meet the foot surface a slight distance back of the heel. A perpendicular line dropped from the hip joint should meet the foot surface midway between heel and toe ....

F—ACTION, 10 Points:

39. **Walk,** straight, strong, elastic.....
40. **Trot,** strong, regular, free, easy...

Total Score ....

Study each characteristic and determine in your own mind what proportion of perfection it has according to the following scale of tenths:

1 No Fault .9 Very slight defect .8 Slight defect .7 Defective .6 Marked defect .5 Very marked defect .4 Extreme defect .3 or more for any defect that would disqualify in competition.

Gestation Table Calendar

The Following Is the Usual Length of the Gestation Period:

Mares.................... 310 to 410 days, average.................340 days
Cows..................... 240 to 300 days, average.................283 days
Ewes..................... 146 to 156 days, average.................148 days
Sows..................... 105 to 130 days, average ....112 days

The following calendar provides a convenient means of figuring the gestation period for the four classes of farm animals.

Veterinary

Conducted by Dr. J. F. Shigley
Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Livestock.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

TWINS: BULL AND HEIFER.—Our cow had twin calves, one a heifer and one a bull. We would like to keep the heifer but neighbors say that a twin heifer will not breed.—W. E. P., Parnassus, Pa. The percentage of sterile heifers, when the other twin is a bull, runs rather high. One takes a chance in keeping such an animal for breeding purposes. However, if one desires to feed out such an animal until breeding age, there can be no serious criticism, provided, of course, that it is understood that the animal can be sold for beef if she is sterile.

PROBABLY WORMS.—Can you tell me what causes a cat to take spells?—Mrs. G. D. S., Newville, Pa. Your cat is probably suffering from intestinal parasites. Give this cat worm medicine, preferably that which can be supplied by your veterinarian, and you will probably note improvement. Might suggest that you put the cat in a basket and take him along when you drive to the town having a trained veterinarian. Treatment would be more effective under such conditions.

WARTS ON TEATS—DANDRUFF.—What can we do for a heifer coming in next month that is getting warts on her teats? Also what shall we do for a cow that has dandruff?—Mrs. C. S., Sparrow Bush, N. Y. One might try the application of powdered blue vitrol twice daily to these warts. Small warts frequently disappear following a daily application of castor oil. Large warts may require surgical attention. Give this cow a bath with warm water and a soap having a low alkaline content. Add enough of one of the coal tar disinfectants to make a 2-3 per cent solution. Dry the animal carefully and groom thoroly every day.

POSSIBLY COW POX.—We have a Jersey that freshened about two months ago. After we weaned the calves her teats broke out in blisters. When one milks the skin comes off. A scab forms over night, but when you milk this also comes off. Would like to know what the cause is.—Mrs. A. H. S., Woodbine, Md. From the description of the stages of this condition, one might suspect cow pox. If you have other cows it may spread to them. Washing the hands in antiseptic solution, and applying a [illegible] strength solution to the udder is indicated. Apply carbolized vaseline to the areas involved. In any case prevent the spread to other animals or to members of the family by careful handling of the affected animal.

GARGET.—I have a Holstein that has had garget 3 weeks. One quarter began swelling about 10 days before she freshened and I started then to milk it out. There was a pus substance with a very offensive odor. That quarter is still swollen hard and she has been fresh 10 days. Cow still gives that thick offensive stuff out of quarter. Would like to know how to keep her from giving this bad milk.—G. D., Stoneboro, Pa. The cow should be separated from the herd. Milking this quarter every hour into a pail containing antiseptic is indicated. Put the cow on a dry ration as milk secretion should be cut down until inflammation subsides. Fever medicines are usually advised. Cleanliness of quarters where animals are stabled; use of antiseptics on floor every day or few days; clean hands at milking time and absence of injuries are points to consider in the prevention of garget.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 100,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (65 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

FURS WANTED—Ginseng, skunks, raccoons, mink, $1.75; muskrats, $2.00; weasels, $1.50. Postage refunded. Flat prices—list free. Stern's Furriers, New Brunswick, N. J.

ALL WOOL YARN for sale from manufacturer at bargain. Samples free. H. A. Bartlett, Harmony, Maine.

EXTENSION LADDERS—20 to 32 ft., 25c ft. Freight paid. A. L. Ferris, Interlaken, N. Y.

BIG BARGAINS in used incubators. All sizes. L. F. Jones, Danbury, Conn.

FISTULA HORSES CURED $5. Pay when well. Chemist, Barnes, Kansas.

FARM LANDS

ON ROAD now under cement construction, 78 acres land nearly level, fifty tillable, ample wood lot. Natural gas fuel, in hustling oil field. Home market, milk ten to fourteen cents qt. School adjoining. General store and post office two hundred yards. Hunter's paradise, have gotten a fine Buck last two seasons, trout streams, 5 miles to County Seat and R. R. Trail. 1 mile to Backus B. R. P. station. River accommodations. Phone available, large ten room house, fine water, 864 square ft. cement cellar floor space, mouse-proof wall, six room tenant house, chicken house, meat house, sixteen by thirty-four closed shed, 32x40 part basement barn, handy equipped, hay fork, litter carrier, Drew line stanchions, 7 Grade Guernsey cows, 1 bull, T.B. tested, 1 heavy horse, harness, wagon, sleds, buggy, cutter, one and two horse mowing machines, plows, cultivators, harrow, sprayers, other implements. 225 young bearing fruit trees, last year's crop nearly sold locally. 40 swarms bees, up to date equipment to handle eighty swarms, ext. and comb have sold eighty dollars in day to auto trade. Two never failing springs in pasture, wire fences, 600 stored Chestnut posts. Ford truck. With or without bees $6500, oil reserved. Liberal terms. Ill health. Mr. and Mrs. W. H. Brown, Ormsby, McKean County, Pa.

IN THE SAN JOAQUIN VALLEY of California farming is now a paying business, feeding millions of people in towns. Dairying, hogs, poultry and fruit should yield a good income. A small one-family farm, with little hired labor, insures success. You can work outdoors all the year. Best crops to plant are well proved. Selling is done co-operatively in established markets. Newcomers welcome. The Santa Fe Railway has no land to sell, but offers a free service in helping you get right location. Write for illustrated San Joaquin folder and get our paper, The Earth, free for six months. C. L. Seagraves, General Colonization Agent, Santa Fe Railway, 914 Railway Exchange, Chicago.

STROUT'S SPRING FARM CATALOG JUST OUT—128 big illus. pages, a time-saving, money-saving guide to farms in many states. Pg. 51 describes 300 acres, cuts 100 tons hay, near college city; splendid home and $5000 barn, 150 acres level tractor fields, orchard, stream, valuable woodland; included are 10 cows and heifers, horses, poultry, hog, great lot crops, machinery, vehicles, furniture, price only $5000 with $1500 cash and $200 year on balance. Get your copy this free catalog before best bargains are gone. Strout Agency, 1422-BE Land Title Bldg., Philadelphia, Pa.

LANCASTER COUNTY FARM—Equipped, for only $4750; 49 acres in section of $150 to $300 per acre value; easy walk store and school, convenient city markets; fertile loam, mostly tillable, wire-fenced pasturage with running water, good variety orchard, desirable 5-room house, wonderful views, good basement stone barn, other bldgs. Quick buyer gets team horses, machinery, grain drill, wagons, tobacco equipment, all for only $4750, easy terms. Wm. S. Kilgore, Strout Agency, 400 Agricultural Trust Bldg., Lancaster, Pa.

SEVENTY-ACRE dairy and poultry farm on concrete road for sale. Four miles from Grade A cooling station. In one of the best farming communities of the state. Good buildings with direct electric current. Fifteen acres permanent pasture. Six acres alfalfa. Nineteen acres timber. F. A. Walls, Owner, Harbeson, Del.

CANADA LAND—Information about farm lands for sale or rent, free homesteads, and farm work in Canada, also general information about Canada can be obtained from Canadian Government. Information Bureau, 303 North Second St., Harrisburg, Pa.

WONDERFUL OPPORTUNITIES. Southern Georgia farm lands. Write for complete information. Chamber of Commerce, Quitman, Georgia.

WANTED to hear from owner of farm or unimproved land for sale. O. Hawley, Baldwin, Wis.

HELP WANTED

AGENTS—New plan, makes it easy to earn $50.00 to $100.00 weekly, selling shirts direct to wearer. No capital or experience needed. Represent a real manufacturer. Write now for Free Samples. Madison Shirts, 566 Broadway, New York.

SALESMEN—New invention beats vacuum sweeper and all its attachments. No electricity required. All complete only $2.95. Over half profit. Write O. P. Morgan, Mgr., 750 Grimes St., Fairfield, Iowa.

REPRESENTATIVE WANTED in your neighborhood for Priscilla Dress Fabrics, Dry Goods, Handkerchiefs, etc. Easy work. Good pay. Fitzcharles Company, 983 Fitzcharles Building, Trenton, New Jersey.

FREE OFFER—Fifty Bermuda onion plants or frostproof cabbage plants for few minutes your time. Write for proposition. Bell Plant Company, Cotulla, Texas.

OUR NEW HOUSEHOLD DEVICE washes and dries windows, sweeps, cleans walls, scrubs, mops. Complete outfit costs less than brooms. Over half profit. Harper Brush Works, 176 3rd St., Fairfield, Iowa.

WE PAY $200 monthly salary, furnish car, and expenses to sell our Guaranteed Poultry and Stock Powders. Bigler Company, X-345, Springfield, Ills.

MARRIED MAN WANTED to plow and cut wood. [illegible] month and house with garden and firewood. Middleville Co., Middleville, N. J.

PLANTS

FRUIT TREES and Ornamentals direct to planters. Transportation charges paid. Safe delivery and satisfaction guaranteed. Write for Special Offers and Catalogue. Waynesboro Nurseries, Waynesboro, Virginia.

CERTIFIED SEED POTATOES—Early and late varieties. Vigorous, high yielding stock. Buy in February and save money. N. A. Baker & Sons, Fairport, N. Y.

FRUIT TREES much cheaper by parcel post prepaid. Catalog free. Malta Nursery, Malta, Ohio.

HENDERSON'S SPECIAL OFFER

Giant Waved Spencer Sweet Peas

Henderson's Invincible Asters

Brilliant Mixture Poppies

1927 Seed Catalogue and
6 Packets of Tested Seeds
—only 10c

MAIL the coupon with only 10 cents, and we will mail you "Everything for the Garden," Henderson's new seed catalogue, together with the Henderson specialty offer of 6 packets of our tested seeds.

These 6 packets are all seeds of our own introductions, and are among our most famous specialties—Ponderosa Tomato, Big Boston Lettuce, Early Scarlet Turnip Radish;—Invincible Asters, Brilliant Mixture Poppies and Giant Waved Spencer Sweet Peas. These, like all Henderson's seeds, are tested seeds.

Many of the accepted methods of testing seeds were originated by Peter Henderson three generations ago. These methods improved by 80 years of experience still safeguard the standard quality of Henderson's seeds.

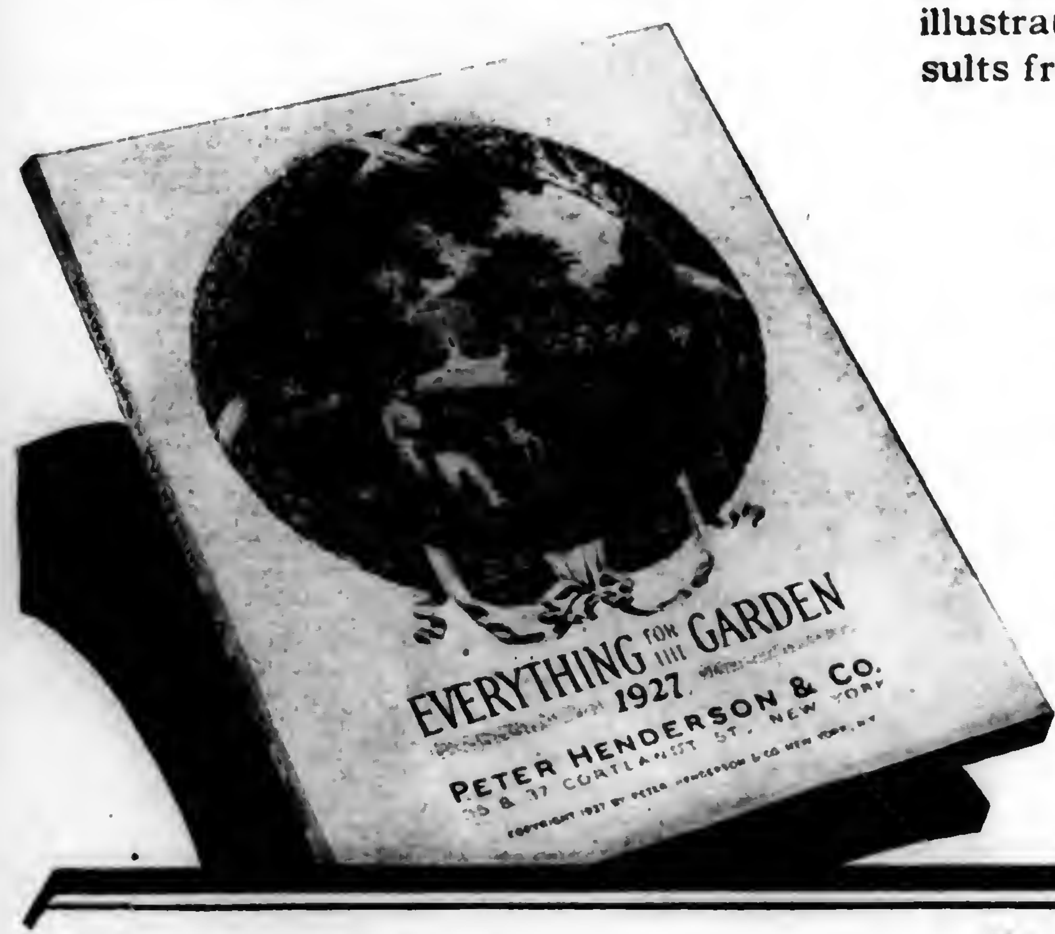
Everything for the Garden

This is a book of 204 pages, with 16 beautiful color plates, 64 pages of rotogravure, and over a thousand illustrations direct from actual photographs of the results from Henderson's seeds.

It offers many special collections of vegetable seeds arranged so as to give a continuous supply of fresh vegetables throughout the Summer, and collections of flower seeds especially arranged for harmony of color and continuity of bloom. It is a complete garden book, and should be in the hands of every lover of the garden beautiful or bountiful.—*Clip the coupon now!*

Every Empty Envelope Counts For Cash

This special collection of Henderson's Tested Seeds comes to you enclosed in a coupon envelope, which, emptied and returned to us, will be accepted as 25 cents cash payment on any order of a dollar or over.



PETER HENDERSON & CO.
35-37 Cortlandt Street
New York City

Early Scarlet Turnip Radish

PF-1

PETER HENDERSON & CO.

Two Ways of Threshing.
An 18-32 tractor with power take-off operates this nine-foot combine which cuts and threshes the grain as it moves across the field.

In This Issue—How Eastern Farmers Increase Profits by Cutting Costs

• • •

Why their alfalfa was killed last winter

Last year about 100 farmers of Buffalo County, Nebraska, set out to determine what killed their alfalfa during the winter. The conditions on a farm in Shelton are typical of what they found. This farm has two fields of alfalfa, side by side, which were sown with two different kinds of seed. One field showed a perfect stand while the other was badly thinned out. *The cause of the winter killing was directly traced to poor seed.*

Poor seed is like poor lubricating oil

Neither cheap seed nor low-priced lubricating oil is a profitable investment. Farmers who turn to Gargoyle Mobiloil are often astonished by the many ways in which Mobiloil returns its small extra price. Less time out for repairs. Fewer stops with a tractor because of overheating or thinned-out oil. Less carbon. Better compression and valve action. And Mobiloil frequently cuts oil consumption from 10% to 50%—saving more than its few cents extra cost per gallon right there.

Do you realize the importance of these facts?

Make this CHART *your guide*

THE correct grades of Gargoyle Mobiloil for engine lubrication of prominent passenger cars are specified below.

The grades of Gargoyle Mobiloil, indicated below, are Mobiloil "E," Mobiloil Arctic ("Arc"), Mobiloil "A," Mobiloil "BB," and Mobiloil "B."

Follow winter recommendations when temperatures from 32° F (freezing) to 0° F (zero) prevail. Below zero use Gargoyle Mobiloil Arctic (except Ford Cars, use Gargoyle Mobiloil "E").

If your car is not listed below see any Mobiloil dealer for the complete Chart. It recommends the correct grades for all cars, trucks and tractors.

GARGOYLE Mobiloil *Make the chart your guide*

(1) Mobiloil is the favorite oil with automotive engineers. (2) Mobiloil is asked for by 3 out of every 4 motorists who buy oil by name. (3) Mobiloil was used in such famous flights as the U. S. Army Round-the-World flight, Byrd's flight to the North Pole, and Lieut. Maughan's Dawn-to-Dusk flight across the United States. (4) The Mobiloil Chart has the approval of 609 automotive manufacturers.

The full economy of Mobiloil will be yours this year if you follow the recommendations in the Mobiloil Chart for your car, your truck, your tractor, your farm lighting engine and your stationary engines. 42 Mobiloil engineers made a careful study of all automotive engines before this Chart was made. Your engines were included.

The Chart is shown at the left in brief form. Your nearby Mobiloil dealer has the complete Chart. Ask him what grade of Gargoyle Mobiloil to use in each of your engines.

The Mobiloil dealer will supply you with the correct grades of Mobiloil—at a substantial saving if you buy in barrel or half-barrel lots. It will be a wise move to see him now about your season's requirements.

Why China Buys American Rice

Modern Machinery Makes $8-a-day Men Cheaper Than 15-cent Chinese Labor

By ARTHUR HUNTINGTON

IT ISN'T how hard a farmer works that counts; it is how much he accomplishes. It isn't the selling price of a crop that determines the profit; it is the production cost. These are the basic facts of America's agricultural problem.

The fundamentals of this great question were set forth so well in a recent address by Arthur Huntington that we are using part of it here as a "text" for the other articles in this special farm equipment number. Mr. Huntington is a prominent member of the American Society of Agricultural Engineers. —Editors.

I COULD spend much time pointing out that agriculture is much more interested in corn or wheat that will produce a 20c a bushel profit than it is in corn at a dollar or wheat at two dollars. I will only say that the 20c profit is far the easier to attain and the profit will come, not from finances or cooperative marketing, or export corporation or by price-fixing, but from more efficient production thru the use of machinery and better utilization of the products backed up by good business management.

I could spend equally as much time demonstrating that the revival of agriculture must come not only from profit per acre but must consider income per worker. The owner or speculator may want high priced land, but the industry is only hampered by the use of high priced land, in so far as the tiller of the soil is concerned. . . .

I was in California last June and July attending the annual meeting of the American Society of Agricultural Engineers. After the meeting we were "shown California." We saw much rice and much of the labor was Oriental. We asked what they paid the Oriental laborers and were told $6 per day and "found," or the equivalent of $8. We asked where they found a market and were told in China and Japan, where, by the way, rice field labor is 15c per day.

A little further inquiry brought the information that the Chinese Agricultural Association had a commission in San Francisco protesting against Americans flooding China with cheap rice, thus destroying their agriculture.

It was not the immigration law, for Orientals in California do not work for an Oriental wage, but work for an American wage. It was not the tariff that made the difference. It was the machinery and practices built up by the American engineer that made it possible.

Further inquiry brought out the following facts.

In China by "hand power" under the best conditions it takes from 3 to 5 Chinamen to raise an acre of rice. In America one Chinaman raises upward of 100 acres. In China the yield is nearly twice the American yield due to intensive cultivation. The results are the cost per pound in America is so cheap that it can be laid down in China at a cost so low that a Chinaman cannot compete even at 15c per day.

Measured in production, an Americanized Chinese, with American equipment at $8 per day makes an Asiatic Chinaman, without the equipment, worth less than $8 per year. . . .

Last summer I took a trip over less than 10 miles of Corn Belt highway and found farmers who were producing less than 800 bushels of corn per worker at a cost of around 75c per bushel, not taking into consideration interest, depreciation, upkeep or living expenses. On that same road I saw two farmers who raised more than 8000 bushels of corn each at a cost of less than 15c per bushel. The difference was largely a machinery and power equipment difference.

But 8000 bushels per worker means farming on a large scale, with machinery efficiently used, low overhead, ability to finance as a producer, to take care of an established market and to

Making short work of haying at the Somerset County Home farm, Somerset, Pa.

My Experiences with a Combine

The Harvester-Thresher Enables Three Men to Do the Work of Fifteen

Editors' Note.—Several combine harvester-threshers have been used in Pennsylvania this year with great success. The experience of Mr. Short seemed typical of that of these Pennsylvania users, so we asked him to tell us about it. However, the nine-, twelve-, and fourteen-foot machines probably will be used more extensively in the Keystone State than the larger machine. Here is Mr. Short's letter:

IN THE summer of 1925 labor in this vicinity was scarce, especially around wheat threshing time. I had about 250 acres of soy beans and buckwheat to harvest that fall, so decided to purchase a harvester-thresher or to use the term of the day, a "Combine." This new method of threshing had never been tested in the little state of Delaware. However, I decided to give it a trial and let me say right here that it far surpasses the old method of threshing. My work with the combine in the fall of 1925, and every harvest season since, has proven very satisfactory, indeed.

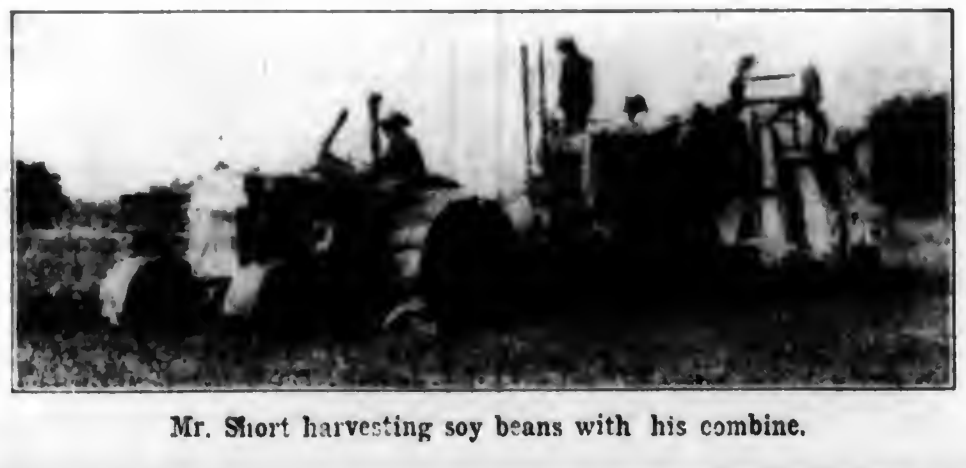
Three men operating a tractor and combine can cut, thresh and bag grain as fast as 15 to 18 men will in threshing grain from shock the old way, and then one has to consider the time it takes to cut and shock grain. In my experience with this machine, I have found that I can get grain in bags for what binding twine alone would cost.

I have used my combine in a three-acre field and the service has been just as good as it was in a field containing fifty acres or more.

My machine is of the prairie type, size 24 by 42. I used a 12-foot cut in 1925 and in 1926 added a four-foot extension, making it 16 feet. This harvester-thresher is equipped with pea and bean attachments, bagging platform and rotating weed screen. I use a straw spreader.

Last summer one of my neighbors wanted me to cut and thresh his 38 acres of wheat; three of us did this job in six hours. The yield was a little over 800 bushels of wheat. The tractor, and the motor on the thresher consumed 30 gallons of gas. We cut about one-third of the straw and used the straw spreader to put it back on the ground.

And now we have the matter of the food problem in harvest season. Three men with combine do the entire job in about half the time that it would take to cut and shock a field of grain. One can readily see why Mrs. Short is 100 per cent strong for the combine, as she avoids the extra help, etc., that is necessary in feeding a larger crew.—Harold B. Short, Sussex County, Delaware.



Mr. Short harvesting soy beans with his combine.

Buy fence on its *past record*

When you purchase fence consider carefully these three things:

First: How long has it been on the market?
Second: What is its past record?
Third: How well is it made?

Page was America's First Wire Fence—produced by J. Wallace Page at Adrian, Michigan, in 1883. For over 43 years it has been paying its users dividends in service and utility, long after ordinary fence has passed into the discard.

Page Fence is constructed by skilled labor, of the best materials that money can buy. It is heavily galvanized to resist rust and is easily adaptable to rough or uneven ground. It may be had in either the staple tie or hinge joint type of knot.

The best is by far the cheapest—ask your dealer to show you the various Page styles. He carries the pattern you need.

Send for Interesting Facts

Write for literature describing in detail the fence that has been first choice for three generations. No obligation.

NESHAMINY GARDENS

WHERE AN EDITOR WORKS AND THINKS.

BY R. P. KESTER

IT IS necessary to go back and take up some inquiries made by "Reader," of Chester County, a couple of weeks ago. To answer his question as to what is the best, up-to-the-minute orchard practice would require more space than is at my command. The best plan is to write to the Experiment Station, State College, Pa., and ask for bulletins on orchard fertilization, pruning, spraying, sod mulch vs. tillage, dusting, storage houses, etc. They will give him the best and latest information on all these subjects.

◆ ◆ ◆

"READER" says he has trouble in getting his apples to ripen and color up in a reasonable time. The cloudy, rainy season last year made this a very general trouble, yet there are some factors which, if present, tend to this result at all times. If the tops are too thick, thus preventing plenty of sunlight and free circulation of air, the fruit is slow to ripen. Again, if there is too much available nitrogen in the soil, either from over-fertilization or the too generous use of nitrogenous crops, it will tend to promote growth too late and retard ripening. When this is the case, it is best to discontinue fertilizing and cultivating and sow grass for a time.

◆ ◆ ◆

A YOUNG ORCHARD of 100 trees may he sprayed successfully with a barrel sprayer mounted on a sled or wagon,—providing you have a good strong man at the pump handle. The little hand dusters for use in gardens and berry plats are not big enough to do good work in dusting trees. However, there is a hand duster made which is recommended for trees up to twenty feet in height. They cost about $20. It can also be used for bush and vine crops. To apply either dust or spray effectively requires a thoro knowledge of what is to be achieved, and also of what to use. For this reason the bulletins referred to, as well as all other helpful advice on the subject, should be obtained.

◆ ◆ ◆

A YOUNG man from up-state writes, in effect, as follows: "Farmers are always advising the young people to stay on the farm, but what is being done about it? I am a young man of fairly good education and would like to stay on the farm. I want to start in the chicken business, but will have to go to the city to earn enough money to do what I want and then I'll not want to return. Instead of preaching to the boys to stay on the farm, why don't they help them to get started? What boy wants to work for someone else at low wages? He would be old before he could buy himself a farm. Find some wealthy men to help the farm boys and they'll not want to leave the farms."—A Young Man.

◆ ◆ ◆

THERE is something wrong here. Either the young man is suffering a temporary spell of the blues, or, if that is his natural frame of mind, he has the wrong slant. The all-too-prevalent disposition today to expect somebody to set one up in business at the top is keeping a lot of young people in the ranks of the time markers. If Young Man is in earnest about poultry keeping he can easily start. It does not require much capital, but it does require industry and intelligence. In fact, those who have made a success of the business have begun at the bottom and worked up. In almost every instance where there was plenty of money to start with the business failed.

◆ ◆ ◆

YOUNG MAN will find that if he is made of the right kind of stuff he will have as much cash at the end of a year in the country as he will have in the city, unless he is an expert workman of some kind. Let him get a good place in his community, work hard, save his money, and prove to the neighbors that he is a really worth while young man and he will have no trouble in getting all the necessary backing he should have. In his present state of mind he would not be a good subject for a rich man to set up in business

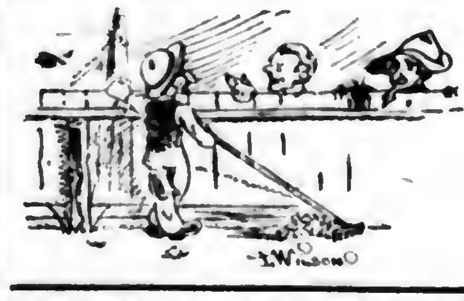
Crisp Curleycues

First Cat—He's cleaned up a big fortune in crooked dough.

Second Cat—He was a counterfeiter?

First Cat—No, a pretzel manufacturer.—Outlaw.

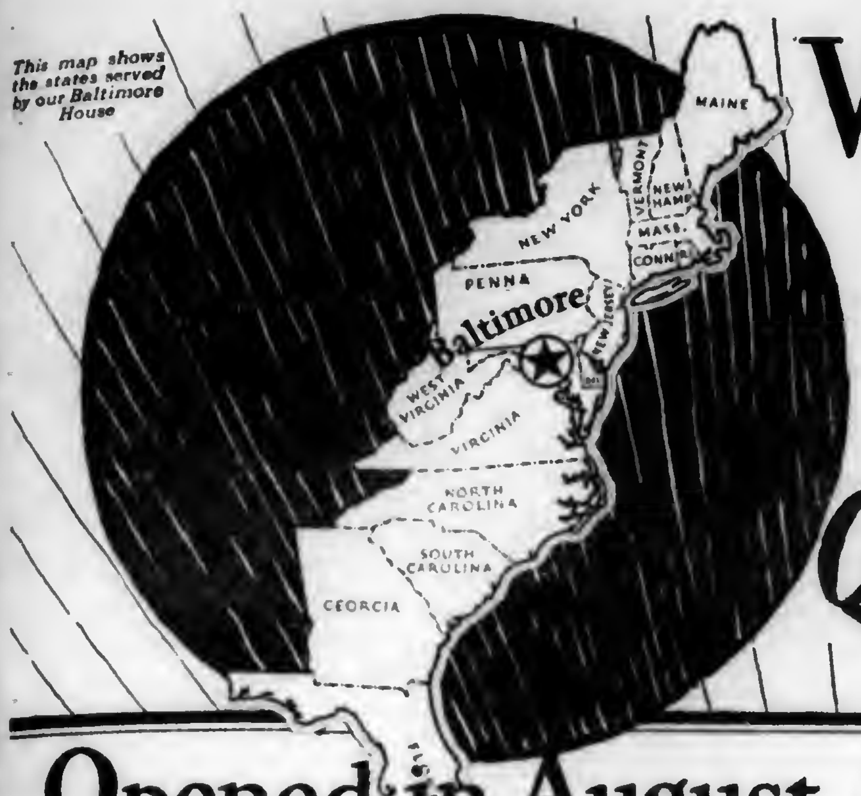


The Cheerful Plowman

Wasting Time

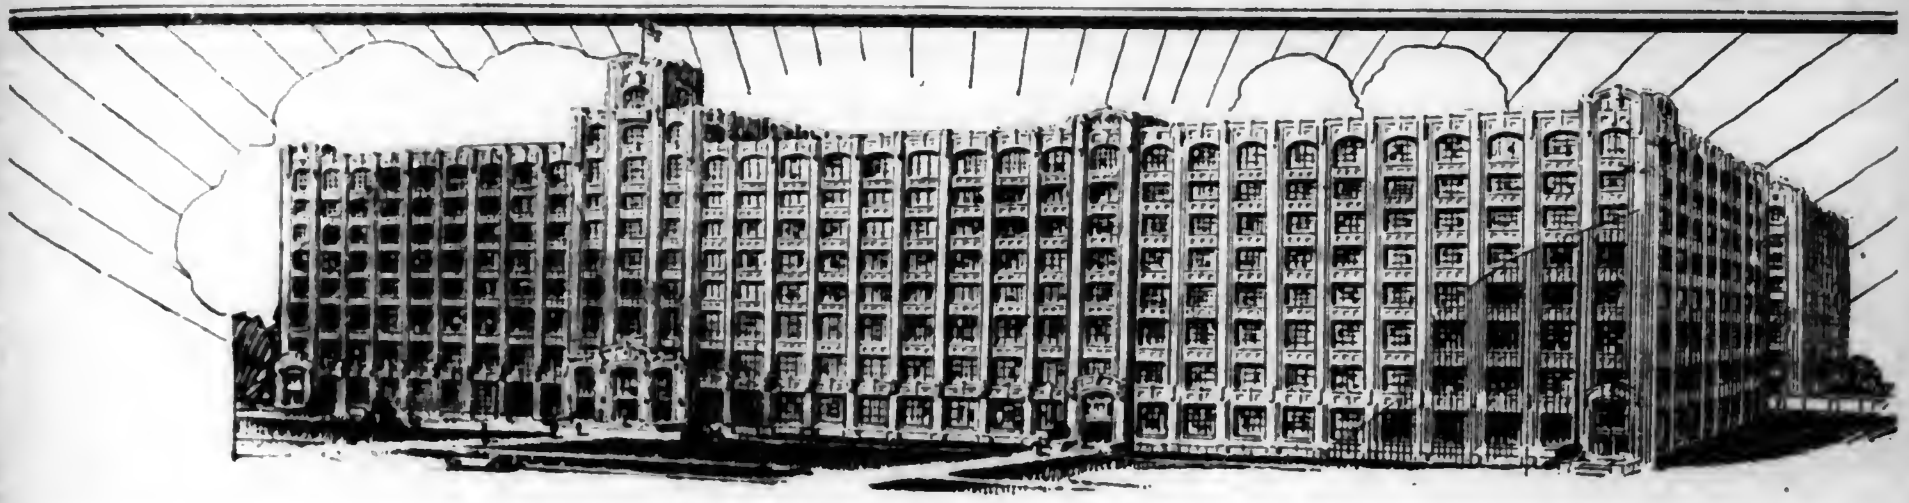
MY NEIGHBORS, Peffingwell and Pence, waste scads of time across the fence discussing useless bunk, discussing nothings, I declare, comparing notions, void and bare, just airing ultra-junk! Yes, wasted time, a loafing spree—by jove, it raises ire in me when some men say they fail because of crimes in every gent from peasant lad to president, and tell a kicking tale, when all the time beside the fence they've talked away the six per cents that should go in the bank; when all the time, hours every day, they're loafing profits all away! They have themselves to thank!

They're failing? Yes, of course they are! They both will slip across the bar with nothing in the purse, with not a cent to leave behind to sooth the weeping widow's mind, no coin to hire a hearse! They'll feel when they are cashing in the world has been a place of sin, a place where men are goats, where wealthy men with heated tongs steal dollar bills in scads and throngs, where honor fights for oats! They'll feel like that, I know, I know, "by all that's right" when trumpets blow they'll feel the cards were stacked; altho today across the fence my neighbors Peffingwell and Pence waste minutes,—hours in fact!—J. Edw. Tufft.



WARD'S *offers you Prompt Service and a Saving on Quality Merchandise*

Opened in August, 1925, Ward's Baltimore House was vastly increased in size in 1926



Hundreds of thousands of new customers quickly learned the convenience, the saving, this big Baltimore House brought to their homes.

So great was the response that in one month plans were drawn for vast additions to our big building.

Today this great complete plant of Montgomery Ward & Co. is perfectly equipped to fill your every need. Today it offers you larger savings, more complete assortments of merchandise, and quicker service than ever before.

Why Not Save Money on Everything You Buy?

You use your Catalogue for some things. You get your share of savings on shoes, or furniture, or automobile tires. But do you miss the equally large savings Ward's offers on men's clothes, or house furnishings, or dry goods?

Hundreds of thousands of customers find great savings in *every department* of this Catalogue. *Why not you—too?* Why not save as much as you can on *everything* you buy?

Ward Quality Is Always Maintained

Ward's prices are the lowest for which *quality* merchandise *can be sold*. But we never lower a price by substituting, by adulterating, or by "skimping," and so reducing *serviceability*.

It is always possible to lower a price—always possible to cut quality. The inside of a shoe does not show. In a tire, new live rubber *looks* no better than old reclaimed rubber. It is easy to lower a price and make a larger profit at the same time. But Ward's sells only the kind of merchandise that will stand *your inspection and use*.

For 55 years Montgomery Ward & Co. has done business in the spirit of the Golden Rule. For 55 years we have backed everything we sell with an iron-clad guarantee.

So in using your Catalogue, in *sending all your orders* to Ward's, you secure a double saving, a saving in price and the extra economy that longer service always brings.

Use your Catalogue for everything you buy

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

We can never go beyond perfection, but a new perfection is always before us.—J. W. Mackail.

Increase of Electric Appliances

SOME idea of the rapidity with which electricity is being used to take the place of hand labor may be gained by noting the amount spent last year for household appliances. A list of nineteen electric articles shows that the sales of the appliances in 1926 amounted to over $437,000,000. The percentage of increased purchases was greatest in the case of electric refrigerators, the increase being over 187 per cent. The increase in some of the other articles was as follows: Floor polishers, 80 per cent; dishwashers, 62.5 per cent; ironing machines, 50 per cent; fireless cookers, 43 per cent; hot plates, 20 per cent; washing machines, 20.8 per cent.

Be Sure of Your Seed Corn

UNLESS we miss our guess, there is going to be a scurrying around next spring for good seed corn. The late, wet season last fall caused a great deal of the corn to be put away in a more or less immature condition, and even that which was fully ripe contained a great deal of moisture. This condition, followed by very cold weather early in the season, caused a great deal of germ injury. Every one who saved seed should test it for germination early, and if it is found to be deficient in viability new seed should be looked after. Those who follow the custom of selecting their seed from the crib may find themselves in a peck of trouble if no investigation is made till planting time, or after.

Milk Inspection Called Menace

THE Health Commissioner of New York City appeared before President Coolidge the other day to urge him to veto the milk inspection bill which has passed both branches of Congress. The bill provides that milk brought into this country from Canada shall be of such quality as will pass the inspection tests required for native milk. But Commissioner Harris sees in this bill great danger to the health of the city, especially to the sick and the poor. He also fears a milk famine for the city if the Canadian supply is reduced. The arguments seem so silly to one at a distance that the question naturally arises as to whether the commissioner is not interested more in the welfare of bootleg milk dealers than he is in the health of the people, or the welfare of the dairymen of his state. Pleas for the sick and the poor, and the widows and orphans, come readily to the lips of those who put up unquestionable arguments.

Cash Farm Income

STATISTICIANS have estimated that the farmers of the nation will receive, for the year ending June 31, 1927, about ten billions of dollars. Analyzed by states it is shown that Iowa leads the list, the estimated amount being $701,000,000. For Pennsylvania the figures are $292,000,000, or about $1500 for each of the 200,000 farms if it were divided evenly among them. Of course, in arriving at these figures no credit is given for food consumed on the farm, nor for house rent, etc. But on the other hand, the costs of production are not charged against these amounts. Curiously enough, the average cash returns per farm in Pennsylvania are practically the same as the average for the whole United States.

Let Us Save the Remnant

PENNSYLVANIA. Penn's Woods, in its primitive state, was a vast forest of great beauty. No other place in the eastern part of the New World had trees more beautiful or of greater variety. But "civilization" has dispersed all this,—all except a tract of eight thousand acres known as the Cook Forest in the northwestern part of the state. There, the lumberman has not entered with his despoiling ax. It stands in all its pristine beauty as it stood when the Indians were the sole inhabitants. So rare are the spots where primitive conditions exist that thousands of visitors from all parts of the East flock to this tract to enjoy the spell which only such environment can cast.

But even this heritage is doomed unless the public comes to the rescue. Fortunately, the public is being aroused and an association has been formed for the purpose of collecting money to purchase the tract and preserve it to the people. The Cook Forest Association, with offices at 331 Fourth Avenue, Pittsburgh, is composed of people having esthetic and philanthropic motives, who will be glad to send full information on what individuals can do to aid in saving this beautiful and valuable spot. We hope everyone will write to them.

Farm Equipment Week

PENNSYLVANIA FARMER has always urged the judicious purchase and intelligent use of machinery on the farm and in the home where it would lessen hand labor and lower costs. This is consistent with our editorial policy of recommending proven methods and policies which will make farming more pleasant and profitable. Without question, the two factors which have enabled American farmers to lead the world in production per man during the last fifty years are the adoption of scientific methods, and the use of improved machinery. If farms were conducted just as they were 100 years ago, the United States would be dependent upon other nations for its food. It has been figured out that if the 1926 wheat crop had been harvested by hand it would have required the labor of every able-bodied person in the United States.

We received a thoughtful letter from a reader recently in which he said that we should throw out a word of caution now and then so as not to open ourselves to the charge of over-influencing farmers to invest in machinery which would be a useless waste of money. We worded the first sentence of this article so that it would meet this caution. We well know that there are some foolish purchases made, but more failures are due to lack of ability to operate or properly care for machinery than to inefficiency on the part of the machine. No reputable manufacturer today is putting out machinery which will not do the work under the conditions for which it is recommended, if it is intelligently operated. There are some people who have no mechanical ability; a wheelbarrow and shovel outfit is about their limit of capacity with mechanical implements. To such, we would not recommend farming at all.

Then there is the matter of keeping an economical balance between the investment in machinery and the size or output of the farm. There are some farms on which a greater investment has been made in machinery than the business done will warrant, but there are a great many more farms on which there is not enough,—where more machinery of the right kind would reduce costs and lessen labor. It is for the purpose of creating a greater and more intelligent interest in the substitution of machine for human labor on the farm and in the home that we make Pennsylvania Farmer this week a special Farm Equipment Number.

Taxes and Bonds

CONSISTENT with the demand for relief from increasing taxation there is arising strong opposition to issuing bonds for public improvements, the demand being that further extensions be made from current receipts. Opposition is crystallizing in New Jersey, Maryland, Pennsylvania, and other states, and pressure is being exerted on legislators to this end.

It is pointed out that in Pennsylvania we now have a state debt of $100,000,000, whereas, the state has been free of debt for many years until recently. At the election in 1928, the people will be called upon to vote for or against the issuing of $38,000,000 additional bonds as follows: For new buildings at State College, $8,000,000; for forestry lands, $25,000,000; for National Guard armories, $5,000,000. In addition to these projects, the following proposals have passed one legislature and are up for second passage now: For soldiers' and sailors' bonus, $35,000,000; additional highway bonds, $50,000,000; state welfare buildings, $50,000,000; state buildings and memorial bridges, $100,000,000. Total, $235,000,000. When the interest is counted, it will mean that the state is obligated to the amount of $527,000,000 if the vote on all the proposals is favorable. If the public would be consistent in its demand for tax relief it must do some thinking before it goes into the election booth.

Editorial Sidelights

MANY farm equipment dealers are putting on special exhibits of agricultural machinery during Farm Equipment Week, February 28 to March 5th. Those interested in the latest developments in farm engineering will enjoy visiting the exhibitions being staged by progressive machinery men, even in the smaller towns.

Among the machines that will be shown in some of these displays will be special equipment to fight the European corn borer. Besides the special plows described by Mr. Bacon, (Page 11) there will be exhibited low cutting corn binders, corn pickers and stalk shredders, stubble pulverizing equipment, corn stalk rakes and other equipment designed by far-seeing engineers to reduce the borer hazard.

UP TO THE PRESIDENT

McNary-Haugen Bill Passes Senate and House—Crowds Attend Closing Debates—Only Good Milk Wanted.

Washington, D. C.

THE closing debates on the McNary-Haugen bill in both House and Senate drew large gallery crowds, indicating that city people as well as farmers are becoming interested in the subject. Recent propaganda in the daily papers has had the effect of inciting strong opposition of consumers' organizations to the bill. Nevertheless, the bill, after being approved by the Senate, was passed by the House on February 17, 214 to 178. It is now in the President's hands for signing or veto.

Secretary Mellon Is Pessimistic

A matter was injected into the discussion by Secretary of the Treasury Mellon, which hitherto had received little attention,—the cost and difficulty of administration. A treasury estimate places the annual cost of the administration organization and expenses thereof and collection of the equalization fee at $790,338. A force of investigating agents must be organized for the purpose of ascertaining whether the designated collection medium has filed correct returns and paid the full amount of the fee.

Secretary Mellon says the investigating body might be compared with the present force of revenue agents employed under the supervision of the Internal Revenue Bureau. The law will be as difficult to enforce as the prohibition law.

Coolidge Has Said Nothing

It has been generally understood that the Coolidge administration is opposed to the McNary-Haugen bill, altho it would be difficult to quote anything the President has said directly against it. The attack made by Secretary of Labor Davis on the bill, and later the statement issued by Secretary Mellon, however, are taken to indicate that President Coolidge is preparing to veto the measure. There is little expectation in Washington that it will become a law. In this case the fight for farm relief will be carried over into the next Congress.

Wants Cooperation In Borer Fight

A resolution has been introduced in the House by Representative Madden, chairman of the House Committee on Appropriations, proposing that no part of the appropriation of $10,000,000, authorized in the act approved February 9, 1927, for eradication of the European corn borer shall be expended until all the states in the proposed control area shall have provided necessary regulatory laws.

Will Make Them Toe the Mark

The Taber-Lenroot bill designed to prohibit the importation of impure milk and cream from Canada and to protect the dairy industry of the United States has passed Congress and been sent to the White House. It requires Canadian producers and shippers of milk and cream for the American markets to submit to the same sanitary regulations and inspections as are required of milk producers on this side the line.

Upwards of 7,000,000 gallons of milk and 5,500,000 gallons of cream 43 per cent butterfat, or 11,000,000 gallons of coffee cream comes into the United States annually from Canada, according to Charles W. Holman, secretary National Cooperative Milk Producers' Federation. This country is being used as the dumping ground for milk produced under conditions that are below the requirements of Canadian cities. Certain interests who are profiting by this low grade Canadian milk are urging President Coolidge to veto the bill on the grounds that it will have a tendency to increase the price of milk.

No Action on Muscle Shoals

There is little hope of getting action on the Muscle Shoals disposal proposition this session. The House Military sub-committee has turned down both the American Cyanamid Company and the Farmers' Federated Fertilizer Corporation bids for fertilizer production and power development at Muscle Shoals. Representative Madden, of Illinois, says he is informed that the committee had agreed on almost every point at issue on the Cyanamid Company's bid, but that more time for study was required. Meanwhile the hydro-electric power at Muscle Shoals is being sold to the Alabama Power Company at 3 mills a kilowatt hour, and it is said that the power company is selling this power to manufacturing establishments at 9 mills or above per kilowatt.—E. E. R.

WAIT ON GOVERNOR

Executive's Legislative Program Retarded by Throngs of Visitors—Inspection Work Will Be Enlarged.

Harrisburg, Pa.

THE Legislature of 1927 is just about half over and from present indications the number of statutes placed on the books is not going to be anything like what would be expected from the number of bills piled into the two houses. The administration's legislative program is reported as having been retarded by the unusual number of visitors thronging the Governor's anterooms and the delegations mobilizing to meet the new executive. However, most of the bills sponsored by the Governor will be ready soon and action will be looked for as the intention to adjourn April 14 appears fixed. Since it became known the Administration was not going to be rushed into making wholesale changes on the "Hill" but to await results of surveys of each department by its chief, ardor of the place hunters and patronage grabbers has declined. When changes are made they will be at a time when the legislative session is either well advanced or ended.

Money for Inspections

Assurances have been given that due attention will be given to requests for money for inspection work under the Department of Agriculture in making up the schedules for this year. These inspection matters include not only the emergency activity required by the beetle and borer invasions, but nursery, fertilizer, orchard, feeding stuff and similar work which it is the intention, as a matter of fact, not only to carry on, but to enlarge as circumstances require. At the same time the studies in conjunction with the apple orchards, vineyards and potato areas which have yielded important results are to be conducted vigorously.

Orders on Pole Lines

The Public Service Commission has issued several orders the last few weeks dealing with objections to authorization for transmission or pole lines. Most of them have been approved, but the character of the objections makes them interesting. Refusals to order routes to deviate from straight lines have occurred and the commission has also declined to order lines to cross roads where it can be avoided.

Tax Bills Uncertain

Altho it seems pretty certain bills providing for opening of ballot boxes and for various changes to election laws will be passed this session, alteration of the tax system is a gamble. There does not seem to be much sentiment for any particular change, such as there is in election matters. The biggest fight relating to taxes seems to be probable on revision of the cost of local tax collection. Locking of horns on this proposal will come very soon and will furnish the real fireworks of the session.

Looking up Roads

The policy of the new state administration appears to be a desire to be shown and nowhere is this being demonstrated more than on road improvement petitions. In each instance the location of the road and the conditions attending travel as well as connections are being looked up. Every delegation coming here seeking to get a new line put on the primary system has been asked to supply data and to assist in engineering and traffic studies.—R. T.

MAKES REQUEST

Farm Organizations Back Item Asked by Experiment Station—Hunterdon Now Has County Agent.

Trenton, N. J.

THE New Jersey Experiment Station has included in its appropriations' request this year an item of $4000 for a poultry sub-station at Vineland. If granted, the experimental farms would be placed at the disposal of Dr. J. J. Black, poultry pathologist, stationed at Vineland. Of the amount requested, $1000 is for the erection of special buildings while the balance would be devoted to experimental work on poultry problems of South Jersey. Special attention would also be given to several serious poultry diseases that are prevalent in the southern counties. The farm organizations are quite actively backing the measure.

Hunterdon Chooses Agent

The Hunterdon County Board of Agriculture has now completed its plans for a county agent and has engaged E. A. Gauntt, who opened his office in Flemington on February 15th. Mr. Gauntt has been for some time assistant extension specialist in dairying. He is a New Jersey boy, having been brought up on a farm in Burlington County. Mr. Gauntt was graduated from Cornell in 1923 and since graduation has been active in promoting junior club work in Middlesex and Morris Counties. The Hunterdon County Board has had a county agent under consideration for several years and is the last strictly rural county in New Jersey to complete such arrangements.

Local Pigs Scarce

The fall pig crop in Salem, Gloucester and Cumberland Counties is shorter than usual this season, the scarcity being reflected in high prices for 6- to 8-week-old pigs at farm sales. At recent sales prices have run $10 to $12 each, which is considerably higher than last year. Inquiry at one of the county agent offices for 20 fall pigs showed that it was impossible to fill the request in Gloucester County.

Milk Testing Course

The State College is offering a special one-week course beginning February 21 on the operation of the Babcock milk test. The work is of a practical nature and intends to encourage general testing of milk as well as to give specific information on the mechanical procedure of the test. The course is about equally divided between class-room and laboratory work.

Mercer Board Dinner

The Mercer County Board of Agriculture will hold its annual meeting and dinner at Hillwood Inn on March 3rd. Speakers of state-wide reputation as well as prominent leaders of the county will address the gathering. The meeting promises to be one of the principal late-winter events in Mercer County and a large attendance is expected.—B.

WITNESSES COMING

Information Assembled and Farmers Eager for Single Milk Selling Agency—Bill Stirs Up Unusual Interest.

Ithaca, N. Y.

THE third hearing of the milk producers' committee on unification has been held at Albany. Practically all the leading agencies concerned in the production and distribution of milk have been heard, and a huge mass of information has been assembled. A few more witnesses remain to be heard. The farmers are impatient for definite and effective steps whereby all the producers of this territory shall be united in one single selling agency, thus eliminating competitive features.

Capper-Ketcham Bill

No national measure of its kind since the Smith-Lever funds were secured thru the deliberations of Congress has aroused the interest that the Capper-Ketcham bill has. This bill is expected to be given its first reading this week, and its friends predict a triumphant passage for it, if not this year, then surely the next. The bill would make generous contributions to the Smith-Lever funds to be used to promote agriculture and the home. It recognizes the importance of agriculture, which in turn so largely depends on the quality of the home life on the farms. In many states the Smith-Lever funds for extension work have been used for agricultural purposes only, with none to spare for junior project work or the furtherance of home economics.—M. G. F.

OUT OF THE SAME BOTTLE

Labor Savers That Don't Save

By ARNOLD P. YERKES

IT IS paradoxical but nevertheless true that we often waste money by saving money. This is a very frequent occurrence in connection with machinery and equipment for all kinds of productive enterprises, and particularly for farming. It often costs more to keep an obsolete and inefficient piece of equipment in use than it would cost to junk it and buy an improved unit.

Every normal human being dislikes to see useful things wasted, whether it be natural resources, or the product of someone's labor. And yet it is often more wasteful to save something which may still be used than it is to scrap it. For example, it costs less to build a new automobile engine than it does to overhaul an old one—that is, it actually requires fewer hours of work to produce an entirely new engine than it will to completely overhaul and put in first-class condition an engine which is badly worn, tho the latter would be capable of giving a lot more useful service after such renovation. The same is true of many other things.

In the case of machines or equipment used in producing some commodity for sale, there is still another angle to be considered—the relative efficiency of the old equipment and of the new. If the new equipment has been greatly improved it will often be cheaper to junk the old, even tho it is in good working order, and to buy the new, because the later will soon effect savings in labor or materials of far greater value than the total value of the old machine.

Junked Brand New Machinery

Factories, mines, railroads and other industrial enterprises are constantly faced with this question—will new and improved equipment save more than we can save by not buying it? Farmers, too, have exactly the same question to answer about many pieces of farm equipment. Very often, in any business, the purchase of the new equipment will be the more profitable.

A few years ago a large mining company ordered a lot of new machinery, to a value of several hundred thousand dollars. Naturally, it required considerable time to manufacture this equipment and in the meantime some new improvements in mining machinery had been invented which greatly increased its efficiency. These improvements permitted fewer men to do a great deal more work and recover more metal.

Before the new machinery had been delivered, the mining company was faced with the question of whether it should install the machinery it had ordered, or get the improved equipment. Full consideration showed clearly that the improved machines would soon save them more than the entire cost of the machines they had ordered. Consequently, they ordered the improved equipment and the first-ordered machinery, which was delivered while the matter was under consideration, was not even uncrated, but sold for junk just as it came from the factory.

Wasteful? No! It would have been more wasteful for the company to have hired men to operate the less efficient machinery than to junk it and provide their workmen with equipment with which they soon saved time and materials of greater value than the scrapped machines.

That was an unusual case, of course, but exactly the same sort of problem exists on every farm in the United States today, and every day. And every such problem deserves and must have careful consideration and be correctly solved, else the profits from the year's work will suffer.

Take the cream separator, for example. If the old gravity or water-dilution system is being used, it is false economy to continue with either of them, for a centrifugal separator will soon pay for itself by recovering a much greater amount of butterfat than either of these old-style methods, besides permitting the skimmilk to be fed to calves, pigs or chickens while it is warm and sweet.

Results Count Most—Not Cost

If a centrifugal machine is already in use, there is always the question of when it will pay to replace it with a new one. If it is badly worn and cannot be made to skim clean, it may be cheaper to trade it in on a new one than to keep it in service. There comes a time in the life of every piece of farm equipment when it will be more profitable to dispose of it and buy a new one than to keep the old one in service—the problem is to tell just when this point is reached.

To answer the question intelligently and so as to produce the most favorable effect on the pocketbook, it is necessary to estimate as closely as possible just how much the improved machine will earn and save as compared with the old one. It is not simply a question of whether one can afford to buy the machine or not, but whether good business management will justify its purchase. Results, not cost, should be the prime consideration.

Most improved machines save labor—for any particular machine it is a question of how much labor will it save in this particular case and how much is that labor worth.

Most improved machines will do a better quality of work—this may mean a larger crop yield, or a saving of materials, or both. An old, badly worn corn planter may reduce the yield by planting too thickly, thereby reducing the return from the crop and increasing the expense for seed. A new planter might not save any labor and yet be fully justified by more accurate planting. The increased return from a single crop has more than paid the entire cost of a new planter on many farms.

Custom Work Makes Them Pay

In the case of many machines, there is still another point to be considered in deciding whether a new piece of equipment should be purchased—the possibility of earning money with it by doing custom work. Many a threshing machine, combined harvester-thresher, tractor, truck, and other less expensive pieces of farm equipment have been extremely profitable to their owners because of the fact that they earned good profits at custom work, while for use on the home farm alone they would have been unprofitable.

Many eastern farms were laid out long before the days of modern farm equipment, and it is not always as easy matter to reorganize them to use present-day implements to advantage. Yet, if eastern farmers are to compete on anything like equal terms with farmers in other parts of the United States, or in foreign countries, who are raising the same crops with the latest, improved equipment, they must likewise avail themselves of the economies which these modern machines permit. That means that in many cases tractors, combines, etc., must be either jointly owned or that individual owners must use their outfits for custom work in order to reduce their own costs.

This all-purpose tractor may be used to cultivate corn or do belt work when the mowing is completed.

We Cannot Do Much About Prices, But—

By GILBERT S. WATTS

Staff Contributor and Adviser

IN RECENT years numerous factories have been paying higher wages, selling their products for less and earning larger dividends at one and the same time. Automatic machines multiplying man-power many times over alone have made this possible.

Vegetable growers during this time have been experiencing increasing competition from the extension of old shipping districts and the development of new. The agitation for a diversified production has unquestionably had influence. Good grading and packing, precooling, proper loading and refrigeration, together with the United States' unexcelled transportation system, have tended to level prices over great areas. An occasional crop failure in an important district may bring unusually high prices, but the cold fact remains that the only road to a sure profit year in and year out is lower costs of production.

Having made sure we are receiving the prevailing market prices for what we sell there is little or nothing we can do about price. The competition for workers determines very closely how much labor will cost us per hour, day or month. There is nothing we can do about that, nothing we would do if we could for in general the keener the demand for all kinds of labor the higher the wage level and the better our markets. If it may be repeated, the cost of producing a bushel, a barrel or a ton of whatever we sell must ever be cut down and down.

In the period since the Civil War agriculture as a whole has been multiplying man-power continually with constantly improving drills, binders, threshers, mowers, rakes, loaders, milking machines and a host of other labor-saving devices. I have a day book or ledger kept by one of my great-grandfathers who ran a farm, mill, and general store in the middle of the last century. He employed farm hands at $13 to $17 per month. These men paid $1.75 a week for board, 37½ cents for overalls, and the wheat they broadcast, cradled and flailed by hand sold up to $1.50 per bushel. If he were living today great-grandfather would of necessity pay wages five times as high, yet sell his wheat at about the 1847 price, and would probably manage to own a car, radio, and some luxuries or necessities.

Are We Keeping Up-to-date?

Has the vegetable industry met the pace set by other agricultural interests in the use of labor saving machinery? It is very doubtful, I believe we will say, if we are honest with ourselves. Whether or not any particular machine will fit into the scheme of things and reduce costs on your farm or mine is a problem each must settle for himself. By way of suggestion, however, let us consider some of the labor-saving machines in the vegetable-growing field.

First, the plow, to be fully efficient must be one which will turn under

(Continued on next page)

A check-row plant setter enables these men to keep down the weeds in the tomato field by close cross-cultivation.

large quantities of tomato vines, sweet corn fodder, cucumber vines or manure cleanly and without vexatious clogging. One with good clearance under the beam and a rolling coulter which will cut straight thru trash will save time, cut costs. The neater job will save expense in the subsequent operations of fitting, will reduce annoyance in sowing or planting.

A selection of harrows, drags and rollers adapted to the job in hand may cut costs of preparing the soil for planting to half of that incurred with antiquated or poorly adapted implements. It would be almost safe to say that the disc harrow, corrugated roller and home made plank drag are among the indispensables where any appreciable acreage is worked. Almost any type and condition of soil can be whipped into first class shape with some combination of these three.

A Leveler Hard to Beat

As a leveler, for mixing fertilizer into the soil and to keep down weeds on land being held sometime before planting, the old spring-tooth harrow is hard to beat. On the lighter soils the smoothing harrow of the roller type will give a finish like a hand rake. The heavier parts of my farm we finish with a plank drag and never use a hand rake. It costs too much outside the backyard garden, hotbed or greenhouse.

The spike-tooth smoothing harrow and spring-tooth horse-drawn weeder are remarkable labor savers, weed killers, if used before and just as seedlings break thru the soil surface. With discretion they sometimes may be used to great advantage, preferably in the middle of the day when the shoots break off less easily, on potatoes, sweet corn, asparagus and occasionally other crops two or more inches high. Anything we can do at this stage to reduce or eliminate hand hoeing or weeding is master strategy.

Even the small gardener cannot afford to be without a garden seed drill. With larger operations a "gang drill" built up of several seeder units mounted so that each drill is free to conform to any unevenness of soil surface will cut seeding costs by a half or three-fourths. Moreover, the drills are tied together in such a manner that the 2, 3, 4, 5, or more rows sown at one passage are bound to be evenly spaced in relation to one another at all times. This opens the way for gang cultivation and further economies.

An Acre an Hour Without Hurry

Last April we put into operation on Logan Spring Farm a five-row gang drill of the type just mentioned, this machine being drawn by a pair of small mules. Some growers use a garden tractor. Since purchasing this outfit we have taken out our single-row drills on only one occasion, to sow cucumbers between rows of spinach a week before the spinach was cut. An acre can be sown every hour without hurrying at a cost for machine, mules and driver of not over one dollar.

Some of our readers may be inter-

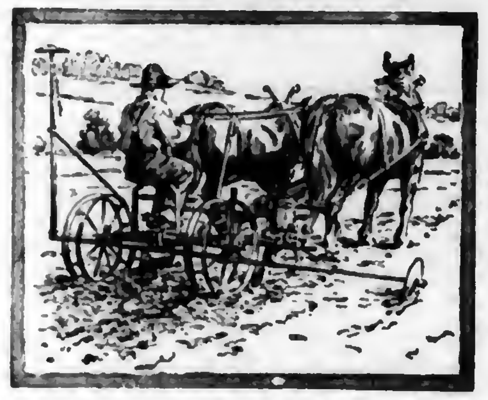
YOUR FARM

Demands These Better Tools



YOUR farm deserves these better implements of *true Superior* quality. And when you specify SUPERIOR, you are buying the highest possible value, the greatest efficiency and the finest service ever offered in farm implements of this type. Every implement in the SUPERIOR line is a *practical* product—the kind of implement scientific farming demands.

SUPERIOR GRAIN DRILLS

SUPERIOR Grain Drills take the guess-work out of planting and make good seeding a certainty. For simplicity of control, lightness of draft and the ability to sow uniformly, SUPERIOR stands alone.

SUPERIOR drills are built for years of hard service. Improved Disc Gear Drive — Single or Double Disc Furrow Openers—Hyatt Roller Bearings—complete Alemite Lubrication — Pitch-and-Gather Wheels. They are accurate for all seeds from flax to beans, without cracking.

SUPERIOR BLACK HAWK MANURE SPREADER

A spreader of finest quality, the SUPERIOR Black Hawk has the shortest turning radius of any spreader. Has extraordinary strength and durability—and it is the lightest draft spreader on the market. The SUPERIOR BLACK HAWK has Alemite lubrication, making it easy to keep it in perfect condition. Large capacity yet light weight. Has a spreading range of 4 to 28 loads per acre.

—Grain Drills
—Beet & Bean Drills
—Alfalfa Drills
—Corn & Cotton Drills
—Corn Planters
—Lime Spreaders
—Buckeye Cultivators
—Black Hawk Manure Spreaders

NOTE: Complete Buckeye line includes one and two-row, horse and tractor, walking and riding cultivators.

A 4-year apple test on the Clermont County Farm—

HERE'S the story of a four-year experiment using Sulphate of Ammonia as a source of nitrogen for apple trees. The test was made on the Clermont County Farm Orchard, Clermont Co., O., during 1922, '23, '24 and '25 on bearing trees, 13 years old in 1925, under grass-mulch and tillage cover-crop methods of culture.

And here are the results given out by Mr. F. H. Ballou of the Dept. of Horticulture, Ohio Exp. Sta.

Four-Year averages—Yields in Pounds per Tree

GRASS-MULCH		TILLAGE COVER-CROP	
With Sulphate of Ammonia	*Without Sulphate of Ammonia*	*With Sulphate of Ammonia*	*Without Sulphate of Ammonia*
247.3	79.1	279.6	71.6

Nitrogen application was 128 pounds Sulphate of Ammonia per acre and an additional four-fifths pound per tree scattered under the outer branches annually. Acid phosphate at the rate of 200 pounds per acre was applied to all plots. Varieties tested were Gano, Rome, Jonathan, Grimes, Stayman and York Imperial

The test shows that Sulphate of Ammonia produced much bigger apple yields not only under grass-mulch system but under tillage cover-crop method as well.

Results prove the availability of the nitrogen in

Buy reliable seeds from reliable merchants!

FARMERS do not usually have the time nor opportunity to investigate the quality of seed to be used. Therefore the reliability of your local merchant and the reliability of the cleaners of the seed is of great importance.

Quaker brand seeds are selected, cleaned and tested in Philadelphia in the largest seed cleaning plant in Pennsylvania. They are distributed by a house which has built a reputation for fair dealing—a reputation which will be guarded jealously at all times as of priceless value.

Beware of so-called bargains in seed. If you will insist on Quaker brand you will always get "the finest of the crop."

He Grew Up With Machinery

And Now That He's Grown He Wouldn't Be Without

By THOMAS H WITTKORN

IN the spring of 1898 Henry Herr and his good wife moved onto a 154-acre farm in Lancaster County, Pennsylvania. Shortly afterwards he was the first man in a large surrounding territory to buy a gasoline engine for farm use.

Two years ago he turned the place, completely equipped and long since paid for, over to his eldest son, Elias, now 28 years old, to be worked on shares while he went into the milk business in the city. Of course, Mr. Herr still often lends a hand when needed, as I found him doing on Ground Hog Day directing the family hog butchering.

Elias, as you can easily understand, grew up on the farm with machinery. He saw first one and then another job taken over by the new and improved methods until today he does practically all his work mechanically and the farm is noted for its complete equipment as well as for its good farming methods.

Elias Herr, Lancaster County, Pa.

Altho often overlooked, Lancaster County, long known as the banner agricultural county of the state, has extensive industrial interests. In the past four years, for instance, it has had more than 3000 workers, according to the Lancaster Chamber of Commerce, added to the factory payrolls.

The Farmer Has Felt the Loss

The farmers have suffered in losing just so many chances to get reliable help and were it not for the aid of modern farm machinery the agricultural production of the county would have fallen off instead of increasing as it has. Not only is the labor supply curtailed but the call of "an easier job" has a strong appeal to those working under old-time back-breaking methods.

It was the war labor shortage several years ago which made the tractor boom and led Elias Herr's father to purchase one of the big ones, a 16-32, and for a while pull a bottom plow with it. Like others, however, he soon saw the vantages of the smaller and type tractor and bought a 10-2

Now Elias does all his plowing with the small one and the heavy one for belt work sively. He figures on plowing acres a day and can cover twenty-five acres when the pulls a disc-harrow and culti combined.

As an example of the part machinery plays in making a let us consider his 30 acres of last year. The plowing was done the tractor. Four horses with spring-tooth harrow and leveler the back went over the twice. Then it was disc-har and cultipacked twice with the tor. The seed was planted with two-row check-drill, three feet inches one way and three feet other.

It Doesn't Matter What the

During most seasons all of the tivating is done with 2-horse ing cultivators straddling the but when wet ones like the last along a 1-horse single cultivator used crosswise to get the weeds grass between the hills. Mr. likes to have two stalks in the and then grows it so 12 to 15 will fill his two 12x36 feet silos

A corn harvester is used to the acreage which goes into the silo It not only speeds up the work overcomes the great difficulty of ting the men to cut the stalks enough. Wheat is put in where silage corn grew so high stubs a nuisance besides being so lost for the silo.

By hiring some labor, trading with neighbors and using his own Mr. Herr has 13 to 15 men working at silo filling time so that with own 13-inch ensilage cutter blower driven by his big tractor can fill his two tubs in three The finer he can cut the corn better he likes it and he always a man in the silo to tramp it, cially around the edges.

While the farm keeps from ten milking cows Mr. Herr is marily a steer feeder. He buys lots each year. In October he heavy ones and feeds them so will be ready to sell in January. then puts in another lot of ones and feeds them until July. of these cattle is pastured so will find no fences on the farm cept around the meadow.

The hay crop is another one which

(Continued on page 28)

(Courtesy International Harvester Company)

Many tractors are being used in clearing land during fall and spring months. Smaller trees are easily pulled out by the roots.

Here's to Your Health

By Dr. FRANK McCOY

Copyright, 1926, McCoy Health Service

THE nervous system in man is very complex, consisting of the brain and other nerve centers, or plexes, connected together with hundreds of nerve canals going to all parts of the body.

There are over three billion nerve cells distributed over this telephone-like system, each capable of transmitting impulses to all of the other nerve cells. It is easy to understand that local irritation or inflammation will acutely affect the cells in the neighborhood of the irritation. It is also true that such irritation will have a decided effect upon many of the other nerve cells by reflex action.

Many of the important functions of the body we do not ordinarily control, such as the circulation of blood, digestion of food, or the action of the glands. We are conscious only of the stimulation of the sense of touch, hearing, vision, smell and taste, but these sensations we do not really control. Our conscious control is mostly over the muscular system. However, all of these various nervous impulses have a very decided effect upon each other.

Eye-strain Causes Other Disorders

For example, eye-strain always produces causes of disorders in parts of the body seeming to have no direct connection with the organs of vision. Indigestion, constipation, general body weakness, and mental irritability can be entirely caused by an eye-strain which does not impart any unpleasant indication in the region of the eyes.

Disease of the nerve cells is very rare. What is called "nervousness" has its origin in some mental or physical irritation, producing finally a general enervation with symptoms showing in some weak spot.

If you wish to overcome nervousness, you must understand the numerous causes producing it in your particular case. If the reason lies in your eye-strain, see your optometrist; if you are eating indiscreetly, you must strive to correct your mistakes and substitute good eating habits for the one you find to be bad.

If you are working mentally, it will be necessary to cut down on the mental work and substitute more physical exercise.

The Cure Lies Within Yourself

If you are enervating yourself with destructive habits of thought, as of fear, criticism, jealousy, worry or malice, you can immediately enjoy a miraculous change by turning off these thoughts and turning on their constructive opposites—courage, tolerance, confidence, repose and love. The cause and cure of neurasthenia lies within yourself.

Your physician can help you to discover these causes, but you alone can make the requisite changes in your habits of thought or action to bring about health. You must realize that when you are sick, it is because of bad habits. These must be corrected eventually if you ever hope to have that abundant health to which you are entitled.

Ringside Repartee

"Ah shuah does pity you," said a colored pugilist to his opponent as they squared off. "Ah was bohn with boxin' gloves on."

"Maybe you was," retorted the other, "and ah reckon you's going to die de same way."—The Farmer.

"I've swallowed my collar-button," gasped the grocer.

"Well," responded his wife, "you know where it is, anyway!"—The Progressive Grocer.

PLOW This Shadow From your Fields

There can be no compromise with the European Corn Borer.

Either you must win the battle or he will.

Clean plowing, authorities agree is the best practical way of killing this pest.

Therefore, Oliver has developed a special plow to control the corn borer. It plows deep. It turns the ground *completely*. It buries stalks and stubble *entirely*.

This new plow is furnished in two models—for tractor and for horse power.

See your Oliver dealer at once. He will be glad to show you, in your own fields, how this new plow protects your crop.

Write for our latest literature on the control of the European Corn Borer.

Isbell's Seeds Do Yield More

You can make more money from your garden and crops when you plant dependable seeds—adapted to your soil. The work of preparing the land and planting is the same whether you use ordinary seed or pedigreed seed. **But the crop tells the story:** added profit—often double or triple—comes from using hardy, big-yielding, Michigan-grown, Isbell's seeds.

48 YEARS OF BETTER SEEDS

For nearly a half century, Isbell's have been developing yield, vitality and hardiness in seeds. Conscious experimenting, careful selection, better growing, sorting and cleaning methods have done this. 200,000 customers have proved this profit-building quality—they plant Isbell's seeds year after year and get bumper crops. We grow our own seed—you buy direct from us, saving money and eliminating all risk of substitution.

PAPEC
"The Cutter That Does Not Clog"

THE light-running Papec is just the Cutter for home and neighborhood filling. It requires less help and less power than any other cutter of equal capacity.

The entire feeding mechanism is now so nearly human in action that a man is no longer needed at the feeding table. Given suitable power, the Papec never clogs under *any* load or *any* silo.

Simple, rugged construction assures long life with few repairs. Many are giving good service after ten years' heavy use. Every part is easy to get at and adjust. There are no worries and no delays when you get a Papec on the job. Built by men who have specialized in Papec construction for 25 years.

Our 1926 Catalog describes four sizes of Papec Cutters and shows how a Papec will pay for itself in one or two seasons. Write for your copy today.

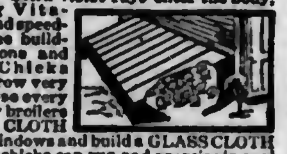
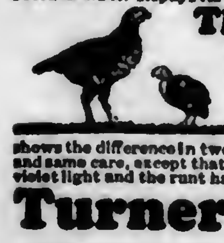
GLASS CLOTH
Brings Amazing Success with BABY CHICKS

Fred Turner
Discoverer of Glass Cloth

If you want unusual success with your chicks this year raise them under GLASS CLOTH. This wonder material admits the life giving ultra-violet energy rays of the sun. (Plain glass stops them) Science has discovered these rays prevent rickets, softness, leg weakness and many other chick troubles. Death loss from these causes is stopped. Ultra-violet rays enter the body, supplying Vitamine D and speeding up the building of bone and tissue. Chicks thrive amazingly and grow very fast. If you want to raise every chick, if you want early broilers and layers, put GLASS CLOTH in your brooder house windows and build a GLASS CLOTH scratch shed where the chicks can run and exercise in real sunlight. It is nature's health remedy. All you need is a roll of GLASS CLOTH and a few scraps of lumber. Millions of yards in use today. Success everywhere. Experts recommend it. Repays its cost many times a season.



The Ames Test
Experts everywhere recommend GLASS CLOTH. In a test at Ames College 25 per cent of the chicks under plain glass died, while all under GLASS CLOTH lived and grew rapidly. The illustration shows the difference in two chicks that had the same start and same care, except that the big one had plenty of ultra-violet light and the runt had none.



Ideal for HOT BEDS
Much Cheaper Than Glass

GLASS CLOTH is the cheapest and best covering for hot beds. Costs a fraction as much as glass and gives far better results. Vegetables and flowers mature weeks earlier and produce bigger yields because GLASS CLOTH admits the life giving ultra-violet rays of the sun. (Plain glass stops them.) Plants grow stronger and hardier and transplant better. GLASS CLOTH holds the heat of the sun and throws it to all parts of the frame. Under glass, plants become weak and spindley for want of violet light.

Patented—Accept No Imitations
Genuine, durable GLASS CLOTH is made only by Turner Bros., under exclusive patents. No other concern can copy our process. No other has the same weather resisting formula. Avoid imitations. Real GLASS CLOTH is a strong fabric specially treated to make it transparent, waterproof and weatherproof. Originated in 1916 and proven by eleven years success. You will know it by its quality. So much cheaper than glass it has won wide popularity all over the United States and Europe.

SPECIAL TRIAL OFFER Send $5.00 for big roll 45 ft. long and 36 in. wide, postpaid. (Will cover scratch shed 9x15 ft.) If, after ten days' use, you do not find it better than glass or any substitute, return it and we will refund your money. For smaller quantity send $3.50 for 30 ft. roll, or $2.25 for 18 ft roll. Common sense instructions, "Success With Chicks," with each order. Catalog illustrating uses on request. (Many dealers sell Glass Cloth.)

Turner Bros. Dept.6316 Bladen, Nebr. Wellington, Ohio

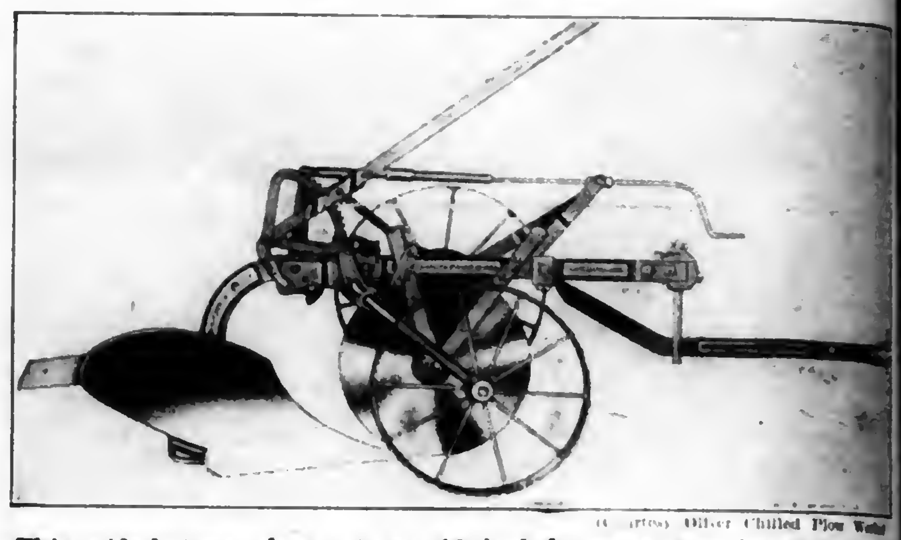
The Borer Is Waiting for Spring

And Newly Developed Machinery Is Ready for the Borer

By C. A. BACON

IT BEHOOVES every corn grower to begin now to get ready for the infestation of the European corn borer. A great many farmers in the fall wheat areas drill their wheat between the corn stubble rows or in the corn stalk fields. Clean-up orders for this spring include destroying the corn stubble and stalks in the wheat fields. This requirement means plowing under the entire wheat crop planted in the corn stubble and the corn stalk fields. This is a vivid illustration of the loss that will be the lot of those who do not start control measures until they are compelled to do so by clean-up regulations.

The worm or larva form of corn borer does the damage. The larvae, as soon as they are hatched, penetrate the corn stalk and stay there as worms for approximately nine months. The borer must be fought during this period. After this time the borer pupates and stays in that stage for approximately two weeks, and then emerges as a full-grown moth.



(Courtesy Oliver Chilled Plow Works)

This wide-bottom plow cuts an 18-inch furrow and buries all the trash, even corn stalks. It was designed to fight the corn borer.

No Farmer Wants to Lose His Crop

The corn may be anywhere from one foot to two and a half feet high when the worms begin to bore into the stalks. Of course, control measures can start any time the worms are found, but unless the infestation is exceedingly heavy no farmer wants to lose the total crop by destroying the corn field before he has harvested the ears and used the stalks that he wants for silage or shredded fodder. Hence, most of the cleaning up must be done in the fall of the year or in the early spring before the worm pupates.

The habits and characteristics of the worm in going downward in the stalk as the weather begins to cool in the late summer and fall is one of the reasons why a low cut corn binder and other devices of this kind have been used in the cleaning-up process.

The first thing the farmer must do is to plan to raise the amount of acreage of corn that will enable him to successfully take care of the corn stalks before the time set for the final clean up. There must be no corn stalks or corn cobs on the surface of the ground after this date. Discing corn stalk fields does not meet the requirements because it does not put the corn stalks into the ground deep enough to prevent later cultivation from pulling the stalks to the top of the ground.

The cleaning-up operations demand the destruction of all corn stalks left in our feed yard as well as all of the debris that will harbor the insect. Corn stalks buried deep enough in a manure pile for fermentation to set are killed in the stalks. The top layer, of course, must be burned. This brings up another serious problem. The universal experience when burning corn stalks of this sort is that the work is very unsatisfactory because of the high moisture content of the stalks. Additional combustible matter must be added to do the work successfully. The moisture contained in the corn stalks, even in the field, has made burning very unsatisfactory.

When the borer is plowed under it emerges to the top of the ground, but the worm can travel over the plowed ground only twenty-five or thirty feet, before it is overcome by exhaustion. If there are no corn stalks or debris of any sort on the surface of the plowed ground for the insect to enter, it must of necessity perish.

This calls for a job of plowing that buries the corn stalks, weeds and loose trash deep enough to prevent cultivation from pulling them onto the surface. Birds will pick up the worms as they emerge from the ground. Beetles attack them, also ants. It was found that by plowing in this manner in test fields that only two per cent of the borers survived. In other words, ninety-eight per cent of the corn borers were killed.

(Continued on next page)

(Courtesy Oliver Chilled Plow Works)

This shows how the wide-bottom plow buries all the corn stalks.

Professor Caffrey, of the U. S. Bureau of Entomology, and Professors Huber and Neiswander, of the Ohio Experiment Station, conducted experiments of this kind. The results have been published in a leaflet by the United States Department of Agriculture, Washington, D. C. Every farmer should write to the Department for a copy of this circular. (Miscellaneous Circular No. 84).

Large Base Required to Bury Stalks

If the twelve, fourteen or sixteen-inch plow cannot turn the corn stalks under to meet the clean-up requirements, it will be necessary to purchase a plow with a larger size base. Every farmer should set about to do a little experimenting in his own field. Some are of the opinion that double discing or discing three times cuts up the corn stalks in such small pieces that they can be successfully buried.

The only course left for any farmer to satisfy himself in this respect is to experiment in his own corn field before he definitely decides what size of plow base he must use. It would be better to take a small portion of the field and experiment with it before discing the entire field.

A large plow bottom cutting 18 inches has been devised for turning the corn stalks under. The large base buries the corn stalks successfully without any previous ground preparation.

This plow is constructed so that the mouldboard can be removed and the plow used as a stalk lifter. The purpose is to get under the first joint and lift the stalks so that they will contain the smallest amount of dirt. The plowing is done from the center of the field outwardly, until the 12th or 14th row from the outside is reached. The mouldboard is then taken from the plow. The rows of stalks are lifted, raked onto the plowed ground, and burned. The insect is tough and the danger of the burning method is that the worms in the first joint often escape destruction because the heat is not intense enough to kill them.

Can't Travel Far Over Black Soil

The mouldboard is put back on the plow and the rest of the plowing done. If the lifting and the raking are done properly all of the borers are moved into a large windrow around the entire field, 48 to 50 feet from the outside. Since the borer can only travel 25 to 30 feet this 50 feet of black soil makes it impossible for the worm to reach the edge of the field even if it escapes the fire treatment.

One can save this operation by seeing to it that the edges of the corn field are bare of all kinds of trash, leaving no place for the insect to enter.

If crop rotation of some sort is practiced to keep the lands bordering the corn field free from any type of vegetation large enough to furnish protection for the worm, it is not necessary to go to this labor, but in case necessity demands the plow is ready to do this work.

Happiness is nearly always a rebound from hard work. It is one of the follies of men to imagine that they can enjoy mere thought, or emotion, or sentiment! As well try to eat beauty! For happiness must be tricked!

She loves to see men at work. She loves sweat, weariness, self-sacrifice. She will be found, not in palaces, but lurking in cornfields and factories and hovering over littered desks. She crowns the unconscious head of the busy child.

The happiest words in the world

A SAYING becomes universally popular if its expression recalls an experience of pleasure. "Have a Camel!" are the three happiest smoke words ever uttered because no other cigarette ever gave the world so much enjoyment. To millions of experienced smokers, Camels are contentment realized.

Camel has become the most popular smoke of all time because of quality. Camels contain the choicest Turkish and Domestic tobaccos that nature grows. Then these superb tobaccos are given a blending that can be found in no other cigarette. The largest tobacco organization in the world puts its all and its best into Camels. You could smoke, end to end, a mile of Camels—they will never tire the taste, never leave a cigaretty after-taste.

We invite you now to introduce yourself to the finest made.

Millions of friendly voices are calling you to the mildest, mellowest fragrance that ever came from a cigarette. Once you know what they mean, no words can compare with

"Have a Camel!"

The new B B Marvel Cream Separators get all the cream all the time—and last longer

The improved and permanently balanced bowl of the new B B-marvel represents the greatest separator improvement in a quarter of a century. Troublesome neck springs and bushings have been eliminated. The bowl is mounted on an automatically oiled ball bearing spindle, supported by a stationary shaft. Perfect, permanent balance, freedom from vibration and tilting, which waste cream, practically frictionless operation—guarantee *all the cream all the time.*

Run skim milk from any other separator through a B B Marvel and you will want the extra cream it separates. A right size for every herd. Sold on easy-payment plan. Mail the coupon today.

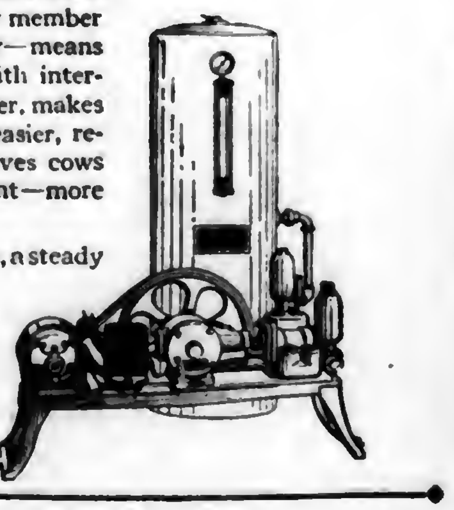
Running water in house and barn for a few cents a day

The Empire Water System provides comfort, saves work and time for every member of the family, every day in the year—means bathroom comforts, does away with interminable pumping and lugging water, makes kitchen, laundry and dairy work easier, reduces fire insurance premiums, gives cows and hogs all the water they want—more milk, heavier hogs.



Easy to install, silent in operation, a steady flow at any faucet, motor, pump and tank equipment with 300 gallons an hour capacity—comforts and conveniences only running water can supply for about a nickel a day. Sold on easy payment plan. Mail coupon today.

Profit from Labor Savers

Orchard and Pullets Pay Bills Since We Got a Tractor

First Prize

I FEEL safe in saying that modern labor-saving machinery has made it possible for the progressive, wide-awake farmer with a vision to make money during the past five years, while the old fashioned, non-progressive farmer has been howling calamity and hard times and has been asking Congress to legislate for the "poor farmer."

Our farm contains 100 acres. Six years ago we kept two teams and a hired man. We were not making very much money. Five years ago last fall we sold one team and let the hired man go and bought a tractor. I believe that the tractor has done more to make farming profitable and pleasant for us than any other modern machine.

The spring plowing and harrowing used to be a big job with the team. Now the tractor does the job in one-fourth of the time and does it better.

The other three-fourths of the time I spend in our old apple and peach orchard spraying, etc., and I also help my wife raise pullets to sell.

Before we had the tractor we did not realize an income from these two sources. Last year we had a labor income from the chickens of $962, and during the last five years we have had an average yearly labor income of nearly $500 from our old orchard. We had this, after spraying materials and depreciation on a power sprayer had been deducted.

Corn Takes Place of Oats

The tractor has made it possible for me to take oats out of my rotation and substitute corn. This corn is put into the silo. The corn stubble is seeded to wheat. This is usually a rush job. The tractor fills the bill in silo filling and preparing the ground for seeding. The corn grown on this ground is worth twice as much as the oats crop would be.

The manure-spreader is another profitable and labor-saving machine. A man can haul and spread three times as much manure with the spreader as by hand. This is a big item on the average farm. I have been top-dressing my wheat for a number of years with the manure spreader. This makes a nice, even job. Since doing this I have always had good stands of clover and good hay crops and good sods to plow down for corn.

I raise seven acres of potatoes yearly. Before last year, I broadcasted my fertilizer. This meant a day's hard work for man and team.

Last year I bought a fertilizer attachment for the cultivator. This sows the fertilizer alongside of the row which means that the young potato plants can reach it and also that the potatoes are fertilized and cultivated in one operation.

And Electricity, of Course

Electricity on the farm is convenient and profitable: washing, ironing and lighting are done by electricity.

We have the lights in our laying houses and have given our hens a 14-hour working day all winter. The hens' laying average for this whole winter has been nearly 50 per cent.

One of the first requirements of successful livestock feeding is regular feeding. During the winter, when the days are short, the feeding can be done quicker and better with electric lights than by the old lantern light.

We consider our radio and telephone among our valued conveniences.

Our brooder houses and brooding equipment play a very important part in our chick raising. We could not handle 2000 chicks at one time if we had to depend on broody hens.

(Continued on next page)

Contest Awards

THE owners of labor-saving equipment wrote such enthusiastic letters about their mechanical helpers that it has been difficult for the judges to select the best submitted for the contest, "How I Have Profited by Using Modern Labor-Saving Machinery." Tho all do not own the same labor savers they seem to be agreed that modern equipment, indoors and out, increases the size of the figures which appear on the credit side of the farm ledger at the end of the year.

The judges have made the following awards:

First Prize—Mark N. Witmer, Northumberland Co., Pa.
Second Prize—Edgar T. Henry, Clearfield Co., Pa.
Third Prize—S. Elwood Croshaw, Mercer Co., N. J.

We hope to be able to publish other contest letters in future issues.

(Courtesy Fred H. Bateman and Company)

This orchardist is equipped to spray the right way and at the right time.

Last, but not least, because it is the most profitable equipment that we have on our farm and because no farm is complete without it. A farm account book and a pencil. This is the greatest labor-saving machine of all, because it tells us the things that don't pay so that if we are wise, we will save all our labor on those particular things.—Mark N. Witmer, Northumberland County, Pa.

Machinery Helps Keep Everything Shipshape

Second Prize

I AM farming about 100 acres of a 150-acre farm. I have a full line of the most modern up-to-date machinery with the exception of a potato planter and digger. I do not pretend to farm on a large scale but I do ask for a competitor who keeps his farm and buildings in A-1 condition, to produce what I did in 1925 at less overhead cost or outside expense.

I keep from 18 to 20 good milk cows which are milked with a two-pail double unit milker operated by electricity. I raised 700 bushels of oats, 75 bushels of wheat, 50 bushels of buckwheat, 600 bushels of potatoes, which were sprayed eight times. Sprayed 75 apple trees three times, cared for the fruit, apples, peaches, plums and cherries, cared for 19 acres of corn which filled two 60-ton silos besides 500 or 600 bushels of ear corn, cared for three acres of sweet corn and cabbage and cut 60 tons of good hay.

Children Are Good Assistants

I have four girls and two boys. The boys are 18 and 8 years old. The 18-year-old boy was graduated from high school in June, 1925. He helped until November 1 when he took a position as messenger boy in a bank. One girl raked hay behind the loader. The children helped plant and pick the potatoes and outside of this I hired a young man eight afternoons in haying, three days in threshing, (I threshed right from the field) and five days filling silos.

Besides my own work I did $63 worth of farming for my next-door neighbor, $41 for another, and cut 39 acres of oats with my binder for other neighbors.

I pump water into an 80-barrel cistern on a hill above my barn which gives me fine water pressure in both house and barn. My house is equipped with a hot water plant, bath, and all electric appliances and conveniences.

I am a Presbyterian Sunday school superintendent, a Granger, (master of the largest Grange in Clearfield County) a Shriner and a Yellow Dog, and we don't pretend to stay at home all the time, either.—Edgar T. Henry, Clearfield County, Pa.

Cutting Production Costs in Potato Fields

Third Prize

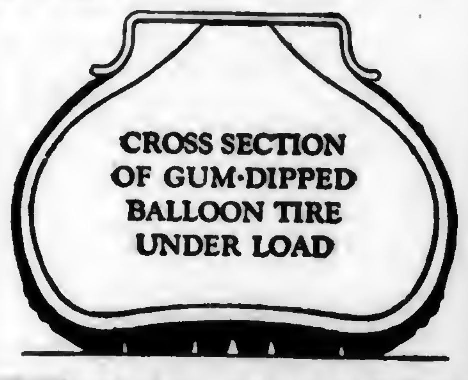
THE "signs of the times" are to use high analysis fertilizer and man-saving machinery to reduce the cost of production. Irish potatoes are the leading cash crop in this section. Some growers plow their ground with a three-furrow tractor plow in the fall after all the crops are harvested, thereby saving valuable time in the spring.

In the spring we prepare our potato seedbed with tractor harrows, and use our horses to a two-row fertilizer distributor, and a two-row potato planter, planting ten acres per day. One neighbor uses a three-row potato and fertilizer distributor combined with four horses which saves one man's labor. These potatoes are cultivated with a three-row cultivator and four horses, saving

(Continued on page 25)

Scientifically Designed
BALLOON TIRE TREAD

THIS type of tire rides more directly on the wide rider strip at the center of the tread. That is where the weight and wear come, so that is where extra rubber is needed. The walls and tread of this tire are thick and stiff, making necessary the use of large tread design for high pressure tires.



THIS type of tire—low pressure Balloon—carries the load on a wider surface, therefore grooves are cut directly in the center of the Firestone Tread to permit easy flexing. Greater amount of Rubber is placed at outer edges of tread where most of the load is carried. Instead of large, heavy rider strips and projections which retard flexing and cause skidding, the Firestone Tread is provided with small projections and narrow rider strips which increase flexibility and give greater safety and skid-protection.

Another Reason why—
Firestone Tires are Better

When Firestone engineers were developing the Balloon Tire they found it necessary to design a tread altogether different from that which is required by High Pressure Tires.

The Firestone tread was not designed with large, massive projections for appearance or to make plausible sales argument. On the contrary, the projections of the cross-and-square tread are small and the rider strips narrow permitting the tread to yield to irregularities and cling to the road, giving the greatest non-skid surface. This tough, pliable tread has the wear-resisting qualities that give thousands of extra miles of service.

The tread, however, is not the only important part of the Balloon Tire. Such a tread as this, designed to yield to every depression of the road, must be placed on the carcass that also has the qualifications to withstand the terrific flexing that this design tread permits. Firestone provides this extra strength and endurance by dipping the cords of the carcass in a rubber solution. By this process, every fiber of every cord is saturated and insulated—to withstand the extra flexing of the Firestone tread.

If you want the economy, comfort and safety of Gum-Dipped Tires—see the nearest Firestone Dealer. He will gladly explain the many features that make Firestone Tires better.

The Answer to a Man's Question

Farm Women Have Helped Husbands Buy Labor Savers, Now They'll Install Devices Indoors

LAST year a man prominent in the affairs of agriculture in Pennsylvania asked me why women on the farm are not so progressive as men when it comes to fitting up their work-shops with labor-saving equipment. I have not answered him to date but I hope he will read this story.

At first I set about to see whether his assertion were really true, and I am now convinced that you and I must agree with him, for country visits, surveys of farm homes, and yearly statistics taken by various organizations prove the rather startling truth. We country women go on year after year doing without machinery of all sorts that would mean shorter hours of labor and increased efficiency in home-making.

Wives Help to Achieve Success

The more I think of the situation, the prouder I am of my sisters and the greater becomes my faith that we will before long match pennies with these progressive men. I am thoroly convinced that men are in the lead today because of the foresight and cooperation of wives who have helped to place at husbands' command trucks and tractors, planting machines and improved sprayers, harvester-threshers and loaders, manure spreaders and milking machines, incubators to take the place of a thousand clucks, and other fine equipment for every line of farm work.

These inventions take the place of many men, and what a saving that is! How can the farmer "carry on" today with labor the price it is unless he has machinery? What would he have left after paying men their wages, paying the food bills which accumulate when he feeds them? You know one thing that would remain and that is a tired woman, for what work it is to cook and bake, wash and iron for many men when the garden needs attention, the babies must be fed and bathed, and the young chicks need a watchful eye.

The efficient farm woman is far-sighted enough to realize that the precious moments she so desires with her husband and family are made possible when equipment reduces the need of man power, and time and strength are saved for the joys of living. Is it economy to do without an improvement that might cost $750.00, and then spend fully as much for hired help entirely forgetting the cost of food and waste of personal strength and time to feed and care for such helpers?

Why Not Indoor Equipment, Too?

Many farm conveniences are as useful in the housekeeping and home-making industries as in the barns or on the acres. Water systems and electricity work for him or for her with equal grace, and yet only ten per cent of the farm homes in the United States have piped water, and but seven per cent have either gas or electricity. I am glad the farmers are up and doing, but I see no reason why the men should have labor-saving machinery of all sorts and women struggle on over the washboard when electricity will wash the clothes for three cents an hour.

Are you stirring up and merely dislocating dust daily with the old broom when a vacuum cleaner will actually remove that dust safely and easily? Are you carrying water—hundreds of buckets of water in and out of the kitchen—when a water system could so easily be arranged and a life-saving drain be installed?

Doing Without Isn't Always Saving

Are your children leaving the farm because you have never thought to give them bright lights and a piano, phonograph or radio for the evening's recreation? Are you burning half the biscuits and all the cakes because the old stove is a miserable lump of iron, and have you wasted enough in good batter to pay for a fine modern oil range? Did you know that houses are today fifty years behind the technical arts? How is yours? Let us not put square pegs in round holes.

Wise woman helps her husband and thereby helps herself. Wise husbands realize that better equipment in the home saves mother's time and strength for the real work of home-making.—Gertrude S. Stewart.

His Best Sunday Morning Breakfast

"I DO not know of anything better for Sunday morning's breakfast than salt mackerel and boiled potatoes. Sunday morning is the only morning I have time to eat salt mackerel." Those lines are quoted from a recent letter that reached my desk, and I know they voice the sentiments of many men. Do you give them what is not only their heart's desire, but this delicious fish food so rich in body needs?

The composition of fish is not unlike that of meat as fish contains protein, fats, valuable mineral salts and water. Fish give you iodine, so very essential to health. We country folk often lack fish foods because of location, distance from markets. We need fish in our diet and every woman should study the local supply to be able to secure fresh, absolutely fresh, fish when in season.

How fortunate we are to be able at all seasons to place fish on our tables, for today, canned salmon and tuna are perfectly preserved. Flaked fish of various kinds can be bought in carefully sealed packages. Cured fish is a treat. One of the finest Sunday night lunches I ever enjoyed was largely of smoked white fish.

The Men Like It

To make the breakfast our men folks crave, soak mackerel all night by covering completely in fresh water. In the morning, cut off the head and tail and place fish in your frying pan with a covering of fresh water. As soon as it boils, pour off the water, add a generous spoonful of butter and brown the mackerel on both sides. Many folks stop here and serve piping hot. Others remove the fish to a hot platter and add a cup of cream to the hot butter. Let it boil up a minute, and pour over the mackerel which has been surrounded with plain boiled potatoes.—Gertrude S. Stewart.

Old Furniture Made New

LAST summer we had our house painted a lovely gray, and I fixed up the porch to make it more inviting. A trip to the attic revealed two dilapidated chairs, which I treated to three coats of gray paint, and new cretonne cushions, after needed repairs had been made.

A friend gave me her old porch swing which had been made from a discarded davenport. When she visited me next time, she was surprised to see how three coats of gray paint, and new cretonne tacked firmly over the upholstering had transformed it.

For a finely finished piece of furniture, first remove every bit of the previous finish with varnish remover, and lightly rub down the first two coats of enamel with finest sandpaper. Use even, medium-length strokes with a brush that does not shed hairs, and do not attempt to go over it while it is wet with little patching dabs as these are ruinous to the smooth mirror-like effect.

After the final coat dries, if you do not care for the high lustre, rub in circular motion a little powdered pummice on a soft cheesecloth slightly moistened with rubbing oil, which will give it the desired eggshell lustre.

Repairs, fresh paint and bright cretonne transform dilapidated chairs.

Three Coats Applied

Reed furniture may be thoroly scrubbed with strong soap and lye if there is no necessity for varnish remover, or it may be merely brushed free from dust if the previous color is not too dark. Two coats of enamel undercoating are followed by one of eggshell enamel, being sure that each is dry before the next is applied.

To get a silvered effect, such as you see on some reed furniture, apply silver gray or white and let dry. Then apply green, dark blue or any chosen color and rub with a soft cloth as you apply it, letting the silver show thru. A trip to the furniture store will show you how it ought to look.

Any good floor stain may be used if it is dark enough to cover the former color. Reed, such as that used in basketry, of suitable size may be used to repair a reed rocker.

Good lines in furniture, good construction, and pleasing proportions make it worth refinishing. The color may be soft and neutral if gay draperies and cushions supply the needed color note, or the furniture itself may be attired in a color more daring, yet lovely.—Doris W. McCray.

The Kitchen Cabinet

GINGERBREAD

KINDLY print a recipe for good gingerbread.—C. E. W.

This gingerbread baked in a long pan is very good.

½ cup butter
1 cup boiling water
½ cup raisins (not necessary)
¼ teaspoon salt
2 well-beaten eggs
½ cup sugar
2½ cups flour
1 teaspoon each ginger and cinnamon
1 cup molasses
1 teaspoon baking powder
1 teaspoon soda
½ teaspoon cloves

Cream the butter; add the sugar slowly creaming thoroly. Then add the well-beaten eggs—the molasses—the water, mixing well after each added item. Sift together all dry ingredients, add slowly, beating well. Use a moderate oven and you will have a delicious soft gingerbread.—Mrs. Samuel K. Mast, Pa.

• • •

COTTAGE CHEESE PIE

1 cup soft cottage cheese
Two thirds cup sugar
Two-thirds cup milk
2 egg yolks well beaten
1 tablespoon melted butter
A pinch of salt
½ teaspoon vanilla

Mix ingredients in the order given. Bake in an unbaked crust. Cool slightly, and cover with meringue made by adding two tablespoons sugar and one-half teaspoon vanilla to the beaten whites of the two eggs. Brown the meringue in very slow oven.—Betsey Ford, Maryland.

Our Mandy—The Best Hired Girl to Be Found in All the Country Round

CHURNING, washing, running the separator—none such hard work for a husky, but what a lot of time they take!

For years we have been planning what we would do when they ran an electric line up from town past our farm. Being only a mile from the street lights, we thought our dream might come true till this last fall. Apparently the power company prefers to extend its service only within the village limits where new stretches of wire won't be required and where meters can be read more conveniently.

So we bought "Mandy" a few months ago to do our chores for us. She has a more dignified trade-name but we don't care to call her Miss ——. For our work it seemed advisable to get a plant with a pulley to supply power direct instead of thru an electric motor. While the motor takes less room than the shafting and pulleys, it takes more gasoline and more of the engine's power for the same task; the efficiency is about two-thirds I believe. However, we may get a motor sometime for running a milking machine or a washer if it seems more convenient.

At present Mandy churns and runs the separator. The amateur machinist had an interesting time gearing her down so she wouldn't snatch the churn baldheaded or whirl the separator off into space. It is great to get up from the breakfast table and find the butter all ready for washing.

If There Were No Traffic Laws

As a mere woman who has never driven a car—not even from the back seat—I am proud to say I have learned to start Mandy, as well as stop her, on churning days without any help. I almost think I could run a car if there were no traffic laws!

During all this talking and dreaming, we hadn't thought much of the quality and convenience of the lights. Our oil lamps were all right; we knew how to keep them from being the smoky, smelly things that you read about. But it has taken us just no time at all to find it handy to pull a chain for a light and to appreciate its clear brightness.

"They" tell us our lights are brighter for the same number of watts than we could get from a high-power line. Running the engine a while every week or ten days to charge the batteries doesn't cost much in care or gasoline, and it is a great improvement on tending lamps every morning.

Now we are sure Mandy is the very best hired gal in our neighborhood. We don't care a snap whether a public service line ever comes our way!—Mary Vida Bates.

Wanted!

An extra good eggless chocolate cake recipe.

Baked beans recipe including tomato sauce.

Appetizing ways to cook split peas, lentils, dried lima beans.—G. S. S.

Why Not the Easier Way?

DISHES have to be washed but why wipe them if it is not necessary? A wire dish drainer will hold the washed china and if scalding water is used to rinse it, the china will dry itself in a more sanitary way than can be done with a towel.

Glassware and silver need wiping and should be wiped while hot. Pots and pans may be wiped with the dish cloth wrung out in clean water.

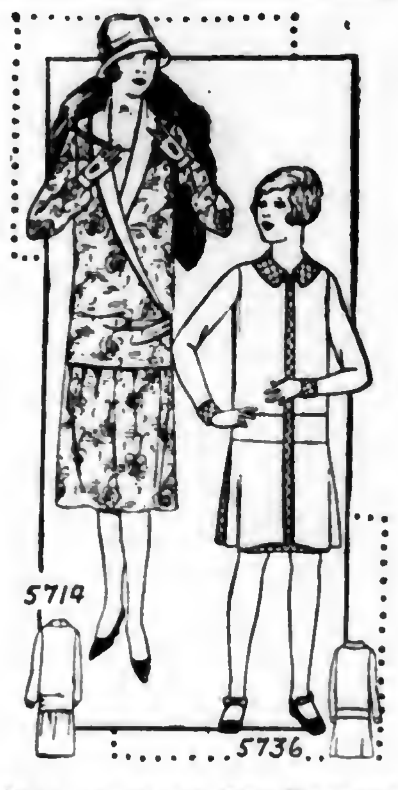
Short cuts in dish washing begin with putting pots and pans to soak as soon as they are emptied. Greasy pans are easier to wash if wiped out with newspaper before soaking. Egg and milk dishes should be washed in cold water, and greasy or sugary dishes need hot water. Frequently the pots and pans may be washed immediately after using, and while other parts of the meal are cooking. To get as many of them as possible out of the way beforehand shortens the work afterwards.

The time taken to clear the table, clear working spaces, put away food, and scrape and pile dishes before beginning to wash, saves time in the end. Rubber scrapers are useful to scrape the dishes, and they may hang in a handy spot near the sink.

Glassware should usually be washed first as it is cleanest, then silverware. Fresh, hot, soapy water should be used for the china if there are many dishes. Knives are usually washed separately, and, if they have bone or wooden handles, the handles should be kept out of the water.—New York State College of Agriculture.

Distinctive Styles

Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.



5714.—A Jaunty Two-Piece Dress.—This model features the surplice closing with smart shawl collar. The skirt is mounted on a yoke. Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. To make dress shown in large view for a 38-inch size will require five-eighths yard of 36-inch lining for the skirt yoke, one-half yard of plain material 40 inches wide for facing on vestee, collar and cuffs, and 3¾ yards of figured material 40 inches wide. Pattern, 10 cents.

5736.—Stylish Frock for the Girls.—Wool crepe and plaid silk are here attractively combined. This is also a good model for two tones of jersey or other materials. Four sizes: 8, 10, 12 and 14 years. To make as illustrated in the large view for a 12-year size will require 2¼ yards of 36-inch material together with 1⅛ yard of contrasting material. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date spring and summer 1927 Book of Fashions.

The Handy Washer

Saves time, work and clothes

A FEW pieces or a tubful of clothes are quickly and easily washed with this new-method washer. Made to fasten on every kind of tub. It is easy to operate, requiring only slight bending of the arm. A 12-year-old girl can do it. The suction and double action thoroughly cleans out the dirt and does not rub or wear. By draining out the water it is easily converted into an excellent wringer for heavy pieces.

Complete Washer (without tub) Only $10

by parcel-post prepaid, cash with order. Or with two satisfactory references, $1 with order and $1 each month for the next ten months. (Your money back if you are not satisfied and return the washer within 30 days.) In ordering, state on what kind of tub washer is to be used. Guaranteed for five years.

Agents Wanted. Liberal commission allowed. Sales easily made on demonstration. Address

HANDY WASHER CO.

Judith of Blue Lake Ranch

By JACKSON GREGORY

Copyright Charles Scribner's Sons

The Story Thus Far

JUDITH SANFORD, part owner in Blue Lake Ranch since the death of her father, Luke Sanford, fired Bayne Trevors, general manager, because he wasn't square. The men grumbled. Trevors made trouble in every way possible. Bud Lee, horse foreman, and old Carson promised to stay. Judith could depend on them and on "Doc" Tripp, veterinarian and a friend of her father.

Busy days followed. Mrs. Simpson took up her duties caring for the ranch house and Pollock Hampton, part owner of the ranch, arrived with his guests—Major and Mrs. Langworthy and Marcia, their daughter; Marshal Rogers, lawyer, and Frank Farris, artist.

On May 30 Charlie Miller, returning from Rocky Bend with the pay roll, was robbed. To avert a walkout, Bud Lee covered 80 miles in six hours and put the money into Judith's hands in time in spite of smokeless powder and a silencer that put his horse out of business. Next day, while searching for clews of the holdup, Bud Lee and Judith came upon three of the troublemakers. In the fight that followed Bill Crowdy was injured but Chris Quinnion, the man Judith believed responsible for the death of her father, escaped. Pollock Hampton captured Shorty, who, tho locked in the grain house that night, also escaped. Someone on the ranch was double-crossing.

Bud Lee liked Judith but she certainly wasn't the lady of his dreams. Then he met Marcia in flounces and pink parasol down in the meadow. Three days later Lee came upon Judith in the cabin crying. Over the coffee she told Lee of the difficulties she was up against. Tho $350,000 in debt and little to come and go on she was determined to make a go of the ranch if she had the chance. She was depending upon Lee to see that she got that chance. There was cholera among the hogs—there had been lung worm among the calves—Trevors had imported both, but how? It wasn't long after that talk in the cabin before they learned the answer. A strange man brought pigeons to the ranch. Tripp washed their feet, made his test. Those pigeons carried cholera germs. Poker Face, suspected as the man who had been double-crossing, and the stranger were put under guard.

Continued from last week

AT LAST word came from Judith. Carson and Lee were to bring both suspected men to the house. Doc Tripp, wiping his hands on a towel, his sleeves up, bestowed upon the two of them a look of unutterable contempt and hatred.

"You low-lived skunks!" was his greeting to them.

"Easy Doc," continued Judith from her desk. "That won't get us anywhere. Who are you?" she demanded of the man standing at Lee's side.

"Me?" demanded the man with an assumption of jauntiness. "I'm Donley, Dick Donley, that's who I am!"

"When did you get here?"

"'Bout an hour ago."

"What did you come for?"

"Lookin' for a job."

"Did Carson say he hadn't anything for you?"

"No, he didn't. You're askin' a lot of questions, if you want to know," he added with new surliness.

"Then why are you going in such a hurry? Don't you like to see any one shoot pigeons?"

Donley stared back at her insolently.

"Because I didn't fall for the crowd," he retorted bluntly. "An', if you want to know, because I didn't hanker for the job when I found out who was runnin' it."

"Meaning me? A girl? That it?"

"You guessed it."

"Who told you that I was running the outfit?" she demanded suddenly, her eyes hard on his. "You must have found that out pretty soon! Who told you?"

Donley hesitated, his eyes running from her to the other faces about him, resting longest upon the expressionless, dead-looking eyes of Poker Face.

"What difference does it make who told me?" he snapped.

"Answer me," she commanded. "Who told you?"

"Well," said Donley, "he did. Poker Face told me."

"Who told you that his name was Poker Face?" Judith shot the question at him.

DONLEY moved a scuffling foot back and forth, stirring uneasily. That he was lying, no one there doubted; that he was but a poor liar after all was equally evident.

"You ain't got no call to keep me here," he said at last. "I ain't goin' to answer questions all day."

"You'll answer my questions if you don't want me to turn you over to Emmet Sawyer in Rocky Bend!" she told him coolly. "How did you know this man was called Poker Face? Did you know him before?"

Donley's eyes went again, furtive and swift, to Poker Face. But so did all other eyes. Poker Face gave no sign.

"Yes," answered Donley then, taking refuge at last upon the solid basis of truth.

"Did you know this man?" Judith asked then of Poker Face, turning suddenly on him.

"No," said Poker Face.

Donley, having guessed wrong, flushed and dropped his head. Then he looked up defiantly and with a short, forced laugh.

"Suppose I know him or don't know him," he asked with his old insolence, "whose business is it?"

But Judith was giving her attention to Poker Face now.

"Where did you get that white pigeon you turned loose this morning?" she asked crisply.

"Caught it," was the quiet answer.

"How?"

"With my han's."

"Why?"

"Jus' for fun."

"Did you know that pigeons could carry hog-cholera on their feet?"

"No. But I wouldn't have been afraid, not bein' a hawg."

Donley tittered. Poker Face looked unconcerned.

"Take that man Donley into the hall," Judith said to Lee. "See if he has got any pigeon feathers sticking to him anywhere, inside his shirt, probably. If you need any help, say so."

Very gravely Bud Lee put a hand on Donley's shoulder.

"Come ahead, stranger," he said quietly.

"You mind your own business!" cried Donley, springing away.

But Bud Lee's hand was on him, and tho he struggled and cursed and threatened he went with Lee into the hallway. Tripp, watching thru the open door, smiled. Donley was on his back, Lee's knees on his chest.

"I'll tell you one thing, stranger," Bud Lee was saying to him softly, as his hand tore open Donley's shirt, "you open your dirty mouth to cuss just once more in Miss Sanford's presence and I'll ruin the looks of your face for you. Now lie still, will you?"

"Connect me with the Bagley ranch," Judith directed the Rocky Mountain operator. "That's right, isn't it, Doc?"

"Yes," answered Tripp. "That's the nearest case of cholera."

"Hello," said Judith when the connection had been established. "Mr. Bagley? This is Judith Sanford, Blue Lake ranch. I've got a case of hog-cholera here, too. I want some information."

She asked her questions, got her answers. Triumphantly she turned to Tripp.

The Bagley ranch, tho a hundred miles away, was the nearest cholera-infected place of which Tripp had any knowledge. Bagley did have a flock of pigeons; a man, a month or so ago, had bought two dozen from him; the man wasn't Trevors. Bagley didn't know who he was. The same man, however, had shown up three days ago and had asked for another half-dozen of the birds. There had been three white pigeons among them. He was a shifty-eyed chap, Bagley said, old brown suit, hat with a rattlesnake skin around the crown. That, point for point, spelled Donley.

LEE returned with the shirt which he had ripped from his prisoner's back. Adhering to the inside of it were little, downy feathers and three or four larger feathers from a pigeon's wing.

"I guess he rode mostly at night, at that," concluded Lee. "A great little fat man you must have looked, stranger, with six of those birdies in your shirt."

Donley's face was a violet red. But a glance from Lee shut his mouth for him. Poker Face, still looking on, gave no sign of interest.

"Put him in the grain-house," said Judith, her eyes bright with anger. "And see that he doesn't go Shorty's trail. Poker Face, have you anything else to say for yourself?"

"No," answered Poker Face.

"Then," cried Judith hotly, "you can have your time right now! Donley, here, I'll prosecute. He's going to pay for this morning's work. I've got nothing on you. It's up to you to see that I don't get it! And you can tell Shorty for me—yes, and Quinnion, too, and Bayne Trevors, if you like—that I am ready and waiting for your next play! And don't forget that when San Quentin is full there's still room in Folsom."

Judith telephoned Emmet Sawyer that she had a man for him. Lee and Carson conducted an expostulating Donley to the grain-house and jailed him wordlessly. Then Carson put a man on guard at the door, daylight tho it was. When all was done he filled his pipe slowly and turned troubled eyes after Poker Face.

"She made a mistake there," he said regretfully. "A better hand I never ask to see, Bud. As' ought to see the game of crib man plays! Nope, Judy; yo wrong there."

But Bud Lee, the man who did approve of the sort of woman did man's work, said with u warmth:

"Don't you fool yourself, Ca She hasn't made one little yet!"

THO, under the surface, life Blue Lake ranch was suffic tense, the remaining days of frivoled by as bright and bonny the little meadow-blues flirting the field-flowers.

Since from the very first the had been short-handed, the from dawn to dusk were filled activity. Carson, who, true to ith's expectations, had brought some new ideas from his few day the experimental farm—ideas be admitted by Carson, how bought a hundred young steers a neighboring overstocked In the lower corrals the new machines were working smooth cnly a few of the older cows to have anything to do with the

Tripp had succeeded in and getting back some of the who had worked long under Sanford and whom Trevors had charged. It was a joy to see the miliar faces of Sunny Harper, ny Hodge, Bing Kelley, Tod The alfalfa acreage was extended little more than doubled. Plans made for an abundance of dry der to be fed with the lush during the coming lean months Lee broke his string of horses, with Tommy Burkitt and one dependable man began perfecting their education, with an eye turned toward a profitable sale in Janu

Quinnion, perforce, was left turbed upon the sheep-ranch whi Emmet Sawyer had followed Against Bud Lee's word that he had a hand at the trouble at the cabin were the combined oaths two of the sheepmen that he been with them at the time.

Hampton's guests, who had pla ned for a month at the ranch, on. But they would be leaving at end of June. That is, Farris Rogers positively; the Langwo perhaps. The major was cont here, and to stay always and alw would be an unbounded joy— course, with little runs to the cit for the opera season and for sh ping trips, and a great, jolly hou party now and then.

The only fly in Marcia's ointme was Hampton himself. She confess as much to Judith. She liked hi oh, ever so much! But was that lov She yearned for a man who wou thrill her thru and thru, and Ham ton didn't always do that. Just aft his heroic capture of the terrib Shorty, Marcia was thrilled to he heart's content. But there were oth days when Hampton was just Pollo Hampton. If it could only be a ranged so that she could stay on an on, with no day of reckoning t come, no matrimonial venture o the horizon . . .

"That's simple, my dear," Judi smiled at her. "When you get the

being Pollock Hampton's guest, you can be mine for a while."

Hampton was now a great puzzle to Mrs. Langworthy, and even an object of her secret displeasure. Not that that displeasure ever went to the limit of changing Mrs. Langworthy's plans. But she longed for the right to talk to him as a mother should. For, seeking to emulate those whom he so unstintedly admired, Bud Lee and Carson and the rest of the hard-handed, quick-eyed men in the service of the ranch, Hampton was no longer the careless, frankly inefficient youth who had escorted his guests here. He went for days at a time unshaven, having other matters to think of; he came to the table bringing with him the aroma of the stables. He wore a pair of trousers as cylindrical in the leg as a stove-pipe, over them he wore a pair of cheap blue overalls, with the proper six-inch turn-up at the bottom to show the stovepipe trousers underneath. The overalls got soiled, then dirty, then disgracefully blotched with wagon grease and picturesque stains, and Hampton made no apologies for them.

Twice he left the ranch, once to be gone overnight, intending that it should be a mystery where he went. But, since he rode the north trail which led to the Western Lumber camp, no one doubted that he had gone to see Bayne Trevors, in whom he still stoutly believed.

BETWEEN the 15th and the memorable 30th of June, Bud Lee saw little of Judith. She was here, there, everywhere; busy, preoccupied. Marcia he talked with twice; once when they rode together while Hampton, racing recklessly down a rocky slope for a shot at a deer got a fall, a sore shoulder and made his debut in certain new swear-words; once when all of the guests, with the exception of Farris, who was painting the portrait of the stallion, Nightshade, and the major, who had "letters to write," came out to watch the horse-breaking. This time, introduced to Mrs. Langworthy, Lee got for his bow a remarkably cold stare. Others might forget, here in the open, the distinction between people of the better class and their servants—not Mrs. Langworthy, if you please.

Having created his imaginary woman, Lee was ripe to fall in love with her when she came. He had thrilled to the touch of Judith's hand that night in the cabin; his thoughts, many and many a day, centered about the superbly alive beauty that was Judith's. The fact disturbed him vaguely. The thought that he was very deeply interested in her in the good old way between man and maid, never entered his stubborn head. She was as far removed from his ideal woman as the furthermost star in the infinite firmament. Perhaps it was this very disquiet within him, caused by Judith, which now turned his thoughts to Marcia.

"That's the sort of woman," he told himself stoutly. "A man's woman; his other self, not just a pardner; the necessary other side of him, not just the same side in a different way."

Marcia had little, feminine ways of helplessness which turned flatteringly to the strength of the other sex. Judith asked no man to aid her in mounting her horse; Marcia coquettishly slipped a daintily slippered foot into a man's palm, rising because of his strength.

Now, when his thoughts went to Judith, Bud Lee turned them dexterously to Marcia, making his comparisons, shaping them to fit into his pet theory. When, days passing, he did not see Judith, he told himself that he was going to miss Marcia when she left. When one day he came unexpectedly upon Judith and with lips and eyes she flashed her ready smile at him, he felt that odd stir in his blood. What a pity that a girl like her, who might have been anything, elected to do a man's work! When, again unexpectedly, he came another day upon Marcia riding with Hampton, there was no quick stirring of the pulses, and he contented himself with the thought: "Now, that is the sort of woman. A man's woman' His other self . . ." and so on.

When Judith planned a little party to mark the departure of Marcia on the 30th of June—it wasn't definitely decided that the Langworthy's were leaving then, but at least Farris and Rogers were—the reasons actuating her were rather more complex than Judith herself fully realized or would have admitted. She liked Marcia; she wanted to do at least this much for her. Living-room, dining-room, music-room, library—they would all be cleared of the larger pieces of furniture, the double-doors thrown open. The string band from Rocky Bend would come. Judith would send out invitations to the nicer people there and to the ranches hereabout. She would have a barbecue, there would be races and the usual holiday games, then the dance. Marcia would know nothing of it until the last day, when her eager enthusiasm would send her a-flutter to her dressing-room.

Unanalyzed, it was simplicity itself, this giving a farewell party to Marcia. Under analysis, it was a different matter. The boys at the ranch would be invited, and of course most of them would come. Bud Lee would come. Judith would see to that, even if he should hesitate.

Bud Lee had always been so self-possessed, had so coolly found her lacking, that, piqued a little, Judith longed for the opportunity to place him in an atmosphere where a little of his calm self-possession might be snatched from him. If she could embarrass him, if she could see the red rise under his tanned skin, she would be giving Mr. Lee a lesson good for his soul.

"I've got powerful little use for an affair like that," said Lee coolly, when she told him. "Thank you, Miss Sanford, but I don't think I'll come."

Judith shrugged her shoulders as tho it did not in the least matter to her.

"I'm giving it for Marcia," she said. "Do you think it would be quite nice to her to stay away? I am afraid that she will be hurt."

Not Judith's words, but the look in her eyes changed Lee's intentions.

"If it's for Miss Langworthy," he said quietly, "I'll come."

THE day came and Bud began to regret he had given his promise to go to Marcia's dance. All day he was taciturn, aloof, avoiding not only the visitors from Rocky Bend and the other ranches, but his own fellows as well. He took no part in the races, was missing when the blazing trenches and smell of broiling meat told that the barbecue was in progress. He worked with his horses as he had worked yesterday, as he would work tomorrow. With the dusk he went, not to the men's quarters, but to the old cabin at the Upper End.

Again and again that day he had thought of that look in Judith's eyes when she had asked him to come for Marcia's sake. What the devil did she mean by it? He didn't know exactly, but he did know that in its own vague way it irritated him. Her eyes had laughed at him, they had tensed, they had told him that Judith herself wasn't wasting a single thought upon Mr. Bud Lee, but that she had noticed his obvious interest in Miss Langworthy.

"Darn it," muttered Lee. "I won't go."

But he had said that he would go, and in little things as in big ones he was scrupulous. He would go, just to dance with Marcia and show Miss Judith a thing or two. He felt unreasonably like taking Miss Judith across his knee and spanking her. And he did have a curiosity to see just what Judith would look like in a real party-dress.

"Poor little wild Indian," he grumbled. "She's got the making of a wonder in her, and she doesn't even know it. What's worse, doesn't care."

HE SAT with a dead cigarette between his fingers, staring at the wind-blown flame of his coal-oil lamp. Judith was doing this as she did everything that she set her two hands on, thoroly and with her whole heart and soul. In that lay the key to her character. There was no half-way with her. When she gave, it was open-handedly, with no reservation; where she loved or hated, it was unreservedly; if she gave a dance it would be a dance for the countryside to remember.

Yesterday Hampton had wondered, grinning, what he'd look like in a dress-suit again. Hadn't had a thing on here of late but his war togs. Whereby he called attention to his turned-up overalls, soft shirt, battered hat, and flapping vest with the tobacco-tag hanging out.

Bud Lee turned down the wick of his lamp, which had been smoking, and sat staring at it another five minutes.

"By thunder," he said softly to himself. "I'll do it."

He shoved the bunk away from its place in the corner, opened a trap-door in the floor and, lamp in hand, went down into the cabin's cellar. Here was a long pine box, hooped with tin bands for shipping, its lid securely nailed on. He set down his lamp and with shirt-sleeve wiped off some of the accumulation of dust and spider-web. A card with the words, "David Burrill Lee, Rocky Bend," tacked to it made its appearance. Lee shook his head and attacked the lid.

"It's like digging out a dead man," he muttered. "Well, we'll bury him again tomorrow."

It was a box of odds and ends. Clothing, a few books, a pack of photographs, an ornate bridle, a pair of gold-chased spurs, a couple of hats, gloves, no end of the varied articles which might have gone hastily into such a receptacle as this from the hurried packing in a bachelor's apartments. Bud Lee, with a dress-suit and the articles it demands, even to tie and dancing-shoes, went back into the room above.

"Like Hampton," he mused, looking at the things in his hands. "I wonder what it'll feel like to get back into these! I'm a fool." He laughed shortly and set to work to improvise a flat-iron to take the worst wrinkles out of the cloth. "Once a fool, always a fool. You can't get away from it."

Tobacco on Its Way to Market

The one-crop farmer usually cannot afford the modern labor savers which are rapidly displacing slow and often back-breaking methods.

Did you ever hear this one?—

The Rock of Gibraltar

Recently there was a distinct earthquake shock which disturbed a small western city and rocked the municipal building so that the councilmen, then in session, left without the usual ceremonies.

The clerk, a man of rules and regulations, was hard put to give his minutes the proper official tone. Finally he evolved this masterpiece: "On motion of the city hall, the council adjourned."—DeLaval Monthly.

He Had the Wrong Number

A man who believed he knew all about parrots undertook to teach what he thought to be a young, mute bird to say "Hello!" in one lesson. Going up to the cage, he repeated that word in a clear voice for several minutes, the parrot paying not the slightest attention. At the final "Hello!" the bird opened one eye, gazed at the man, and snapped out, "Line's busy."—Exchange.

Plea for Beauty Sleep

"I have only one request to make," groaned the college man who had come to work in the harvest.

"What is that, Mr. Smart?" returned the farmer.

"Please let me stay in bed long enough for the lamp chimney to cool off."—Wallace's Farmer.

The Tiff

Simpkins and his young wife had just completed their first quarrel.

"I wish I were dead," she sobbed.

"I wish I was, too," he blurted out.

"Then I don't wish I was," and the war continued.—Exchange.

Kind to Dumb Animals

A small boy was sent to the store by his mother to buy a chicken.

"Do you want a pullet?" asked the grocer.

"Naw," replied the boy scornfully, "I wanna carry it."—DeLaval Monthly.

McAndrews—Hooray! The wind has changed.

Convalescent Wife—Well, mon, what of it?

McAndrew—Ye ken the doctor said ye needed a change of air.—DeLaval Monthly.

Presence of Mind

Papa was deep in a book, when his wife called, "Dan, baby has swallowed the ink. Whatever shall I do?"

"Write with a pencil," was the reply.—Patton's Monthly.

Ella—I suppose you met lots of Greeks while you were in Athens?

Etta—Yes, they have them there, too.—Life.

Mum's the Word

"Did your church pray for rain last week?"

"No, the parsonage roof leaks."—Siren.

Clerk—We have taken ten dollars off the price of this suit.

Customer—Ye can kape it, thin. Don't yez think Oi want me money's worth?—Exchange.

When Edith and Alexander were engaged she said: "I just love to see you smoke that pipe!"

When Edith and Alexander were married she said: "I'd just like to see you smoke that pipe!"—Life.

"Winter Days" Contest Prize Winners

Group 1—Over Twelve

1. Earl S. Haldeman, (X), Lehigh County, Pa.
2. Olive Nichols, (X), Chester County, Pa.
3. Frank Seder, (X), Allegheny County, Pa.

Group 2—Twelve and Under

1. Melvin E. Ruhl, (X), Salem County, N. J.
2. Esther Landis, (X), Dauphin County, Pa.
3. Dorothy Harter, (X), Centre County, Pa.

Honorable Mention

Raymond Boles, (X), Tompkins County, N. Y.; C. Clyde England, (X), Bedford County, Pa.; Ada P. Gehman, (X), Lehigh County, Pa.; Anna B. Oberholtzer, (X), Lancaster Co., Pa.

OUR YOUNG PEOPLE'S FORUM.

First Prize—Over Twelve

THESE PINE TREES ARE FORTY-FIVE YEARS OLD
Earl S. Haldeman, (X), Lehigh County, Pa.

Letters from Forum Members and Friends

Dear Cousin Ruth.—I have four cats for my pets. One is black, she is a very playful cat. If I hold a piece of meat above her head she will stand on her hind feet and try to get the meat with her front paws. I think it is great fun to have some pets.—Josephine Steiminger, Washington County, Pa.

Dear Cousin Ruth and Forum Friends:—I live on a 150-acre farm but we don't own it. We have eight horses and one of them has a colt. She is widely known as the best saddle horse in the state. Her pictures and name often appeared in papers and books. Her name is Princess Pat. She is lonely now because they took the colt from her.

We raised potatoes and corn on the farm last year. We can't raise much because so much of our land goes for pasture.

The man that owns the farm owns the P. M. C. at Chester and they bring about thirty-eight to forty horses out in the summer. I have four sisters and one brother all smaller than I. We just finished putting them to bed.—Anetta Passwater, (X), Chester County, Pa.

Third Prize—Over Twelve

MY DOG, MACKS GORDON BUDDY, HELPING ME FEED QUAIL.
Frank Seder, (X), Allegheny County, Pa.

Dear Cousin Ruth and Forum Friends.—It snowed today and drifted the roads and we had to shovel ourselves out. I shoveled the front steps myself. I was out playing in the snow with my four puppies, Sing, Bolet, Tunny and Racket. Sing is mine.

I was at the Sesqui last summer. We had Chautauqua. I was there. We had the play "Applesauce" and a magician who shot his wife and did other tricks.

I help mother with the chickens and have a cat named Mexie. We live nine miles from Coatesville and sometimes we go to the Y. M. C. A. meetings. We went on Sunday. The auditorium seats 1800 people and they have a fine pipe organ.—Ada Fleming, eleven (X), Chester County, Pa.

Dear Cousin Ruth and Forum Friends:—My pets are a cow named Patty and her calf called Swiss. I have a puppy, Ted. He is only two months old and he sleeps with the calves. He is very warm at night because the calves like him very well and all sleep around him. We have nearly 200 chickens. Two beautiful White Leghorn roosters eat out of my hand and if I say crow they will crow. One is Billy and the other one is Tom. I have a horse named Carlie.—Josephine Meddo, twelve (X), Butler County, Pa.

Dear Cousin Ruth and Forum Friends:—I am having a nice time this winter on the farm.

I am the oldest child in the family. I'm a freshman at Calvert Agricultural High school. I have two miles to go to school. In the fall when school first started I drove a car but the roads are so bad that we have to walk across the fields.

I have a white Collie dog and I think very much of her. She has two puppies. They are very cute. They are white and brown spotted. They are twins.—Harold C. McGrady, thirteen (X), Cecil County, Md.

Dear Cousin Ruth:—The ice on the ponds is soft and the boys of the school and I can't skate. I saw an airplane from the U. S. Navy today.

We have a phonograph in our school and we play it lots.—Paul Klements, Salem County, N. J.

Third Prize—Twelve and Under

TAKEN IN A SNOWSTORM
Dorothy Harter, (X), Centre County, Pa.

Thanks to You

MANY, many thanks to the Forum cousins who remembered me with valentines and birthday cards. I surely did appreciate receiving them.

Sorry there isn't room on the page this week to print all the prize winning pictures in our "Winter Days" Contest but those that didn't get in this time will appear before long.

First Prize—Twelve and Under

WEIGHTED WITH FEATHERY FLAKES
Melvin E. Ruhl, (X), Salem County, N. J.

Any time you have good pictures that you think others would enjoy seeing, send them along and I'll try to use them.

COUSIN RUTH.

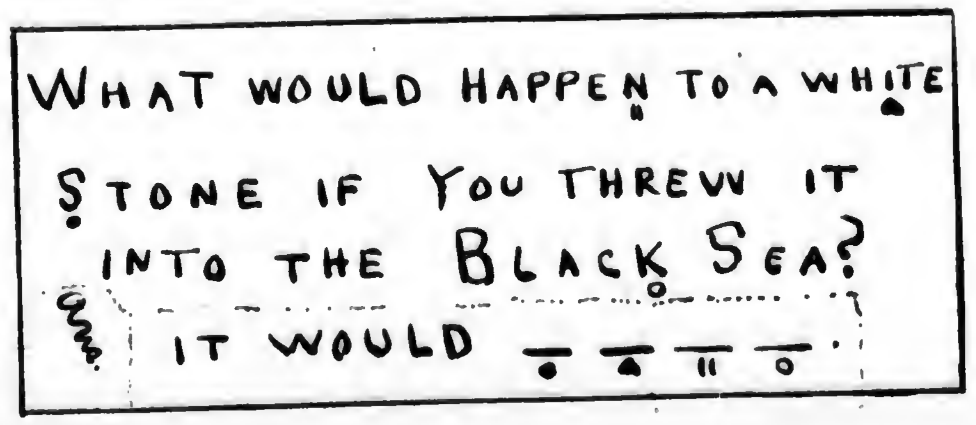
OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—Queer things can happen in foreign lands, and when I look at the pictures in the windows of the steamship companies these days I wonder what might not happen on the Black Sea, the Red Sea or the blue Mediterranean. Maybe we'd still like to toss stones into the water, away off there as we do here at home, just to hear the funny little "ker-plunk" when the stone hits the water and to watch the silky ripples spread out. At any rate you can answer this week's puzzle if you will look carefully at the queer little signs under the blank spaces in the answer at the bottom of the page and place in those spaces the letters under which the signs appear in the question part of the puzzle. I leave it to you whether it is a strange thing or not. Let me have your answer, on a postcard or in a letter, by March 5th. BE SURE TO SAY HOW OLD YOU ARE, and please tell me what county you live in and when your birthday comes. The prizes go to the ten children, sending in the correct answer, whose cards or letters are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to the Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

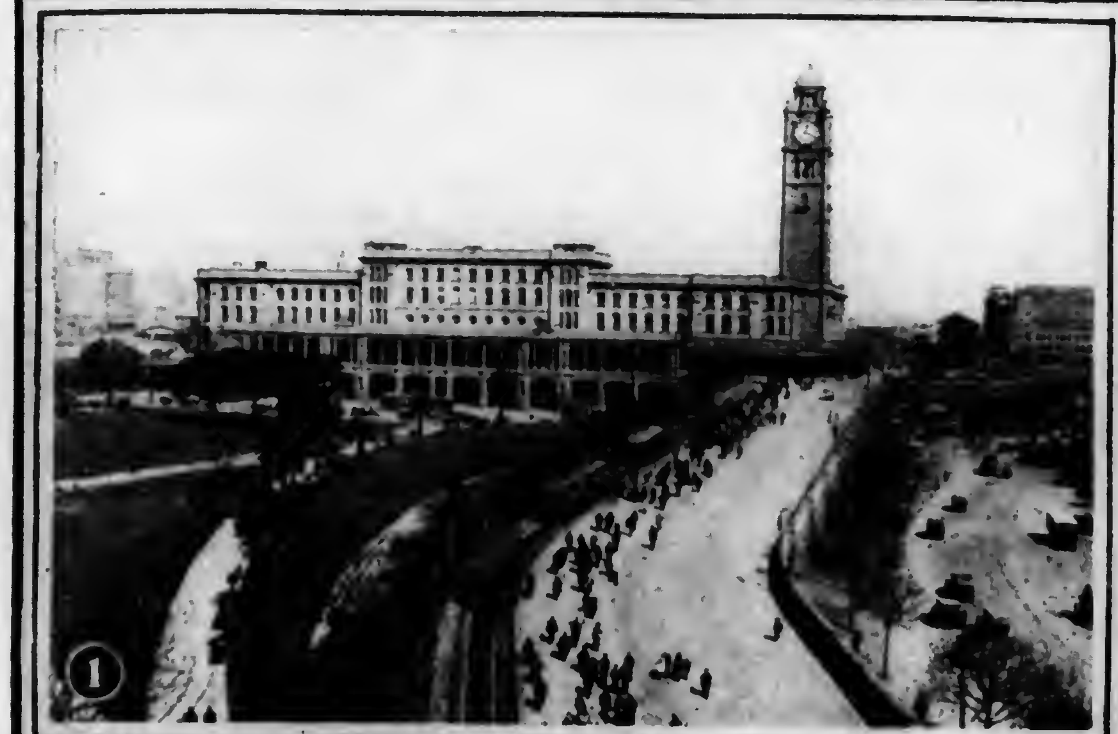
The answer to the puzzle published in the February 5 issue of Pennsylvania Farmer (the one about Valley Forge) is: LAFAYETTE CAME FROM FRANCE.

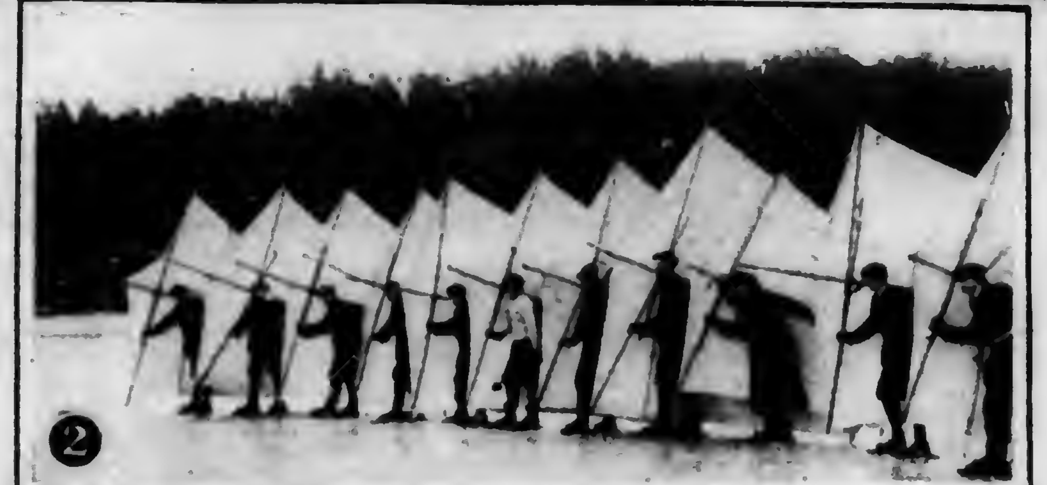
The ten little folks whose answers were correct and whose letters (or postcards) were the best in those things mentioned above (grammar, spelling, etc.) are: Ernest R. Brendlinger, age 11, Frederick, Pa.; Martin Deibert, age 9, Slatington, Pa.; Albert Dunn, age 13, Smithfield, Pa.; Kathryn Jacoby, age 10, Etters, Pa.; Pearl B. Mountz, age 12, Carlisle, Pa.; Elizabeth Jane Rice, age 6, Pequea, Pa.; Michael Schneider, age 11, St. Peters, Pa.; Mabel E. Smith, age 9, Punxsutawney, Pa.; Mae Walters, age 11, New Bethlehem, Pa.; Harold Wentzel, age 11, East Earl, Pa.

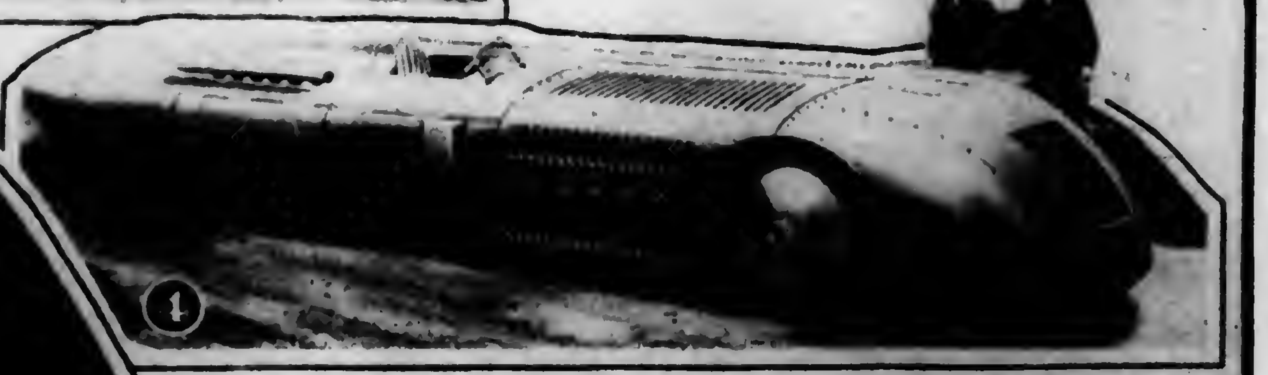


WHAT WOULD HAPPEN TO A WHITE
STONE IF YOU THREW IT
INTO THE BLACK SEA?
IT WOULD

PASSING EVENTS IN PICTURES







1.—Sydney, Australia, the capital of New South Wales and the parent city of Australia, resembles an old English town in some sections but has many beautiful modern buildings as well.

2.—One of the most popular winter sports in Sweden is sail skating. The tense moments at the beginning of the race are followed by many thrills.

3.—Fred Brenckman, Washington representative of the National Grange.

4.—The English racing car, the "Mystery S," in which Major Segrave will try to pass the 200-mile mark at Daytona, Florida.

5.—In a Chicago workshop 30,000 men and women manufacture more than ninety per cent of the telephone equipment used in the United States. Flaming fires start the mass of molten metal on its way thru the various processes necessary before it reaches the home as a telephone.

6.—Wash day in an oasis of the Sahara Desert. Altho they lack soap and modern conveniences, these women manage to get the clothes clean by washing them in the brook and laying them out on the sand where the hot sun finishes the job.

Quicker Solubility!

Michigan Rotary Calcinator

A NEW AND BETTER AGRICULTURAL LIMESTONE

We announce the greatest single advance in the preparation of MICHIGAN LIMESTONE. Now an accomplished fact, after months of research and experiment. We now pass "Michigan" through huge Rotary Calcinators. It is heated at 1200 degrees, opening up the grain, expanding the crystals, and decreasing the density. We then can pulverize to greater, smoother fineness at 7,000 lbs. pressure, where it formerly required 18,000 lbs.

QUICKER AND MORE COMPLETE SOLUBILITY

is the result of this process. The extreme purity of MICHIGAN LIMESTONE, combined with this advanced method of preparation, will give results in your soil this Spring that will amaze you.

Place your order early. No advance in price.

MICHIGAN LIMESTONE & CHEMICAL CO.
55 Coal and Iron Exchange BUFFALO, N. Y.

Wonder Healing Compound FOR MAN or BEAST
—It's CORONA WOOL FAT

Soothing Healing Ointment That Works Like Magic

Corona Wool Fat is made from the oil extracted from sheep's wool. It's different from any salve or ointment you ever tried. It heals and soothes, but will not smart or blister the most sensitive wound. It has healed thousands of stubborn wounds where other lotions have failed.

Hardly a day passes but what you'll find some use for Corona. For sore shoulders, sore necks, collar boils, split hoofs, scratches, sore teats on cows, caked udders, cuts, wounds, burns of any kind on man or beast it is unequalled.

LIBERAL SAMPLE FREE Corona is sold by nearly all druggists or direct from us on receipt of price—8 oz. tins 65c, 20 oz. tins $1.25, postpaid. If you will send your name and address, we'll mail you a liberal sample and book of uses Free. We want you to see for yourself the wonderful healing properties of Corona.

CORONA MFG. CO., 266 Corona Bldg., Kenton, O.

Pennsylvania's "Spud King"

How Mr. Briggs Won That Coveted Championship

MR. R. E. BRIGGS, of Nescopeck, Luzerne County, Pa., by producing 688 bushels of potatoes from one measured acre of land, earned the title of "Spud King" for the Keystone State and for most other states, as well, last year. Briggs was one of eight men in Luzerne County to top the 400-bushel mark in 1926. His nearest rival was H. F. Coon with 546 bushels.

The record yield was produced on clover sod which had been in wheat in 1924, and in potatoes in 1923. Mr. Briggs spring-plowed the land and applied 12 tons of manure. He planted northern-grown seed in 24-inch rows and 12 inches apart in the row, using 38 bushels of seed per acre. A 4-8-6 fertilizer was applied in the row at planting time, the field was cultivated five times, and sprayed 14 times.

(Courtesy National Fertilizer Association)

Mr. R. E. Briggs, undisputed potato-growing champion of Pennsylvania.

Of the eight men in Luzerne County who made more than 400 bushels, all but one planted 20 or more bushels of seed per acre; seven applied manure; all cultivated an average of five times; sprayed from 7 to 17 times; and applied from 900 to 1600 pounds of fertilizer per acre.

Ordered Those Parts Yet?

LAST fall we advised that equipment be put under shelter and that a card be made out for each machine, listing on it any overhauling that should be done, any adjustments to be made, and any repairs that should be ordered. If these have not yet been ordered they should be sent for at once.

In ordering repairs, give the make and model of the machine, the name and address of the manufacturer, and the casting number of the parts wanted as clearly as you can make them out. Usually your dealer can locate the repair number in his catalogs, if it is a machine which he has handled.

If you cannot make out the manufacturer's name and address, get the repair or casting number of the part wanted and also the name and casting number of a few of the principal parts of the machine. Then take these to your implement dealer and have him take the matter up with one or two of the chief implement trade papers. These papers keep a pretty complete set of old repair lists. The following is about the correct form in which such a request should be made to the implement trade papers:

Gentlemen:—

Please tell me the manufacturer and where repairs may be obtained for an endless apron manure spreader with beater driven by sprocket chain from large sprocket bolted to spokes of right rear wheel. Repair is wanted for small sprocket on beater shaft on which main sprocket chain runs, No. X-123 or X-128. Number of main drive sprocket is X-45, right rear wheel hub casting X-73, left rear wheel hub casting X-70. Am enclosing stamped addressed envelope for reply.

Very truly yours,
JOHN DOE.

With this much information, almost any machine can be identified, and these papers can tell where repairs can be obtained if any are available.—I. W. D.

(Courtesy International Harvester Company)

This might be called the champion potato digger of Pennsylvania. It harvested Mr. Briggs' 688-bushel crop.

We Cannot Do Much About Prices, But—

(Continued from page 9)

ested in the set up of this machine as it has been used for the past year, growing for local wholesale and roadside market trade. Sowings of something are made every few days. By throwing one, two, or three drills out of gear the gang as shown is used to plant all sorts of vegetables. Wheel tracks are the marks for the next rounds.

When used as shown with four drills in operation and a 20-inch space between the two middle rows we are able to cultivate with a light four-row pivot-wheel gang cultivator. This is drawn by a small mule which walks in the 20-inch-wide center. The machine is a walking model, one handle being rigid, the other serving as a tiller to guide the knives or teeth. A gang seeder is absolutely essential to the successful use of a gang cultivator and the combination of these two machines has eliminated wheel hoe work for us except with the most delicate seedlings. On some farms the power may to advantage be a light two-wheel tractor.

Transplanters Are a Big Help

For those who set out large numbers of cabbage, tomato, eggplant and pepper plants there are on the market several makes of transplanting machines worthy of investigation. These apply fertilizer in the row and water at the roots of the plants. Two workers riding on a low platform drop the plants ahead of press wheels or shoes which firm the soil better than is likely to be done by hand.

I sometimes wonder whether we fully appreciate and realize in practice the labor-saving possibilities of the larger cultivators in the variety of sizes and forms which are available. When they are skilfully operated with the right attachments it is possible to effect great savings in the hoeing bill, even to eliminate it entirely. Consideration of soil condition and the precise stage of both crop and weed growth to be handled make the problem of size and kind of attachment, adjustment and manner of working one which will pay well for the best thought we can give.

A Tractor Fills the Bill

The larger tractors for plowing and harrowing have reached a stage of development where there is no questioning their labor-saving efficiency on any farm with enough land to make the investment justifiable. Timeliness, that great factor in securing profits, is made easier with a tractor to drive continuously 24 hours a day when hard pressed in planting time.

Sprayers and dusters deserve high place among labor-saving machines. A crop of celery was all but lost with blight because the old sprayer had given out at a critical time. The arrival of a new machine saved the crop, turned a sure loss into a real profit. Similarly the loss of labor in preparing land, planting and cultivating is often saved by up-to-date equipment to fight crop pests. With some crops, especially celery and potatoes, systematic spraying almost invariably improves quality and increases yield, reducing, thereby, the labor cost per crate or bushel. Convenient arrangements for mixing and filling along with evenly spaced rows and a boom to cover several rows at one passage will save labor in applying the material.

Irrigation Often Prevents Failure

Irrigation is a subject in itself but there are times and places when it will prove a real labor saver thru the finishing of crops otherwise doomed to failure. Multiplication of man-power thru irrigation comes with the production of higher yields than might otherwise have been secured. Costs must be considered, each installation presents its own problems.

In harvesting vegetable crops labor-saving machinery has played a very small part and the problem is difficult. Color, size, maturity, freedom from disease or injury are all factors demanding experience and discretion which we may hardly expect of a machine. When bunching is done in the field some growers feel the use of rubber bands saves time with radishes. If two or three-ply jute twine is used for tying in the field or packing house its purchase in the "many end" coils from which about 100 strings may be cut at one stroke of the hatchet will save minutes. Tying machines have been improved and are giving satisfaction in many places.

This high-pressure sprayer makes it easy to cover large fields quickly.

A Washing Machine for Vegetables

Other packing house conveniences which are being used to an increasing extent are rotary brush washing machines for celery and bunched stuff. Cut off roots are cheaply washed in slatted cylinders slowly revolving in a tank partly filled with water or better still with a stream flowing thru the cylinder and draining out the dirt. Others have devised conveyors of chicken wire or of the smaller sized opening potato grader belt, the vegetables to be washed being carried thru a sort of long box in which they are sprayed by forcible jets of water from all angles.

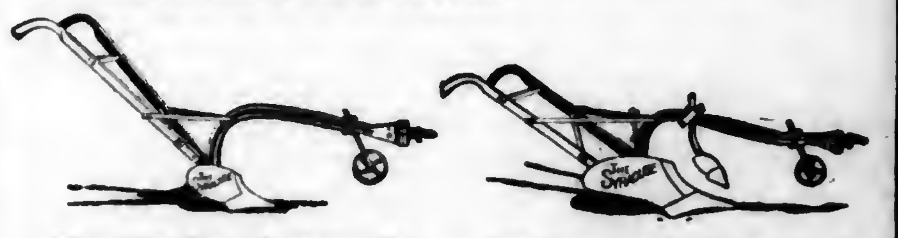
After all the fullest degree of labor saving can be attained only thru day-by-day study of our problems in the light of such methods and machines as we may be able to adopt or develop. Certainly any increase in profits must come from this direction more than from any other.

Plows that Last Longer and Do Better Work

John Deere-Syracuse Chilled Plows are preferred by particular farmers wherever chilled plows are used, because they last longer in sandy soil, shed better, run steadier, handle easier, are built stronger and do better work all around.

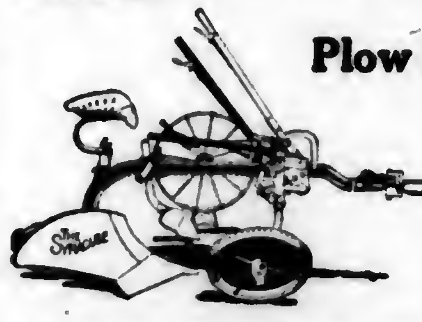
Moldboard is smooth and regular for good shedding.

Shares are chilled to uniform depth, underside as well as top—**one Syracuse Chilled Share will outlast two similar shares of other makes.**



The John Deere-Syracuse No. 1459 is a small, light-weight plow, but having the same substantial construction and good working qualities as our bigger plows. Rib on lower edge of landside insures steady work. Three-piece reversible clevis allows ample adjustments. Beaded steel beam. Full born share.

John Deere-Syracuse Plows of the No. 1341-1441 Series take either chilled or steel bottom parts, adapting them to any soil condition. Built strong. Good penetration. Durable. Heavy malleable frog. Rolled foot beam of standard John Deere type. Bottom parts interchangeable on sulky and tractor plows.



Plow More Acres in a Day

The No. 210 Sulky is the lightest-running plow of its type. Rolling landside eliminates dragging friction. All weight is carried on wheels. Front furrow caster wheel, controlled by lever, governs plow on turns, causing plow to cut at uniform depth even when turning square corners.

Write today for folder describing the Syracuse chilling process and the line of Syracuse plows. Address John Deere, Moline, Illinois, and ask for Folders SI-736

Hoffman's Farm Seeds Spring 1927

Alfalfa Seed

Catalog FREE

Cleaned and Recleaned Strong Germination

SUCCESS with Alfalfa depends largely on the right kind of seed. Good, clean, hardy, Northern-grown Seed means success if other conditions are right. Remember, an Alfalfa field started right lasts for many years; you can afford to use the best seed to be had. Sow Hoffman's Alfalfa Seed and succeed!

Genuine "Grimm"— Many Alfalfa growers insist on "Grimm" because of its ability to withstand hard winters. We have a limited supply of State-Certified and Sealed genuine "Grimm" from Idaho. The very choicest you can buy.

"Northwest"— Very hardy, from the far Northwest and Western sections. Cleaned and recleaned to remove all weed seeds. Big, plump, bright seed. Prices are right. Start an Alfalfa field this season when prime seed can be had at reasonable cost.

Clover Seed— Finest Red, hardy strains suitable for Eastern farms. Mammoth, Alsike and scarified White Clover Seed.

RADIO DEPARTMENT

The Man Behind the Voice

MR. MILTON J. CROSS, chief announcer of station WJZ, is a graduate of De Witt Clinton High School, New York City, and the music supervisor's course of the Damrosch Institute of Musical Art.

After completing his musical education, Mr. Cross toured for several seasons with the Paulist Choristers, during which time he covered the entire eastern portion of the United States. After this he devoted himself to church and concert work, singing in the First Presbyterian Church of New York and as a member of the quartette of the Progressive Synagogue of Brooklyn.

Milton J. Cross,
Chief Announcer WJZ

Mr. Cross was one of the pioneer broadcasters. He appeared repeatedly before the microphone of WJZ in its early days in Newark, N. J., and later, became a member of its staff. He is the oldest announcer in years of service with station WJZ. He is considered one of the foremost announcers in the country today, specializing particularly in classical events.

Aerial That's Best

Would you please tell me the best kind of an aerial for a receiving set, a single, double or triple wire? Also, what is the proper height for an aerial?—G. C.

For the best results with a receiving set the best all-around aerial is a single strand wire about 35 to 40 feet high and about 150 feet long from the outer end of the aerial to where the ground wire joins to the permanent ground. In other words, the horizontal length should be about 85 to 100 feet and the lead-in and ground wire combined from 65 to 50 feet, so that the total length is approximately 150 feet.

Apt to Decrease Selectivity

Many use double and triple and quadruple wires where the length is limited. These may increase the volume slightly, but usually decrease the selectivity more than they make up for any change in volume.

With a multitube set, it is often convenient to have the aerial arranged so that it can be disconnected and a loop aerial connected on, with the proper balance so the dial readings will not be changed, as this will usually bring in the nearby powerful stations in good shape without the static which the outside aerial sometimes brings.

The lead-in should be kept at least six feet away from all metal roofs, gutters, ridgepoles, and so on, and it is better if it doesn't come near a chimney. The ideal lead-in would be one kept entirely away from all contact with the house until it enters the insulated tube which carries it inside.—D.

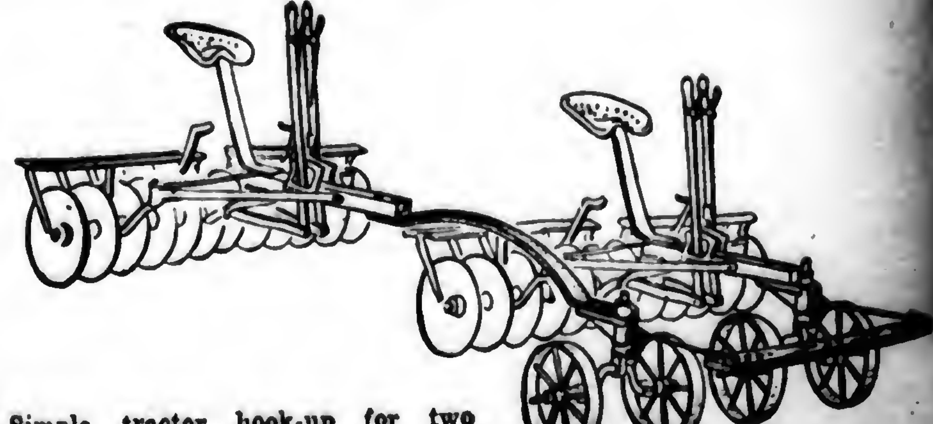
A Hitch Proved Satisfactory

MANY farmers who are changing from horse to tractor power have very good horse-drawn disc harrow which they cannot afford to throw away to buy the heavier and wider tractor discs.

At first it may seem a simple matter to arrange a hitch for two discs, but it is not so easy as it seems. About the most satisfactory hitch I have seen of this kind is that shown in the accompanying diagram. This has been thoroly tried out and proved satisfactory.

Bring the two discs close together and set so as to lap half. Remove the tongue truck from the rear disc and bring it out in front of the first disc up even with the front disc truck and at the proper distance to the side of it. Then from a piece of heavy bar iron have the blacksmith make a curved bar to connect the stub tongue of the rear discs over the front disc to the tongue truck from the rear disc, now out in front of the first disc. This bar should be given plenty of clearance over front disc, but a little study of the two discs and their trucks should enable the blacksmith to make the connection easily.

Belts should be used to make the connections, so this bar can be removed and the tongue truck put back if it is desired to use the truck for horse use again. Lastly an iron or wood bar should be made to connect the two trucks together to act as an evener for the tractor to pull on. It is well to have several holes in each end of this to allow some adjustment to make the lap come properly and also to neutralize any difference in draft between the two discs, which might cause one to pull ahead of the other.—D.



Simple tractor hook-up for two horse-drawn disc harrows.

Electric Committee Ready to Act

Will Help Farmers Secure Light and Power Service

THE Joint Committee on Rural Electrification which has been working for several months to arrive at a basis for an effective agreement for a more rapid extension of rural electric service, feels that this has been accomplished in Order 28, and is now taking active steps to make effective the provisions of that order.

The Pennsylvania State Grange and the other larger farm organizations of the state composing the State Council of Agricultural Associations are unanimous in their approval and support of the proposed plan for the extension of electric service to farmers.

Offices have been opened in the Telegraph Building, Harrisburg, Pa., and a secretary employed to carry on the work of the committee. John M. McKee, who recently retired from his position as Deputy Secretary of Agriculture, was the choice of the committee for this position as secretary. Other officers of the committee are: J. S. Wise, Jr., chairman; W. S. Wise, vice-chairman, and Miles Horst, treasurer.

Requirements of New Order

Order 28 requires that rules and rates shall be filed by the different companies by March 1 and will be effective April 1, but those desiring extensions should at once see the electric utility serving their district as to the conditions and costs under which extensions will be made.

The joint committee would like to hear from groups of applicants as to the success they are having in making extensions or the problems confronting them in which they need aid. All communications should go to the office of the secretary.

Under the new order it is possible for farmers to reduce the cost of extensions materially by contributing labor or poles, where satisfactory ones are available. Therefore, the committee is urging that they get their plans under way as rapidly as possible so that they may contribute such labor during the early spring months before the work of the farm becomes so pressing.

Secretary Has Had Wide Experience

In selecting Mr. McKee, the committee had in mind his knowledge of the state acquired during his four years as Deputy Secretary of Agriculture and the fact that he has been closely associated with the working out of the entire program of rural electrification during that time. He has had experience in working out rural problems during 10 years as county agent in Washington County and during several years of that time he served on the conference committee of producers, distributors and consumers on milk prices in Pittsburgh.

Consequently, it was felt that Mr. McKee's experience in this field would be particularly valuable in the new program the joint committee is undertaking.

In accepting the position, Mr. McKee said: "The extension of electric light and power to farmers is a final step in making the farm home the ideal one. Linked with the rural free delivery, improved roads, telephone and radio, electric service on the farm will make it more efficient as a farm and more attractive as a home, having the best conveniences the city can offer with none of the undesirable features.

"It will be possible to reach the great majority of farms within the next ten years if farmers will show the same cooperation as in providing telephone service."

Profit from Labor Savers

(Continued from page 15)

two men's time and two horses' time.

After we are thru planting and cultivating once, the field is ready to level down the row ridges just before the potato sprouts come thru the soil. This is done with a four-section drag harrow with the spikes slanting backwards, using four horses, this saves one man's time.

The seed potatoes are treated with hot formaldehyde by having a boiler to keep the liquid the correct temperature, and by drawing the potatoes thru the vat by setting the baskets on an endless chain belt and using a power machine. The potato vines are sprayed with a machine operated by a gas engine, which sprays six rows at a time.

Potatoes are usually dug with an engine digger one row at a time, but occasionally you will see a two-row digger fitted in a large tractor. We also have a combined digger and picker which also sacks the potatoes. This saves at least six men's time. Usually potatoes are picked by hand and graded by a power grader which divides them into three sizes. The day of the hoe is gone as we now use four-row weeders drawn by two horses.

There is no need of sowing seed by hand as we now have grain drills drawn by tractors. Just think of the contrast between the use of the sickle and scythe, and the grain harvester and thresher combined, which is now in use.

These labor-saving machines are a great help to us.—S. Elwood Croshaw, Mercer County N. J.

(Courtesy Massey-Harris Harvester Company)

A steady stream of grain flows into the wagon box as this harvester-thresher combine comes down the field.

Easier Work—Lower Costs with the CENTAUR TRACTOR

NEVER before has any farm tractor—regardless of price—offered such an abundance of practical, profit-earning features! Never before have you had an opportunity to buy a power unit that would do—at such small cost—the things that CENTAUR does! At a cost of a few cents per hour it will cultivate a 9 acre field—in one day. It will plow a 12" furrow, pull a heavy harrow, seeder and other field implements. And it is just right for belt jobs. In brief, the CENTAUR is the tractor that you have always looked for—a small size, full-powered unit that will handle your farm work easily and economically.

For Large and Small Farms

If you own a small farm—5 to 50 acres—the CENTAUR will take care of all your power work—better, quicker and cheaper than horses.

There is no more trudging thru heavy mud when plowing or doing other field work. You slip into the spring seat, shift the gears and do all of your work easily, quickly, comfortably. For large farms the CENTAUR is invaluable as a secondary power unit. It is ideal for cultivating—and for all general utility work.

Write or Mail Coupon Today

Right now is the time to get your CENTAUR. There are months of heavy work just ahead and CENTAUR will quickly pay for itself in saving your time and labor. A post card or the coupon will bring you all the facts, including our easy payment plan. Write at once.

LEADCLAD FARM FENCE

Save two-thirds~

For fifty years before the advent of Leadclad there had been no marked improvement in farm fence. Old fashioned methods of plowing, reaping, cultivating, seeding, fertilizing, mowing and hay loading have all been supplanted by more modern and up-to-date methods. Now the old fashioned short-life, wire fence is fast being replaced by the more modern longer-life fence—LEADCLAD.

Leadclad Fence is in keeping with other modern farming improvements. Farmers everywhere are learning that it is far cheaper in the long run, to erect a fence that will last three times longer than ordinary fence; especially when there is so little difference in the price.

Leadclad fences cost no more to put up than ordinary fence. Every Leadclad fence you put up saves putting up two ordinary fences.

Cut down your fence bills by putting up Leadclad fence this spring.

If you get your order in before plowing time, we'll include free, a workman's handy, canvas apron.

Write for 1927 catalog and prices.

Dealers Want Only Fancy Potatoes

Review of the Week Ending February 19

POTATOES — The market was generally steady during the week but trading was slow. Supplies at most markets were liberal and most country shipping points reported a slow demand. In some sections growers were holding for higher prices. In Philadelphia supplies have been moderate and business slow. Some dealers have their money tied up in high priced stock and are trying to avoid losses by holding prices at steady levels. Buyers seem to want only fancy potatoes and are willing to pay a good price for these. The average run of stock of fair quality is only wanted when it can be bought as a bargain or peddled out a few sacks at a time. Since the majority of the Pennsylvania potatoes this year fall in this class they are meeting a very limited demand. There does not appear to be much promise of improvement in the near future.

EGGS—The better grades of midwestern eggs met a fair demand on the New York egg market. There was a considerable supply of ordinary stock that was hard to move. Pacific Coast white eggs were in fairly liberal supply and prices were generally lower. Nearby white eggs were very irregular with some dealers holding their stock and others selling at lower figures.

POULTRY—The live poultry market was rather unsatisfactory. The demand for fowl was only fair. Light stock was steady but heavier birds sold at a discount. Chickens were steady in price with prices varying with the quality. Express receipts of colored fowl moved slowly but light White Leghorns were in good demand and sold readily. Express broilers held firm. The dressed poultry market was quiet with light receipts.

BUTTER—Butter prices advanced 1c to 1½c per pound during the week. On Monday prices were firm but the market showed an unsettled tone and dealers showed a lack of confidence. As the week progressed the tone became firmer and prices advanced. Reserve stocks of butter in storage are lighter than in 1925 or 1926 and prices are now averaging from 8c to 10c above those of last year.

FEEDS—The market was about steady under a moderate consuming demand. Limited offerings are the chief factor holding prices firm. Wheat feeds were slightly higher in some markets while cottonseed meal was barely steady. Linseed meal was slightly lower in the Central West. Gluten feed was a little harder to get and prices were somewhat higher. Hominy feed was barely steady.

HAY—The markets were quiet with eastern markets dull and weak. Central western points showed some improvement. Timothy hay was draggy but there was a fair shipping demand. Alfalfa hay was weaker with an excess supply of medium and lower grades.

GRAIN—The markets were quiet and dull toward the close of the week. Wheat prices were about 1c lower than a week ago due to liberal shipments from Argentine to Europe. Best corn was in fair demand but poorer grades sold at discounts. Oats prices averaged lower.

LIVESTOCK — The Chicago hog market was weak during the early part of the week but was firm toward the close. Beef steers were steady to slightly higher while vealers were generally lower. Heifers and cows were practically steady. Stockers and feeders made slight advances. Fat lambs and yearling wethers advanced while lambs were generally steady.

County News and Comment

Adams County, Pa.—Weather unusually warm and damp for past three weeks. Dirt roads almost impassable. Very bad for corn in cribs. Corn in the shock in much better shape. Chickens not producing well. Chicks being bought. Apple pruning being done as weather permits. Prices: corn, 70c; wheat, $1.35; oats, 50c; four per cent milk, $2.70; butter, 45c; eggs, 27c.—A. R., February 15.

Chautauqua County, N. Y.—February is springlike. Hens beginning to lay. Eggs have dropped to 36c. Hay dealers are of the opinion that neither the price nor the demand is satisfactory. Butter around 50c; potatoes, $2 or better; milk, 8c qt. in the village, 5c on the farm, or approximately $3 per hundred to shippers. This is not net price. No fall plowing was done because of the rains and the ground is frozen hard now.—E. M. A., February 14.

Cumberland County, Pa. — Weather changeable. Almost like spring today. About three inches of snow fell during the night but before sunset nearly all melted. Wheat fields almost bare. Grass fields somewhat better but very little snow protection during winter. Some corn to be husked yet. Good seed corn will be scarce. Owing to high price of potatoes more interest is shown by growers and more certified seed is being shipped in for spring planting. Prices: milk, $2.89; butter, 50c; eggs, 35c; lard, 20c; dressed hogs, 20c; chickens, 30c; wheat, $1.30; oats, 60c; corn, 70c.—A. L. B., Feb. 12.

Frederick County, Md.—Weather unusually mild latter part of January. Fifth of February seven inches of snow fell. Roads in almost impassable condition. Quite a lot of corn still to be husked. Tuberculin testing of cattle is again being agitated and from present outlook Maryland will probably finish the work already begun of freeing herds of this state of the dreaded disease. Grass fields looking about as usual, also the grain. Corn plentiful but poor quality. Eggs steady, around 30@32c dozen; butter, 40c; hogs still high, around 17c, dressed; steers, slightly higher.—R. J. W., February 14.

Greene County, Pa.—Have had two weeks of springlike weather. Meadows, pastures and wheat fields showing green. Farmers busy doing spring work. Quite a lot of plowing for corn already done. Gardens and truck patches being plowed. Continued warm weather has eased up on the feeding of hay, fodder, and other rough feed to livestock. This is much appreciated as there is a shortage of hay in the county. There is a great increase in drilling for oil and gas. Some large producers being drilled in. Mud roads in bad condition. Eggs, 25c; butter, 35c.—C. M. K., February 14.

Mifflin County, Pa.—Weather makes it impossible for farmers to husk corn left out last fall. Roads are in bad condition. Farmers have loaded two carloads of wheat within the last week for which they received $1.25 a bushel at the car. Mr. W. A. Keener, McVeytown, held a tractor school at his home on February 2nd. Tractor and auto owners were much pleased with it. Farmers are receiving $2.90 for four per cent milk. Our dealers are shipping a carload of cows on the 21st for which they are paying good prices for well-bred and good stock. Wheat, recleaned, $1.28; corn, 65c; oats, 45c; butter, 50c; eggs, 30c; apples, $1.—J. H. B., February 15.

Monroe County, Pa.—Weather during past week very mild. On the eleventh several inches of snow fell. The thick ice on the fields has nearly all disappeared with little damage to grain. Ice houses have all been filled. Community meetings are being held in nearly every township by the Agricultural Extension Agent, Roy M. Decker. Prices: hay, $28@30; potatoes, $1.75; lard, 18c; beef, 18c; calves, 18c; pork, 20c.—G. E. S., February 12.

Passaic County, N. J.—Weather for the past month has been a little above normal with about two weeks of sunshine. Pruning of trees nearly completed. Early tomatoes and peppers will be planted this week, or at latest, next week. Markets are rather small as usual at this time of year. Egg production is increasing and prices are falling off a little. Cover crops apparently have wintered well, as have strawberries, but the hardest month is to come so not much can be told about them. Very little pruning of raspberries or blackberries yet.—N. D., February 14.

Potter County, Pa.—We have been having springlike weather with plenty of sunshine for several weeks. Four veterinarians will be working in the county next week retesting herds in which cattle reacted to the T. B. test during the area test last fall. Some potatoes have been shipped. Consumers in nearby cities have been slow about buying them because many were chilled in the field and developed rot. Some carloads were bought for 80c per bushel. Warm weather increased the supply of eggs. Local price, 38c.—M. C. S., February 12.

Snyder County, Pa.—Warm suns are starting apple and peach buds where exposed to south. Chickens laying well. Price of eggs, 32c; corn, 70c; oats, 40c; wheat, $1.25. Considerable corn fodder and some unhusked corn in the field. Coal and wood plentiful and not so high owing to mild weather and slack demand. The immense electric power plant for central Pennsylvania to be built along the Susquehanna River opposite Sunbury in Snyder County is slated for commencement in early spring. Power is to be distributed as far as Pittsburgh and New York City. Present plans indicate it to become one of the largest undertakings of its kind in America. Rumor fixes initial cost at 75 millions. Pig sales frequent and country sales are beginning to have daily large attendance.—W., February 12.

Somerset County, Pa.—No snow, freezing at night and thawing thru day makes roads almost impassable. Very hard on wheat and young clover. Have had a lot of ice this winter. Hard on fruit trees and telephone lines. Some corn to be husked yet. Not much plowing done. Not many sales on farms. Some farmers getting short in hay and dry feed. All seeds high in price, especially clover. Prices: oats, 55c; wheat, $1.40; hay, $20; 3.5 per cent milk for December $2.81; eggs, 35c; butter, 40c.—H. W. B., February 14.

"Cashing In" on Nearby Markets

(Courtesy International Harvester Company)

Pennsylvania farmers use more motor trucks than the farmers of any other state. The reason—unexcelled markets, fine roads.

Sweep Away Your Milking Troubles!

When Bag Balm comes into the cow barn, out goes all the annoying, costly troubles of the udder and teats. No more loss of milk through nervous, restless cows.

Bag Balm heals, with marvelous speed, all cuts, chaps, cracked teats, teats stepped on or bruised in any way. The healing is usually effected between milkings. Just a dab of Bag Balm assures the complete rebuilding of the injured tissues. For Caked Bag, Bunches, Cow Pox—any inflammation or congestion Bag Balm gives prompt, effective relief.

Bag Balm is clean, sanitary, inexpensive—and cannot taint the milk. Big 10-ounce package, 60c, at general stores, feed dealers and druggists. If your dealer is not supplied, order from us, giving us his name. Booklet, "Dairy Wrinkles," sent free.

Farm situated one mile south of Waynesboro, Pa., along pike.
CHAS. E. MARTIN

PLEASE say: "I saw your adv. in Pennsylvania Farmer."

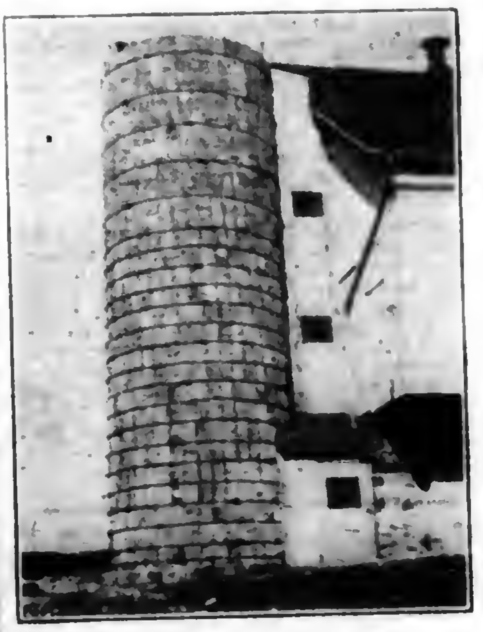
He Grew Up with Machinery

(Continued from page 10)

he handles almost entirely by machinery. He harvested 22 acres last year and told me he does not see how he could have pulled thru without his hay loader. He used two seven-foot mowers to cut the grass and a side delivery rake to place it in the windrow.

Of course, he has always had a tedder but he never has to use it now unless he is caught in a rain. The side delivery rake puts the hay in fine shape to dry and if necessary the whole windrow can be turned over again to help it cure.

He generally uses two hay wagons, each with four mules, so they draw the loader in back of the wagon. Sometimes when he is rushed he uses a third wagon with a tractor so knows what it is to have it draw the loader. The big tractor is geared to a drum hoist at the barn and puts away all the hay. The only real hand labor in the whole process is that necessary to keep the load level when putting it on the wagon in the field.



Concrete stave silo on Mr. Herr's farm.

Much the same story may be told about Mr. Herr's wheat. Last year he had 45 acres and they threshed out 2000 bushels, a record for his place. All of it was cut by the reaper and binder pulled by the tractor. This not only saved the horses a long, hot job but was by far the quickest way to get it done when favorable days came.

The tractor also overcame the problem of how to get across several washes and gullies in the field. It went in and out of them a great deal easier than a team could have done and did not suffer from the extra strain needed every time to get the binder thru.

The crop was stacked in the field allowed to stand for a time and then threshed. The farm has its own threshing and baling outfit which is run by the large tractor so there is never time or money lost waiting for the custom one to come around. Indeed the work is kept up so that time is left to do many custom jobs in the fall for the neighbors.

Not to Mention Many Others

So far I have said nothing about planting, cultivating, spraying and harvesting the potato crop but you may rest assured it is handled in just as efficient a manner as the others. The tobacco crop of the farm, too, has been omitted, with its transplanting machine little known or used outside of the tobacco districts.

Neither have I mentioned the two manure spreaders which save labor and increase crop yields, or the electric pump at the barn which waters the fifty head of stock, or a dozen and more other pieces of machinery and tools which play their part in making it worth while living on the farm.

You should go as I did and see the well-kept place. Not a tool or machine was to be seen outside, all were safely housed in substantial buildings. Then you would be willing to agree with Mr. Herr, that, "Good Equipment Makes a Good Farmer Better."

Friendly Talks with Farm Folks

By Edgar L. Vincent

A SPRING in one of our pastures was not doing well. A very small stream of water ran away from it. There was plenty for the birds, and when the old dog was tired on a hot day he found enough to slake his thirst; but the cattle had to pass on to a spring higher up, for it took too long for the little reservoir below the fountain to fill.

One morning I shouldered my hoe, went to the spring and dug it all out. I pulled out a great pile of mud and leaves and grass. What a change! It was not long before the reservoir was full and a nice stream running away to refresh the meadows below. The spring had not been doing its best. It could not do better as long as it was clogged up.

Is It Not True with Myself?

And I have been taking that to myself, asking the question, "Have I been doing my best?" I have wished every morning that my work might be done this day a little better than I ever did it before. But I have learned that it takes something more than wishing to help a man do that. The wishing is all right; but if we stop with that we make a sorry job of it, because it costs to make a life better.

In a little while now we will be plowing our fields. Many a time the plowshare will strike a stone. What shall we do then? Drive on and leave a balk, or tug the plow back so that we may turn a good, clean furrow to the end of the field? It may be that yesterday we would not have thought it worth while to back up and get a new start. We were in a hurry; we wanted to get the piece plowed that day; but that was yesterday, and we want to make today better than any day that ever has gone by. So we pull back the plow; we put a little more care into everything we do, and we come to the end of the day with more joy and satisfaction in our hearts.

And do we not find a great deal of encouragement in the thought that this is the way with all life? We know how the plant grows. Every day it reaches up and takes something out of the air and the dew and the sunshine that can be turned into stalk and stem and bud and blossom, resulting by and by in ripened fruit. Every day it reaches down into the dark and pulls up something from the earth to make it more perfect. Reaching up and reaching down, reaching out, reaching everywhere, and always adding a bit more to the perfected plant.

And all the time if we follow the great pattern, something is going out of our lives, as well as something new coming in. It is the story of the spring told over again. Out must go the mud and the water-soaked leaves and the unlovely accumulations. Away with pride and selfishness and unrestrained passion, so that the water of our lives may pour out in a purer, sweeter stream. As long as these clog the fountain we cannot live at our best.

Good to the last forkful

This Unadilla *makes* good silage and *keeps* it good. One farmer writes us, "although we did not open the Unadilla for almost a year, our silage was in perfect condition."

There is no waste—no mouldy silage—no oozing out of valuable juices, for the Unadilla doors are so made (of wood least affected by moisture) that they are air tight, frost repellant, strong and durable. They are important factors in insuring good, palatable, succulent, and productive silage.

Safe, efficient, convenient, and moderately priced, the Unadilla can solve your silo problems as it has those of thousands of other farmers.

Write today for our big catalog. It's well worth your while. Ask too, about our special discount on early cash orders.

Our water tubs, storage tanks and vats are moderately priced and sturdily built.

When Buying Equipment—

Know What You Want and Be Willing to Pay the Price

"THE best is usually the cheapest" is a common saying which I believe many of us might well adopt as a guide in buying equipment, and a safer rule than always to buy the cheapest, as some of us are too apt to do. The only values we get out of any piece of equipment are service and satisfaction, and both of these are more dependent on quality than on price.

Service consists first of all in efficient and reliable performance of whatever work the equipment is designed to do. Thus, a big, heavy, clumsy machine might be so built as to last indefinitely and still be practically worthless because it would not do the work efficiently. So when we buy a machine the first consideration is to see that it will go out and do our work in a first class way and not be continually breaking down and giving trouble at the times when most needed.

Light Machinery Doesn't Last Long

A light and cheaply constructed machine is usually neither efficient nor reliable very long at a time. Long life and consequent low depreciation is also an essential part of the service which we have a right to expect.

A machine which is used only a few days per year may give many years life and still have a very high operating cost per day or per hour. What we are after is a large number of hours of actual use, and the fewer years of efficient use these can be crowded into, the cheaper is the operation per hour. Thus, the way to make the most money out of a machine is to wear it out as rapidly as possible in years, provided we get the utmost day's use out of it and that each day's use is made to return a profit.

It's Like Clothes and Automobiles

The matter of satisfaction must not be overlooked in buying machinery any more than in buying clothes or automobiles, as a machine is dear at any price if the owner doesn't like it from the start.

How shall we select equipment? First, know exactly what you want done and then pick out the size and type of equipment which will do this work the most efficiently and with the greatest number of days, and with the least probability of breakage and trouble.

How can you know these things? The reputation of the firm and the machine should go a long way in deciding; because if there are many similar machines in your neighborhood all giving satisfactory service, it is a safe bet that you are likely to get similar good service.

An unusually low price should be considered a danger signal rather than an inducement, as perhaps indicating lack of quality, reliability, service facilities, or manufacturing stability. This is not always the case, of course, but it is true often enough to induce caution.—I. W. D.

Why China Buys Rice

(Continued from page 3)

develop new ones.

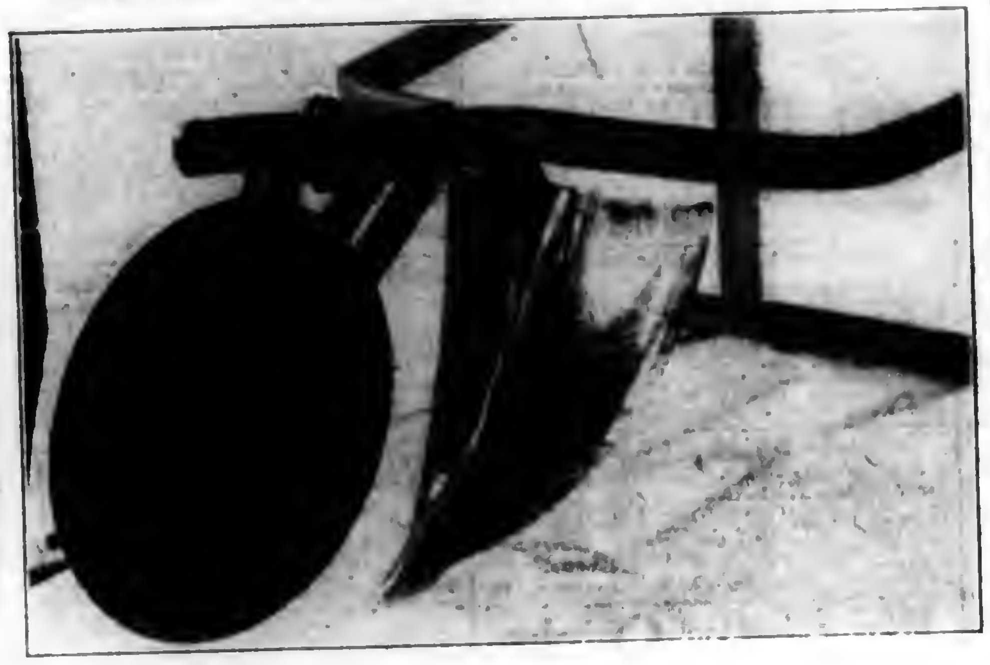
I do not propose to discuss the efficiency of large and small farms, or the farm as a mode of living against a commercialized agriculture, but I will say that efficiency in agriculture means farms large enough to be commercialized to the point that they can compete with a commercialized factory, which produces that which the farm buys. . . .

Handicapped Two to One

In nearly every industry production has outrun agricultural production until today the man of agriculture must work 2.18 hours to produce that which will exchange in the market for that which the man of the factory produces in one hour. As man lives on what he produces and not on the effort put forth, it is plain to be seen that agriculture producing in small quantities with inferior equipment is at a tremendous disadvantage and will continue to be so until there is a better ratio of exchange between agricultural production and factory production. Agriculture is not using, as it should, much efficient machinery that is available.

Contrary to general belief industry derives no permanent benefit from this unbalanced condition. Agriculture is industry's greatest market and when this market is gone the industry must run on short time until the market recovers. Industry is now waiting for agriculture to recover.

Blade Plants Potatoes Deeper



IN ORDER that potato growers may plant their seed deeper, which Dr. Nixon has shown in many cases increased production seventy bushels to an acre, a manufacturer has put on the market a new deep opening plow equipment for his potato planter. The new plow blade is eleven inches wide and fourteen inches deep including a nose-piece which reinforces and increases the life of the plow. The nose-piece is reversible and is to loosen the soil below the depth the seed is planted so that the new roots will have a good chance to start.—T. H. W.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

COW STRAINS.—I have a valuable Holstein cow, now carrying her third calf. While carrying second calf and this one she strains constantly after she is five months gone. Can anything be done to remedy condition?—H. W. F., Elverson, Pa. There is evidently some irritation of the vagina or urinary apparatus that causes the cow to strain. Try giving one tablespoonful of nitre daily for ten days. See that the diet is laxative in nature, using oil meal and bran. Report on your results.

COWS DO NOT COME IN HEAT.—Have two heifers that freshened a year ago, both retained afterbirth. Had veterinary take afterbirth from one. Neither has been in heat since. Would like these heifers to breed again.—O. M., Venango, Pa. Heat periods do not appear when there is a persistent corpus luteum or yellow body in the ovary following calving. This can be determined by an examination of the ovary, and if the condition exists the yellow body may be pressed out and heat periods will occur. The fact that there are retained afterbirths is an indication that breeding troubles are likely to occur.

The boys find joy in cultivating when a motor does the work. Note condition of soil after cultipackers go over it and the narrow row left for hand weeding.

BOTS.—Last spring my team looked fine. In about two months they got poor and died. I opened them and found the stomach full of worms that looked like grubs about three-quarters of an inch long. They had eaten holes in the stomach. My other team is thin. Am wondering if they have worms and what to do for them.—A. R. W., Granville Summit, Pa. The treatment for bots should be administered by your veterinarian. He will probably use the capsule method under conditions which he will outline. It would be advisable to have these bots removed and the horses put on a tonic. There are some remedies to be fed but they are not as efficient as the treatment suggested.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 100,000 farm families read Pennsylvania Farmer every week. Rate 8 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (65 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

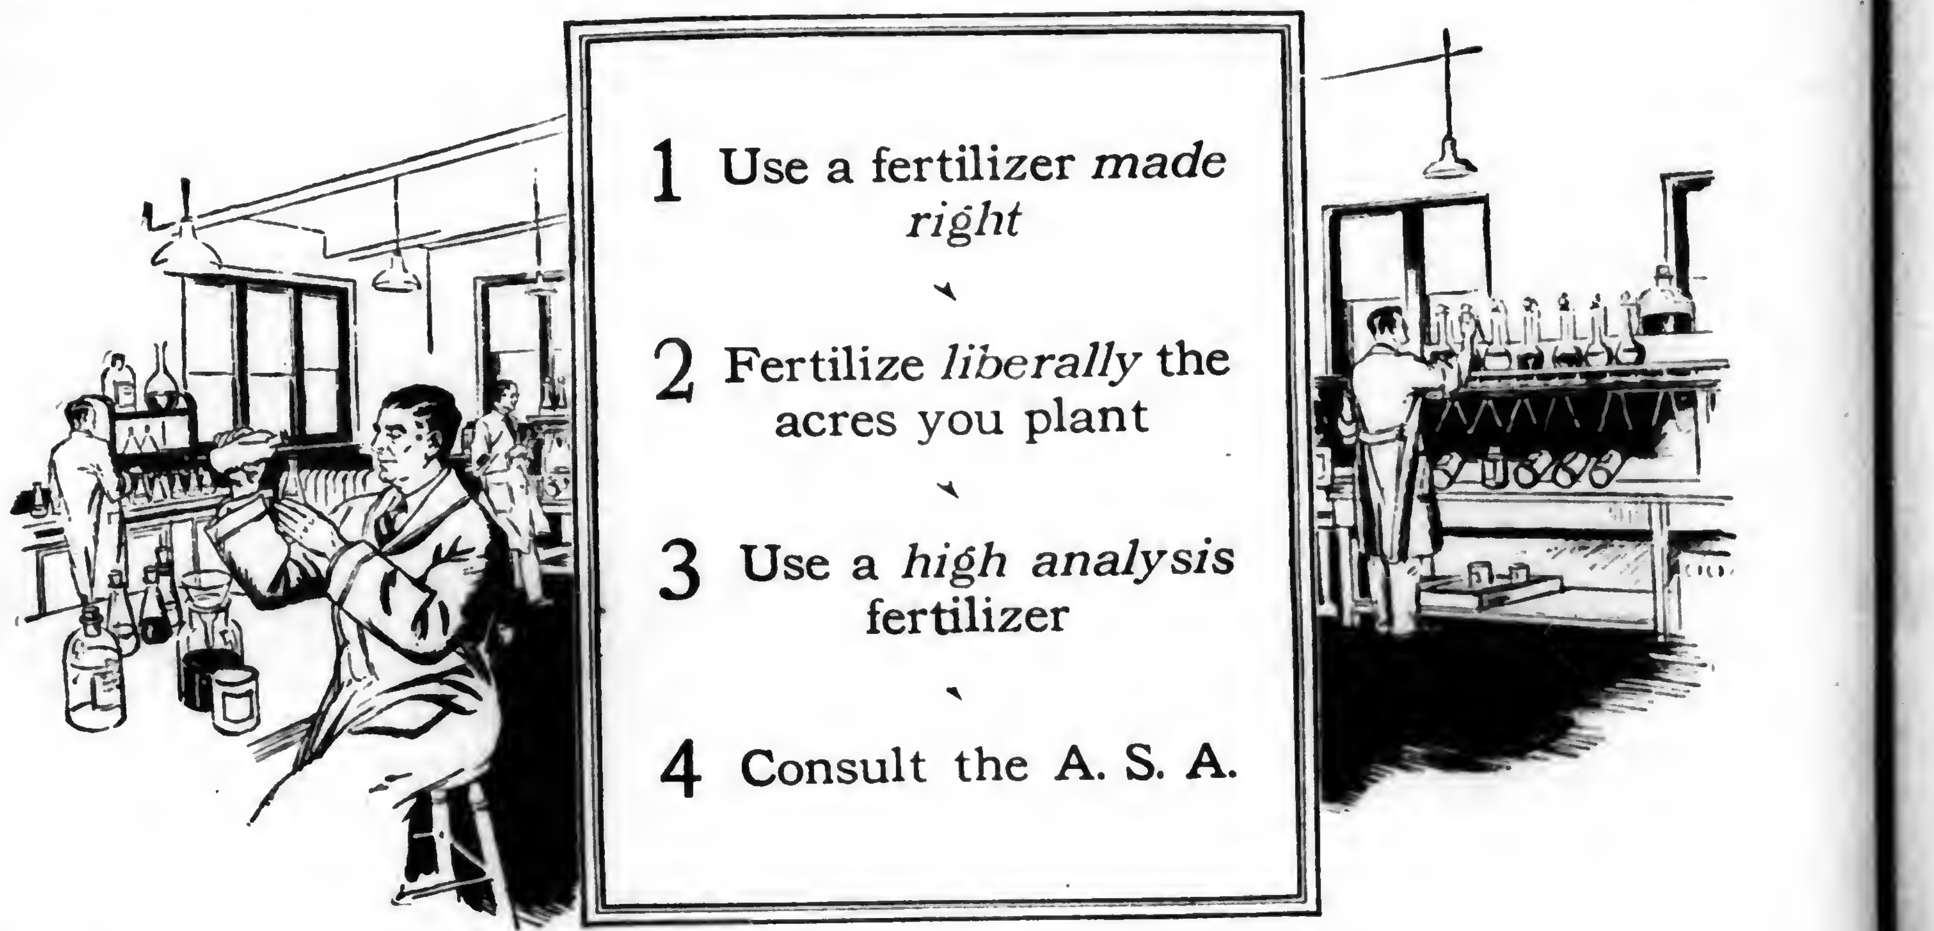
WONDERFUL OPPORTUNITIES, Southern Georgia farm lands. Write for complete information. **Chamber of Commerce, Quitman, Georgia.**

DELIGHTFUL HOME—Southern Delaware; poultry, fruit; forest, if desired. **Franklin Smith, South Glastonbury, Conn.**

WANTED to hear from owner of farm or unimproved land for sale. **O. Hawley, Baldwin, Wis.**

THIS YEAR successful farmers will demand larger yields *per acr*



1 Use a fertilizer *made right*

2 Fertilize *liberally* the acres you plant

3 Use a *high analysis* fertilizer

4 Consult the A. S. A.

Quality — *the biggest thing in this 4-point plan for* extra yields

Be sure you understand this point: "Guaranteed analysis," as you see it marked on a fertilizer bag, means only the *amount* of plantfood. It does not guarantee the *kind* or *quality* of plantfood, which may vary greatly in fertilizers of the same analysis.

The kind and quality of plantfood in the fertilizer you buy depends upon the manufacturer who makes it.

There you have the reason for the importance of *quality* in this 4-point plan. Successful farmers take no chances with the quality of fertilizer they use. They put their faith in Swift's Red Steer Fertilizers. They know that the Swift name on any product means the best product of its kind—has meant that for 50 years.

Follow this 4-point plan for *extra yields*—the yield beyond what is necessary to pay cost of production. There your profit begins.

By fertilizing *liberally* the acres you plant you can get this larger production *per acre*—and save on your labor and other production costs. Use *high analysis* fertilizer. It gives you the amount of plantfood you want for less money, saving on bagging, labor and freight.

Plan now for a larger profit-making *extra yield* this year. Follow Swift's 4-point plan. It is your best assurance of success.

Talk over this plan with the A. S. A. (Authorized Swift Agent). He knows good fertilizer practice in your locality. Get his advice. Look for his sign. It marks the place to get "the fertilizer the best farmers use."

Potato Markets and Selling Methods

The Kind of Potato Housewives Want Is the Kind for Farmers to Grow

By WILLIAM R. WHITACRE

(United States Department of Agriculture)

Digging time near Caribou, in famed Aroostook County, Maine.

PROFITABLE potato production is not a matter of price alone, for one farmer may be able to make a profit on potatoes at $1.00 per bushel, while another may only make ends meet when they are selling at $2.00. Cost of production is just as important a factor as satisfactory prices. In fact, cost of production determines what is a satisfactory price.

Selection of seed, spraying and dusting, and proper fertilization are a few of the practices which have been proven to lower production costs. Some growers have hesitated to follow these practices because of the cost. It is true that equipment is expensive and unless the soil is suited to the growing of the crop on a commercial scale, the investment is not warranted. Cooperation with neighbors in the purchase and operation of machinery offers a partial solution to this problem. In general, the man who cannot follow improved production methods would be better off if he did not grow potatoes commercially, for his product will generally be poor and his costs high.

The efficient marketing of the crop is of equal importance, and in this respect Pennsylvania growers are unusually well situated. The state has 150 cities of 5000 to 25,000 population, or about twice as many as any other. This means short hauls and in many cases growers can sell direct to retailers and consumers, thus receiving a larger percentage of the retail price.

In marketing the most important point is to have something the people want. To the housewife all potatoes are not equally desirable. She buys the kind she thinks is best suited to her needs. The fact that the farmer may know that another variety is equally good, or even superior, does not affect her preference. If he is a good business man he will grow the kind that she desires, for educating the public taste is an expensive proposition.

In most of the large markets in the state, a clean bright potato of medium size will bring the highest price. Large potatoes such as are popular in the West do not find favor in the East. Perhaps this is because fewer baked potatoes are served on our tables but it is more likely because the housewife has come to expect the large potatoes to have hollow heart.

Defects Discount Potatoes

Deep scars and cuts will cause discounts for housewives and restaurants find that it involves waste to cut them out. Practically all of the hotels and larger restaurants have paring machines in which the potatoes are revolved rapidly and rub against a rough surface which removes the skins. In this case a fairly round potato is desirable since it pares more easily and leaves less hand work. For this type of trade uniformity of size is of great importance. The large potatoes are used for French fries. The smaller sizes are often served whole.

Appearance is just as big a selling factor in potatoes, as it is in apples and a trip thru any large wholesale market will convince the most skeptical.

Reputation is said to be what a man's acquaintances think he is and with potatoes the same is true. Potatoes with a reputation will sell for more money than others just as (to page 32)

The Farm Workshop Makes Rainy Days Profitable

By JOHN R. HASWELL

Agricultural Extension Engineer, The Pennsylvania State College

The first requisite of a good farm workshop is plenty of light.

THE question of how much shop work a farmer should do usually starts a warm discussion. Some would have him shoe horses, grind gas engine valves, make wagon frames, solder pans, and do a million other things expected of a good worker in wood, iron, brass and other metals.

Personal observation over a period of seven years in which the writer has helped build community septic tank forms in three-quarters of the counties of Pennsylvania, has led him to believe that no set rule will apply. Each man to his liking. We have worked on the barn floor, with a wagon tongue and a box for saw horses. At the other extreme we have had a work bench, vice, saw horses, portable electric light, and a full kit of tools. But no matter what the equipment, the friendly spirit of cooperation was always there.

The point is often raised that it does not pay the farmer to invest heavily in tools and that he had better spend his time farming and not indoors. In many cases the tools are inherited, and still in good shape. Some time ago we saw the work bench made by the Editor's father. One would not want a better piece of equipment and it is as good today as the newer ones.

The light, quick, ambitious horse with a slow, heavy team-mate will certainly show the benefit of the proper use of the brace and bit in boring another hole in the evener to favor him in proportion to his weight. The horse flesh saved would easily pay for the two tools.

Often the older boys or a particularly desirable hired man may make radios for sale or do auto repairing when not busy. One place in particular, a fruit farm in Lehigh County, had quite a little side business in carbon removal and valve grinding.

Better Than Loafing

Except in rush seasons most farmers can organize their work so as to be able to spend some time in the shop. It will pay higher dividends than loafing down at the store.

Most shops are in some corner of a farm building where there is a little space not otherwise occupied. However, some men plan a garage with room enough for a bench along one side. A building 16x20 feet, with 9-foot doors close to one corner on the side away from the bench, makes a good layout for the average farm.

Hand tools for the farm may be hung around the walls in the spaces away from the bench. The walls above the bench and near the sides, not occupied by windows, can be taken up with racks or cabinets for wood and metal working tools.

A bench 24 inches wide is usually ample. A length of 8 feet and a height of 33 to 36 inches will be found good.

The steel vice and metal working tools can best be kept toward the right end of the bench.

The following tool suggestions may not suit everybody but will be a help in checking over what you have. (to page 31)

Catalog and Samples FREE

A SEED Catalog that's different — deals entirely with important Farm Crops that mean profit or loss on the season's work. Offers kinds adapted to your soil and your climate. Gives ten pointers to success with Alfalfa, and ten more for Soy Beans—also practical ideas on other crops Write for your copy today.

Clover Seed: Extra quality Red Clover Seed — safe to sow—hardy and suited to Eastern farms. Also Mammoth and Alsike. Finest White Blossom Sweet Clover, scarified. Free from foul weeds. Tested. . . . high germination.

Alfalfa: Genuine "Grimm." State-certified and sealed . . . . splendid quality. Also our famous "Northwest" Brand. Free from weeds, bright and plump. High in germination. Let us quote prices.

Seed Oats: Seven kinds, including both "horse mane" and "tree" types. "Shadeland Climax," our leader for 11 years; "White Russian," "Swedish Select," etc. Heavy plump oats from the North—extra vigor—will increase your oat yield.

Potatoes: Choice Maine-grown and Michigan-grown stock. The Standard commercial varieties—early and late kinds—Selected and Certified Seed. These Northern grown Seed Potatoes will outyield and outpay home-grown stock.

Seed Corn: Lancaster County-grown, well cured, dry, hard, sound Seed. Tested—90 to 95% germination and better. "Lancaster County Sure Crop"—an extra value, all-around corn—fine for the silo and a good husking corn too. A dozen other good varieties—white and yellow dents and quick-maturing flints.

Soy Beans: We have a good supply of "Wilson Black"—the Variety most popular with Eastern farmers. The quality is splendid and the prices reasonable. Also other standard varieties.

Grains—Grasses: Barley, Spring Wheat and Rye. Fine Clean Timothy Seed. Hay and Pasture Mixtures, Millet, Sudan Grass, etc.

Other Seeds: Canada Peas, fine for early green feed ..... Vetches, Rape, Cowpeas (several varieties)—Also Seeds for other forage crops and cover crops ...... Write today.

Sow Them for Your Protection and Profit

NESHAMINY GARDENS

WHERE AN EDITOR WORKS AND THINKS.
BY R. P. KESTER

IT MAY be the general practice now to put terra cotta lining in chimneys, but it was not so in the old days. I watched the mason awhile the other day as he w s building one of the flues in the house at Neshaminy Gardens. The opening in the inside of this flue is nine by thirteen inches. The bricks are perfect in form and of even hardness and plenty of good mortar is being used. In addition, lining one inch thick and about the same size is slipped down and cemented at the joints. How much safer such a flue is than the old-fashioned, unlined one from which the mortar would drop out and leave holes for sparks to come thru!

✦ ✦ ✦

IT IS necessa y for us to plan our own water system. Where the water from a well is used exclusively for family purposes a modern supply system is a simple matter. But we wish to use water for irrigating garden crops also, and the house supply systems are not big enough. We have put a 120-gallon pneumatic tank in the cellar, and a motor will pump water and air into it from the well thirty feet away. The pressure thus secured will put the water thru the house where we want it. The pump, which has a capacity of 700 gallons per hour, may then be used for other purposes when wanted. At least, that is our plan. If it doesn't work we will let you know.

✦ ✦ ✦

WE ARE looking into the claims made for the use of a material which is recommended for sheathing and lining houses. It is made of finely shredded sugar cane which is pressed and cemented together in wide boards nearly a half-inch thick. It is strong and the manufacturers claim that it provides the same insulation as three and one-half inches of wood or twelve inches of brick or stone. I believe that the builders of homes in the future will give more attention to insulating against heat and cold than has been done, and thus save in fuel costs.

TWO or three requests have been made for the plans after which we are building the house. Since some interest has been shown I shall make a copy of the floor plans some day and print them here; also, make a photograph when the right time comes and let our friends see just what we are doing. Some one has said that no home was ever built which could not have been improved had it been possible to see it before work was started. But up to now, the house being built at Neshaminy Gardens looks to be about right.

✦ ✦ ✦

I NOTICED a few days ago that our market gardening editor, Gilbert Watts, said he had his early cabbage seed sown. We have not, but wish we had. Next year we hope to have a small greenhouse in which to start vegetable plants. Sowing seed in small boxes in the house and transplanting to hotbeds is only fairly satisfactory. The boxes are a nuisance and it is a big job to attend hotbeds properly early in the season. Every market gardener knows that the closer plants are grown to the field in which they are set, the better are the results. However, not everyone can do this and the next best plan is to buy good plants from reliable growers and have a place ready to set them as soon as they are received.

✦ ✦ ✦

WE HOPE to be able to get a double-acting disc orchard harrow this year to use in the peach orchard. It is a big job to plow a peach orchard, and a single disc throws the soil towards the trees all the time. Anyway, the ordinary disc harrow cannot be worked close enough because of the limbs. An orchard disc has the two halves spread apart by an iron frame, thus enabling one to run the harrow under the head close to the trunk.

The old village store which sold everything in the world has moved to town and calls itself a drug store.

The Cheerful Plowman

Auto Not Expensive

SOME farmers think the auto a costly sort of thing, adapted for the banker, the lawyer, or the king, but I believe them erring, mistaken as can be; my auto, I am certain saves dollar bills for me! Distinctly I remember, some twenty years ago, when Dobbin in his glory was moving to and fro, how many hours were wasted in going for repairs, while honest farmers fretted and tore their honest hairs. In harvest time a binder, perchance, would break a reel, a knotter would stop tying and pull a crooked deal, then off to town with Dobbin at four slow miles per hour we farmers would go jogging and pray for faster power. A break meant work and worry, a day all shot to smash, while hired men loafed in leisure and drew the farmers' cash!

One harvest it was rainy, we'd suffered from delays, forsooth in doing nothing we'd wasted many days; then suddenly the weather turned nice as nice could be, instilling hope abundant and confidence in me! I got my binder running, then, horrors, one by one, the reel and needle busted and canvass came undone! I jogged to town with Dobbin, some seven trips I made, while hired men lay in leisure and loitered in the shade! Well, as I jogged my barley was shelling on the ground,—Oh, how I tried to hurry each weary, poking round! Before I finished jogging on journeys for repairs again it took to raining in spite of many prayers! I lost that year, I'm certain, enough potential gains to buy three clever autos and fit them out with chains! No, Dobbin, he's expensive when time is on the wing; my auto isn't costly, I feel it's JUST THE THING!—J. Edw. Tufft.

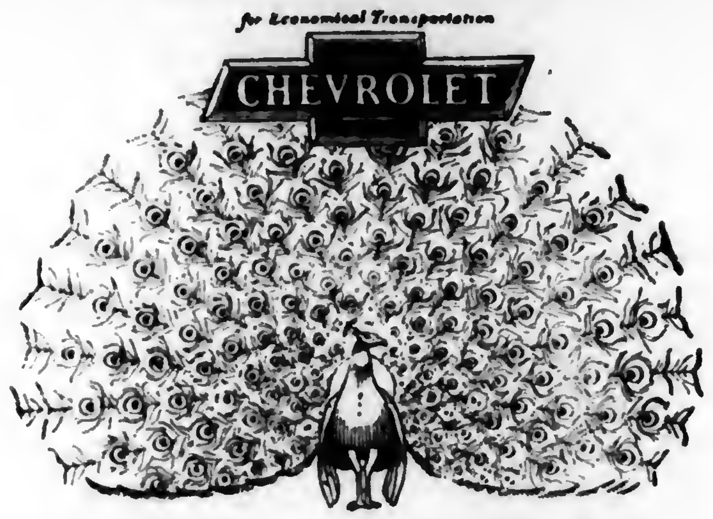
CHEVROLET



The Most
Beautiful Chevrolet
in Chevrolet History!

a host of improvements

Not only does this most beautiful of all low-priced cars offer new paneled and beaded Fisher bodies but also many new fine car features and mechanical refinements such as:

Full-Crown Fenders
New full-crown one-piece fenders add a note of smartness to the new and supremely beautiful bodies.

Bullet-type Lamps
Modish new bullet-type head and cowl lamps add a pleasing touch of beauty and style.

AC Oil Filter
A new AC oil filter removes all dirt from the oil supply—assuring greater oil mileage and a minimum of motor wear.

AC Air Cleaner
A new AC air cleaner safeguards motor parts from excessive wear by removing all dust and grit from air passing through carburetor and into the engine.

New Tire Carrier
A new tire carrier of improved design is mounted on the frame—entirely free from the body.

New Door Handles
New remote control door handles—handily located in center of doors—provide a beauty and convenience feature new to low-price field.

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

"He who is wrapped up in himself wears a shabby cloak."

Talking Thru His Hat

IT IS reported that a certain Congressman from New York City recently said in a speech before a class of city boys graduating from an agricultural school, "If the farmers of the nation had the knowledge of agriculture you have there would not be any farm problem. There would be no demand for farm relief," or words to that effect. All of which is the veriest kind of bunk. We hope the boys did not take him seriously, and we are sure they did not if they have received the right kind of education.

Will Be No Referendum

SEVERAL people have suggested that we start a campaign of opposition to the proposal to have the question of prohibition submitted to the people of Pennsylvania for a referendum vote. The question seems to be settled already. The newspapers report that men high up in the councils of the administration have declared against any such move, since at best it would be only a meaningless gesture. However, it will not do any harm for those who are interested to write their legislators giving their views on the bills submitted in favor of such a vote. Senator David Reed will have to devise some other way of avoiding that question next year.

Radio Control Bill Passed

CONGRESS has at last passed a compromise bill intended to bring some kind of order in the radio broadcasting field. As all radio "fans" know the "air" has been in a congested condition for several months,—ever since the Supreme Court decided that, under the law, the Secretary of Commerce had no legal authority to limit or control broadcasting. As a result of this decision hundreds of stations sprang up and chose at will their time and wave-length.

The new law provides for a commission of five, to be appointed by the President, who will have power to allocate powers, wave-lengths, and broadcast hours. All existing licenses will lapse upon the signing of the bill and the commission will take up each one anew. After one year the control authority goes to the Secretary of Commerce, the Commission sitting periodically to act as a board of review. There are now 725 stations broadcasting and it is expected that a great deal of litigation will result from the efforts to bring order out of the present chaotic condition.

Nut Orchard Investments

WE WISH to approve and emphasize the caution which Doctor Fletcher threw out recently about investing in far-away nut plantations. We understand there are traveling salesmen in some parts of the country spieling great stories about the size and certainty of profits in nut growing in southern states. Nuts do grow well in the South, and the business has undoubtedly been profitable to those who live there and conduct their own orchards. But the scheme of selling blocks of actual or proposed orchards to northern people, said orchards to be managed by the promoters, is something else. It is something to leave severely alone. There are certain kinds of nuts which may be planted profitably in the North, and those who are really interested in the business can find an outlet for their ambitions at home where they will have everything under their own eyes.

What Rights Has a State?

SO FAST has the nation grown and so short have distances become,—extending the neighborhood to the farthermost limits,—that the tendency to unify every main factor in life has developed. Because no community or no state can live to itself alone there is a tendency to standardize almost everything thru federal control. This brings up the question of States Rights,—a question which once brought on a civil war. While that result is not likely to occur again, yet is it not a question for every citizen? How far, in these days, should a state or a community exercise complete autonomy?

Bottled Milk in Restaurants

WE HAVE no figures showing the comparative amount of milk used now by the patrons of moderate priced eating places, —automats, cafeterias, etc.,—but observation indicates that there is less since the bottle milk law went into effect. It is unlawful to serve milk except in bottles and as these are cumbersome the restaurant keepers make little effort to push the sale, and customers are more loath to ask for it. Another reason is undoubtedly the price asked. Almost invariably ten cents is charged for a half pint, or less, while formerly a glass of whole milk could be gotten for five cents. Ten cents for a half-pint bottle makes a price of forty cents per quart. The law does not require buttermilk and skimmilk to be sold in bottles, and these may be secured in some places, but they do not take the place of good whole milk.

A Show Worth Seeing

IN THESE latter years shows made up of practical things have become popular. So far has science been developed and so great has mechanical ingenuity become that the things of man's creation are as instructive and entertaining as the more frivolous, make-believe shows, and certainly more worth while. The show recently held in the Commercial Museum in Philadelphia by the hardware industry was one of the modern kind of shows. The vast space was completely filled with the latest and best in the hardware line. Everything in this line which a mechanic, a householder, a builder, or anyone else could use was there on exhibition. It was really a liberal education in mechanics to view carefully the things, large and small, which have been produced to make life easier and more comfortable.

Food the Biggest Bill

IN SPITE of the immense expenditures for other things, food is the biggest item of expense in America. The estimated retail value of what the people eat in a year in this country is twenty billion dollars. Seventeen food articles represent seventy-six per cent of the total, while the remaining twenty-four per cent is divided among nearly 1000 different items. The main classifications are pork, fish, chickens, other meats, milk, wheat flour, sugar, butter, eggs, wheat, bread, white potatoes, ice cream, coffee, canned vegetables, apples and canned fruit. Some idea of the tonnage of food products marketed may be gathered from the figures of the railroads alone which show they carry 116,980,000 tons annually. So fast has the urban demand for food grown that the farmers of the nation produced last year twice as much as was necessary thirty-five years ago.

It would be interesting to know what part of this twenty billion dollars the farmers received. It is estimated that the total farm value of last year's products was ten billion dollars. Of this amount, probably three-fourths was sold off the farm. While the difference between seven and one-half billions and twenty billions is great, still it must be remembered that a great part of it is made up of manufacturing costs, transportation, retail costs, and many other expenses before it reaches the city consumer's table. It may well be that the spread is too great, but what are we doing about it?

Farm Bill Passed—and Vetoed

THE bill which for three years has been cussed and discussed more than any other has been passed by both branches of Congress and is now before the President. What will he do with the McNary-Haugen Bill? The eastern newspapers have said there is only one thing he can do, while the western papers say there is only one thing he dare do. Economists are divided on it, bankers are divided on it, even farmers are not a unit. Who will win? We should not like to have the deciding vote.

Just after the above paragraph was written Mr. Coolidge vetoed the McNary-Haugen Bill. Some are of the opinion that he exhibited great political bravery by this action. Others think that if he had signed the bill he would be accused of doing so under pressure, and wouldn't have earned any gratitude from the people the measure was designed to help.

The whole affair is a classic example of what happens when agricultural and economic problems are mixed with politics.

Editorial Sidelights

THAT article on potato marketing (Page 1[illegible]) isn't just theory. It is what the boys call "straight goods." Mr. Whitacre's ideas are the result of his own constant observation of the country's great markets, particularly the Philadelphia market.

As Philadelphia representative of the Pennsylvania Bureau of Markets, Mr. Whitacre is in constant touch with the men in the "street," the important middlemen who know what the buyers want and what the farmers have to sell.

"Why is it that my wheat never brings as much as the quoted market prices?" That is a troublesome question frequently put up to the editors. Mr. Whitacre has prepared a very interesting answer, one that covers the whole problem. This illuminating article is scheduled for early publication.

WHAT DID YOU THINK of the reference issue? What would you like to have us include in the next issue of that kind? Suggestions and criticisms will be filed away "for future reference."

RELIEF PLAN KILLED

Coolidge Vetoes McNary-Haugen Bill as Farm Bureau Protests—Many Toll Bridges Being Planned.

Washington, D. C.

AFTER passing the House by a vote of 214 to 178 in the same form in which it was passed by the Senate, the McNary-Haugen Bill was sent to the White House February 19, and since then the leading question for discussion has been: What will President Coolidge do with it?

The President has had many callers advising him what to do. He has received many telegrams and letters from all parts of the country asking him to sign or veto the bill.

He was advised by his cabinet to veto the bill on the ground that it is a price-fixing measure, unconstitutional and economically unsound. Congressmen have told him that farmers did not want the bill. Others have informed him that all the farmers are in favor of it, and will be greatly peeved if he vetoes it. Representatives of the American Farm Bureau Federation, including President Sam H. Thompson, have conferred with him, telling him that the Farm Bureau was 100 per cent for the McNary-Haugen bill, and asking him to sign it. (Note: President Coolidge vetoed the McNary-Haugen Bill February 25th.)

Authorize New Toll Bridges

A conspicuous feature of this session of Congress is the number of bills giving private corporations authority to build toll bridges across rivers. More than 200 bridge bills have been introduced and many of them have passed Congress. At the present rate, the travelling public using the improved highways will be held up at river crossings by bridge tolls that will net the bridge companies large dividends.

The background of this bridge legislation is the fact that certain investment interests have discovered that in this toll bridge proposition there is an opportunity for investment that is sure to return lucrative profits to the operating companies.

The National Association of State Highway Officials, thru its Washington representative, is watching closely these proposed changes in the highway act, for the purpose of preserving as far as possible the rights of the public in the use of the highway system without tolls or other fees.

Order Out of Chaos

The Radio Control Bill, having passed Congress, is now at the White House awaiting the President's signature. It creates a Federal Radio Commission of five members to be appointed by the President. It is indicated that the farm organizations will insist that one of those $10,000 jobs go to a representative of agriculture. (Later: The President has signed this bill, making it a law.)

The bill makes no provision against charging for listening-in or against patented devices for this purpose. Senator Dill, its sponsor, says the commission will be absolutely independent of all other departments of the government. It will be supreme at all times in regulating radio transmission. The bill is not perfect, and will need amendment as radio develops and new problems arise. Nevertheless it does afford a basic law to meet the present situation, and Senator Dill believes that, on the whole, it will be found reasonably satisfactory legislation.

Banks in Healthy Condition

The Joint Stock Land Banks are in a better condition as a whole than any other farm loan agency, W. W. Powell, secretary of the American Association of Joint Stock Land Banks, told the House Banking and Currency Committee, in hearings on the bill to enlarge the control of the Federal Treasury over the Federal Farm Loan System. Mr. Powell declared that the Joint Stock Land Banks were in better condition than the Federal Land Banks, having less land obtained thru foreclosure in proportion to capital stock. This proportion is 10 per cent in the case of the Joint Stock Land Banks and 19 per cent in the case of the Federal Land Banks. It was denied that the Joint Stock Land Banks pay dividends out of stock premiums or from accrued but uncollected interest. Such claims have done serious injury to the Joint Stock Land Banks.

The banks do not object to being placed under the supervision of the Treasury, but they are opposed to being placed partly under the Treasury and partly under the Farm Loan Board. Such administration would bring about divided responsibility and possible conflict between the two agencies.—E. E. R.

SEEK ROAD MONEY

Fisher Trying to Keep Expenses within State's Income—Livestock Values Climb in 1926—Bean Beetles Travel.

Harrisburg, Pa.

DEMANDS of delegations coming to the State Capitol in the interest of improved roads have caused state officials and legislators in charge of money matters to go on hunts for funds that for the present are overshadowing measures making changes in the state government and even in the election bills. There has been an estimate made that only about two and a half millions will be available for new road construction in 1927, and it has caused painful surprise in some quarters altho for the last year and a half people conversant with what was going on in the State Highway Department knew there will be little beyond current revenue for the new administration to depend upon in the matter of funds for highway building. Governor Fisher in his inaugural address called attention to the situation.

The last fortnight numerous delegations have come to Harrisburg, gathered up their legislators and gone to the Governor and highway head seeking improved roads only to be told there is not much money in sight. Indications are that the road building program will be much restricted unless money is found and no one wants to start anything. Opening of bids late this week may open discussion.

Must Hold Appropriations

The new state administration has taken a very definite stand against appropriations being allowed to go over the available revenues and warnings of veto power to be used if the budget is disregarded have been given. There has been a consequent abatement of the disposition of some people interested in state grants to hospitals to run wild. The budget has been the subject of very careful study among the conservative members of the legislature and when the requirements of government are met they will seek to increase the road allowances.

Statistics Show More Pigs

While state statistics on livestock show there has been a decrease in number of animals generally the swine columns show a gain of seven per cent in the figures compiled as of January 1st. At the same time the values of stock on Pennsylvania farms climbed seven per cent over what they were a year before. The situation is a very interesting one, notably in the case of cows which rose about $6 per head. Both horses and mules have declined in value.

Bean Beetle Being Watched

Some apprehension is felt here over the possibility that the bean beetle, which turned up two years ago in Washington County, may be found in central sections. A careful watch is being kept and, owing to the fact western counties where the beetle has been marauding are under corn borer quarantine, inspection will be facilitated.—R. T.

THEY MEET IN BARNS

Jersey's Informal Farm Meetings Grow in Popularity—To Study Potato Transportation Problem.

Trenton, N. J.

THE extension men in central New Jersey have awakened interest recently in so-called barn meetings, where farmers are called together for informal demonstrations and talks on practical farm problems. Mercer County has had a number of such meetings within the last few weeks. A large crowd turned out at the farm of Charles Baldwin at Pennington a week ago, when the discussion centered on better feeding of dairy cattle. A similar meeting was held in the barn of A. S. Atchley. Extension specialists conduct the meetings as a round-table dicussion and visiting farmers enter into the discussion and ask questions on their own problems.

To Attack Transportation Problem

At the request of potato farmers in Monmouth, Middlesex and Mercer Counties, the New Jersey State Improvement Committee organized three years ago will attack the potato transportation problem in the central part of the state. The truck movement of potatoes will be an important phase of the committee's survey of the situation. The committee will hold a summer meeting probably near Allentown early in June when growers, dealers, manufacturers, bankers and others will be invited to a joint discussion of New Jersey's potato problems. Representatives of the State Department of Agriculture and the Federation of County Boards of Agriculture are active in laying the plans for bettering the potato situation in New Jersey.

Discuss Higher Fat Differential

Sussex County dairymen, meeting recently in Newton, discussed a market premium for milk from their high-grade herds. They advance the proposition that farmers should hold for a six-cent differential for each 0.1 per cent for milk testing under 4 per cent butterfat and eight cents on milk over the 4 per cent limit. This change advocated is from the four cents on each 0.1 per cent as now prevailing. It appears that dealers are now encouraging the testing of herds for tuberculosis by compensating the owner by $10 or $15 per cow condemned, in addition to the present state and federal payments. In addition, they pay the owner ten cents per 100 pounds bonus on all milk from disease-free herds.

Association Accomplishes Results

The annual meeting of the South Jersey Protective Association, which purposes to fight the stealing of farm products, particularly poultry, brought out the fact that farmer protective organizations are accomplishing results. Since the arrest of suspected thieves due to the activity of the association this past season there have been no large thefts in the territory where the association operates. Officers of the Board of Directors elected for the coming year consist of: Robert K. Shoch, Elmer; Albert Ridgway, Mullica Hill; Russell Skinner, Mullica Hill, and Elbert Kirby, Mullica Hill.—W. H. B.

ORPHANS MAKE GOOD

Children Adopted by New York Farmers Become Successful Citizens—Milk Pasteurization Saves Many Lives.

Ithaca, N. Y.

RURAL homes in need of children will be interested in a recent statement by Miss Sophie Theiss, of the New York State Charities Aid Association, that in a recent survey of 400 adults who had been placed as children in carefully selected and supervised homes, 78 per cent were found to be making good according to reasonable standards of success. More than half of these cases had been over ten years of age when placed. Usually the younger the child is placed the more quickly and completely he recovers from the effects of a bad background.

A Safe Milk Supply

J. E. Thompson, of the Bureau of Foods and Drugs of New York City, when speaking before a Farmer's Week group, said that the New York City milk supply is the safest in the world. Compulsory pasteurization has caused a marked decline in tuberculosis. Before the advent of pasteurization, in 1913, there were 49 cases and 7 deaths yearly from tuberculosis to each 100,000 population in the metropolis. In 1916, three years after pasteurization went into effect, there were 28 cases and 4 deaths to each 100,000 people. In 1926 only 15 cases and 2 deaths to each 100,000 were reported. Infant mortality made an even faster drop during the time. "It is a problem, not for the Bureau of Foods and Drugs," said Mr. Thompson, "but for the farmers themselves." Farmers do feel a real pride in the quality of their product and they deplore the importation of milk from uninspected sources. They are advised by their leaders to improve the quality of their milk, to keep their premises neat and attractive, and to make ready as fast as possible for the time when New York City will demand milk from tuberculin tested cows only.—M. G. F.

Late sown Fall wheat needs Spring top-dressing–

LIKE many others, you could not get your wheat in until late last Fall and it looks backward this Spring. The yield promises to be a poor one unless you give it some help.

Look at the increased yield these men got when they top-dressed their wheat with Arcadian Sulphate of Ammonia.

GILBERT S. WATTS, Staff Contributor and Adviser
Logan Spring Farm

Seventy Pennsylvania Miles, and Less Than Five Strawberry Patches!

DURING the last few days I have had occasion to drive several hundred miles over country roads in central Pennsylvania. A week of unseasonably warm weather had chased all the snow from fields and gardens. Having just recently decided upon details of fertilization, spacing and varieties for the 1927 planting of strawberries to be made on Logan Spring Farm the subject of strawberries was very much in mind.

Since a great many farm gardens are situated between the house and barn and run right up to the edge of the road, I began to watch for strawberry plants or the patches of mulch showing their location. Doubtless some were missed but part of the fingers on one hand served to count the farm garden berry patches observed in a seventy-mile drive. I wondered how many thousands of the hundred thousand families reading Pennsylvania Farmer have in season all the strawberries they can eat and a lot more left over to can?

Fifty Quarts for Each Family

It is late for New Year's wishes but we can't help but wish that every home which this paper reaches could have 50 or 100 quarts of strawberries to use in 1927, five or ten million quarts of this most luscious of berries!

Some say wishing is an idler's occupation but this wish may be made to come true in 1928. Neither will it take the hours and hours of backbreaking weeding, runner placing and trimming that is sometimes associated with strawberry growing. "Who is busier than a baby?" If anyone, the farmers, and we must get our strawberries with the least possible labor. To this end we will consider one cultural method only, the matted row system. It is the tried and true standby of commercial strawberry growers in the East.

Most of us must use the soil at hand regardless of type and need not be discouraged if it does not approach closely to our ideal. Strawberries are grown successfully on almost every imaginable type of soil but good drainage is very important. High fertility is an advantage but its lack may be largely offset by proper use of commercial fertilizers.

Practices vary. Last year I used 1200 pounds per acre of home-mixed 6-10-7 applied broadcast and harrowed in before planting. For the farm garden one pound to every 20 square feet, 30 pounds to a two-row bed seven or eight feet wide and 75 feet long should bring results. Manure which has heated or which is not too weedy may be plowed down. If very coarse or strawy better not apply in such quantities as to leave the soil very loose; rise of moisture from subsoil to surface soil will be hampered.

The strawberry is shallow rooted and the soil's moisture reserves must be conserved from the moment the plow or spade enters the ground until the crop has been harvested. In preparing the soil for planting a firm, fine condition begins our campaign to have moisture within easy reach of the plant at all stages.

How many plants need we set to make that wish of 50 or 100 quarts for each family come true? One hundred good strong plants set 18 inches apart in rows 42 inches apart, together with the runner plants which will be formed, should come up to or exceed our goal. This spacing will permit horse or wheel hoe cultivation and will usually produce good solid matted rows of about the right width.

Variety Depends Upon Local Factors

The "best" variety may depend upon local factors, soil, climate or exposure. Thruout Pennsylvania Farmer territory Premier or Howard 17 will be the one to plant most largely until experience shows some other variety to be more desirable.

Premier blooms over a long period. One frost, or two or three consecutive frosts, will usually catch only a portion of the bloom. The berries are sizable and of good quality. They begin to ripen early and keep right on coming when Chesapeake and other late ones are in their prime. To show my faith in Premier and by way of suggesting other varieties for trial, my 1927 plant list is 37,000 Premier, 4000 Chesapeake, and 1000 each of Aroma, Big Joe, Big Late and New York.

New York is not a market berry, being too soft, but is unsurpassed in quality. I cannot put that too

Have Deer Damaged Your Trees or Crops?

WE WISH to learn the extent to which deer have injured fruit trees and crops. Please fill in answers to the following questionnaire and mail to Pennsylvania Farmer, 261 South Third St., Philadelphia.

How many fruit trees have you? ______________________

How many, if any, have been injured by deer? ______________________

How many have been entirely ruined by them? ______________________

What damage to other crops have you experienced? ______________________

____

What do you propose as a means of prevention? ______________________

(If necessary write a letter also.)

Name ....

County ....Post Office..................................

strongly. They are sweet almost before fully ripe. The fact that the children soon learn in which part of the field they are growing proves the point.

In selecting plants from an old bed by all means get young plants that have never fruited. These are found along the row edges. On a large scale a better plan is to dig a row or more of the planting made the previous spring. In buying plants make sure of a reputable house and specify yearling plants that have not been exhausted by fruiting.

Plants Set with Care

Actual setting can hardly be done too early, late March or early April, as soon as the soil can be worked. Roots should be spread fan-like and must extend well down into the soil, not turned up. Lacking a stem like cabbage or tomatoes, strawberries which are set too low may be smothered by the soil that is likely to be thrown into the hearts by the cultivator or washed in by heavy rains. Likewise, when the plants are set too high the roots may become exposed with fatal results.

When bloom appears in the new plantation the flower stalks should be cut with shears to force all the plants' strength into runner production. Frequent use of the cultivator and a narrow-bladed sharp hoe from spring until fall will practically eliminate hand weeding. Then in June, 1928, garden pirates, the weeds, will not rob the heavily burdened berry plants of much needed food and we may look forward to gathering a bountiful crop of God's best berry.

After the crop is picked, what? If not too weedy keep another year. If weedy it will pay to turn the bed under and plant late cabbage or some other fall crop. To be sure of good big berries every year with the least labor it pays to start a new bed each spring.—Gilbert S. Watts.

Indoor Planting

What is the proper time to plant seeds indoors for the following: Tomatoes, cabbage (early), celery, beets (to set out early), parsnips (to germinate early), peppers, verbenas, scarlet sage, pansies. Also, what is the best fertilizer one can buy to force young plants?—T. W. McG., Jr., Cambria County, Pa.

The dates for sowing seed of the crops which you mention will vary with the facilities you have for handling the plants. The dates which follow are from my own experience where a small greenhouse is used to start the seedlings, the plants being removed to hotbeds or cold-frames as soon as transplanted. If you are working entirely with hotbeds you might start 10 days later.

Seeds Started as Follows:

Tomatoes to transplant twice before field setting, February 22-March 10th.

Tomatoes to transplant once before field setting, March 15-25th.

Early cabbage to transplant once before field setting, January 25 to February 10th.

Celery to transplant once before field setting February 15 to March 15th.

Peppers to transplant once before field setting, March 1-10th.

Beets do not transplant before field setting, March 10th.

I am no florist but believe you will make no mistake to start scarlet sage and verbenas the same time as tomatoes. Pansies, to get earliest bloom, are often sown in late summer, transplanted in September and wintered with a mulch of straw or in cold frames. They may also be started much the same as cabbage.—Gilbert S. Watts.

Camels bring enjoyment to living

SMOKING is one of the keen pleasures of life.

The choice of a cigarette deserves your most careful judgment because it determines the degree of enjoyment you will have. Camels welcome comparison on every count. Compare their goodness in every way. Each successive Camel brings a fresh pleasure no matter how constantly you smoke.

Such mellow mildness can come only from the world's choicest tobaccos, supremely blended, with the sole purpose of giving you, the smoker, a cigarette which you can enjoy to the fullest. The verdict of the experienced smoker is—
"Have a Camel!"

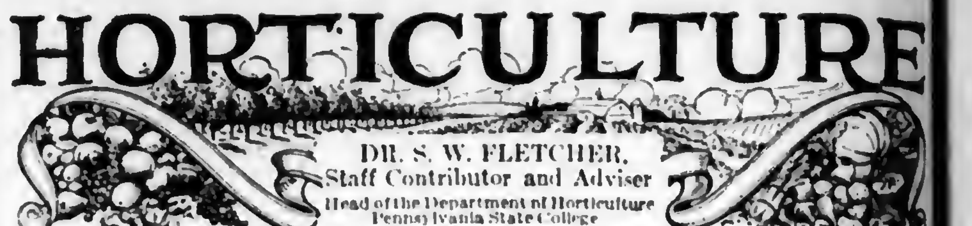
HORTICULTURE



DR. S. W. FLETCHER,
Staff Contributor and Adviser
Head of the Department of Horticulture
Pennsylvania State College

The Job of "Apples for Health" Campaign

IN addressing the annual meeting of the State Horticultural Association of Pennsylvania held in Harrisburg during Products Show Week, John W. Gorby of Chicago, Executive Secretary of "Apples for Health, Inc.," said that there have been twenty-three separate national advertising campaigns for increasing the consumption of certain fruits and vegetables, but none for the king of all fruits, the apple. Each of these campaigns has pushed the apple further off the table.

The job of "Apples for Health" is to set apples back on the table and keep them there. Over a billion dollars a year are being spent in America for advertising. The consumer pays for it, not the producer, whether the commodity is chewing gum or oranges.

West Can't Do It Alone

The apple growers of the Northwest have spent considerable money for advertising their local brands but realize that the publicity will be much more effective if it is on a national scale. They stand ready to get behind "Apples for Health" as soon as they see that the growers of the East really mean business. There are now over 1000 members, but at least 10,000 of the 100,000 applegrowers in the country are needed to adequately represent the industry. The dealers already have cooperated by giving $6000 cash to start the movement.

Apples are not appreciated because they are so common. "If apples cost $1.00 each and were hard to get," says Mr. Gorby, "people would discover wonderful medicinal value in them." They are especially valuable for producing an alkaline condition, to counteract the harmful acids which are produced in the system, especially during the winter.

The "Apples for Health" organization already has issued 276,000 attractive window strips, which are pasted on store and auto windows. A half million small stickers, to be used on letters, are now being issued. Various types of advertising which have been found most serviceable in other national campaigns will be used, including full page ads in national magazines. Local advertising, following the same general direction as that used for milk, will be introduced as funds permit.

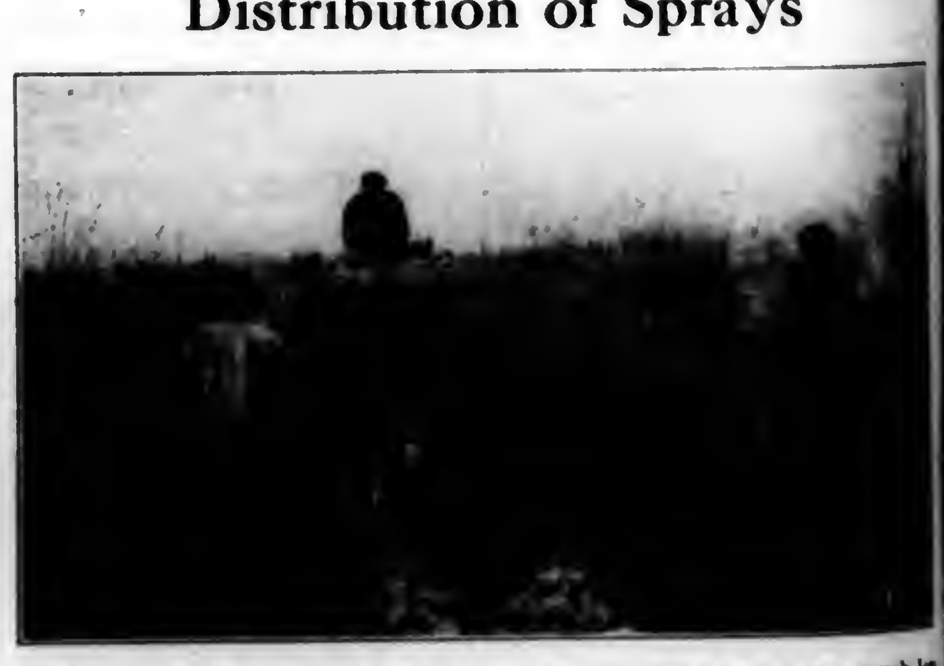
Mr. Gorby cited other examples of increase in consumption resulting from advertising. In six years the per capita consumption of oranges was increased from 31 to 65. In ten years the raisin growers made a gain from one pound to 4.1 pounds per capita.

The most remarkable example of the power of advertising to change the habits of people is found in the pineapple market. In ten years the sale of canned pineapples increased from 400,000 cases to 5,000,000 cases. The canned pineapple, highly advertised by the Hawaiian Association, has practically driven the fresh pineapple from Florida and Cuba off the market, reducing them from 700,000 cases to 26,000 cases in ten years.

In four national fruit advertising campaigns the sales increase has been over 200 per cent. It takes time to get tangible results, at least

(Continued on next page)

Spreader Insures More Uniform Distribution of Sprays



THE use of spreaders in spray materials is fast increasing among fruit growers. It is well-known that the smooth surface of young bark, leaves and fruit, tends to make ordinary liquids collect in drops, consequently leaving too little on some places while depositing too much on others. Injury to foliage and fruit was a very common result of this condition.

It was found a few years ago that the addition of casine in some form made a more even coating possible, and that when right amounts of poisons were used the amount of arsenical injury was greatly lessened, and in most instances entirely eliminated. A spray rod in the hands of inexperienced persons is a much less dangerous implement when a good spreader is added to the spray material.

In addition to the more uniform application of spray material which a spreader insures, there is the added advantage of greater adhesiveness. Spray to which there has been added some form of casine spreader is much less easily washed off by rain. Because of greater efficiency in the control of insects and disease, and because of the lesser amount of damage to fruit and foliage, there seems to be no doubt but that some form of spreader will soon be recognized as a necessary element in all spray work.—K.

four or five years. The cabbage growers spent $50,000 a year advertising sauerkraut and now it is one of the most popular items on the menu of restaurants.

The average commercial crop of apples of the United States is 79,000,000 bushels. If the growers contributed one-half cent a bushel for advertising purposes, as is proposed by "Apples for Health" this would yield $400,000. Even $100,000 a year would put apples before the American people as never before, and $50,000 would help very materially.

At the close of Mr. Gorby's address the Association adopted the following resolution unanimously:

"The State Horticultural Association of Pennsylvania endorses the movement to increase the consumption of apples by advertising on a national scale, as proposed by "Apples for Health, Inc.' and urges individual members and local organizations of growers to support this movement."

He's Learned the Selling Secret

F. G. Reiter, of Mars, who has a successful roadside market twenty-two miles from Pittsburgh, has found that a large display of fruit attractively arranged, and striking roadside advertising, are of prime importance. A small display does not attract purchasers. He has large signs—"Treesdale Farms—Fine Fruits in Season" placed about a mile each side of the stand. Smaller signs, about one foot wide and four feet long bearing the legend "Cherries" or "Plums," etc., are attached to these large signs in season. Just before the market is reached there is another large sign, "Treesdale Farms—Fruit for Sale."

It pays to have a large parking space. In 1926 there were sold at this market 170 bushels of cherries, 500 bu. of pears, 500 bu. of grapes, 2100 bu. of peaches, and about 10,000 bu. of apples. An advertisement in the Pittsburgh papers helps to draw trade. The market is open on Sunday; it is Mr. Reiter's opinion that Sunday selling is essential to success under his conditions.

Progress Made Since 1923

Porter R. Taylor, Director of the State Bureau of Markets, called attention to the marked progress in the standardization of fruit grades since 1923. In that year a committee appointed by the State Horticultural Association met with similar committees representing adjoining states and the U. S. Department of Agriculture; the result was the U. S. Standard Grades for apples, which are now widely accepted by wholesale growers and shippers. Thirty five of the forty-eight states now are cooperating with the Federal Department in shipping point inspection. In 1925 there were 31,000 cars of apples and 5732 cars of peaches inspected; this was about one-third the commercial crop of apples. In 1926 the proportion was nearer one-half.

The chief difficulty in the certification of apple grades has been in the color requirement. For this reason a new grade, "U. S. Commercial," was adopted this year. It is the same as "U. S. No. 1" in all respects except that it does not require color. Since one-fifth of all the inspected apples shipped from Pennsylvania this season did not have enough color to meet the "U. S. No. 1" standard, it is evident that there is room for much improvement in the cultural practices that affect color, such as pruning, the use of nitrate, and the time of picking.—S. W. Fletcher.

"There are two sides to every question," proclaimed the sage.

"Yes," said the fool, "and there are two sides to a sheet of fly-paper; but it makes a difference to the fly which side he chooses."—Outlook.

Tonight
Delco-Light Helpfulness
in over a
QUARTER MILLION FARM HOMES

TONIGHT, on more than a quarter-million farms, Delco-Light will make short work of the chores.

At an early hour the lights will be snapped off at the barn and the whole family will be ready for an evening of enjoyment—an evening made free from tiresome tasks by electrically operated machinery at both house and barn—an evening made bright and cheerful by electric light wherever it's wanted.

Is your home one of the quarter-million that is equipped with Delco-Light? If not, think what Delco-Light would mean. Think about it the next time you light your lantern—the next time you try to crowd hours of work into a few remaining minutes of daylight.

And when you think of Delco-Light, remember that it is a convenience you can easily afford—that it is low in first cost, low in cost of operation and can be bought on easy terms.

See the Delco-Light Dealer or write direct to the factory for complete information.

A size Delco-Light for every need.
750 watts to 1250 watts capacity.

You Can Raise More Chicks with Larro

Many poultry ailments can be traced to digestive troubles during the first six weeks of the chick's life, so it is vitally important that during that time the baby chicks receive the very best feed and care.

And you can't feed them anything that is as good as Larro Chick Starter. Nothing you can buy or mix will give you such low mortality or develop such husky, healthy youngsters.

You may be able to buy the same things that are contained in Larro Chick Starter, but—it is not possible for anyone to blend and mix those ingredients with the same uniformity as is possible with the special equipment of the great Larro mills. And it is the extra quality built into Larro Chick Starter that means better results for you.

Only one or two pounds of starting mash are required to feed a baby chick through the critical first six weeks. But this small amount of mash may be the determining factor of the success of your years work. Don't risk the expense, labor, extra mortality and disappointment which follows the use of inferior feeds. Get Larro Chick Starter, a feed that has proved thousands of times that it will raise more and better chicks than any other starter.

Chickens Won't Object to Second Floor

I have turned my garage into a chicken house. Would it be advisable to put Leghorns on the second floor? I feed bran mash in morning in which I mix condition powder. In the evening, commercial scratch. Have dry mash before chicks all the time.—S. D. Z., Franklin Co., Pa.

There is no reason at all why chickens will not do just as well on the second floor of a building as on the first floor, if certain requirements are met. These birds should have leafy green vegetables every day, such as cabbage, lettuce, or sprouted oats; or lawn clippings in the summer. Give not over five pounds for every 100 birds a day. Then be sure that the chickens get direct sunshine that does not come thru window glass at least part of the day, or use one of the new glass substitutes in the windows that let the rays thru.

If you cannot get the sunshine feed one pint of cod liver oil for every 100 lbs. of mash that your birds eat. I think your birds will do better if you feed a moist mash made of laying mash instead of bran. It would be better to feed a little grain in the morning and feed the mash at noon if you are home.

The tonic is all right. If you decide to use the oil you can feed it in the moist mash or mix it in the dry mash, but if you put it in the dry mash, it is best not to mix more at one time than will be eaten in a week, or the oil will lose in strength. —R. L. Scharring-Hausen.

How to Secure Parcel Post Trade

I have 100 White Leghorn pullets. I am getting more eggs than I can dispose of locally, and would like to know how I could get in touch with institutions, etc., to whom I could mail eggs by parcel post. Your suggestions would be appreciated. How are apples considered as a green food for chickens? When feeding meat scraps should they be cooked or fed raw?—H. S. M., Wyoming Co., Pa.

In producing eggs for a special purpose such as you have in mind, the first thing to do is to be sure that you have an absolutely first-class product, perfectly fresh, infertile, and above average size. It would be necessary to candle each egg to be sure that it contained no blood-spots or other abnormalities.

If you want to be absolutely up-to-date, feed your birds a ration containing lettuce, sprouted oats and cod liver oil, to establish the claim that your eggs come from birds fed special vitamin-containing substances.

To find a market, ask your family physician to give you the name of a baby-specialist in some nearby city and explain your proposition to him, offering to supply his patients with your special brand of eggs by parcel post. Of course you would have to charge a price far above ordinary quotations to meet the extra expense involved, but there is no reason why, once you put the idea across, you should not find just such a market for your eggs as certain dairy companies have found for modified milk in infant nutrition.

Apples are not as good a source of green food as are the leafy vegetables or sprouted oats, but chickens are very fond of them. They can be fed with good results in quantities not to exceed 5 lbs. per 100 birds per day.

Fresh meat scraps may be fed raw at the rate of ½ oz. per bird. Be sure that nothing tainted gets to the birds. Commercial meat scrap is cooked.—R. L. Scharring-Hausen.

Feathers Stay Soiled

Four or five of my chickens have dirty feathers on their backs and a grey discharge on small feathers. I have washed them in boracic acid water, but they don't get any cleaner.—Mrs. A. M. S., Hilltown, Pa.

The symptoms you describe are those of chronic diarrhea. This is commonly caused by spoiled or moldy food, or something the birds may pick up while running out. Be sure that the food is wholesome, first of all, then give a dose of common baking soda in the drinking water, at the rate of a heaping tablespoonful for 100 birds, for one day. Then feed 5 lbs. of powdered charcoal mixed in every 100 lbs. of mash, for as long a period as you like, as it is harmless.

It might be well to remove affected birds from the flock; and if they do not recover in a reasonable length of time, it would be best to get rid of them.—R. L. Scharring-Hausen.

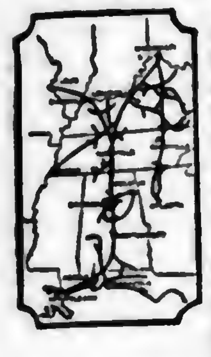
Turkey Mating

I have a turkey hen hatched late last summer. When should she be mated?—J. H. G., Armstrong Co., Pa.

The turkey mating season usually begins about the first of March. A late hatched pullet will not make the best breeder, but if you are going to use her try to mate her with an early hatched cockerel.—R. L. Scharring-Hausen.

FARMING PAYS in the SOUTH

Pays well, because of the distinctive advantages the South affords farmers: such as *Climate*, permitting outdoor work every month in the year; low-cost *Living* for farmers and their hired help, which makes farming all the more profitable; *Land* on which varieties of crops can be abundantly grown; cheap and reliable farm *Help*. Add to these advantages those of good *Neighbors*, good *Schools* and good *Roads*—and happy is the farmer who lives in the South.



Write and say what kind of farming you want to do, and full information as to where and how you can do it in the South, will be sent *free*. Address G. A. Park, Gen. Imm. & Ind. Agt., L. & N. R. R., Dept. P.11 Louisville, Ky.

Nest Box Notes

SOME of the pullets got to scratching and dusting themselves in the open mash hoppers which I am using, thereby wasting a good deal of feed. Lips on the side of the troughs failed to stop the waste, so I got a roll of two-inch poultry netting a foot wide, and cut off lengths that would just go inside the boxes. These sections of wire are laid on top of the mash and prevent all scratching and dusting, without interfering with feeding. The wire lifts right out when new mash is to go in. I used the one foot width because it had a selvage on each side.

• • •

This is the time to sell breeding stock. We save the best cockerels when selling the broilers during the spring and summer, and keep them by themselves. Any above our own breeding requirements are sold early in the spring. Without securing a fancy price for them, they always return a great deal more than their value as meat. This is just another argument for keeping purebred birds of good blood.

• • •

"A good goose will lay
On Valentine's Day."

This rhyme may not state the exact truth, but the geese will soon be laying, and some sort of shed with a little straw on the floor ought to be ready for them. The gander will stand guard outside while his mate is laying. It is best to gather the eggs as soon as possible to prevent freezing and breakage.

• • •

From now on, the hens will be laying heavily. Plenty of nest room should be provided. We gather eggs three times a day, on account of danger from breakage. Some nest-boxes seem to be especially popular, and the hens will hold prize fights for the privilege of laying in them. Sometimes three will get on the same nest at once, and I have collected as many as 18 eggs from one nest while adjoining boxes would be empty.

• • •

Eggs broken in the nest beside being a direct loss, smear up the other eggs and may also start the egg-eating habit which is hard to stop. Several years ago we had trouble from this vice, and helped matters by tacking a strip of burlap to the top of the box, so that it hung to within a couple of inches of the bottom. This darkened the nest and made a fine secret place to lay, but hid the eggs somewhat from idlers looking for trouble

• • •

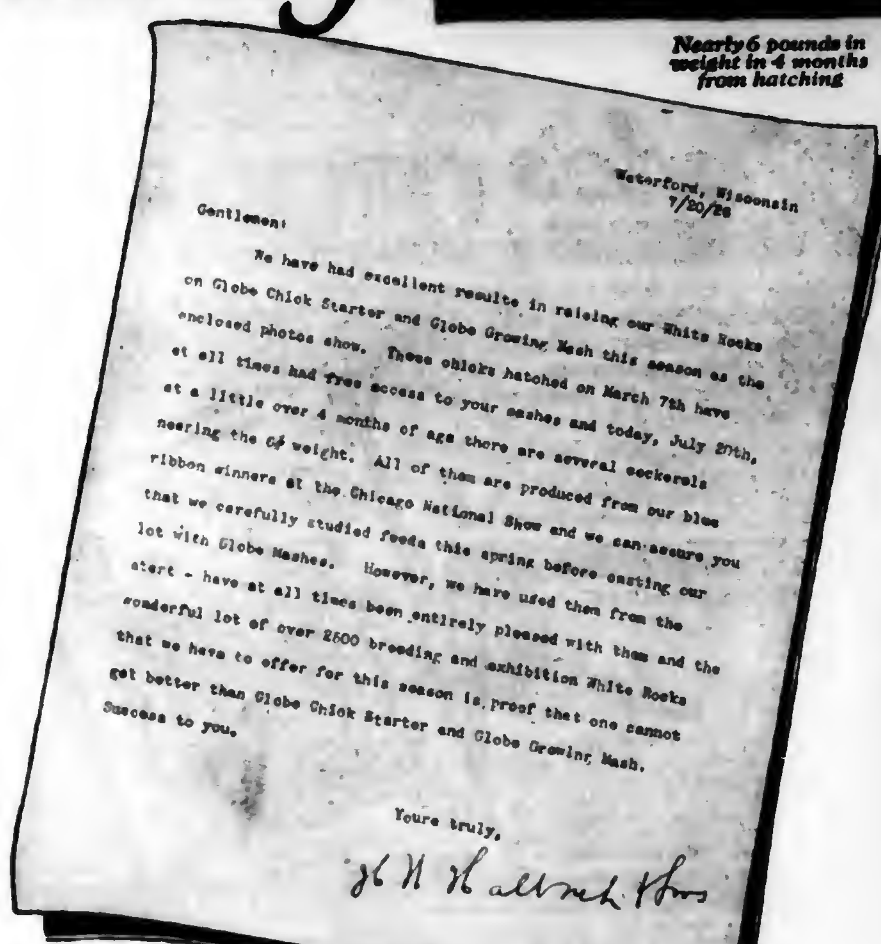
I noticed in going thru the pens that a shell hopper which I had filled early in the week was empty. It pays to keep a bag of shell ahead, because a laying flock will consume an enormous quantity of this material, and nothing will stop egg production quicker than its lack.—R. L. Scharring-Hausen.

Want Poultryman on Board

THE Pennsylvania Baby Chick Association took a strong stand in favor of a larger and better poultry department at State College during its recent annual meeting at Harrisburg. The organization asked an appropriation of $240,000 for new buildings to improve the poultry department and endorsed the move for more funds for the entire institution. The baby chick men went on record favoring that a practical poultryman be appointed to the Board of Trustees of the Pennsylvania State College.—W.

Will Your Chicks Look Like This Next July?

Nearly 6 pounds in weight in 4 months from hatching



Waterford, Wisconsin
7/20/26

Gentlemen:

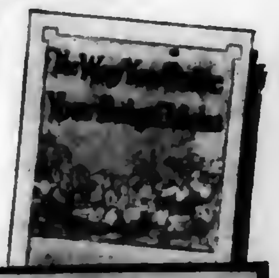
We have had excellent results in raising our White Rocks on Globe Chick Starter and Globe Growing Mash this season as the enclosed photos show. These chicks hatched on March 7th have at all times had free access to your mashes and today, July 20th, at a little over 4 months of age there are several cockerels nearing the 6# weight. All of them are produced from our blue ribbon winners at the Chicago National Show and we can assure you that we carefully studied feeds this spring before casting our lot with Globe Mashes. However, we have used them from the start - have at all times been entirely pleased with them and the wonderful lot of over 2500 breeding and exhibition White Rocks that we have to offer for this season is proof that one cannot get better than Globe Chick Starter and Globe Growing Mash.

Success to you.

Yours truly,

H H Halbach Bros

"Carefully studied feeds before selecting Globe"



Of course, no one who had blue-ribbon stock like this would want to take a chance on any but the best feed.

The same principle, however, applies in any flock that is kept for profit. Results are what count.

If you will have chicks to raise this Spring, and want to get the utmost in returns from them, it will pay you to follow Globe Methods and feed Globe Starting and Growing Feeds.

The new booklet shown above, on how to make money with chicks, will be gladly sent free on request.

Mother Biddy Is Out of a Job

Now Poultrymen Entrust Chicks to Brooders

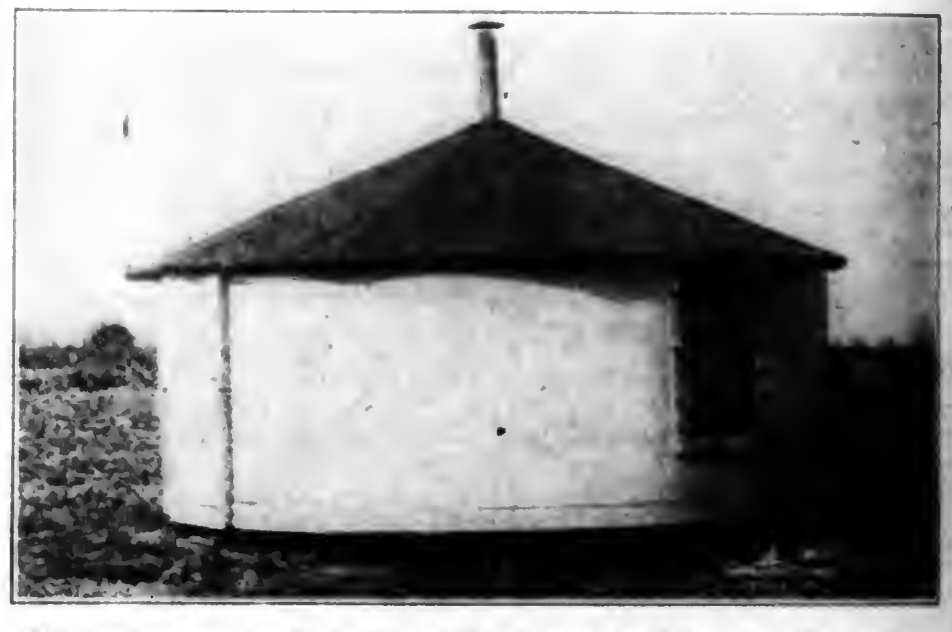
By R. L. SCHARRING-HAUSEN

ONE of the best methods of brooding chicks from the standpoint of the farmer who wants to raise a hundred pullets, or from that of the poultryman who wants to raise a thousand, is the use of a portable brooder house and colony brooder stove. No doubt this combination has helped the growth of the baby chick business, because it is getting to be the common thing for farmers who used to fuss with setting hens to send their eggs away to a commercial hatchery or buy their baby chicks outright, with the intention of raising them artificially.

This method saves a lot of time in the spring and yields a nice uniform flock of pullets in the fall. Another advantage is that the chicks can be had early, without waiting for the hens to get broody, so that the pullets will mature in time to lay in the fall.

The most popular type of house is 10x12, about five feet high in the rear and seven in front, with a shed roof. Such a house, if built on skids, can be moved to a new location with a tractor or strong team, which is often desirable for sanitary reasons.

I know one poultryman who moves his colony houses to opposite sides of a large alfalfa field each year. Another moves them about in a field used for general crops. A third has several lined up along a meadow, but works up the ground near the houses in the fall after the pullets are housed and sows rye for the next year's chicks to pick off.



The circular brooder house is one of the many good types on the market. Note the oil tank outside.

Plan Provides Southern Exposure

The New Jersey Experiment Station has planned a colony brooder house which is very convenient. It is designed to face the South. There are two openings in the front, half sash and half glass, both movable, and protected by an overhanging roof. On the west side is a small sliding window designed to admit afternoon sunlight. The entrance is on the east side, and the door for the chicks is in front.

The floor is made double, of matched boards with builder's lining paper between. The sides are made of novelty siding, and it is desirable to line with beaver-board at least half-way up. This house will accommodate 300 chicks under a 52-inch hover. A greater number of chicks in a single flock is not recommended.

The other day I saw a colony house with the walls made of fiber board, which comes in such large sheets that few joints are necessary. I also saw a circular house, a patented affair, which the owner spoke of as being very satisfactory, as there were no corners inside for the chicks to crowd into and smother.

Very often a small shed already on the farm can be fixed up to serve the purpose. The main points to be observed are plenty of sunlight and ventilation, a good tight floor and a thoro cleanup, with lots of whitewash.

On large poultry farms multiple brooder houses are also used. They are long buildings divided into pens, and heated by brooder stoves or by a central heating plant. Such houses are cheaper to build per chick and are economical to care for, but being permanently located, require careful measures in the runs to combat worms and coccidiosis.

Preferred Type May Be Selected

There are two types of heaters used in colony brooders; the coal stove and the oil heater. The heater is set up in the center of the floor, sometimes a little nearer the back of the house than the front, to allow extra space for hoppers, drinking fountains, etc. The smokepipe will draw much better if it goes straight up thru the roof than if it goes out the side with several bends.

There are patented contrivances to take the pipe thru the roof and at the same time ventilate the house. These can be purchased from the companies manufacturing the stoves. Another arrangement that any tinsmith can make consists of a sheet of galvanized iron eighteen inches square, thru the middle of which is passed a pipe a quarter of an inch larger than the diameter of the pipe from the stove. This pipe should be long enough to extend above the highest point of the roof, and is terminated by a cap to keep out snow and rain. The pipe is firmly soldered to the sheet at an angle corresponding to the pitch of the roof, so that when in place it will be straight up and down.

Ventilator Made Fire-Proof

A hole is cut in the roof a foot square directly over the stove, the roofing paper is slit at the sides so that the sheet will slip under the upper part of the paper and over the lower part so as to shed water, after which all joints are smeared with roofing cement and everything nailed down with big-headed nails to make a water-tight and weather-proof job.

The pipe leading from the stove to this chimney is cut six or eight inches too long, so that it will extend into the chimney that distance when set up. This arrangement is fire-proof, as there is no wood within several inches of the pipe, which does not get very hot at that point anyway.

(Continued on next page)

TEXT CUT OFF

There are also oil-heated brooder stoves on the market, which, when put out by a reliable concern, give satisfaction. They are somewhat more flexible than the coal stoves, but should be well made and carefully cleaned and regulated.

Before setting up the brooder stove it is a good plan to lay a six-foot square of roofing paper on the floor where it is to be set. Then, in case the floor is not all it should be, the chicks will be protected from drafts thru cracks in the floor at night.

This Has Been Ideal Winter for Roup

LAST fall I went on a poultry tour, and the party stopped at what was described as "the nicest one-man poultry plant in the state." The owner had just been housing his pullets and someone in the crowd asked him if he had had any roup.

"Not yet," he replied.

Then everybody laughed.

The sad part is that a great many poultrymen who have seen their carefully planned preventive measures fail have come to regard a touch of roup as something to be reckoned on as going with the business, and not without reason. Just as common colds attack persons who try to take the best of care of their health, so roup sometimes makes inroads on carefully regulated flocks where the owner may be absolutely at a loss to know how the ailment got started.

I personally have seen big, fat Leghorn pullets, apparently in the best of condition, come down with this disease and die in spite of care. So serious is this trouble in certain sections that state aid is being sought for a special investigator to be appointed to devote his whole time to attempting to solve the problem.

Conditions Favoring the Disease

Warm, foggy days in the winter, when the litter becomes damp from absorbed moisture, followed by sudden cold snaps, when the chilled birds huddle together in the damp, cold house, furnish ideal conditions for an outbreak of roup, and are impossible to prevent. Such conditions prevail during all of the late winter, and the flock that gets by unscathed is lucky.

The best that can be done in the light of present knowledge is to keep the houses warm, dry, clean, and free from drafts. Then follow the best feeding practices that you know. If an outbreak occurs, remove sick birds at once, give the flock a dose of salts, and clean out and replace the litter. Sick birds are helped by being placed in a pen heated by a brooder stove.—R. L. Scharring-Hausen.

Can Natural Gas Be Used for Brooders?

WE HAVE an inquiry from a reader in Fayette County, Pennsylvania, asking whether natural gas can be used to heat chick brooders. He is uncertain what effect the moisture and the fumes might have. We have given him our opinion, and advised him as to the necessity of leading the fumes out by pipe or flue, but we are sure that some of our readers in the natural gas country can give more information from their own experience. Please send it along.

We get letters every week from dealers who want us to ship them our eggs. Some of them make glowing promises of "extra high returns, owing to favorable outlet." No doubt many of these letters are from fake concerns, who only receive mail and express at the address given, fail to make returns, and disappear if investigation comes their way.

PUBLIC *preference chooses the inimitable Chrysler "60"*

ONE of the most convincing proofs of Chrysler "60" superiority is trying to match its features in any other six of its type and price.

7-Bearing crankshaft;
Impulse neutralizer;
Oil-filter;
Air-cleaner;
4-Wheel hydraulic brakes;
Full pressure lubrication;
Manifold heat control;
Levelizers front and rear—

These, with many other features that cannot be imitated, have been embodied in the Chrysler "60" ever since its introduction.

These typical features of the Chrysler "60" were harmonized into the car's original engineering design—*and are thus uniquely Chrysler*—insuring that flashing speed of 60 miles and more per hour, enviable acceleration of 5 to 25 miles in 7¾ seconds, with the almost magical handling and operating ease that are typical of every Chrysler, and endure throughout its long life.

It is for this fundamental reason that the Chrysler "60" has been accorded a public preference that has contributed substantially to Chrysler's dramatic rise from 27th to 4th place.

FARQUHAR STEAM POWER

For the big jobs where dependable power is required, use Farquhar Steam Engines—there is nothing to equal steam when real work is to be done. The rated horse power of steam engines is about one-third the power developed on brake test; the initial cost and upkeep of steam is very much less than the internal combustion engine; Easier to operate. Burns Coal, Crude oil or wood. Less parts to care for; simpler lubrication, more flexibility—wider range of speed and power—Does the work of an internal combustion engine of three times its rated horse power.

Write for detailed description of Farquhar dependable steam engines.

BOX 448, YORK, PA.

Cheaper and Better Fordson Power with PICKERING Governors

Steady even power ALL the time, smaller fuel bills and longer tractor life — these are the reasons why farmers are equipping their Fordsons with Pickering Governors.

These famous governors respond instantly to the slightest change in load because they are built without joints or links which prevents any loss of regulation.

The Pickering does not sacrifice power for power control. It is the only governor that does not cut down power of the motor — TESTED and PROVED by the University of Nebraska.

Send coupon for free pamphlet 8-D which describes the Pickering Governor for your make of tractor.

The Pickering Governor Co., Portland, Conn.

How much protein?

Quaker Answers This Problem for All Dairymen by Providing a Complete Line of Dairy Feeds to Meet the Individual Needs of Each Farm.

Protein requirements vary, according to the quality and type of hay, other roughage, or pasture that are available. No single feed can meet all conditions, everywhere! That's why Quaker offers you a complete line of feeds—to give you exactly the combination that will return most profit.

Quaker Boss Dairy Ration is the ideal grain ration for cows receiving timothy hay, grass hays, straws, corn and clover, or poorer grades of clover.

Quaker Big "Q" Dairy Ration exactly meets the need of those herds receiving poor alfalfa hay, fair clover hay, or real choice mixed clover-and-grass hay.

Quaker Dairy Ration has no superior when cows are receiving choice clover hay, good alfalfa hay, or an excellent grade of fine mixed grass-and-clover hay; a good ration for dry stock and for young growing stock.

Quaker Sugared Schumacher Feed has a real place with dairymen when the herd is receiving liberal quantities of choice alfalfa hay. It combines beautifully with any Quaker high protein feed. For all stock—dry stock, horses, swine, sheep or steers.

All of these feeds contain molasses in dried form and are rich in the minerals cows must have to make milk

Choose the feeds that fit your conditions! Buy the feeds in striped sacks—Quaker Dairy Rations in red stripes; Sugared Schumacher in black stripes.

Send for the free book, "The Dairy Herd." This tells you just how to meet the peculiar conditions of your farm with Quaker Feeds.

Pennsylvania State College

Testing Association Records Bring Ou Variety of Facts Dairymen Need

A. J. GLOVER, of Wisconsin, gave a splendid address on "Making Dreams Come True" at the annual meeting of the Pennsylvania Dairymen's Association in January. He stated that there are twenty-three million dairy cows in the United States. These cows produced over one hundred and seventeen billion pounds of milk in 1926. This amount of milk would make a canal from New York to San Francisco as deep and as wide as the Erie canal.

He raised the question whether these cows were as good as they ought to be. He stated that one-third of the twenty-three million cows do not pay for the feed they eat. He also emphasized the importance of cow testing association work in detecting unprofitable cows. He stated that this work tested the man as well as the cow in that it enabled him to plan his work more efficiently.

The Daughters Win

DAUGHTERS of Montgomery County, Pa., Bull Association sires produced:
13,909 pounds of milk
453.5 pounds of butterfat
Their dams produced:
10,572 pounds of milk
381.2 pounds of butterfat.
Subtracting, the daughters beat their dams by:
3,337 pounds of milk
72.3 pounds of butterfat

When all of the old cows are replaced by daughters of association sires, an increased production of 857,609 pounds of milk is anticipated. At $2.50 per 100 pounds this would bring the members $21,440 more cash per year from the same number of cows.

The cow testing association also helps to locate good bulls. Thru the records kept by the cow testing associations the United States Dairy Bureau located one thousand pr sires. Upon looking up these sires it was found that eight hundred of them had already gone to the butcher. Thru the testing associations these sires ought to be located in time to preserve their usefulness.

There is a great difference between purebred sires in their ability to sire high producing daughters. An example was given of one sire whose daughters averaged approximately 5000 pounds of milk and [illegible] pounds of butterfat. Their dams, however, had averaged 8000 pounds of milk and 425 pounds of butterfat. This bull decreased the production of his daughters by [illegible] pounds of butterfat annually as compared with their dams. This bull had dragged down the production of the herd over 30 per cent.

The Opposite Story

Another bull had daughters that averaged 13,000 pounds of milk and 675 pounds of butterfat. The dams of these daughters had produced on an average 8000 pounds of milk and 490 pounds of butterfat per year. This bull had increased the production of his daughters 58 per cent in milk and 38 per cent in butterfat as compared with their dams. We need such information as this about sires if we are to build the dairy industry on a solid rock.

In discussing the dairy cattle feeding proposition Mr. Glover stated that thousands of records made in cow testing associations during a period of the last twenty-six years show that low production may be attributed in no small degree to the lack of protein in the dairy ration. Timothy hay and silage with barley, corn and oats as grain feed do not furnish enough protein to produce liberal amounts of milk.

Some feeds have the effect of combining the proteins of other feeds more effectively. For instance, skimmilk and corn make a combination that is utilized to a greater extent by the animal than either feed alone. Gluten feed and red clover make such a combination while silage and alfalfa also supplement each other.

(Continued on next page)

He laid particular emphasis upon the importance of tuberculin testing, stating that Chicago, Milwaukee and other large cities were requiring that all milk shipped into the city be from tuberculin tested cows. Inside of five years the man who does not have his cows tuberculin tested will be left holding the bag without a market for his milk.

We must also look more to the quality of our dairy products. The better the milk the greater the consumption, the higher the demand and the better the price. We must put both honor and integrity into the dairy business. The dairymen of Pennsylvania are to be congratulated upon the work being done by the dairy councils looking to the better quality of dairy products.

Good cows, properly fed, advising the people concerning the food value of milk and dairy products, cooperating in the marketing of milk, and the utilization of labor saving machinery will result in such an efficient production of milk that Pennsylvania farmers will have no need to worry about competitive markets. —A. A. Borland.

Coulter Tests Good Cows

This is Leo J. Coulter, tester in the Carbon County Cow Testing Association, the first association in Pennsylvania to reach 10,000 pounds of milk per cow. The average for 1926 was 10,378 pounds of milk and 358.6 pounds of butterfat. The association also had the highest herd, that of William Steigerwalt, Lehighton, which averaged 509.6 pounds of butterfat per cow and 14,443 pounds of milk. The highest cow in the state, Colantha, owned by Adam Hegel, also was a Carbon County product. She produced 27,091 pounds of milk containing 815.2 pounds of butterfat.

Buckwheat Doesn't Make Good Hay

Do buckwheat and oats make good feed to cut for hay?—J. H. C., Washington County, Pa.

I would advise against buckwheat and oats as a mixture to cut for hay. Buckwheat does not make a good hay feed. The stems are coarse and watery. It is hard to cure it in satisfactory condition for hay and when dry the leaves fall off readily. A much better combination would be Canada field peas with oats. This combination can be cut when the oats are in the milk stage and makes good hay for dairy cows.

Another crop that you might well consider as a leguminous hay crop for dairy cows is soy beans. These have been grown quite extensively thruout Pennsylvania for the last year or two. They are rather difficult to cure but when properly cured make a roughage which will produce as much milk as alfalfa hay, according to experiments conducted last year at the Pennsylvania State College.

It is advisable to cure the soy bean hay under hay caps, if possible, as it has to stay out for a considerable time in order to become well cured and is likely to be caught by rains before getting dry enough to go to mow.—A. A. Borland.

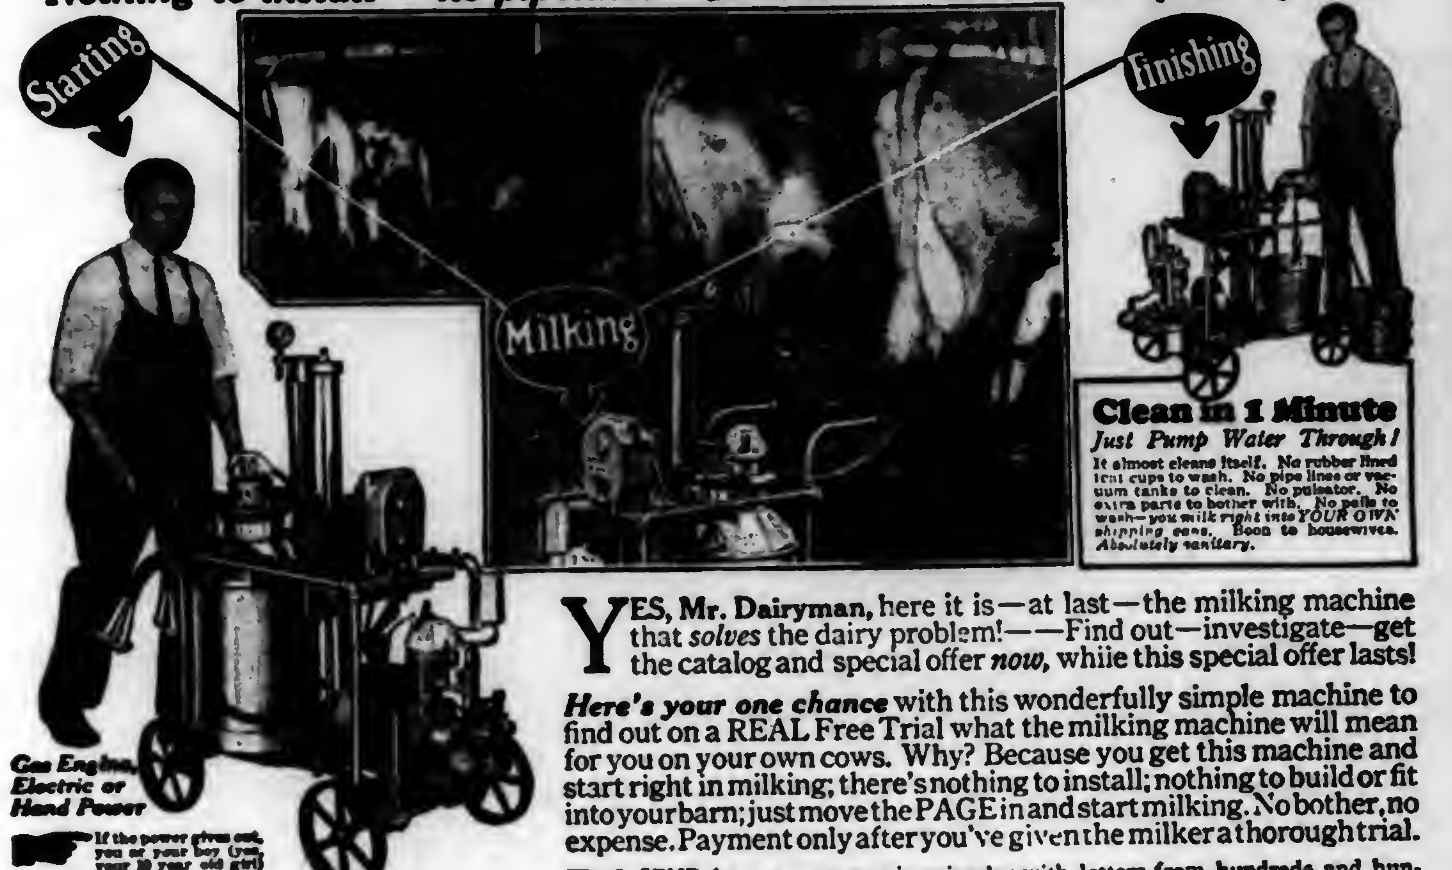
Untested Milk Barred

THERE are now 874 cities and towns in the United States that have ordinances requiring the tuberculin testing of all herds furnishing their milk supply. This number includes several of the larger cities,—Chicago, Cleveland, Detroit, Louisville. Fourteen states have enacted laws or have issued regulations authorized by law requiring the tuberculin testing of cattle.

Byrne A. Pyrke, New York Commissioner of Agriculture and Markets, predicted a few days ago that by 1933 every cow in New York state will have been tested for tuberculosis at least once. Other authorities predict that all dairy cows in the United States will be on the disease-free list before the end of the next ten years.—W.

Wheel it in—and start milking!

Nothing to install — no pipelines — no vacuum tanks — no special pails



Clean in 1 Minute
Just Pump Water Through!
It almost cleans itself. No rubber lined teat cups to wash. No pipe lines or vacuum tanks to clean. No pulsator. No extra parts to bother with. No pails to wash—you milk right into YOUR OWN shipping cans. Boon to housewives. Absolutely sanitary.

Gas Engine, Electric or Hand Power

If the power gives out, you or your boy (or your 10 year old girl) can pump by hand. A wonderful advantage.

YES, Mr. Dairyman, here it is—at last—the milking machine that *solves* the dairy problem!——Find out—investigate—get the catalog and special offer *now*, while this special offer lasts!

Here's your one chance with this wonderfully simple machine to find out on a REAL Free Trial what the milking machine will mean for you on your own cows. Why? Because you get this machine and start right in milking; there's nothing to install; nothing to build or fit into your barn; just move the PAGE in and start milking. No bother, no expense. Payment only after you've given the milker a thorough trial.

DO SEND for our monster size circular with letters from hundreds and hundreds of farmers all over U. S. A., telling what they know about Page Milkers and *what these practical farmers say about the way to use a milker! Investigate* —Mr. Dairyman. Don't miss this—write for that circular of farmer letters.

So simple! So very, very simple!

That's the secret of this successful milker. That's why it's *so* easy to clean; that's why the upkeep is almost nothing; that's why the cows take to it so quickly. A positive *stop* of *all* vacuum on each stroke of our simple pump; that's *the* way for teats and udder! The secret? Our simple, direct air release pump and teat cup—no pulsator, no rubber lined cup. Our catalog explains. *Read it!*

What Dairymen Say:

Thousands of dairymen write us like this:

"The Page Milker is a Godsend. So simple—so sure and easy to use. It can be cleaned so quickly."—W. F. Wolf, Milford, Mich.

"I have used my PAGE Milker twice a day for over two years, and have milked as high as twenty-two cows. I also want to say that your company has given me the very best of service." Yours truly, Albert E. Nelson, R. F. D. No. 2, West Chicago, Ill.

"The PAGE Milker does very good work and is far ahead of hand milking. It lets us out about one hour sooner than if we were milking by hand."—Frank H. Fuller, Orwell, Ohio.

"I still like my milking machine fine. It is giving entire satisfaction. We are milking fourteen cows and have milked in thirty-five minutes. We could not begin to do it without our machine."—Fletcher Peterson, Rt. No. 2, Brownstown, Ill.

"Can milk 6 cows and strip them in 15 minutes. Cows like it better than hand milking. Easy to keep clean. My wife can use it just as good as I can."—Geo. Miller, Rt. 3, LaSalle, Ill.

$67 *down* **AFTER free trial**

Don't pay us a cent *until* you are satisfied that this milker is just right for *your own* cows—No money down—No C.O.D. to us. Just wheel it in and TRY it *thoroughly*—nothing to install. *Then* if you are satisfied:

8 months to pay

—and yet, while allowing 8 months, we give you a *rock-bottom price*, direct from the factory. Also our iron-clad 10 year guarantee—yes, 10 years.

☞ Send for complete information on this wonderful milker and the long time payment plan today—NOW while offer is still open. Find out NOW even though you are not yet ready to buy. No obligation. Write for free catalog NOW.

The size of the milk check depends upon the feed

YOUR milk profits depend on what and how much you feed your cows. The grain ration is the milk producer and you can't afford to feed any but the best. Union Grains—the first dairy feed—has been making milk records for years. Thousands of dairymen use Union Grains and will not feed anything else because it keeps their herds producing milk profits.

Union Grains is a dry, bulky grain ration, easy to digest—doesn't pack in the cows' stomachs. It is high in digestible proteins and low in fiber and moisture content. Fed by weight, and not by measure, Union Grains goes farther than any other grain feed. Its bulky Corn Distillers' Dried Grains is the element that means easy and complete digestion, better health and more milk. It is the one feed that contains in itself *all* the variety the cow needs and wants.

Plan for tomorrow as well as for today. Feeds high in proteins are easy to get but they are not always safe. Only when a feed gets its proteins from a combination of grains is high proteins safe. Union Grains is a safe feed. Give it a fair trial. It has made milk records for others—it will do the same for you. Keep a record of milk production on the free Ubiko Milk Record Cards you can get from your dealer or by writing us.

Remember, it's not how cheap but how much milk a feed will produce that counts on the profit side of the ledger. Feed Union Grains.

UNION GRAINS is composed entirely of Corn Distillers' Dried Grains, Choice Cottonseed Meal, Old Process Linseed Meal, White Wheat Middlings, Winter Wheat Bran, Hominy Meal, Corn Gluten Feed, Brewers' Dried Grains, one-half per cent of fine Table Salt—and nothing else.

Analysis

A Man Is Known by His Cows

So Mr. Harter Couldn't Long Afford to Keep Grades

THE old adage "A man is known by the company he keeps," might well be revised for dairymen to read, "A man is known by the cows he keeps."

When some owners appear at the barnyard gate the cows hasten for the far side of the yard. When other owners appear the cows flock around them like sheep. Such actions speak more than words concerning the character of the respective man. Is a man stingy? Poor, thin cows tell the tale. Even his credit and standing at the bank is in accordance with the cows he keeps—a high-producing herd spells prosperity while a bunch of low producers means unpaid debts, poor credit, and low financial rating.

I have noticed that farm boys brought up with a good, purebred herd of cattle possess an ambition and interest in farming and dairying not likely to be found in boys reared with a bunch of scrub cattle.

Association with his father's herd of purebred Holsteins evidently had its effect on Allen Harter of Bellefonte, Centre County. When he started farming for himself in 1917 he felt that he could not afford to go into debt for registered cattle, so bought grades. However, since he had been brought up with purebreds on his father's farm, he could not content himself with grades, and after thinking the matter over carefully decided that registered cattle would put him out of debt the quicker. He, therefore, disposed of his grades and bought purebreds as fast as his financial circumstances would permit.

Penn Spring Lilly Belle, the highest producer in the Centre County Cow Testing Association, 1926, is one of Mr. Harter's registered Holsteins

Lilly Led All the Rest

Mr. Harter now has ten registered Holsteins and his herd led the Centre County cow testing association for the year 1926 with an average production per cow of 10,276 pounds of milk and 393.4 pounds of butterfat. One of his cows, Penn Spring Lilly Belle, 447,486 was the highest producer in the whole association, which includes 299 cows. Her yield was 14,943 lbs. milk and 623.9 lbs. butterfat for the year. In one day she produced 96.9 lbs. milk with three milkings and in one month 108.8 lbs. butterfat. Her great milk producing ability is indicated by the immense size of her udder which measured 93 inches in circumference at the time of her freshening.

Mr. Harter feeds a grain ration of his own mixing composed of corn, oats, bran, oil meal, and a 32 per cent protein supplemental feed. The roughage includes silage, corn stover, and a good grade of hay.

He is a strong advocate of the cow testing association. He thinks every dairyman should belong to a cow testing association, weed out the unprofitable cows thru the information secured in the association, and keep more purebred cattle.—A. A. Borland.

Infectious Abortion Must Be Reported

FOLLOWING are some of the highlights of the new Pennsylvania Bureau of Animal Industry regulations, effective February 15, 1927, for the prevention, control and suppression of Infectious Abortion in cattle (Bang Bacillus Disease):

Animals affected with Bovine Infectious Abortion shall not be sold, given away or removed from the premise except under permit from the Bureau of Animal Industry.

Permits for removal of affected animals will be issued only on the conditions that their destination shall be immediate slaughter or infected herds; or that they shall not be exposed to healthy animals.

Affected animals may be quarantined by the Bureau if that is considered necessary to prevent the spread of the disease.

Any affected animal sold, offered for sale or given away must be represented as an infected animal.

Affected animals shall not be brought into Pennsylvania except upon permit from the Bureau, and then they shall be subject to quarantine and the state regulations.

All tests for Bovine Infectious Abortion shall be reported in full to the Bureau within one week after they are made, with description of the animal tested and the name and address of the owner.

The holder of a permit to administer vaccine for the treatment of the disease shall report in full about each animal treated within one week.—W.

It Is a Hardy Germ

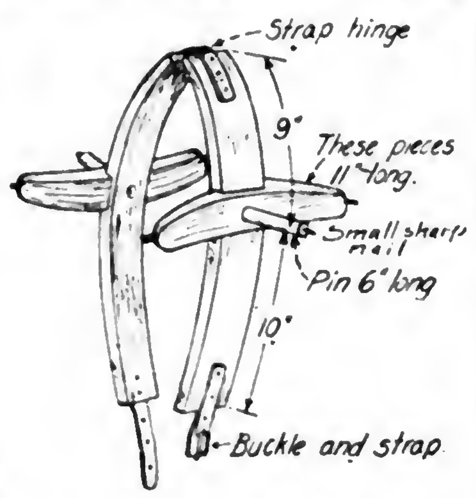
FOOT-AND-MOUTH disease is one of the most contagious diseases known. Fearing that it might spread beyond their control if they conducted any experiments on diseased animals in this country, the scientists of the United States Department of Agriculture went to Europe to do their research work. The disease is already widely prevalent there, and European veterinarians welcomed the assistance of the Americans.

(Continued on next page)

The virus of the disease was found to be so active that it produced foot-and-mouth disease even when diluted to one part in ten million. Antiseptics which killed ordinary germs in a minute failed to destroy this virus in 26 hours. The European and American scientists agreed that the most economical and the only effective control method is the slaughter and clean-up system carried out during the recent outbreak of the disease in California.—W.

Stops a Bad Habit

The accompanying diagram shows a device to prevent a cow from sucking herself. It consists of two curved pieces, about 18 or 19 inches to fit on each side of the cow's neck, with a heavy strap hinge at the top and strap and buckle at the bottom. One inch above the middle of each of these is fastened by a double notched joint, a crosspiece about 11 inches long extending lengthwise of the neck and hence crosswise of the other pieces. These crosspieces are fastened so that the ends toward the shoulders are one inch shorter than those toward the head



The crosspieces are fastened to the long pieces with a wooden pin one inch in diameter and six inches long tapered and wedged on the side next to the neck. Now put a small sharp nail in each end of each short piece and also one in the outer end of each pin.

This device will break cows of sucking themselves but it should be left on for a year and not taken off sooner if you expect a cure.

Given the Ingredients —Here's the Mixture

Please compound for me two of the most satisfactory mixtures from gluten $1.90, cotton seed meal $2.20, bran $1.60, corn meal $1.70, oats $1.70.—R. J. S., Crawford Co., Pa.

In answer to your inquiry I would suggest the following mixture:

Lbs.	Feed	Per Cent Crude Protein.	Cost.
100 lbs.	Corn Meal	9.6	$1.70
100 lbs.	Ground Oats	12.4	1.70
100 lbs.	Gluten Feed	23.0	1.90
100 lbs.	Cotton Seed Meal	43.0	2.20
100 lbs.	Linseed Meal	33.0	2.65
500 lbs.		121.0	10.15
100 lbs.	mixture contains	24.0	2.03

The foregoing gives a 24 per cent protein mixture at $2.03 per 100 pounds. With roughage such as timothy hay and silage you need a grain mixture containing at least 24 per cent protein.—A. A. Borland.

"When I was a boy I was glad enough to eat dry bread for my dinner," said father, at the head of the table.

"Well, daddy," piped up his small daughter, "you are having a much better time now you are living with us."—DeLaval Monthly.

No More troubles of Calving

STOP dreading the time when your cows freshen! The troubles you've looked upon in the past as part of the hazard of dairying are no longer a menace to your profits. Dairymen without number are now using Kow-Kare at freshening because of its marvelous invigorating action on the reproductive organs.

Kow-Kare is a concentrated tonic-medicine that has no other function than the building up of the digestive and genital organs. By using this famous cow medicine with the feed for two or three weeks before and after freshening you are assured a healthy cow—and a strong, vigorous calf. Retained Afterbirth and the other disorders you have learned to dread have no terrors for you if Kow-Kare is your reliance.

Kow-Kare, used sparingly with the feed helps your cows fill the pail under the most adverse conditions of winter feeding—when dry, heavy feeds put an added burden on digestion and assimilation. Try Kow-Kare when troubled with Barrenness, Retained Afterbirth, Abortion, Bunches, Scours, Lost Appetite, etc. Its health-building action will give you a convincing demonstration of its money value to you in the business of dairying.

Dairy Asso. Co., Inc., Lyndonville, Vt.

Makers of Kow-Kare, Bag Balm, Grange Garget Remedy, American Horse Tonic, etc.

KOW-KARE
FAMOUS CONDITIONER OF MILCH COWS

Feed dealers, general stores, druggists have Kow-Kare—$1.25 and 65c sizes (six large cans, $6.25). Full directions on the can. Mail orders sent postpaid if your dealer is not supplied.

PAYING MORE TO MAKE MORE

Recently we wrote a message to feeders explaining how we made every possible saving in the cost of the feeds we manufacture, and passed the saving on to the feeder.

One of our Organization commenting on the article stated, "That's all right, but they will want to know why Tioga Dairy Feeds aren't cheaper than other feeds".

He is right; you should know.

If you are buying an automobile instead of feed and could get a Studebaker for the price of a Ford, you would be getting exceptional value; you could even pay considerably more and still be getting a real bargain.

The same principle holds true in buying feed. It is not so much a question of the price you pay as it is what you get.

In Tioga Dairy Feeds you get more value. At times the price is higher, often it is lower than other feeds of similar crude analysis but you are always getting the same standard of feed that will make you the most profit; the best that money can buy.

We never lower the nutritive standard to lower the price. The cost of the best ingredients we can buy plus our manufacturing profit always makes the price of Tioga Dairy Feeds. Our customers get whatever saving we can make in the cost.

To help feeders prosper in this way is our aim in the manufacture of Tioga Dairy Feeds for we realize that our business prospers only as we make our service of value to you. That's why we never lower the feeding value to cheapen the price.

Tioga Dairy Feeds may cost more than other feeds even if the crude analysis is the same but the extra cost makes you several times the amount in extra profit. If you are not using them, we wish you would ask someone who is and learn from him the results that can be obtained.

A. C. PALMER, Pres.

TI-O-GA FEED SERVICE

A Better De Laval Separator For Fewer lbs. of Butter~

(Based on average price of 92 score butter for each year. Present indications are that butter prices for 1927 will be as high or higher than for 1926.)

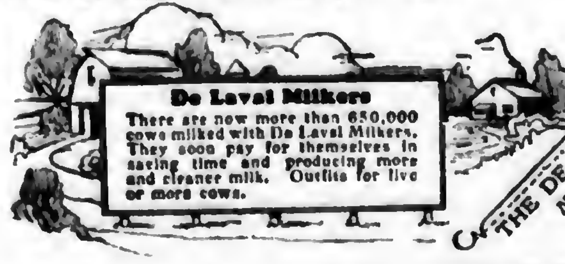
In 1914 it required 250 lbs. of butter to buy a popular size De Laval Separator; five years ago 221 lbs. were required to buy the same size De Laval; while today approximately only 214 lbs. are required to buy it.

But the De Laval Separator of today is greatly improved over the 1914 and 1922 machines. It has many improvements and refinements, including the famous "floating bowl." It skims cleaner and runs easier, and is more convenient to operate and handle. It is the best De Laval Separator ever made, and that is saying a great deal.

See—Try—and Trade

See and try the De Laval. Run the skim-milk from your old separator through it. If you are losing any butter-fat the new De Laval will surely recover it. Thousands of people have tried this simple test and many have been surprised at the saving made by the new De Laval. Trade allowance made on old centrifugal separators of any age or make.

See your De Laval Agent or send coupon for full information.



De Laval Milkers

There are now more than 650,000 cows milked with De Laval Milkers. They soon pay for themselves in saving time and producing more and cleaner milk. Outfits for five or more cows.

Next Summer's Flower Garden

Plans Now Will Make It Nearer Your Ideal

WHEN the tulips begin to poke their sturdy noses above the ground in spring, then it is that we begin to think about the home flower garden—the garden which is to be planted in April or May, to blossom until Jack Frost puts flowers to sleep for another season. But before the garden can be planted, it must first be planned, and part of the planning will include the preparation of the soil.

Perhaps last year you did not have much luck with nasturtiums. Perhaps the cosmos did not bloom well; the hollyhocks did not mature as you hoped, or the larkspur did not give the mass of blue you had looked for by the fence.

The soil which plants like is the kind that makes them grow.

Every flower needs special soil—some loam, some clay and some a sandy mixture—and to have the plants one wishes in the garden, the ground must be prepared to please them.

Hardpan is about the only soil in which plants refuse to grow. Clay comes next, tho roses, contrarily, prefer just such heavy soil. For other plants, the clay must be lightened and nourished, using rubble and leaf mold. The best rubble is mortar, because it contains lime and grit. The grit separates the clay and permits water and air to circulate thru the earth. The leaf mold is added to give nourishment and warmth to the soil.

Sand Must Be Treated

Sandy soil must be treated for the average flower bed, and leaf mold is good to use here, too, tho it should be in combination with well-rotted manure or decayed soil from the compost heap. Since it is light and warm, it can be worked quite early in the spring.

The best soil for the average flower garden is the kind of loam which will produce a good crop of corn. With the addition of muck in varying quantities, it may be adapted to a wide range of plants.

The seed packages usually tell what sort of earth is best for the plant. Follow directions carefully. It is surprising how many plants one can raise successfully from seed—even such giants as cannas and caster beans, for which one would pay a florist a high price. Cosmos, scabiosa, coleus, dahlias and salvia can also be started successfully from seed by the home gardener. If you have a hotbed, start these in it, just as the florist does. When danger from late frost is past, transplant to beds.

But before hotbeds are planted or soil is prepared, one should know where each variety is to be planted, and even tho the garden be a mere patch besides the clothes-line or a narrow stretch along the fence, a plan on paper is a great help. You are thus better assured of getting the taller plants at the back and the low, spreading ones along the edge; of getting harmonious colors together (tiger lilies should not be next to the Sweet William or California poppies beside petunias). Make allowances for the blooming season as well as the colors of flowers, and consider the view from the home and road.

Scatter the Annuals

It is often wise not to plant annuals in distinct groups. Scatter them, so that when thru blooming the rough brown top which is left will not be noticeable among the plants that still are blooming.

Sometimes several kinds of seed can be sown in the same area, so that as soon as the early species is thru blooming, a new flower is ready to appear, and when this is gone another blossom will come to stay until frost.

Some flowers, like candytuft and schizanthus, may be given several sowings thru the season, so that a constant period of bloom is assured. The flowering period of nasturtiums may be prolonged by not allowing them too rich a soil or too much sunshine. Rich earth causes them to run all to leaves, while a profusion of sunshine will make nasturtiums give a golden glory of blossoms for a very few weeks; then for the rest of the season they will be an unsightly mass of yellowing leaves.

English daisies, pansies, ageratums, nasturtiums or other low-growing and shallow-rooted plants such as petunias, verbenas, asters, phlox, and dwarf morning glories may be sown where the tulip bulbs are planted, if you wish to leave the bulbs in the ground, and thus the bright border of early spring will be kept colorful all summer.—Earle W. Gage.

Five of the Reasons

WHY establish a country bath room? Because:

1. A bathroom is convenient, and makes frequent bathing (which is a necessity) a pleasure instead of a tedious bore.
2. A bathroom provides a safe, sanitary means of disposing of waste water.
3. Fly and mosquito breeding places are eliminated when we get rid of outside mud holes.
4. The great danger of exposure and over-fatigue for the housewife vanishes with the installing of a bath in the home.
5. Bathrooms are time savers and give mother time for studying and practicing health measures for the home.—G. S. S.

To remove black oil (the kind from automobiles) from clothing first apply a coating of clean lard then good soap, slightly rubbing fine clothing and briskly brushing heavy clothing with a stiff brush. The soap takes the oil away along with the lard like magic.—Kate, Pa.

Touchy to Make But Fit for the Gods When Finished

NOTHING in the world is so "touchy" about temperature as baked custard. Old folks, begonias, and cats are simply not in it. Cup custard out-fusses them all. What is more, if you long for a smooth-as-velvet, golden result, you have to pamper the whimsical thing and have the temperature just right.

But cheer up! There is an easy path which leads to perfect custard.

First, let's have a recipe to follow. Almost any reliable cook book contains rules for baked custard but this time we'll consider one that may be popular in angel-food season, a season which starts as soon as the fresh eggs come in plentifully enough to be reasonable in price. No need to puzzle over utilizing egg yolks when it takes only a minute to beat up a delicate nutritious dessert as custard really is.

BAKED CUSTARD

1 quart of milk
8 egg yolks or 4 whole eggs
½ cupful sugar
¼ teaspoonful salt
Dash of nutmeg

Thoroly mix the eggs and sugar. Add milk, salt and nutmeg and beat until well blended. Pour into baking dish or custard cups which must then be placed on a folded sheet of paper in a dripping pan one-third full of water. Bake in a slow oven until firm. Just right baked one hour.

With this rule there is no need of first scalding the milk. It is quickly prepared except for taking pains to line the dripping pan with paper, which is absolutely necessary. The paper serves as a heat regulator since it is a non-conductor of heat. You see we must cook custard at a temperature below boiling point which means a slow oven.

The oven of a kitchen range is somewhat like the electric oven, and holds even heat. But again, one must be sure it is a slow oven, before the custard is put into it, or one might as well prepare scrambled eggs in the first place.

Perhaps you are wondering how to bake custard pie at a slow heat without soaking the crust. Custard pie presents two problems: a high heat for the starchy pastry and a low heat for the egg and milk combination. The solution is to slip the pastry-lined pie plate into a hot oven for a few minutes to set the crust. Then lower or turn off the heat; line the shell with the filling; replace the pie in the oven to bake slowly for forty minutes, when it should be firm.

Yes, custard is exacting about the surrounding atmosphere, but your solicitude will render it a rival of angel's food, for a golden, velvety baked custard is a food for the gods!
—Floris C. Thompson, Mich.

Threaded Needles

WHEN sewing on buttons thread needle with double thickness of thread, draw thru and double again making four strands to go thru the button's eye each time you put the needle thru. This saves time and much threading of the needle. Use fine needle and thread for good clothing but heavy thread is more durable with working clothes. We who have received the sewing set from Pennsylvania Farmer, for which I am very thankful, will have no trouble in finding just the right needle for any work.

• • •

When the school boy's collar and cuffs show hard wear rip off and turn under side out. This will give the shirt a new lease of life, and prevent humiliation to the boy over frayed collar and cuffs. I have boys, and know how quick they are to refuse to wear them frayed.

• • •

When you have a long, narrow belt to make, the kind that is so hard to turn, sew by hand across end and about two inches along side, turn by placing finger on end just sewed and push thru just far enough to allow you to continue the seam, sew and pull thru as you sew. When you are done sewing your belt is all ready turned.—Kate, Pa.

When Little Folks Must Stay Indoors

WHEN winter days are too stormy for outdoor play, and afternoon hours seem endless to children who are too young to go to school, a pair of blunt scissors and a newspaper or old magazine will provide entertainment. Lace paper doilies may be cut from folded paper, paper money may be made, and pictures may be cut out. A box of crayons and large sheets of paper for drawing keep little hands away from more breakable things.

Colored beads, with holes in them large enough to string easily, or even empty spools, help to pass away the time, and modeling clay with a newspaper to work on will make a fine array of dishes, balls, animals and many other things. Little girls like to play house and with dolls, dishes, a duster and a little broom they will find plenty of amusement.

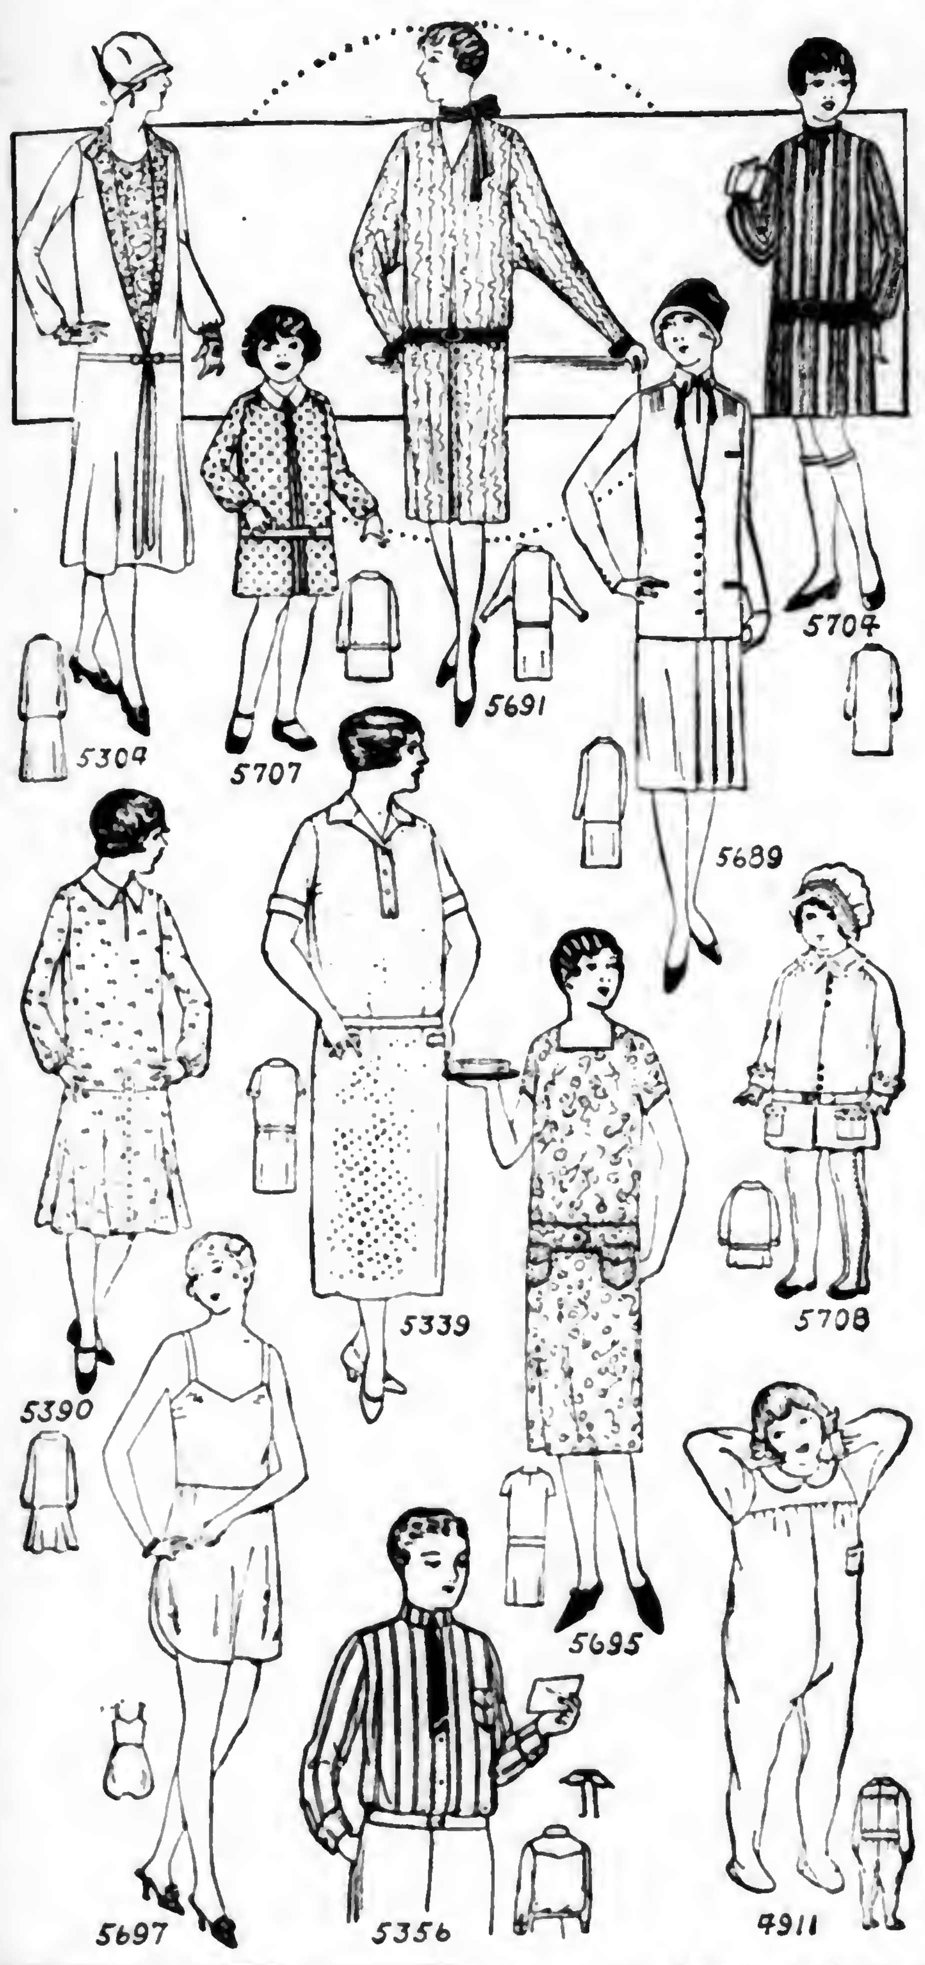
Large blocks to build houses, trains, automobiles for either boys or girls, and other simple toys will keep children happy and busy doing things for themselves and will keep them out of mischief.—New York State College of Agriculture.

Change in the State's Marriage Law Proposed

THE Public Charities Association of Pennsylvania plans to introduce in the 1927 General Assembly a Child Marriage Bill raising the minimum age to at least 16 years for both sexes, and a Hasty Marriage Bill requiring a five-days' interval between the application for and granting of a license. The present legal minimum age is 14 for boys and 12 for girls, and a recent study made by the association's child welfare division revealed that 521 girls under the age of 16 were married in the state during 1924.

Whatever the Occasion Demands

If Not Here It's in Our Catalog



Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5304.—Ladies' Afternoon Dress.—Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 3¾ yards of 40-inch plain material and one-half yard of contrasting material for facing revers, collar, cuffs and vestee. Price 10c.

5707.—Smart for Little Folks.—Four sizes: 2, 4, 6 and 8 years. A 4-year size requires 1⅞ yard of 36-inch material with one-quarter yard of contrasting material. Price 10c.

5691.—Dolman Sleeves.—Seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 4 yards of 40-inch material, with three-eighths yard of contrasting material. Price 10c.

5689.—Straight and Tailored.—Seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 3¼ yards of 54-inch material. Price 10c.

5704.—Fine for School.—Four sizes: 6, 8, 10 and 12 years. A 10-year size requires 2¼ yards of 36-inch material with one-quarter yard of contrasting material. Price 10c.

5390.—Skirt with Flare.—Five sizes: 8, 10, 12, 14 and 16 years. A 12-year size requires 2⅝ yards of 40-inch material with one-quarter yard of contrasting for facing on tab and collar. Price 10c.

5339.—In and About the House.—Nine sizes: 38, 40, 42, 44, 46, 48, 50, 52 and 54 inches bust measure. A 42-inch size requires 4 yards of one material and one-half yard of contrasting, 36 inches wide. Price 10c.

6-Room ALADDIN $598 ALL MATERIALS READI-CUT
WE PAY THE FREIGHT
ALADDIN Certified Lumber

You can buy all materials for a complete home direct from the manufacturer and save four profits, on the lumber, millwork, hardware and labor.

Price Includes All lumber cut-to-fit, highest grade interior woodwork, siding, flooring, windows, doors, glass, paints, hardware, nails, lath, roofing. Complete instructions and drawings are also furnished. Safe arrival of complete materials is guaranteed. We pay the freight to destination on all Houses, Summer Cottages and Garages.

Save 18% LUMBER WASTE—30% LABOR COST The lumber that's wasted costs just as much as the lumber that's used, and the best way to cut your cost is to save the usual waste. The Aladdin System prepares all the lumber in our mills ready to be nailed in place. Cost of lumber is reduced 18 per cent, cost of labor is reduced 30 per cent. Quantity production of standard designs allows us to quote the very low prices we do, and still maintain the High Quality materials for which Aladdin Homes are noted.

Aladdin's 21 Years' Success is proof that you can do as thousands of other home builders do every year—save from $200.00 to $800.00 by building an Aladdin Home. There is an Aladdin near you wherever you live. Go and see one. SAVE money, time and annoyance by ordering all materials from one reliable manufacturer. You get the finest quality of materials obtainable. Our blue prints and instructions make it easy for anyone familiar with tools to erect an Aladdin. You will be sure to find in the Aladdin Catalog the home, garage or summer cottage that you will like. WRITE NEAREST MILL TODAY FOR FREE MONEY-SAVING CATALOG No. 311.

Don't neglect a Cold

Dangerous sickness often starts with a cold. Ward off your colds with Musterole before pneumonia starts.

Musterole is a clean, white ointment made with oil of mustard. It has all the healing properties of the old-fashioned mustard plaster.

Rub the ointment gently over congested spot. It penetrates the skin and goes right to the seat of the trouble.

Rheumatism, tonsillitis, lumbago, coughs and colds are all symptoms that call for Musterole.

To Mothers: Musterole is also made in milder form for babies and small children. Ask for Children's Musterole.

The Musterole Co., Cleveland, Ohio

MUSTEROLE WILL NOT BLISTER
BETTER THAN A MUSTARD PLASTER

A new taste thrill!

THIS way of cooking meats will give them a new taste thrill that will delight your family. *Before* cooking, spread a layer of Gulden's Mustard over both sides of the meat. Then put on the fire or in the oven. The lively mustard taste and the delicate spices of Gulden's will spread through every particle of the meat, adding a wonderful, appetite-arousing flavor. Use it to enliven gravies and vegetables.

Write for free Recipe Book to Charles Gulden, Inc., Dept. D-12, 48 Elizabeth Street New York City.

GULDEN'S MUSTARD
Use it as a seasoning in cooking

Painting ?
-then see your
Felton-Sibley dealer
-ask to see COLOR GUIDE

Before you do that painting you are planning, visit your Felton-Sibley dealer. Ask him to show you our new color guide suggestion book. It will give you a lot of concrete ideas for color combinations that are bound to be helpful—15 buildings in their true colors.

Your Felton-Sibley dealer is a good man to know. And Felton-Sibley Paints are good paints to use. Their quality never varies—and they "certainly *do* last." They are known as the paint that goes a long way—big *coverage.*

Which Shall It Be?

Submitted for Approval to Those Who Serve!

IT HAS long been the custom for men to serve at table, but what home is there without its rebelling men and long suffering women? Either Dad serves portions too large or spatters the cloth with juice from the roast. Or perhaps the man simply sits back and says he can't while the guests look uneasily at each other and at you and wonder if they are to witness a family scene. If you suggest that brother serve, there are at least mumbled words and a scowl. "Gee! I don't wanna work! I wanna eat!"

Of course there are model homes where the men seem to enjoy serving at table and make the meal a delight by such service, but in the great majority of cases, this is labor for a man. And so, in many nicely conducted homes, the hostess herself or one of the daughters sits before the serving plates and without explaining that Dad or husband or brother would rather be shot than portion out the food, does so quietly and in such manner as to make everyone at the table feel comfortable.

Aside from all "family" reasons which might be personal, does it not seem logical that the woman who prepares or plans a meal would know best how to serve it to advantage? She realizes which potatoes might have a "bone" in them. Dad would be sure to give this unfortunate one to the domestic science guest you wished most to impress! A woman can "figure" how far the stretched out quantity of creamed beans will go and does not attract attention to it by her own empty plate as a man would do. And she knows how to place the different foods on the plates in a neat and attractive manner so they will look their best and do justice to the cook who labored with them.

The next time there are guests, or sometime just among yourselves, try serving the family from Mother's or sister's place. It will prove a simple solving of a long standing home problem.—Effie Maurine Paige, Pa.

How One Group Earned Money

IT MAY be a help to the women in country towns to know how some women in one small town made quite a lot of money and did it easily.

In almost every village someone may be found who owns an attractive home large enough to spare one room for a salesroom. The person who has charge of the room should be one who has been accustomed to meeting and dealing with all sorts of people—people from different localities and of different nationalities. She should also have a knowledge of sewing and fancywork and the crafts and of antiques if possible, and be used to club work.

Other women can help in the work and take turns as clerk. The person taking charge of the tearoom and of the bookkeeping should have some pay in the way of commission or some other arrangement can be made.

The things sold in the town where this scheme was carried out were what the women happened to make. I have not had an opportunity to inquire if there were demands for certain things more than was in stock, but that is something that would soon be found out in any salesroom and notes could be taken. I presume that the sales were made mostly in the summer time.

This is the list of the things sold and the returns realized:

27 hooked rugs	$405.50
9 braided rugs	145.00
10 woven rugs	43.00
5 quilts	65.00
5 fireplace iron forks	23.00
7 baskets	35.25
Fancy work	53.00
Aprons	10.15
Stockings	8.00
Hand woven table covers and towels	45.00
7 dresses	55.50
Home made candy	29.70
Food	105.00
Miscellaneous	40.34
Total	$1063.44

—Addie Folsom, N. H.

The Kitchen Cabinet

PINEAPPLE PIE

1 cupful grated pineapple, or if fresh, chopped
3 tablespoons flour
¾ cupful sugar
1 egg

Mix sugar and flour; add pineapple and cook until it thickens, stirring constantly. Beat the egg, add to the first mixture, and pour in a pastry-lined tin. Add meringue to the top or else bake between crusts.

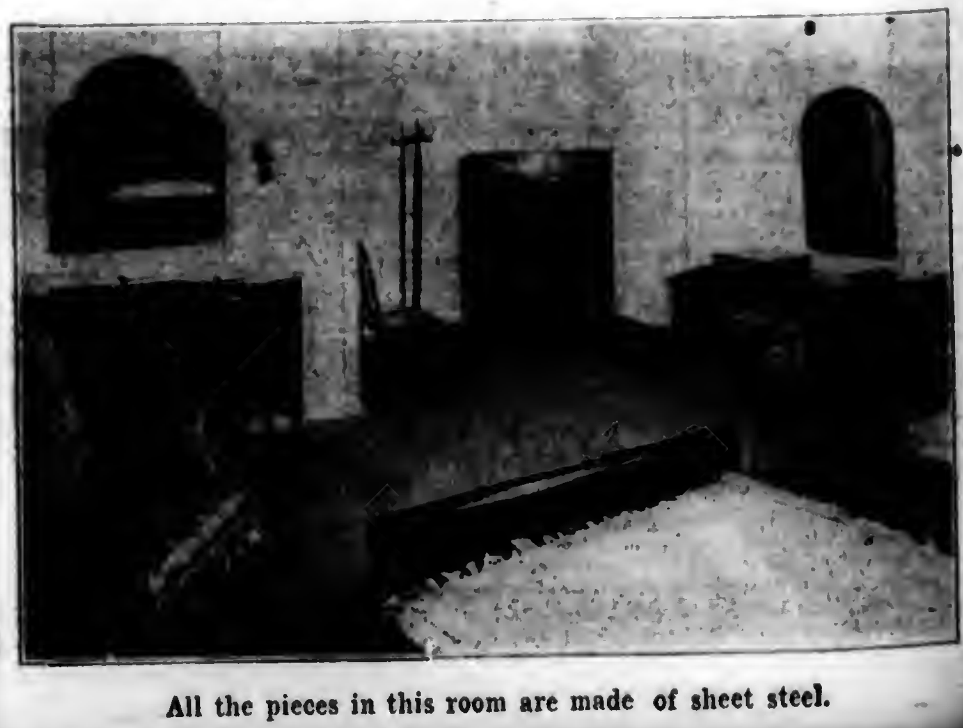
• • •

PEACH CREAM PIE

8 halves canned peaches
2 eggs, beaten
1 teaspoon cinnamon
½ teaspoon nutmeg
¼ teaspoon each of cloves, allspice
1 cup milk
1 cup peach juice
¾ cup sugar

This filling will make two pies. Fill pans with pastry, pour in mixture, and bake in a moderate oven.—Olga Clark.

Fire Won't Burn This Furniture



All the pieces in this room are made of sheet steel.

Friendly Talks

By EDGAR L. VINCENT

THERE is something about making maple sugar that everybody likes, I think. For one thing, it is the first work we do in spring. The boys and all of us feel as if we had been let out of jail. The winter has been so long! And there is a feel in the air that puts new life into us. It is sloppy under foot, but what a bright blue there is in the sky! Frosty in the morning; that only makes us step a bit higher.

It is a lot of fun to scatter the buckets around in the woods. One at every tree, and two when the old maple is a big one. And the smoke that first curls up from the smokestack in the old sugar house looks and smells so good! There is something about the smell of the country in spring that is sweeter than any we can buy downtown in a bottle.

But when we come to tapping the trees we become a little bit glad and a little bit sorry. Looks fine to see the crystal-clear drops fall with a tinkle into the bucket. Makes us think of the syrup and the sugar that are on the way. Only a step more now from the good old maple tree to the cans of delicious syrup and the brown cakes of sugar. Even now when we taste the sap it has that fine flavor that belongs to no other liquid in the world.

It Shortens Its Life for Us

But have you never felt a bit of a tug at your heart, as you thought that these beautiful hard maple trees are giving up a little bit of their lives in the sap they let fall into our buckets! For the sap is the life of the tree. No sap, no leaves, no growth, only death. And year after year these trees we love so well put something of themselves into making you and me a little happier. We forget that sometimes. The sugar is so sweet! It gives us so much of joy! But our joy costs something right out of the heart of the tree.

A little way from our home lived a woman who was not very strong but she poured out her very life on a boy who was a hopeless cripple. She never seemed to realize that her boy never could run and play like other boys. If she knew that his mind was even weaker than his body, she never showed it by word or look. To her he seemed the finest, handsomest boy in all the world; and when he went away to stay, her heart was well-nigh broken. Right out her heart she gave day after day the very best there was in her. It cost, but who shall say that it did not pay?

Yes, It Pays!

Pay? How could it pay? She lost her dear one. What was left for her after that? Well, as I look at it she had a sweeter, saintlier life because of her self sacrifice. The affection we bestow upon others only awakens a deeper capacity to love.

What do we do when we graft a tree? We cut away some of its branches. That is true; but we put back a finer sprout, a branch that will some day bear better fruit than the tree ever could have carried on its boughs had not the saw and the knife done their work. But tapping the sugar maple tree shortens its life, do you say? That may be so; a good many think it is true: and yet, there is no more delicious sweet in the world than that we get from the heart of the sugar maple.

It is just so with every kind thing we do. It is never lost. It blesses those upon whom we bestow it, and it strengthens and beautifies our own natures, and that helps to bring the Kingdom of God a little nearer!

OUR YOUNG PEOPLE'S FORUM.

How Many Words Can You Find?

DEAR FORUM FRIENDS:—On my desk is a pile of Forum mail, questions to be answered, pins to mail and prizes to be sent—but the pile grows larger and days seem to grow shorter. There have been so many other things for me to do on Pennsylvania Farmer lately I've had to keep you waiting but I haven't forgotten you. I'm hoping to start those pins and contest prizes on their way before long, but in the meantime, just to keep your minds busy and so you won't bother the mail carrier every time he puts in his appearance, I'll start you going on another contest. If you're anything like my next door neighbor in the office (her desk is right next to mine and she knows some of you almost as well as I do) I'm sure you'll have a splendid time taking part in this contest.

Now the Fun Begins

You know that in a very long word there are so many letters that it is possible to make a great many shorter words using the same letters. Well instead of taking one long word, we'll take the two words, PENNSYLVANIA FARMER, and see how many different and shorter words we can find. For example, there's "pen" and "pan" and "pay," and I haven't any idea how many more. That's what I want you to find out.

Remember:

First: The letters you use to make your words must appear in the two words, PENNSYLVANIA FARMER. For instance, you mustn't list the word "barn" for there isn't any "b" in the two words given, or the word "pass" because there is only one "s."

Second: Proper names, abbreviations and words of two letters will not be counted.

Third: Write clearly so that the words can be read quickly.

Fourth: Words should be written on a paper by themselves and numbered—1, 2, 3, etc. If you wish to write a letter at the same time use another sheet of paper.

Fifth: Put the word "Contest" in the upper left hand corner of the contest paper and your name, age and full address (including county) in the upper right hand corner.

Sixth: To be counted in the contest all word lists must reach me on or before March 19th. Address all Forum mail to: Cousin Ruth, care of Pennsylvania Farmer, 261 S. 3rd St., Phila., Pa.

These may seem like a lot of rules but you see I'm counting upon a mighty avalanche of words and unless you all help make it easy for me to correct the papers I'll not be able to tell you who the winners are for weeks to come. Prizes will go to the three older boys and girls who send in the three longest lists of correct words and three to the younger members and friends.

That desk neighbor of mine is already working on her list and the next thing I know she'll be expecting a prize. You'll have to hustle along to beat her record!

COUSIN RUTH.

From Forum Members and Friends

Dear Cousin Ruth:—When Pennsylvania Farmer comes I always look to see if any of my friends' letters are in. Last week my cousin's name was in the list in the corner. Across the road from where we live there is a large swamp. This winter it is like a great big pond frozen over. There are only two or three logs sticking up in the ice so it is very good skating.—Clarice Biesecker, Lackawanna County, Pa.

Dear Cousin Ruth and Forum Friends:—This picture was taken last year at the first snow on October 30th. The building is the shop and my brother is in the door. The vines and bushes are pretty.—Esther Landis, (X), Dauphin County, Pa.

Second Prize—Twelve and Under

THE FIRST SNOWFALL
Esther Landis, (X), Dauphin County, Pa.

Dear Cousin Ruth:—I have a pet cat, its name is Tiger. When he sees me sitting on a chair he comes and jumps up on my lap. We also have two dogs, their names are Nellie and Dick. When we hold up a bone Nellie jumps up and gets it.

We have two mules and one horse. When we let them out for water they go down to the trough and drink and then they come back to the stable. But sometimes the mules run off and then we have great fun going after them.—Pauline Beck, York County, Pa.

Dear Cousin Ruth and Forum Friends:—I have a pet dog, "Sport." He shakes hands with us, and sits on a chair like a person. When you throw a stick and tell him to bring it to you, he always puts it into your lap.—Helen Fott, twelve, Westmoreland County, Pa.

Dear Cousin Ruth:—I have tried some of the recipes that were on the Forum page and found them very good. I thought I would send one, too.

COCOANUT CAKE

2 cups sugar
½ cup butter
4 eggs
1 cup sweet milk
3 cups flour
3 teaspoons baking powder
½ cup cocoanut

Take the whites of two eggs for filling.

FILLING

Boil together 1 cup of sugar and ½ cup water until they spin a thread. Pour while hot into the well-beaten whites of two eggs. Beat until cold and stiff. Then add one teaspoon vanilla and one cup of cocoanut, and ice.—Freda Gray, Perry County, Pa.

Dear Cousin Ruth:—I like to milk. I could milk when I was four years old. Sometimes I milk all the cows for mother. I have two nice pet cats and a Collie dog. We have good sledding now and we have lots of fun.—Denver Jay Oester, nine (X), Somerset County, Pa.

Dear Cousin Ruth:—I was born in Canada and when I was eight years old I came to the United States. When I came to this country I liked it very much.

We had a fine time Christmas night and New Year's day. Christmas night we had a show at our house. I have a moving picture machine. It was all about Colonial days with George Washington. I am a Boy Scout. I joined only last year. I have my Tenderfoot Badge and next month I get the Second Class Scout Badge.

We have good skating this year. Yesterday the ice cracked and I saved a boy from getting drowned. I pushed him to land and I fell in myself.—Ralph Robert Roe, thirteen (X), Westmoreland County, Pa.

Dear Cousin Ruth:—Here is a picture which I hope you will like very much. My cousin was visiting me and we decided to take this picture for Pennsylvania Farmer. My cousin is a little bit older than I am, but when he comes out from town we always have a jolly good time. Everything is so different in the country.

Honorable Mention

READY FOR A GALLOP
D. Clyde England, (X), Bedford Co., Pa.

I live on a large farm and like my work very well. I milk from six to seven cows twice each day.—D. Clyde England, (X), Bedford County, Pa.

Dear Cousin Ruth:—Daddy gave me 200 Ancona chicks last spring. I am selling eggs at a good price. I have a good deal of money now.—Albert William Walton, Chester County, Pa.

Dear Cousin Ruth and Forum Friends:—We have lots of fun sliding down hill at our school. There are more boys than girls and the boys bring their sleds to school and each boy takes one girl. There are only five girls that go sledding. Sometimes when we go real fast down the hill the boys turn out of the track and tip us, then all the sleds that are following the first one tip, too, because he breaks the track.

I have a pet cat. She is white as snow. She will play with her mother and with a string when you pull it on the ground or floor.—Martha Sakach, (X), Erie County, Pa.

Dear Cousin Ruth:—We have a society in our school every two weeks. I was on the debate: Resolved that Arithmetic is more useful to a school than a Reader. I was on the Arithmetic side.

I sometimes sing by myself. I like to sing and play the organ. I like to help in the fields in summer and skate in winter.—Nellie Kumer, twelve, Juniata County, Pa.

Dear Cousin Ruth:—I bring wood for mother and mind my sister while mother is doing dairy work. We have a little dog. Brother Paul and I have lots of fun with it. I must go and study my books now.—Ralph W. Morgan, Jr., Washington County, Md.

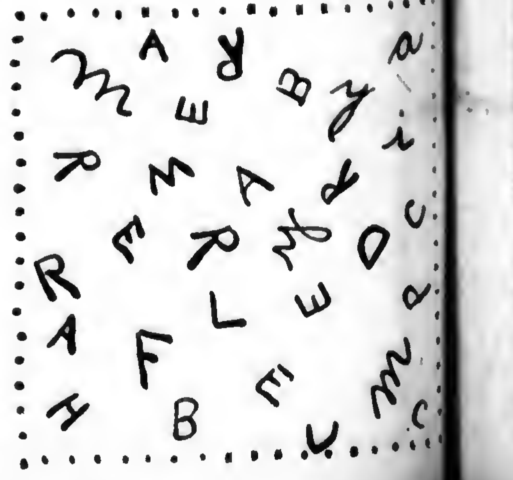
OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS.—My grandmother used to say at this time of the year, "March—many weathers," and I suppose most of us have noticed how this month is likely to give us all sorts of days. But we can usually count on having some pretty stiff breezes in March, and it looks as if something had been blowing the letters in the puzzle all topsy-turvy. At any rate, by using the letters which are flying about in the little square, you can form the names of five months of the year—March and four other months—and perhaps we'll have a sample of the weather of all these. When you have straightened out these letters, send me a list of the five months the letters spell, letting me have your answer by March 12, on a postcard or in a letter. BE SURE TO SAY HOW OLD YOU ARE. Also, please tell me the name of your county and when your birthday comes. The prizes go to the ten children, sending in the correct answer, whose cards or letters are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to the Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

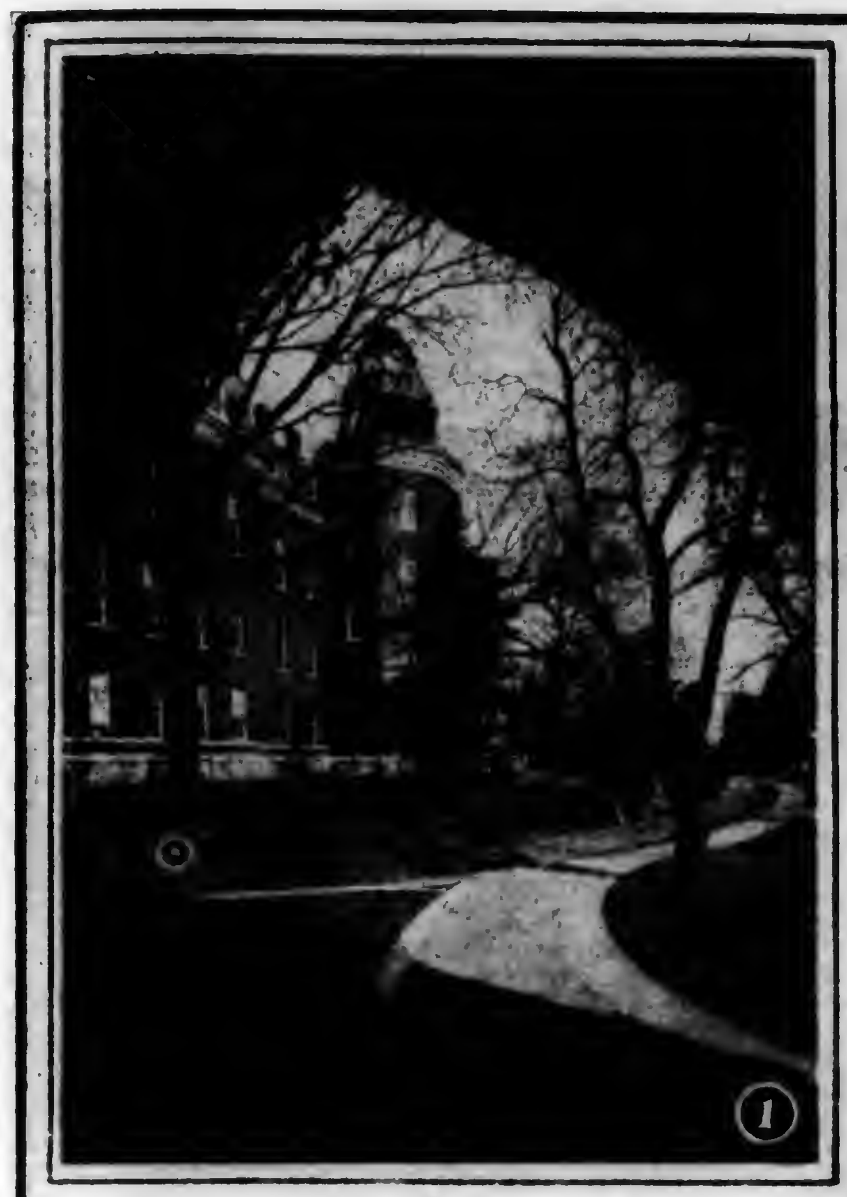
I am glad so many of you took part in the birthday party we had in the issue of February 12, when we had the row of candles. The answer to the puzzle that week is: ABRAHAM LINCOLN

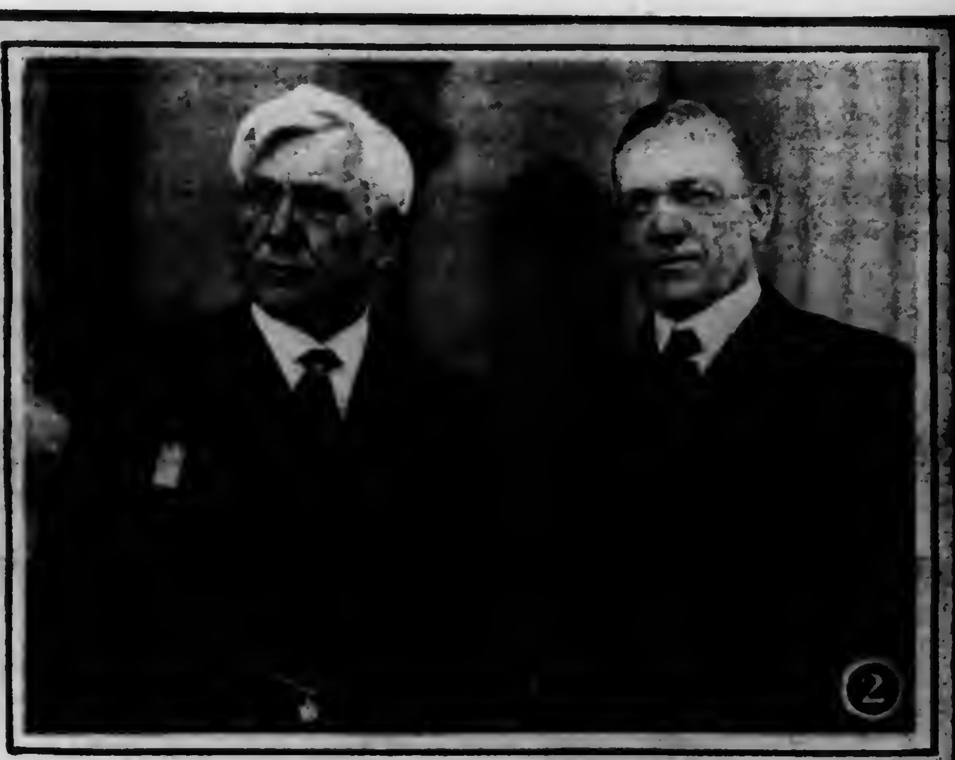
The ten prize winners are: Bernard Beech, age 10, McKeesport, Pa.; Glen Bowlby, age 8, Rockwood, Pa.; Alice Devine, age 12, Elkton, Md.; Margaret I. Greenawald, age 9, Lenhartsville, Pa.; Grant Hawkins, age 10, Kittanning, Pa.; Mamie Kolodchak, age 10, Millville, N. J.; Sarah Mabus, age 8, Millmont, Pa.; Co E. Orr, age 8, Bridgeton, N. J.; Joseph Warnes, age 12, Salem, N. J.

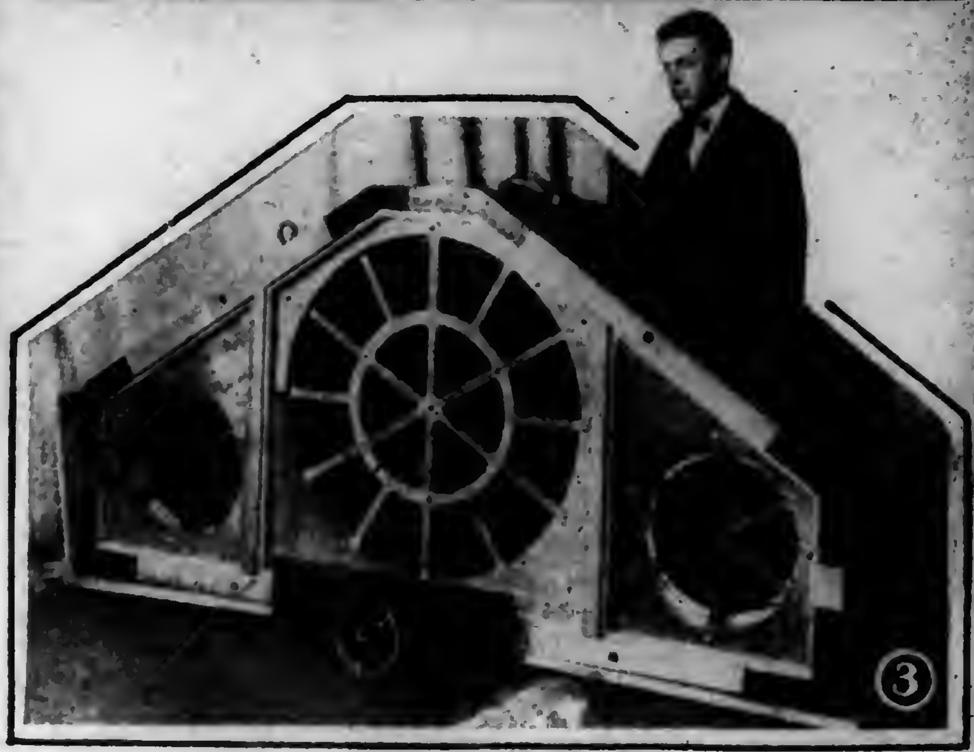
Sometimes Little Folks ask me how to join our Puzzle Corner. You don't have to join it at all. It's your own Corner where you can have a good time, but the only way I can get to know you is for you to send in puzzle answers.

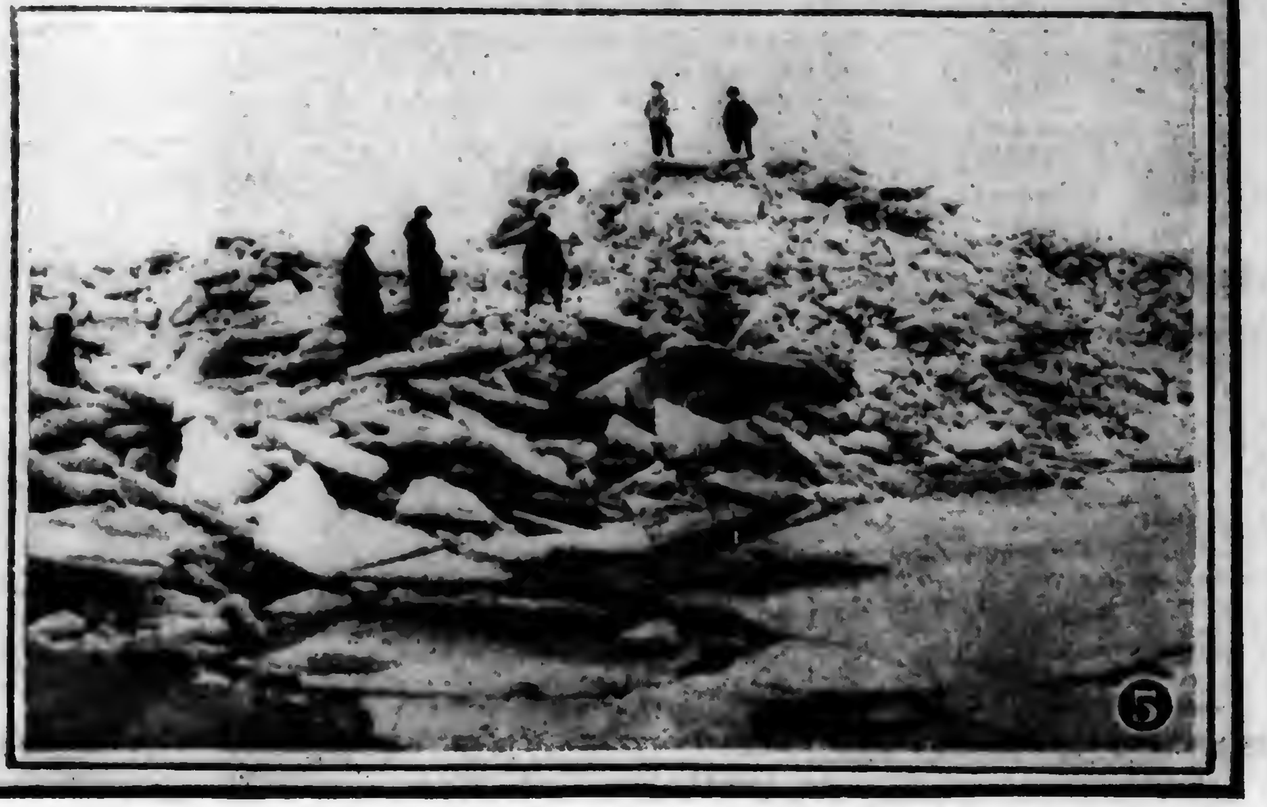


PASSING EVENTS IN PICTURES









1.—The Administration Building of Howard University, Washington, D. C., which is one of the largest and one of the best-known Negro educational institutions.

2.—Senator Charles L. McNary, of Oregon, right, and Representative Gilbert N. Haugen, of Iowa, left, the authors and sponsors of the McNary-Haugen bill.

3.—The photophone, a device which records and reproduces sound, either voice or music, on moving picture films has been perfected recently. A standard moving picture camera, equipped with a synchronous motor, is operated in conjunction with a sound recorder, also equipped with a synchronous motor. This combination places the two records on one film and the result is the talking movie. The three-unit loud speaker shown is used to reproduce the film record of sound.

4.—This little Chinese boy probably is not worried about the outbreaks in China but he seems to have troubles of his own.

5.—Ice jams in the lower Delaware River along the Jersey coast are said to be the worst in fifteen years. In some places the piles of ice are thirty feet high.

Judith of Blue Lake Ranch

By JACKSON GREGORY

Copyright Charles Scribner's Sons

The Story Thus Far

JUDITH SANFORD, part owner in Blue Lake Ranch since the death of her father, Luke Sanford, fired Bayne Trevors, general manager, because he wasn't square. The men grumbled. Trevors made trouble in every way possible. Bud Lee, horse foreman, and old Carson promised to stay. Judith could depend on them and on "Doc" Tripp, veterinarian and a friend of her father.

Busy days followed. Mrs. Simpson took up her duties caring for the ranch house and Pollock Hampton, part owner of the ranch, arrived with his guests—Major and Mrs. Langworthy and Marcia, their daughter; Marshal Rogers, lawyer, and Frank Farris, artist.

On May 30 Charlie Miller, returning from Rocky Bend with the pay roll, was robbed. To avert a walkout, Bud Lee covered 80 miles in six hours and put the money into Judith's hands in time in spite of smokeless powder and a silencer that put his horse out of business. Next day, while searching for clews of the holdup, Bud Lee and Judith came upon three of the troublemakers. In the fight that followed Bill Crowdy was injured but Chris Quinnion, the man Judith believed responsible for the death of her father, escaped. Pollock Hampton captured Shorty, who, tho locked in the grain house that night, also escaped. Someone on the ranch was double-crossing.

There was cholera among the hogs—there had been lung worm among the calves—Trevors had imported both, but how? When Tripp found cholera germs on the feet of some pigeons brought to the ranch by a stranger he had the answer. Poker Face, suspected as the man who had been double-crossing, and the stranger, Dick Donley, were put under guard.

Farris and Rogers expected to leave the ranch at the end of June; the Langworthys might stay, but in the probability of their going Judith planned a farewell party for Marcia,—a barbecue, games and a dance.

Continued from last week

AS BUD LEE came thru the lilacs into the courtyard, he heard the tinkle of a distant pianc and the tremolo of a violin, so faint as hardly to be distinguished above the splash and gurgle of the fountains. The court, bathed in soft light, seemed a corner of fairyland, the music vanishing elfin strains of some mischievous troop putting sighs and love dreams into a sleeping maid's breast. The night was rich with stars, warm with summer, serene with the peace of the mountains. He was late. They were already dancing within.

He stood a moment, looking in at the outer edge of the flood of light which gushed thru the wide doors. Behind him Japanese lanterns hanging from a vine-covered trellis; before him flowers, bright chandeliers, girls' dresses like fluttering, many-colored, diaphanous butterfly wings. He had been saying to himself: "I must hurry if I want to dance with Marcia." And something stirring restlessly within him shoved aside the thought of Marcia and put in its stead the old wonder: "What sort of a Judith would he see tonight?"

He found it difficult to form any picture of her here, among these gay, inconsequent merry-makers. Judith to him spelled a girl upon a horse, booted, spurred, with a scarf about her neck fluttering wildly behind her as she rode, the superb, splendid figure of a girl of the out-of-doors, alive with the hot pioneer blood which had been her rich inheritance, a sort of wonderful boy-girl. Remove her flapping hat, her boots and spurs and riding-suit, and what was left of Judith?

OUTSIDE were half a dozen of the boys who had not mustered courage to set foot on the polished floors, Carson and Tommy Burkitt among them. Tommy stared at Bud Lee and his jaw dropped in amazement. Carson took swift stock of such clothes as he had never suspected a good horse foreman owned, and gasped faintly:

"The darn . . . lady-killer!"

But Lee had neither eyes nor thoughts for them, nor remembrance of his own change from working garb to that of polite society. The dance came to a lingering end, the couples thruout the big rooms strolled up and down, clapping their hands softly or vehemently as their natures or degree of enthusiasm dictated, and Lee forgot Marcia and sought eagerly for a glimpse of Judith.

Refused a second encore, the couples stood about chatting, the hum of lively voices bespeaking eager enjoyment. There was no early chill upon the assembly, to be dissipated as the dance wore on; the day of festivity outdoors had thawed the thin crust of icy strangeness which is so natural a part of such a function as this. Already it seemed that everybody was on the most cheerful terms with everybody else.

Suddenly Lee's eyes, still seeking Judith, found Marcia. Surrounded by a little knot of men, each of them plainly seeking to become her happy partner for the next dance, adorably helpless as usual, Miss Langworthy was allowing the men to fight it out among themselves. Lee moved a little nearer to see her better. In a pale-blue gown, fluffy as a summer cloud, her cheeks delicately flushed, a white rose like a snowdrop in the gold of her hair, she was flutteringly happy, reminding him of those little meadow blues that had flown palpitatingly about him that day in the fields. And she was obviously as much at her ease here, in an atmosphere of music and flattery, as the tiny butterflies in their own meadows.

Bud Lee came in, his tall form conspicuous, and went straight to Marcia. She saw him immediately; forgot herself to stare almost as Carson had done; smiled at him brightly; waved her fan to him.

He took her hand and told her with his eyes how pretty she was. The delicate tint in Marcia's cheeks deepened and warmed, her eyes grew even brighter.

"Flatterer!" she chided him. "Are we to talk of the moth and the star again, Mr. Lee?"

The knot of men about her melted away. Lee stood looking down into her upturned eyes, measuring her gentle beauty. He had thought of her as a little blue butterfly—she was more like a wee white moth, fluttering, fluttering . . .

The music, again from a hidden distance, set feet to tapping. Marcia plainly hesitated, flashed a quick look from Lee to the others about them, then whispered hurriedly:

"It's terrible of me, but—"

And she slipped her hand into his arm, cast another searching glance over her shoulder for a partner who had been too tardy in finding her, and yielded to the temptation to have this first dance with "the most terribly fascinating man there"! Lee slipped his arm about her, felt her away with him, and lightly they caught the beat of the dance and lost themselves in it. And still, again and again turning away from Marcia, he sought Judith.

The dance over, their talk was interrupted by an excited and rather overdignified youth with a hurt look in his worshiping eyes, who stiffly reminded Miss Langworthy that she had cut his dance. She was so contrite and helpless about it that the youth's heart was touched; she blamed herself for her terribly stupid way of always getting things tangled up, gave him the promise of the next dance, which she had already given to some one else, disposed of him with charming skill, and sighed as she turned again to Lee.

"I haven't paid my respects to our hostess," he said quietly. "Where is Miss Sanford?"

"She sent her excuses," Marcia told him. "Aren't we in a draft, Mr. Lee?"

He moved with her away from the soft current of air, a distinct disappointment moving him to the verge of sudden anger. What business had Judith to stay away?

"You mean she isn't coming at all?" he asked quickly.

"Oh, no," she told him, busy with the rose in her hair, her eyes bright on his. "Just as the dance was beginning she had to go to the telephone. Some ranch business. I don't know what. But she sent word she would be here immediately—I believe," and Marcia made her remark teasingly, tho she did want to know, "that a certain mysterious gentleman who masquerades as a horse-breaker is very much interested in Judith."

"What makes you say a thing like that?" he asked, startled a little.

Marcia laughed.

"A woman's intuition, Sir Mystery!" she informed him gayly.

"WHAT does the woman's intuition find to be the mysterious gentleman's interest in a certain Miss Langworthy?" he asked lightly.

"It tells her that he likes her; that it would be fun for him to come and play with her; that he would be kind and courteous; but that he considers her very much as he would a foolish little butterfly!"

Again she startled him. He looked at her wonderingly. But before he could frame a bantering reply, Marcia had involuntarily gripped at his arm with a look upon her face that first was sheer bewildered astonishment, and was crying for him to look yonder.

Judith had come.

Across the floor, now nearly deserted, Bud Lee and Marcia stared at her. She was coming toward them, her dainty little slippers seeming to kiss their own reflections in the gleaming floor. It was Judith and not Judith. It was some strange, unknown Judith. A wonderfully gowned, transcendently lovely Judith. A Judith who had long hidden herself, masquerading, and who now stepped forth smiling and bright and vividly beautiful; a Judith of bare white arms, round and soft and rich in their tender curves; a Judith whose filmy gown floated about her like a sun-shot mist; a Judith whose skin above the low-cut corsage was like a baby's, whose tender mouth was a red flower, whose hair was a shimmering mass of bronze-brown, whose eyes were Aphrodite's own, glorious, dawn-gray; a Judith of rare maidenly charm; a glorious, palpitant, triumphant Judith.

IT MIGHT have been just because it was fitting that they should greet their hostess so; it might have been because the men and women who saw this new Judith were caught suddenly in a compelling current of admiration, that above the hum of voices rose from everywhere a quick clapping of hands as she came thru the room. The color of her cheeks deepened, her eyes flashed a joyous acknowledgment of the greeting, and bright and cool and self-possessed she came on to Marcia.

"Marcia, dear," she said, taking Marcia's two hands—and Bud Lee found that even Judith's voice had taken on a new note, deeper, richer, gladder, fraught with the quality of low music—"forgive me for being late. I wanted to be here every little second to see you enjoy yourself." She put her lips closer to Marcia's ear, whispering: "You are the prettiest thing tonight I ever saw!"

Marcia shook her head, her eyes filled with frank wonder.

"Don't fib, Judith, dear," she answered. And, for Marcia, she was very grave. "I know you have a glass in your room. You wonderful, wonderful Judith!"

Their voices were indistinct to Bud Lee. Now at the moment when she was so rich in the splendor of her own sweet femininity he filled his heart with her. Judith had come in the only way Judith could come, surrendering herself utterly to the hour.

She turned to him, no surprise at his own costume in her happy eyes, and gave him her cool hand. A swift tremor ran thru him at the contact, a tremor which was like that of the night in the cabin, which he could not conceal, which Judith must notice. She said something, but he let the words go, holding only the vibrant music of the voice.

She had stirred him, and now he did not seek a theory for a buckler; the sight of her, the brushing of her fingers against his, made riotous tumult in his blood.

The first strains of a waltz joined the lure of Judith's warm loveliness whispering, counseling, commanding: "Take her." Marcia gasped and stepped back, startled by the look she saw in the eyes of this man who, having spoken no word since Judith came, put out his arms and took her into them. Judith flashed at him a look of quick wonder. His face was almost stern; no hint of a smile had

come into his eyes. He merely caught her to him as tho she were his, and swung her out into the whirl of dancers.

"You are rather—abrupt, aren't you?" said Judith coolly.

"Am I?" he asked gravely. "I don't know. It seems to me that I have been loitering, just loitering while—"

He didn't attempt to finish. He held Judith in his arms while for him the room was emptied of its gay throng, the music no longer pulsed; its beat was in the rhythm of their bodies, swaying as one.

The dance over, she was lost to him in the crowd of men who came eagerly to her. His eyes followed her wherever she went. A slow anger kindled in his heart that she should let other men talk with her, that she should suffer another man to take her in his arms.

A number of country dances followed. He stood by the door waiting a little before he went again to Judith. He saw Marcia across the room beckoning to him with her fan. There was nothing to do but go to her. He frowned but went, still watching for Judith. Marcia wanted him to meet some of her friends. He shook hands with Hampton, was introduced to Rogers. Marcia explained that Mr. Lee was the gentleman who achieved perfect wonders in the education of his horses. She turned to introduce Farris, the artist. But Farris broke into Marcia's words with a sudden exclamation.

"Dave Lee!" he cried, as if he could not believe his eyes. "You! Here!"

"Hello, Dick," Lee answered quietly. "Yes, I'm here. I didn't know that you were the artist fellow Hampton had brought up with him."

FARRIS' hand went out swiftly to be gripped in Lee's. Marcia, mystified, looked from one to the other.

"You two know each other? Why, isn't that—"

She didn't know just what it was, so stopped, looking frankly as tho she'd like to have one of them finish her sentence for her.

"But," muttered Farris, "I thought that you—"

"Never mind, Dick," said Lee quickly. And to Marcia's mystified expression: "You'll pardon us a moment, Miss Langworthy? I want to talk a little with Mr. Farris."

His hand on the artist's elbow, Bud Lee forced him gently away. The two disappeared into the little room off the library where Jose was placing a great bowl of punch on the table.

"Que hay, Bud," grinned Jose. "Your ol' nose smell the booze darn queek, no?"

He set down his bowl and went out. Farris stared wonderingly at Lee.

"Bud, is it?" he grunted. "Breaker of horses, hired man at a dollar a day—?"

"Ninety dollars a month, Dick," Lee corrected him, with a short laugh. "Give a fellow his true worth, old-timer."

Farris frowned.

"What devil's game is this?" he demanded sharply. "Isn't it enough that you should drop out of the world with never a word, but that you must show up now breaking horses and letting such chaps as Mrs. Simpson's Black Spanish chum with you? Not a cursed word in five years, and I've lain awake nights wondering. When you went to smash—"

"When a Lee goes to smash," said Bud briefly, "he goes to smash. That's all there is to it."

"But there was no sense, no use, in your dropping out of sight that way—"

"There was," said Lee curtly, "or I shouldn't have done it. It wasn't just that I went broke; that was a result of my own incompetence in a bit of speculation and didn't worry me a great deal. But other things did. There were a couple of the fellows that I thought were friends of mine. I found out that they had knifed me; had helped pluck me to feather their own nests. It hurt, Dick. Losing the big ranch in the South was a jolt, I'll admit; seeing those fellows take it over and split it two ways between them, sort of knocked the props out from under me. I believed in them, you see. After that I just wanted to get away and sort of think things over."

"You went to Europe?"

"I did not. I don't know how that report got out, but if people chose to think I had gone to take a hand in the fighting over there, I saw no need to contradict a harmless rumor. I took a horse and beat it up into the coast mountains. I tell you, Dick, I wanted to think! And I found out before I was thru thinking that I was sick of the old life, that I was sick of people, the sort of people you and I knew, that there was nothing in the world but horses that I cared the snap of my finger about, that the only life worth living—for me—was a life in the open. I drifted up this way. I've been living my own life in my own way for five years. I am happier at it than I used to be. That's all of the flat little story, Dick."

"You might have let me know, it seems to me," said Farris a bit stiffly.

"So I might," answered Lee thoughtfully. "I was going to in the first place. But you'll remember that you were off somewhere traveling when the bubble broke. When Dick Farris travels," and his grave smile came back to him, "let no mad letter t' ink it can track him down. Then I hit my stride in this sort of life; I grew away from the old news; the years passed as years do after a man is twenty-five; and I just didn't write. But I didn't forget, Dickie, old man," he said warmly, and his hand rested on Farris' shoulder. "You can put it in that old black pipe of yours and smoke it, that I didn't forget. Some day I planned to hit town again, heeled you know, and remind you of auld lang syne."

"You are a fool, David Burrill Lee," said Farris with conviction. "Look here: you can take a new start, pull yourself together, come back—where you belong."

But Lee shook his head.

"That's like the old Dick Farris I used to know," he said gently. "But this is where I belong, Dick. I don't want to start over, I don't want to come back to the sort of thing we knew. The only thing in the world I do want is right here. And I don't see that it would do any good for you to go stirring up any memories about the old Lee that was shot 'somewhere in France'."

WHEN Farris had to go and claim a dance, Lee watched him with eyes soft with affection. Then he too, left the room and went back to the outer door, to his old spot, looking for Judith.

"The only thing I want is right here," he repeated softly.

He watched Farris join Marcia and Judith. He noted the eager excitement in Marcia's eyes, saw her turn impulsively to Farris. The artist shook his head and left them, ostensibly going in search of his partner. Marcia was speaking excitedly to Judith. Lee frowned.

Once more that night he held Judith in his arms. He meant to make amends for his brusque way with her before. But again the magic of her presence was like a glorious mist, shutting them in together, shutting all of the world out. They spoke little and the music had its will with them. Judith did not know that she sighed as the dance ended. She seemed moving in a dream as Lee led her thru the door. They were out in the courtyard, the stars shining softly down on them. In the subdued light here he stood still, looking down into her pleasure-flushed face. Again the insistent tremor shot down his blood.

HERE in this tender light she looked to him the masterpiece of God striving for the perfect in a woman's form. Her gown, stirred by the warm breeze, seemed a part of her, elusive, alive, feminine. The milk-white of bare throat and shoulder and rounded arm, the rise and fall of her breast, the soft lure of her eyes, the tender smile upon her lips, drew him slowly closer, closer to her. She lifted her face a little, raising her eyes until they shone straight into his.

"Judith," he said very quietly, very gravely, making her wonder at the tone and the words to follow: "You have had your way with me tonight. Do you understand all that means? And now—I am going to have my way with you!"

He caught her in his arms, crushed her to him, kissed her. Then he let her go and stood, stern-faced, watching her.

For a moment he thought that the hand at her side was rising to strike him full in the face. But he did not move.

Had such been Judith's intention, suddenly it changed.

"So," she cried softly, "this is the sort of fine gentleman into which a dress-suit has made Bud Lee, horse foreman! For so great an honor surely any woman would thank him!"

She made him a slow, graceful courtesy, and laughed at him. And so she left him, her laughter floating back, taunting him.

Lee watched her until she had gone from his sight. Then he turned and went down the knoll, into the night.

(To be continued next week)

He Takes His Time

Some farmers like to have their threshing done in a hurry by a large custom thresher crew. Others prefer to do it themselves with a small machine that requires little extra help. This grower is in the latter class.

Enters Federal Service

MAJOR R. Y. STUART, until recently secretary of the Pennsylvania Department of Forests and Waters, has been appointed by Secretary Jardine to head the public relations branch of the Forest Service of the United States Department of Agriculture.

Major Stuart is a graduate of Dickinson College, and of the Yale Forestry School. He spent several years in Federal service in the northern Rocky Mountain region and in Washington, D. C., before the war. He saw service with the 10th Engineers in France and in 1920 returned to Pennsylvania.—W.

Did you ever hear this one?—

Couldn't Shake Each Other

He was a stranger in the neighborhood, and had been brought to a dance at the local deaf-and-dumb hospital by an old friend, the doctor.

"How on earth can I ask a deaf-and-dumb girl to dance?" he asked, a trifle anxiously.

"Just smile and bow to her," replied the doctor.

So the young man picked out a pretty girl and bowed and smiled, and she bowed and smiled, and away they danced.

They danced not only one dance that evening, but three, and he was on the point of asking her for another when a strange man approached his partner and said soulfully:

"I say, darling, when are we going to have another dance? It's almost an hour since I had one with you."

"I know, dear," answered the girl, "but I don't know how to get away from this deaf-and-dumb fellow!"—Tid-Bits.

Tit for Tat

A woman in the suburbs was chatting over the back fence with her next-door neighbor: "We're going to be living in a better neighborhood soon," she said. "So are we," volunteered Mrs. Nextdoor confidently. "What? Are you moving, too?" "No, we're staying here."—Christian Register.

The wealthy old lady was very ill and sent for her lawyer to make her will. "I wish to explain to you," she said weakly, "about disposing of my property."

The lawer was sympathetic. "There, there, don't worry about it," he said soothingly, "just leave it to me."

"Oh, well," said the old lady, resignedly, "I suppose I might as well. You'll get it anyway."—Exchange.

Advertising Gets Results

Early southern potatoes being barrelled for northern markets.

Trucking in Potatoes Makes Inroads on Carlot Markets

SECTIONS of Pennsylvania that formerly shipped potatoes to Philadelphia by rail are now using the motor truck more extensively. Whether it is a wise thing to do depends largely upon the point of view.

This season most of these potatoes are being handled on a commission basis by stores on Dock Street and Callowhill Street. In some cases dealers in the producing area buy potatoes and haul them to Philadelphia to be handled by the commission merchants. The men handling these potatoes in Philadelphia are jobbers selling in relatively small lots to hucksters, independent retail stores and small restaurants. They formerly bought their potatoes at the carlot market, and since they can now supply their customers with this hauled-in stock they do not buy as much on the carlot market.

Loses and Gains in Change

This means that one profitable outlet for shipped potatoes has been restricted. On the other hand the grower who is hauling potatoes to the jobbing market is probably receiving more than if they were handled at the carlot market.

The farmer who ships his potatoes to the jobbing market may profit, but in the long run there are numerous conditions which may arise to make this practice appear less favorable. There are some who believe that when potatoes are handled on the carlot market the price is easier to maintain for they are in the hands of comparatively few dealers and because these men generally have a financial interest in the potatoes they are selling.

If the practice of hauling the Pennsylvania crop to market by motor truck continues, it is most probable that there will be a larger number of dealers handling them and that the majority of the business will be done on a commission basis. This means that the dealers will have no actual cash tied up in the potatoes and that competition will be greater and more scattered. Instead of the business being confined to one market shed it will be spread over several jobbing markets in different sections of the city. With this condition prices would likely be more erratic and price cutting more general.

On the other hand there are some who see in this additional competition a chance for greater returns to the farmer. In any case it will take a number of years before this condition can become established and there are a number of things which might happen in that time to change the situation.—W. R. W.

Doctor Lipman's Weekly Talk on Soil Fertility Problems

Bacterial Action and Soil Nitrification

At the suggestion of Mr. Edmund Burke, chemist, of the Agricultural Experiment Station, Bozeman, Montana, I am writing you for information on bacterial action and resulting nitrification of cultivated soil.

I am a one-crop farmer of wheat. We have about 1000 acres in wheat each year and summer fallow 1000 acres each year. We plow some six inches deep. Our soil is clay loam of alluvial deposit from glaciation of the Keewatin Ice Sheet, a portion of the terminal moraine being on our place. We are in a semi-arid region. Wheat yields an average of 35 bushels per acre.

I want to know all I can about bacterial action; as for instance, what effect has turning plowed ground up to the sun and surface atmosphere on bacteria whose natural habitat is some three inches below the surface and protected from these two elements. I believe this subject enters into good farming and I want to be a good farmer. Any bulletins or any information will be much appreciated.

I might mention that we harvest entirely with combine harvesters which return all the straw and chaff to the ground to be plowed under. Our rainfall averages 15 to 17 inches, largely as a rule in May and June.

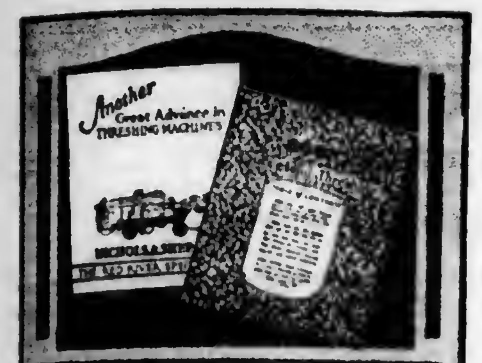
We try to seed our land commencing August 15th. The ground usually freezes up about November 1st.—R. P. R., Fife, Montana.

It is true that by exposing bacteria to the action of direct sunlight many of the bacterial cells may be destroyed. However, the destruction of bacteria by direct sunlight is relatively unimportant in so far as the soil is concerned. Experiments in which soil from an old alfalfa field was broadcasted over a piece of land on which alfalfa was to be established showed that the effectiveness of the soil-inoculating material is not seriously diminished even tho the inoculating soil is allowed to remain on the surface for several days before it is harrowed in.

Other experiments have likewise shown that the mere turning up of soil and exposing it to direct sunshine does not involve a diminution in the activities of bacteria and of other microorganisms in the surface soil.

What is more serious, however, is the drying out of the soil. When moist soil is allowed to dry out, the number of bacteria in it is rapidly decreased. When soil has been dried out, kept in a dry condition for some time and then moistened, there is a very marked increase in the number

(Continued on next page)



Another Great Advance in Threshing Machines

FIND OUT
What Other FARMERS DO
The Book of Successful Threshing!
Before this book was written, thousands of farmers were asked concerning their methods of threshing. Every agricultural college in the grain growing regions, and U. S. Dept. of Agriculture were asked to contribute the latest facts and figures on threshing.
NICHOLS & SHEPARD
All this material has been boiled down in "The Book of Successful Threshing." With it goes a second book, "Another Great Advance in Threshing Machines," that describes fully the Red River Special Line. These books will aid any farmer in the problem of getting his grain threshed quickly and economically. These books are free.

FARQUHAR Roller-Harrow
Every farmer wants to cut down operating expenses and improve crops. The Farquhar Combined Harrow-Roller consists of a strong Spring Tooth Harrow to which is attached a steel roller. The Harrow levels the ground and brings the clods to the surface—the roller crushes the clods while moist and packs the furrow slice to the subsoil, thus re-establishing the capillary attraction. This is the best possible seed bed in which to plant the seed. Built in sections for horses or tractor. Write for complete description and rock bottom price for March delivery—Catalog 825.

of bacteria in it. In fact, it has been shown by investigations in Russia that in dry farming sections the more or less thoro drying out of the soil is equivalent to the effect of partial sterilization. The number of bacteria is decreased and then when moisture again becomes available it is increased beyond the normal and plant food becomes available in large amounts.

From the practical point of view, dry farming methods should provide for the conservation of moisture for the sake of the bacteria as well as for the sake of the crop. There is a more or less direct relation between the quantity of nitrates formed in the soil and the proportion of moisture. By increasing the amount of moisture in the soil up to a certain point we also increase the production and accumulation of nitrates.

Straw Has Its Limitations

As to the use of straw as you describe it in your letter, there are limits beyond which it would not be safe to add straw to the soil. It has been definitely established that when excessive quantities of straw are mixed with the soil the cellulose or certain other ingredients of the straw are used as food for bacteria which eat up the nitrates formed by the nitrifying bacteria.

For instance, in a very simple experiment in which nitrate of soda is added to the soil together with straw at the rate of two or three tons per acre, it is easy to show that the nitrates disappear altho the total quantity of nitrogen in the soil is not diminished. This means that, thanks to the food furnished by the straw, certain soil bacteria can multiply very fast and use up the nitrate just as crops use it up for cell growth. This explains why wheat or other cereals sown on land that has received applications of straw show every indication of lack of nitrogen.—J. G. Lipman.

Pine Needles as Fertilizer

What is the fertilizer value of well-decayed pine needles? Are they in any way injurious if used for growing flowers in frames or field culture?—R. M. L., Cumberland County, N. J.

The plant food content of pine needles is relatively low. It would not be safe to figure on more than about .50 per cent of nitrogen, .05 to .10 per cent of phosphoric acid and .10 to .25 per cent of potash. This would make a total of the three ingredients of 10 pounds of nitrogen, 1 to 2 pounds of phosphoric acid and 2 to 5 pounds of potash, respectively.

If the pine needles are well decayed, they could be used with considerable safety even on light soils. However, they could be used to best advantage if they were mixed with fresh or rotted manure and a small quantity of lime. A ton of decayed pine needles to two tons of well-rotted manure should be found satisfactory.

The lime might best be applied separately on the plowed land and harrowed into the surface soil. For each ton of pine needles an equivalent of about 50 pounds of hydrated lime or 70 pounds of ground limestone should be helpful.—J. G. Lipman.

TURKEYS ARE raised the same way as cattle in the Big Horn Basin, high in the Rocky Mountains of northern Wyoming. The birds range half-wild in the foothills during the summer. At harvest time they pick up grain left in the fields and are fattened at the ranches. Then the turkey drives begin. The birds from the various ranches are assembled and driven to the market towns in great flocks. Sometimes 5000 of the strutting bronze birds march together to their doom.

Greater Faith in
SEMESAN BEL
The Recognized Disinfectant for Diseases of Potatoes
would have earned this grower $2000

IGNORANCE is not always bliss, according to Mr. Joseph Brinkman, potato grower of Idaho Falls, Idaho.

"After I had treated seed with Semesan Bel for twelve acres," he says, "someone started the rumor that the treatment rotted the seed. I immediately stopped treating.

"After my crop came up, I found a perfect stand on the Semesan Bel treated field, while my untreated field had only about 60% stand. Mr. C. H. Linsenmann of Victor, Idaho, a certified seed grower, inspected my field and said I had a 99% stand. My treated field had darker green plants with much healthier color and were more vigorous.

"When I harvested my potatoes, I found the Semesan Bel treated seed yielded twenty-five sacks (or fifty bushels) more to the acre than the untreated ones. There was no disease on my treated field. I just as well could have had a thousand sacks more if I had not stopped the treatment.

"At the present market price I lose about $2000 by not treating all my crop with Semesan Bel."

What are Doubts and Failure to Investigate Costing YOU?

39% improvement in yield is a lot of difference. Wouldn't you like to have the money in your jeans right now that a 39% increase in your last crop would have brought? What about this year? Doubting and neglecting not only get you nowhere; they actually cost you money. Get this coupon off on the earliest possible mail. It means money!

Nitrate of Soda for the Orchard
"The use of Nitrate of Soda or other quickly available forms of Nitrogen, in even rather liberal quantities, has given more widespread and more general beneficial results than any other one fertilizer treatment in the growing of deciduous fruits."

This statement is quoted from the U. S. Department of Agriculture Year Book.

Tests by State Experiment Stations in all the apple growing districts have proven that it is useless to expect profitable production from the sod orchard without liberal use of quick acting nitrogen. They all recommend Nitrate of Soda.

Peaches, Pears and other deciduous fruits respond to the use of Nitrate of Soda as readily as apples.

CHILEAN NITRATE OF SODA — for Profitable Crops — THE STANDARD NITROGEN

RADIO DEPARTMENT

The Man Behind the Voice

TO THOSE who are familiar to the introduction and announcements of "The Man in the Silver Mask," the Silvertown Cord Orchestra, or the Happiness Candy Boys, (the "candy tenor and the bon-bon baritone" which he nicknamed Billy Jones and Ernest Hare) the voice of Phillips Carlin is a source of real enjoyment. Among many of his friends he is known as the "Orator of WEAF."

Carlin showed his gift for oratory early in life by carrying off the stellar honors in elocution at Public School 65 and later in the debating contests at DeWitt Clinton High School, New York City.

At New York University, he continued oratory, winning high honors in that subject and also specializing in languages. He was graduated with a degree of A. B. and decided to try the silk business. This career was terminated when he joined the Navy at the outbreak of the World War. During the war he held the rank of lieutenant, junior grade.

After the war he tried salesmanship for a time, but when an opportunity presented itself to joining WEAF, he accepted, for he knew it would give him an opportunity to use his training in oratory. With his many qualifications Carlin has become an announcer whose neat introductory speeches are eagerly listened for by his audience.

When he was assigned the announcing of the popular Silvertown Cord Orchestra, which is heard thru WEAF and a chain of stations every Thursday evening from 10:00 to 11:00 P. M., he conceived the idea of putting an added touch to their program by playing a set of castanets during the rendition of a tango number by the orchestra. It proved so popular with his audience that they expressed their delight by letters to the genial announcer and in many cases he has struck up a correspondence acquaintance.

With always a smile, Phillips Carlin has become one of the most popular radio announcers in the United States.

Phillips Carlin, popular announcer of WEAF.

Famous Potato Farms Are Sold and Growers Form Kandle Club

THE potato farms of the late J. Harry Kandle, Elmer, N. J., have been sold to Edward B. Prince, a prominent Long Island potato grower for a sum said to be close to $30,000.

These farms are the original farms owned by Mr. Kandle, where he has grown all the potatoes that he has marketed in recent years. This sale is quite remarkable in view of the fact that when offered at public sale the farms were not bid above $13,000.

It is understood that the new owner is planning to grow seed potatoes and the present tenants have been asked to remain and operate the farms this coming season. Mr. Prince has two grown sons and it is reported that they are coming down to Elmer in another year to operate the farms.

Last year Mr. Kandle sold about $40,000 worth of seed potatoes from these two farms, besides retaining close to $5000 worth for planting this coming season.

On February 12 the Kandle Seed Potato Club was formed in Salem, N. J., to carry on the work of J. Harry Kandle in the development and growing of high class seed potatoes. About 400 acres are represented in the membership who will grow seed of the Kandle strain that has made such a remarkable reputation in the central New Jersey, Long Island and southern markets.

The president of the new potato club is J. C. Crissey, Salem, former county agent of Salem County and now one of the heaviest potato growers in this part of New Jersey. Other officers of the seed club are: H. Norman Fogg, vice president, Hancocks Bridge; Alfred Sloan, secretary and treasurer, Shirley; executive committee; Edmund Shimp, Hancocks Bridge, and Leon Robbins, Yorktown.—A. K.

New Batteries for Old

Universal Batteries

Trade-in allowance on all makes

Enjoy the service your light-plant gave when new. Give it a chance to do its job right with new, powerful Universal Batteries.

Save Money

We'll take your old batteries in trade on a set of Universal Nu-Seals—the *original* sealed-glass cell now recognized as the standard replacement for any make of plant.

Need Less Care

Universals need fewer fillings, require less attention, are built to give an abundance of pure, steady power and light current.

Replacements for ANY make of plant

Universal Batteries are suited to *all* makes of plants—now factory equipment on many.

Battery Guide FREE

Big free book that tells you how to care for all batteries. We make farm light, radio and auto batteries for every purpose—this book gives you our expert advice. Send for it. And remember there's a good trade-in-allowance on your worn-out batteries. Ask for it—today!

Box Replaces Barrel

THE standard farm-produce box has recently replaced the barrel as an apple-shipping container in New England. This box is slightly larger than the western box and is about equivalent to one-third of a barrel, and holds about forty pounds of fruit.

This box has the advantage of being distinctive of New England. It displays a large surface of fruit attractively with the cheek up. The box itself is salable at second-hand to vegetable growers for ten cents, or it is serviceable as a lug-box in the orchard.

Ton Litters of Pigs

A NEW era in pork production is at hand. Ton weights attained in 180 days show the great importance of keeping hogs free from worms and parasites that retard growth and wipe out profits.

A pig that has his intestines full of parasites cannot make profitable gains in weight. The Ton Litter Clubs find it a case of

Hogs free from parasites with rapid development versus hogs with parasites and retarded growth

Get rid of the worms first of all and your hog is ready to do his best for you. Then feed him well and you will be astonished how fast and how cheaply he will make weight.

Areca Nut and Santonin given in capsules will destroy intestinal worms, but they are expensive medicines, difficult to administer and so strong that they temporarily check growth and development. Not only so, but reinfestation makes repetition of the drastic treatment necessary at short intervals.

The cheaper, better and easier way is to use Dr. Hess Improved Stock Tonic to drive out and keep out the worms. In its improved form it gives hogs a correctly balanced supply of minerals and tonics that make for perfect assimilation and elimination.

Mr. J. W. Fitzgerald, of Mondovi, Buffalo County, Wisconsin, owned a litter of ten pigs. He began to develop them while they were nursing the mother. To the mother's ration was added a handful of Dr. Hess Stock Tonic daily. At weaning time he added to the pigs' ration of skimmed milk and ground oats a handful of the Dr. Hess Stock Tonic three times a day.

When the pigs were six months and twelve days old, they weighed 2968 pounds. If they averaged 2½ pounds in weight when littered, they had gained over 100 times their original weight. They were the First Prize Ton Litter at the Buffalo County (Wisconsin) Fair.

Dr. Hess Improved Stock Tonic expels worms without injury or checking growth of hogs. The mineral content—calcium carbonate, calcium phosphate, potassium iodide—is essential to the development of bone and tissue. No partially paralyzed hind quarters when Dr. Hess Improved Stock Tonic is fed regularly. The iodine content will also absolutely prevent hairless pigs.

An offer to all hog owners

Go to the dealer and get enough of Dr. Hess Improved Stock Tonic to last your hogs 30 days. Get 25 pounds of Tonic for every 20 hogs. Feed as directed. If it does not drive out the worms and prevent reinfestation—and if it does not put and keep your hogs in a healthy, thriving condition, return the empty container to your dealer and he will refund your money or cancel the charge. We reimburse the dealer.

Put it up—forget about it!

CAMBRIA FENCE

Standard Hinge Joint Field Fence

HINGE JOINT

Put up Cambria Fence, then forget about it! Its strength, its flexibility, and its resistance to weather make it preferable on the farm for permanent protection and neat appearance.

Cambria Fence is made of selected steel wire, heavily coated with zinc. A permanent bond between the steel and zinc is secured by passing the wires through especially long zinc baths, thereby keeping them in the zinc a longer time than in ordinary practice.

Hinge joints assure uniformity in Cambria Fence whether installed on hill, ravine or level ground. Objectionable long wires are unknown in this design of fence.

Cambria Fence retains its newness over many years and helps to keep your farm in good order.

Order Cambria Fence from your Dealer, *put it up, then forget about it!*

Del-Mar-Va Takes Inventory

Farmers, Business and Professional Men Study Mutual Problems and Lay Future Plans

THE Del-Mar-Va Takes Inventory Congress, held February 16 and 17 in Salisbury, Maryland, was a remarkable demonstration of the community spirit and vision of the people of the Del-Mar-Va Eastern Shore Peninsula. The meeting was a fact-finding, policy-making conference, where several hundred of the leading farmers, business and professional men of the Peninsula studied their mutual problems, reviewed present economic conditions and laid plans for the future development of the famed Eastern Shore region. The two-day session was the culmination of many months of painstaking research and study on the part of committees made up of the territory's leading citizens.

From the viewpoint of the outsider, the noteworthy feature of the Inventory Congress was the interest of the town business men in the welfare of agriculture. It augurs well for the farmers of the Eastern Shore that the business and professional men understand so well the close relationship between agriculture and general business prosperity.

Committees Report Surveys

The first half day session of the congress was given over to reports from committees which had been detailed to make careful surveys of agricultural and business conditions in every part of the Peninsula. Then the discussion turned to the commercial interests closely allied with agriculture,—canning, fertilizer manufacturing, the stores that sell to farmers and the resorts that buy from them.

Governor Robinson, of Delaware, addressed the Congress on Wednesday evening, paying high tribute to the vision of the men responsible for the Congress. A. E. Fitkin, public utility magnate, told how his company is backing its belief in the Eastern Shore with hard cash. Millions of dollars have been spent in building electric power stations, transmission lines and gas plants. Millions more are to be spent in the near future on extensions and improvements.

Suppose Factories Followed Suit

W. S. Gordy, Jr., State Comptroller of Maryland, talked on "Banking and the Farmer." According to Mr. Gordy, bankers on the Eastern Shore, as in so many other sections, are appalled by the tremendous waste suffered by farmers because they do not take care of their machinery. Referring to haying tools and other expensive machinery left in the field or barnyard the year around, he said: "Suppose the factory owner took the roof off his factory and left his machinery exposed to the weather the year around!"

"If your customers don't want what you grow, then GROW WHAT THEY WANT." That was the message of J. J. Alexander, of the Philadelphia Board of Trade, who told how he had profited by following his own advice on his two farms,—one in the cattle country of the Northwest and the other in the thickly populated section near Cleveland, Ohio.

The price of beef dropped so low Mr. Alexander couldn't make money on his northwestern farm so he started raising hogs and turning them

(Continued on next page)

Markets and Selling Methods

(Continued from page 3)

good which are struggling to establish one. An illustration of this is the Long Island potato which has regularly brought a substantial premium over all other stock. Pennsylvania potatoes just as good in every way have sold at 10c to 50c below them. The same is true with Maine's. They not only have sold for higher prices but they have sold more readily at times when the movement was slow, entirely on their reputation.

There is one brand of Pennsylvania potatoes that has brought as much as $1.00 per 150-pound sack above the average run straight thru the season. They have not brought as much as Long Island's, for they still have their reputation to build, but they are making a fine start. The dealer who sells these potatoes will book orders days in advance of the arrival of a car. Not all growers can put out a pack like this because they do not have a high quality stock to start with, but it is the grading that helps the sale.

Can Build Reputation Quickly

The Pennsylvania grower is in a position to build a reputation rapidly because of his local markets. In many cases he supplies his own trade; the buyers know who grew the stock. In other states most of the potatoes move to outside markets and are known as Maine potatoes, or York State's, and their reputation rises or falls with the average of all shipments.

Lowering costs of marketing is a subject which has brought forth a great assortment of ideas but only a few of them appear to be practical in application. Cutting out the middleman is a popular thought, but no one has been able to devise a better marketing method than we now possess. Cooperative marketing is one method by which marketing costs may be reduced, but in some cases it has proven more expensive than the old method.

In Pennsylvania cooperative organizations have grown rapidly and many have prospered but, in general, growers will not cooperate unless they have to. In the far West, where cooperatives have been most successful, the growers were forced into them because of their distance from the markets.

Cooperation May Be Solution

The cooperative marketing of Pennsylvania potatoes is a possible solution of the problem, providing that the organization has a large output and is managed properly. Any program for lowering marketing costs must start with a movement for standardization of the product. The western grower shipping potatoes to eastern markets has found that only the best can be shipped profitably, for freight on low priced poor stock costs as much as for No. 1's.

The Pennsylvania grower with his lower transportation costs is slow to see this important point. Dumping poor potatoes on a glutted market is poor business, for it lowers the price of all stock on that market. In the long run it would pay to dispose of them in other ways.

Building up a local trade is one of the best ways Pennsylvania farmers can cut their marketing costs. There is ample opportunity for them to do this, for in fifteen cities in the state where records have been kept 3,000,000 bushels of potatoes have been received in a year from competitive sections.

Six Reasons for Unadilla Leadership

It doesn't *just happen* that more Unadilla silos are sold each year than any others. Here are six of the reasons:

A Unadilla cures and *keeps* silage better.

The air-tight *fitted* staves defy frost and save all the valuable silage juices.

It is strong, durable, well-built of *selected* lumber.

The famous Unadilla ladder makes for the greatest silo *safety* and *easy* use.

Every hoop can be taken up 12 inches *at the door front.*

Continuous opening at feed level. You just *push* out the silage.

Order early while the factory is not rushed and effect a real saving of money. Liberal discount for cash.

Write for our silo catalog, containing information on our strongly built storage tanks, water tubs and vats.

New Chick Mash contains all necessary minerals and cod liver oil meal

ALL IN ONE!

Dead chicks are dead loss. Any chicks, if not fed correct food will eat up profits and give nothing in return. Minerals, Buttermilk and Cod Liver Oil Meal are absolutely necessary to the proper growth and development of strong, sturdy chicks. No better feed can be had for baby chicks than one composed of pure grains—selected animal proteins—and the vital and necessary mineral elements. Now—these are combined in QUISENBERRY'S BUTTERMILK STARTING FOOD. No mixing and fussing by adding minerals. This food is properly prepared—correctly proportioned and very easy for the tender baby chick to digest and assimilate.

Start your chicks on the road to health. Their entire future as broilers or layers all depends on the start they get now. Realize your just profits from them. Feed them Quisenberry's Buttermilk Starting Food from the start—it is easily digested and contains every element that is recognized the world over to be necessary for proper, even and constant chick development.

FREE Radio courses will be given to every person using Quisenberry's Buttermilk Starting Food. Illustrated printed lectures will be sent Free to all those who request them.

Better Prices for Your Butter

"Dandelion Butter Color" gives that Golden June Shade which Brings Top Prices

Before churning add one-half teaspoonful to each gallon of cream and out of your churn comes butter of Golden June shade. "Dandelion Butter Color" is purely vegetable, harmless, and meets all State and National food laws. Used for years by all large creameries. Doesn't color buttermilk. Absolutely tasteless. Large bottles cost only 35 cents at drug or grocery stores. Write for FREE SAMPLE BOTTLE.

Wells & Richardson Co. Inc. Burlington, Vermont.

into high quality sausage, which brings a good price in nearby towns.

There was little profit in wholesale fruit and vegetable growing on the Ohio farm so he went into Cleveland and found city people who would like to receive baskets of fresh farm-products at frequent intervals. Now he sends thousands of baskets of fruits and vegetables direct to the consumer, besides selling hundreds of dollars worth of field-grown flowers in season.

Mr. Alexander touched upon the intensive methods of the California cooperatives. He said that they have solicitors in Philadelphia and other large cities who are busy all the time calling on hotels, restaurants and clubs, introducing their particular brand of fruit and keeping the buyers interested in it.

The Public Ate More Iron

He told how the raisin growers, threatened with ruin thru over-production, solved their problem by inducing the public to buy the surplus. Intensive advertising and selling raised the sales of raisins in four years from 140,000,000 pounds annually to 500,000,000 pounds.

At Thursday's session a survey of the present status of agriculture on the Peninsula by Dr. F. B. Bomberger, of the University of Maryland, emphasized the farmers' opportunity to extend and improve the fruit and vegetable growing industries of the Eastern Shore. This can be done by the selection of the right varieties and the improvement of production and marketing methods.

Due to the many natural advantages enjoyed by the Peninsula, and its nearness to the country's great markets, the dairy, poultry and livestock industries of the territory seem destined to expand rapidly. Half of New York state is farther from New York City than the heart of the Del-Mar-Va Peninsula.

E. Dale Adkins presented a comprehensive review of transportation facilities on the Eastern Shore. No other similar region has such a network of hard surfaced roads, and additions to the system are constantly being made. Railroad and boat facilities can and will be improved thru the promised cooperation of the railroads with the farmers and business men.

More Size—More Strength

Chris L. Christensen, Director of the Federal Bureau of Agricultural Cooperation, delivered the final address of the Inventory Congress. His theme was cooperative marketing,—the need for cooperatives large enough and strong enough to put out a uniform product graded to a certain standard, held to that standard by strict supervision, and then properly advertised and sold.

The Del-Mar-Va Takes Inventory Congress took inventory of the Peninsula, decided what could be done further to improve the welfare of its citizens, and laid out definite plans for action leading to such improvement. These plans were embodied in resolutions adopted by the Congress. Among those of particular interest to farmers were resolutions: to endorse and encourage the testing of cattle for tuberculosis; favoring a profit-sharing lease for tenant farmers, so drawn as to encourage the keeping of livestock; favoring the reduction or removal of license fees for milk trucks; endorsing a shortened or closed season on game birds which prey upon the Japanese beetle.
—C. L. W.

Infant Lord Chesterfield

Little Mary had been taught politeness. One day the minister called, and Mary, awaiting a pause in the conversation, remarked:

"I hear we soon are to have the pleasure of losing you."—Urban Democrat

You'll find Kelly quality in both these tires

THE regular Kelly-Springfield tire is built now, as it always has been, for the man who is satisfied with nothing short of the best the market affords.

For those who do not need the extra durability of the regular Kelly product, but who do want to get real value in a lower priced tire, Kelly builds the Buckeye, a sturdy, full-ply, full-size tire that compares favorably with many other tires offered at higher prices.

Whether you want the very best, or whether you simply want good honest tires at a modest price, you can purchase any tire marked "Made by Kelly-Springfield" with the fullest confidence that your money can't buy anything better.

The regular Kelly tire costs no more than any of the well-known makes. The Buckeye costs less. You can't go wrong on either.

"Kelly dealers everywhere—there must be one in your town."

KELLY SPRINGFIELD PNEUMATIC TIRES

New Coulters for Old "Acmes"

Thousands of old ACMES are being renovated this year at small cost with new Coulters. They are then as good as the day they were bought. We are prepared to furnish Coulters for any Acme Harrow sold since the No. 15 which was manufactured about 1890. Acme Coulters are made of very tough, high-carbon steel. Every one is backed by an unqualified guarantee—almost never exercised because they give such long and successful service.

For Your Tractor

The ACME line is built for use with large Tractors and for small Tractors of the garden type. Also combination harrows for use with either horses or tractor. You can buy a horsedrawn ACME this year and add to it later the equipment for use with your tractor. You need no other tool to make a perfect seed bed quickly and economically.

Your dealer can furnish you with any size ACME Harrow or Coulters. Ask him. If he is unable to supply you send your order direct to us.

34 per cent linseed meal	50.20

Millfeed in continued light supply with quiet demand.

For Baltimore, Cumberland and Williamsport rate points, subtract 30c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury, Bridgeton points, add $1.00 per ton; for Toms River, Cape May rate points, $1.40 per ton.

The Trend of the Markets

THE figures in the following table represent the approximate unweighted average prices of the commodities and grades specified. The prices are based upon quotations from the market page of Pennsylvania Farmer.

	This week	Last week	Month ago	Year ago
Butter, 92 score creamery extras (N. Y.)....	$ .51	$ .53	$ .49½	$ .46
Eggs, fresh gathered extra firsts (N. Y.)....	.26	.29½	.38½	.30
Potatoes, 120-lb sack (Philadelphia)......	2.62½	2.87½	3.12½	...
Steers, good to choice (Lancaster)...........	10.25	10.00	9.87½	9.62½
Hay, Number 2 timothy, baled (Phila.)......	22.50	22.50	23.00	24.50
Wheat, No. 2 red winter (Philadelphia).....	1.44½	1.46½	1.49	1.75½
Oats, Number 2 white (Philadelphia)........	.56¾	.58	.58½	.51

Irregularity Features Trading

Review of the Week Ending February 26

POTATOES—The markets were generally weaker and prices dropped from 10c to 25c per sack. Supplies were moderate to heavy but trading was slow at most markets. In Philadelphia prices declined gradually thruout the week but on Saturday the market closed steady. In the jobbing market truck receipts of fancy Bucks County potatoes sold mostly at $1.50 per bushel, or a drop of 10c to 20c from last week. Most other stock sold around $2.50 per 120-pound sack and was hard to move at that figure.

EGGS—The New York market was irregular during the latter part of the week due chiefly to the heavy receipts. The best grades of eggs sold readily but supplies of medium grades were more than ample for the demand. The nearby eggs held fairly steady in price but some dealers sold at lower figures to clean up supplies on hand. Some of the relatively cheaper grades of fresh nearby eggs met a better demand.

POULTRY—There was a fair demand for live fowl in New York at the close of the week and a few sales were made at higher prices. The trade was chiefly for lighter stocks. Express receipts of broilers were light and the market firm. The supplies of fresh killed stock were light and trading was especially active on the light stock. In general the market was quiet. Nearby hothouse broilers sold at top figures while fowl were fairly active.

BUTTER—Prices of butter fluctuated during the week and the market was rather unsettled. At Philadelphia and Chicago the market was weak at the close but most other markets were steady. Buyers and sellers appeared to lack confidence and the demand was slow and draggy.

FEEDS—The market was irregular on practically all lines except cottonseed meal. This feed was sharply higher altho the demand fell off at the higher levels. Wheat prices held steady under light offerings. Gluten feed was practically steady while hominy was dull.

GRAIN—The market was weak and prices averaged lower. Liberal receipts caused corn prices to drop. Future prices were lower than at any time this season and discounts on low grades were greater. Oats was also lower. Wheat prices were lower than last week largely on account of heavy shipments from the southern countries to Europe.

HAY—The market was dull and prices were slightly lower. Receipts were liberal and the demand light. Timothy was lower in New York and supplies were more than ample for the demand at most other points. Alfalfa hay was in fair demand with lower grades hard to move.

LIVESTOCK—The Chicago hog market was irregular during the week and was lower at the close. Beef steers were stronger, while heifers and cows held steady. Stockers and feeders were higher while vealers and heavy calves were generally steady. Fat lambs closed 50c to 75c higher and feeding lambs advanced. Fat ewes were irregular.

County News and Comment

Blair County, Pa.—Blair County is just emerging from 20 inches of snow. On Saturday and Sunday the wind was so strong that roads were completely blocked. Nearly all are open again, now. Rough feed is very scarce. Still some corn and fodder in the fields. Public sales starting now. Eggs getting plentiful; wheat nearly all sold at the present price of $1.30 per bu.; potatoes, $2; apples, 95c; eggs, 35c; butter, 65c; live chickens, 35c.—H. E. H., February 23.

Bradford County, Pa.—The recent thaws and freezes have been very hard on winter grains. Baled hay is moving slowly at $17 for grade A timothy. Poultry in general is not doing as well this year as last. Many poultrymen feeding cod liver oil to their breeders. P. T. Kistler had the honor of winning the Pennsylvania Farmer Cup (pictured in January 22 issue) for the best display of five dozen white eggs at the Harrisburg show. He also won sweepstakes on the single dozen exhibits. Winter dairies doing nicely now with butter selling locally at 55c.—S. E. E., February 19.

Broome County, N. Y.—We have had old fashioned winter. Sleighing continually but few times has temperature been to zero and for short periods only. There are many farm sales and quite a few farmers are quitting for other work. Prices are good at sales. Dairy cows bring especially good prices and more cash seems to be paid than usual. Eggs are 30c; butter, 52c; potatoes, $1.50.—E. M. C., February 21.

Clarion County, Pa.—Wheat fields very brown. Farmers butchering hogs for market as price is falling and hard to sell. Hogs, live weight, 10@10½c lb. Beef better than a month ago, dairy cows not doing so well as weather is too changeable. Corn in fields moldy and fodder rotten, some say corn rotting in crib. Some hauling manure and fertilizer. Chickens doing well but eggs going down in price. Creamery butter, 60c; eggs, 30c; beef, dressed, 12c; chickens, live, 22c; potatoes, $1.75.—C. R., February 21.

Clinton County, Pa.—Some corn to be husked yet. Wheat sown early looks favorable. On the 19th snow began falling accompanied by a high east wind. Continued until the 21st, blocking highways. Farmers institutes and Pomona Grange meetings scheduled for this week thruout the county. A large bulk of wheat was sold to the mills and on cars during the latter part of January at $1.30. Disease-free seed potatoes scarce. Not enough to supply the demand. Shoats and fat hogs about all cleaned up. Corn in cribs has molded. Live poultry advancing in price. Eggs plentiful and dropping in price. Butter prices also declining. Very few grains selling, prices too low for the farmer.—W. C. W., February 22.

Gloucester County, N. J.—The proposed embargo against the tomato on account of the Japanese beetle in shipments to Baltimore canneries has caused a flurry among growers. The loss of this important market has caused some to consider reducing acreage. Sweet potatoes are moving slowly with fully one-half of the crop still in the farmers' or dealers' hands. Prices: $1.25@1.50 per hamper for repacked stock. The holdings never were heavier at this time of year than they are now. Apples causing considerable concern. The presence of common storage stock on the market is holding the demand for fancy stock to low levels and with immense holdings in storage it now looks like a long drawn out season. Hot beds are started.—A. K., Feb. 15.

Lebanon County, Pa.—Farm meetings scheduled for the month (1) Potato grading demonstration in North Jackson Grange Hall showing how to grade potatoes for U. S. No. 1's. P. R. Taylor, from the Bureau of Markets, Harrisburg, was in charge. (2) Orchard pruning demonstration by Agricultural Extension Association in P. R. Boltz's orchards. R. S. Snyder, fruit specialist of State College, showed how apple and peach trees and grape vines ought to be pruned. Broken trees also were studied. (3) Conewago Valley Grange held open meeting in Lawn schoolhouse. Seed corn is full of moisture and immature. County Agent Berger pointed out these facts in his address by aid of samples of corn. Prof. H. B. Musser gave a highly appreciated speech on foreign and domestic clover seed. Snow, snow, everywhere but not a place to put it. Baby chick season is here once more. Many farmers are holding off for higher price of wheat. Eggs, 28c; hay, $22; oats, 50c; butter, 55c; fat bulls, 8c, live weight; shoats, $6@18; best sale dairy cow with calf, $150; best pair sale mules, $500; common sale horses, $100 and up.—R. I. W., February 22.

McKean County, Pa.—We have had the heaviest fall of snow the past week. At the annual meeting of the McKean County Sheep and Wool Growers' Association the county was praised for production of wool by the sheep extension specialist of State College; they received the highest prices for its fleeces of wool. Twenty-eight members were in attendance. Thieves have been so bold as to kill livestock and haul it away in trucks. From 1800 to 2000 dog owners in the McKean County area are subject to fines for failure to pay the dog tax. Invitations to a farewell banquet to be tended County Agent P. S. Crossman, March 1, have been issued. Having served the county for several years, he has made hosts of friends, not only by his personality, but also by his work in bettering farm conditions. The new county agent will be Mr. Ross. Prices: apples, $2; potatoes, $2; eggs, 45c; hogs, dressed, 20c; beef, 12@14c.—F. J. H., February 22.

Mercer County, Pa.—Winter again, after two weeks of spring-like weather which caused the buds to start. Wheat fields thin, some almost bare. Very little will be worth saving to harvest. Certified seed potatoes being brought in by the Farm Bureau. Good seed corn hard to find. No demand for potatoes. Dealers offer $1 per bushel for them. Not much demand for hay, selling at $20 loose, delivered. Wheat, $1.40; corn, dealers charge farmers 95c bushel; prime hogs down to 15c dressed; veals, 12c, live weight; country butter, 45c; eggs, 35c; milk for January, $2.89 for 3.5 delivered at plant.—J. W. B., February 20.

Salem County, N. J.—The mild weather has been favorable to early plowing in many parts of Salem County. It is understood that there will be but little change in the prices paid by canners this year from the 1926 level. With this in mind it is understood the acreage will be normal. There will be an increase in white potato acreage and the wheat acreage is somewhat larger than usual. There is a normal labor supply at this time of the year.—E. M. B., February 14.

Susquehanna County, Pa.—February, so far, has been ideal winter weather. Many farmers idle and owners just try to cut the hay and rent the pastures. Cattle looking well. Many will need to buy hay as it is feeding fast and very scarce. Nearly all ice houses filled. Eggs plentiful and getting cheap. Horses are picked up rapidly and bring good prices according to quality. Hogs scarce and selling for 20c dressed; eggs, 35c; butter, 50c; apples, $1@1.25.—J. A. G., February 18.

Warren County, Pa.—February warm, balmy month, scarcely any snow. Chickens laying fine, consequently price is dropping, selling now for 39c per dozen. Prices: apples selling slowly at $1 bu.; potatoes, $1.50; butter, 45c; chickens, 28c.—H. C. J., February 22.

Launch Big Campaign

A NATION-wide campaign to raise $5,000,000 in three years to enable the National Farm School at Doylestown, Pa., to complete its improvement and expansion projects was recently launched at a meeting held in New York City. A booklet of 150 pages and many half-tones tells the story of the meeting, and gives a clear idea of the present status of the school and the proposed extension. The extension project is in the hands of a Business Men's Council composed of Adam L. Gimbel, Abraham Erlanger, Ex-Governor Sproul, Manny Strauss, Samuel Vauclain, Ben Grey, D. E. Weshner, and George J. Hexter.

Farm School Thirty Years Old

The Farm School was established thirty years ago by Rabbi Krauskopf, who, after a visit to Tolstoi in Russia, was converted to the idea of providing a place where the boys of the overcrowded sections of the cities could receive training in agriculture. A farm of 160 acres near Doylestown, Pennsylvania, was purchased and the school started. In the thirty years the school has grown in size and efficiency so that the farm now contains 1095 acres, and 173 boys are receiving scientific training in horticulture, poultry raising, gardening, dairying, etc.

At the meeting referred to addresses were made by Secretary of Agriculture William M. Jardine, Senator Capper, Ex-Governor Lowden, Stephen S. Wise, and a hundred other well-known men. The organization effected to push the expansion project is composed of men who are able and experienced in big business and success is practically assured.—K.

EGGS

How to Get Fertility with Increased Production

Are you sure your hens are getting the minerals and other ingredients needed to produce hatchable eggs and healthy chicks? It's either whole egg or none with every hen. When laying she must have enough nourishment to maintain her own health before supplying egg requirements. If her egg organs fail to get any one of several vital ingredients, nature stops the whole egg-laying operation. At this season you want strong fertility as well as good production. Give your hens needed help by mixing with their feed

Profit from the Experience of Successful Poultrymen

Center Hall, Pa.

Dr. L. D. LeGear Medicine Co., St. Louis, Mo.

Gentlemen: For the past fifteen years we have been each year convincing several thousand new customers that there is a vast difference in chicks and chickens. Since 1900 we have developed a SUPER-strain of Leghorns that have delighted more than 50,000 customers in all parts of the U. S. A. and twelve foreign countries.

But—we failed to apply this same truth to the field which your Poultry Prescription so thoroughly covers.

I am writing you today first to congratulate you on the real service you are rendering the poultry raisers of the country in the production of Dr. LeGear's Poultry Prescription, and secondly to urge that you more extensively acquaint our poultry-raising people of the fact that yours is an aid to Nature—not a detriment. Let them know that Dr. LeGear's Prescription is a FOOD, not a "dope."

Our analysis of your Prescription, the increased egg production, the more rapid and even development of the young stock plus the maintenance of the general health of the fowls, have made of us most enthusiastic "boosters" for your Prescription, and we want you to realize that we shall never neglect an opportunity to recommend your valuable product to our "Kerlin-Quality" customers. Wishing you an abundance of deserved success, we are,

Very truly yours, W. W. Kerlin,
KERLIN'S GRAND VIEW POULTRY FARM.

Dr. LeGear's Poultry Prescription

Mineralized—*contains essential minerals for egg production, rich blood, bone tissues and feathers—TONICS for the blood, nerves and egg organs—REGULATORS for the digestive organs—LAXATIVES for the bowels; all being vital ingredients lacking in home or commercial mixed feeds, without which best results cannot be obtained from poultry.*

Get a pail or package from your dealer. Mix with mash feed. If not thoroughly satisfied with results, return empty package to your dealer and he will refund your money. Convince yourself by trial and test that it is all—does all—that thousands of successful poultrymen claim for it.

Dr. LeGear's Chick Diarrhoea Tablets Save Baby Chicks

White Diarrhoea causes more baby chick losses than all other diseases combined. Highly contagious. If not checked whole flocks are often wiped out. No chick from three days to two weeks old is immune. Keep Dr. LeGear's Chick Diarrhoea Tablets in all drinking water until third or fourth week. Thousands of poultrymen have used and praised it for years. Any dealer can supply you. All Dr. LeGear's products sold on money-back guarantee. Use full package. If not satisfied, return empty package and dealer will refund purchase price.

FREE—Just Off the Press "Dr. LeGear's Complete Poultry Guide and Feeding Manual," an authoritative and up-to-date treatise on disease, care, housing, feeding and every conceivable poultry question. Gives the feeding formulas recommended by Experimental Stations in practically every state in the Union—also the formulas used in the big egg-laying contests. Ask your dealer for a copy, or send us 6c in stamps to cover mailing. Let this book help you to bigger poultry profits. Ask for it today.

DR. L. D. LeGEAR MEDICINE COMPANY, ST. LOUIS, MISSOURI

Free Trial of Proved Swedish Abortion Treatment

Famous Foreign Formula quickly relieves badly infested herds. Gives amazing results in cases believed hopeless.

Thousands of American Farmers say the Froberg Swedish Abortion Treatment has saved their herds from destruction. This remarkable treatment has been used with complete success in the big dairy herds of Sweden for many years, and has cleaned up whole districts over there literally rotting with contagious abortion.

It was only after great expense of time and money that this secret formula was made available to American Farmers. During the past nine years the treatment in American herds has given all the amazing results that made it so famous abroad. Herd after herd has been rid of this disease. Even cows considered hopeless by veterinarians have yielded to its healing qualities and been restored to health and produced fine vigorous calves.

SAVED HIS HERD

David Mohr, Jenison, Michigan, says: "Last year I raised only one good calf out of 14 cows bred, all other calves were aborted. I was desperate. I used your C.C.C. treatment. This year with the same herd I have not lost a single calf. It's wonderful. My neighbor lost 3 calves in a few days—I gave him some C.C.C. and it stopped the trouble right there."

The fame of Cow Calf Control (C.C.C.) the name of this treatment has spread from breeder to breeder. Today it is put out only on an absolute binding guarantee that it will stop every case of abortion; that every cow treated will deliver a normal calf, or the treatment cost is refunded. Two reliable banks stand behind our guarantee. You can't lose. C.C.C. is practically 100% successful.

SEND NO MONEY

Mr. John W. Froberg, a native of Sweden and a large dairy owner, is responsible for introducing C.C.C. into this country. He has made the treatment easy to give, and at a cost per animal that every farmer will gladly pay.

Write today for full details explaining our free trial offer. Just send your name and address without further obligation to Froberg Remedy Co., 10 Lincoln St., Valparaiso, Ind.

Farm stock, Implements, Poland China Hogs. 20 Head of High Grade Guernsey Cows and Heifers bred to Registered Guernsey Bulls of No Plus Ultra, Golden Secret and May Rose King Breeding. Herd T. B. Tested under Federal Supervision. Sale of Household goods announced later.

Resume of Bills Before Pennsylvania Legislature

WITH approximately 1500 bills introduced and the session half over, the Pennsylvania Legislature is now getting down to full time work. In order to make it possible to adjourn on the date set, April 15, it is reported that a final date for the presentation of measures will be set soon. So far only a very few bills have passed finally.

ARMORY FOR STATE SHOW.—Among the bills up for consideration in the House last week was the Earley Bill which provides for an appropriation of $350,000 for an armory in Harrisburg. The bill carries a provision that the building shall be available in January each year for the State Farm Products Show. It was reported from the House Committee on Appropriations after a hearing on February 15 but final action by the House has been postponed at this writing.

WOULD UNIFY BUG CONTROL.—A bill has been introduced in the House which consolidates all the state laws relating to the control of plant pests including the Japanese beetle, European corn borer, potato wart, nursery inspection, etc. This bill makes adequate provisions for cooperation between the state and federal departments of agriculture in corn borer control. Congress will appropriate $10,000,000 to be used in Pennsylvania and other states in which the corn borer is now present.

INDEMNITY BILL IN COMMITTEE.—The bill of Representative Haines providing for an appropriation of $2,000,000 for paying indemnities during the coming two fiscal years for cattle afflicted with tuberculosis or other dangerous diseases, has not been reported from the Committee on Appropriations. A bill asking for a deficiency appropriation of $355,000 for the Bureau of Animal Industry for the present fiscal year is also in committee.

PROPOSE TAX COMMISSION.—The creation of a permanent State Tax Commission is provided for in the Hess Bill introduced last week. The commission would consist of three members to be named by the Governor for terms of two, four and six years, each at a salary of $10,000 a year. The commission would enforce all state tax laws and would make studies of tax laws in other states and foreign countries.

MISCELLANEOUS BILLS.—Among the bills introduced which have not been reported from committee are the following: A bill placing a one-cent-per-bushel state tax on sand and gravel dredged from rivers and streams; a bill to permit fishing on Sundays; a bill requiring people walking on roads at night to carry a light visible for 200 feet both front and rear; a bill providing a fine of $200 to $5000 and imprisonment of six months to five years for selling or giving intoxicants to minors; a bill removing the license fee of $100 from retailers who sell oleomargarine; a bill authorizing agricultural fair associations to acquire land and property by purchase or gift or the exercise of the right of eminent domain.

OPPOSE AUTO LIABILITY.—Two bills have been introduced which would require all owners of motor vehicles to submit proof of financial ability to pay damages in case of accident to person or property, the amount of damage ranging from $1000 for property to $5000 for the injury or death of one person and $10,000 for the injury or death of more than one person. A hearing has been held on these bills at which vigorous protests were made by the automobile associations.

INTEREST IN ELECTION LAWS.—Prospects for more drastic election laws to prevent fraud at the polls and to curb primary expenditures are good, if the interest taken in the subject is any indication. Numerous bills have been introduced, the latest being a group of four which are reported as having been prepared and introduced at the request of Governor Fisher. They provide for the mandatory opening of ballot boxes, limiting assistance to voters except for physical disability or inability to read, fixing $10 as the maximum pay for watchers in cities and $5 for outside, and placing a limit of ten cents per voter on primary expenditures by candidates for state or federal office.

COUNTY MAY SHARE GAS TAX.—It is reported that the State Administration will support a gasoline tax which is to be a permanent rather than an emergency tax as has been the case in the past. The present tax is two cents. It is understood that a bill is being prepared which will not only provide for a permanent gasoline tax but will make it more difficult for retailers to evade the tax. One-half cent of this tax would be returned to the county of origin for local road building and maintenance, it is said.—J.

Map Out Plans for 1927

THE New Jersey Extension Department recently held a week's conference with the county agents, club leaders and home demonstration agents and mapped out an extensive program for 1927. Every major branch of farming will receive special attention during the year, according to Dr. H. J. Baker, director.

A new development in the dairy field will be the establishment of an honor roll of cow testing associations to include all cows producing 45 pounds of fat or 1200 pounds of milk. The calf club work is to be extended, and there will be a campaign for more purebred sires. This plan has been so successful in Sussex and Warren Counties that it will be extended to other leading dairy counties of the state.

In the poultry division, two major problems will be tackled: the more economical production of eggs and the production of better and more vigorous stock.

Alfalfa and cover crops for every farm in New Jersey is being pushed as one of the big items in the reduction of production costs. The vegetable industry is to be helped by developing close cooperation between shipping organizations and markets, with the aid of standardization of varieties. It is expected that the number of varieties of vegetables grown for market will be greatly restricted before another season comes around.

A special study of the over production of fruit is being made and records on production costs will be kept. The reforestation of New Jersey's waste land will receive special attention. Ocean County has already started some interesting work on this line.

The home economics department is planning for extensive campaigns in girls' club work.

The conference was addressed by H. W. Hochbaum, Washington, D. C., field agent of the U. S. Department of Agriculture, and Dr. John M. Thomas, president of Rutgers University, New Brunswick.—A. K.

Grain Rations Ewes and Lambs Need

I have 30 head of sheep that will lamb soon. I am feeding corn silage and alfalfa hay. Would like to have a good ration for them.—I. S. T., Franklin County, Pa.

The roughage combination which you have been feeding up to the present time should keep the breeding ewes in good thrifty condition. It is desirable to add some grain to the ration a few weeks before lambing and while the lambs are suckling. The following grain combination should give satisfactory results: 5 parts corn, 3 parts oats, 2 parts wheat bran, 1 part linseed oil meal.

Each ewe should receive about one-half pound of grain daily. This same grain combination can be continued after lambing.

When the lambs are from ten days to two weeks old they will begin to eat some grain. It will pay to provide a "lamb creep" and feed some grain. A very satisfactory grain mixture for the lambs consists of 2 parts crushed corn, 2 parts crushed oats, 1 part oil meal and 1 part wheat bran. Feed this in such amounts as the lambs will clean up daily. The lambs will also eat some alfalfa or clover hay.—W. H. Tomhave.

Purebred Beef Bulls Meet Better Demand

BREEDERS from every section of the country are reporting more inquiries and a better demand for purebred beef bulls at satisfactory prices than has been the case for a number of years. At the recent national and western show at Denver, Colorado, the carloads of purebred bulls on exhibition were in strong demand and many carloads were purchased for range purposes at prices ranging from $200 to $300 per head. The auction sales of single purebred bulls were very satisfactory to those who had consigned cattle to these sales.

One of the outstanding features of all the bull sales has been the demand for bulls of quality. The men who use these bulls on grade or purebred beef herds to produce feeders for the feed lot in the Corn Belt, state that feed buyers are becoming more particular each year about the quality and breeding of the cattle that are selected for the feed lot. Calves or yearlings of the right type, quality and breeding, readily sell at from five to ten dollars per head more than cattle lacking these characteristics.

Feeders have found that it is more economical to purchase the better bred cattle at a higher figure than to buy the inferior cattle at a lower price per pound or per head. These cattle make more rapid gains in the feed lot, require less feed to produce one hundred pounds of gain and command a higher price when put on the market.—W. H. Tomhave.

Feed for Horses

COB corn and alfalfa hay is what Marshall Jones, Chester County, Pennsylvania, finds to be the cheapest and best home grown feed for his horses whether they are working hard or taking things easy during the winter. Of course he uses judgment in feeding the horses according to the work they are doing and the shape they are in.

He gives them about one-half as much alfalfa as he would if it were timothy hay and never allows them to eat all they want. Five to six ears of corn, three times a day, with the alfalfa, he finds, will keep them in good condition for hard work, and his horses have plenty to do on his 500 acres.—Thos. H. Wittkorn.

Taken from the Week's News

SALEM COUNTY, New Jersey, had 262 acres of white potatoes certified this year by the State Department of Agriculture out of a total of 325 acres entered for certification at the beginning of the season. The Salem certified seed growers produce Cobblers almost entirely.

§ § §

POULTRY DISEASE SPECIALISTS of the U. S. D. A. have been very successful in the treatment of roup by vaccination. Ordinary medicines and antiseptics failed to give satisfaction. The Department men have found that birds one year old are more susceptible to roup than those two years old and over.

§ § §

THE TOWNS of Bayonne and Jersey City, Hudson County, New Jersey, are to be included in the extended European corn borer quarantine area according to revised regulations in effect March 1st. These towns are across the river from New York City. The same restrictions on produce shipments will apply as in the quarantined areas of other states.

§ § §

THE MEN who build dams and develop waterpower and irrigation projects have their troubles. One large dam in Texas lost half its capacity in ten years. It filled up rapidly with silt, otherwise mud, brought in by the river. That is one reason why power companies spend money setting out forest trees. The trees keep the soil where it belongs.

§ § §

THERE ARE squashes and squashes, pumpkins and pumpkins. The New York Agricultural Experiment Station at Geneva aimed last summer to grow every named variety of these two vegetables. The grand total was 158 varieties,—38 of summer squash, 70 of winter squash, 30 of vegetable marrows, and 30 of pie pumpkins. The squashes ranged from 1½ to 60 pounds in weight.

§ § §

IN 1926 FOR the first time in many years the amount of pork used in the United States fell below the amount of beef and veal. The country's meat production in 1926 was 240 million pounds more than in 1925, but that wasn't quite enough to keep up with the 2,000,000 increase in population during the year.

§ § §

THREE MILLION CASES of eggs, worth more than $30,000,000, were marketed thru cooperative selling organizations in the United States in 1925, according to figures just released by the U. S. D. A. The largest association was a California cooperative which handled 782,070 cases, an average of more than 2100 cases for every day in the year.

Veterinary

Conducted by Dr. J. F. Shigley
Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Livestock.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

COWS HAVE LICE.—Every fall, usually beginning about November, my dairy cows and young stock become infected with what seems to be a parasite at root of tail. It causes an accumulation of a sticky nature to form which, when dug off, takes the hair with it. The trouble apparently disappears or lies dormant during summer months to become active again in the fall. Can you tell me what this is?—F. L. P., Laceyville, Pa. This is probably a condition of lousiness and may be corrected either by the use of a louse powder or by using a solution of one of the coal tar dips. If you choose a warm day and use a warm, two per cent solution of dip, applying it to all animals in the herd, the results will be quite satisfactory. This should be repeated in seven days to kill the nits. The barn should be treated with a hot lye solution, and also with a solution of dip. These lice will remain in the building year after year, infesting the stock during the fall and winter months.

MARE HAS COLIC.—Please tell me what to do for mare 13 years old. She eats all right but takes spells like colic. I feed her bran, oats and hay. She is not doing any work now.—W. J. S., Gibsonia, Pa. It would be well to give this mare regular exercise. In addition to the bran try a handful of oil meal in the daily grain ration. If this is a grey mare the attacks of colic may be due to some other factor. However, regular exercise will help in this case if it is simple colic.

MAMMITIS.—Four of my cows have a disease that affects the mammary glands. Have had a veterinarian and they are practically recovered but do not come back to their milk. At first part of their bags are very hard but soften up after awhile with treatment.—D. U. A., Granville Summit, Pa. In cases such as you describe, a decrease in milk secretion is the common result. Sometimes this can be overcome by massaging the udder, bathing in warm water and frequent milking. Better results can be expected from causes other than infections. It would be well for you to refer to the article on mammitis, page 19, December 25 issue of Pennsylvania Farmer.

Bankers to Give Cash

CAMBRIA COUNTY bankers are doing their share to promote more profitable farming conditions in their section. As an example of their interest, County Agent McWilliams reports the following prizes being offered in 1927 thru the agricultural committee of the County Bankers' Association:

To the farmer who grows the highest producing acre of potatoes	$25.00
To the dairy farmer whose herd of five or more cows stands highest in butterfat production	$25.00
To the farmer producing the heaviest litter of pigs in 180 days	$25.00
To the Grange whose members win the most premium money in the general display of farm products and livestock at the Ebensburg Fair	$25.00

Silver loving cups will be given to the boy or girl showing the champion baby beef; to the club member exhibiting the best pig; to the boy or girl showing the best pen of three fat lambs.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 100,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (65 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

GOVERNMENT Forest Rangers needed frequently. $125-$200 month. Home furnished. Enjoy the outdoors. Particulars about home instruction. Free. Write, Ozment, 167, St. Louis, Mo.

GLASS CLOTH

Brings Amazing Success with Baby Chicks

Prevents Rickets, Leg Weakness and Death Loss—Speeds Growth

FRED TURNER
Discoverer of GlassCloth

For success with chicks, NEVER keep them behind window glass. Glass stops the sun's ultra-violet energy rays, causing chicks to become sick and weakly, to contract rickets and leg weakness and often to die by the score. Scientists have proved this fact.

For ideal conditions put GLASS CLOTH in the windows and build a GLASS CLOTH scratch shed. The results will amaze you. GLASS CLOTH admits the sun's ultra-violet energy rays freely. Under it chicks thrive and grow at a remarkable rate. Rickets and leg weakness are unknown. Users have gone season after season without losing hardly a chick. Rapid growth makes early layers and early market fowls. It pays.

Accurate Test Made at Ames Proves Benefits

As proof of the great advantages of GLASS CLOTH over glass, note the results of this experiment made at Iowa State Agricultural College, at Ames. 25% of the chicks kept under glass died within four weeks and the remainder were a sickly, slow growing lot. A similar death loss prevailed where a competitive glass substitute was used. But under GLASS CLOTH not a chick died. On the contrary they grew at amazing speed, making a much larger gain in weight.

Test Shows Big Difference in Growth

Wherever tests have been made GLASS CLOTH has shown such superiority over glass that today it is recommended by agricultural stations, experts scientists and practical poultry raisers in all parts of the United States.

Just look at the two chickens shown here, (taken from actual photographs) illustrating the ill effects of a lack of ultra-violet rays. The big hen had plenty of sunlight from which none of the ultra-violet rays had been taken. The runt had the same care, but no ultra-violet rays The picture tells its own story—a story vital to every poultry raiser in the land.

With Ultra-Violet Rays

Without Ultra-Violet Rays

Effect on Profits

Dead chicks are money lost. Sickly chicks are money lost. If you want early broilers, if you want early layers, if you want to raise practically every chick and keep them in prime good health —just give them abundant ultra-violet energy rays by using GLASS CLOTH all through the cold months of the spring. GLASS CLOTH costs but a small fraction as much as glass and gives you nature's greatest health treatment for your poultry. It removes many of the greatest troubles and worries of raising poultry. IT PAYS

Baby Chicks Thrive in This Scratch Shed

The ideal way to give your chicks plenty of ultra-violet light is to put large GLASS CLOTH windows clear across the sunny side of your brooder house. Another way is to build them a scratch shed such as shown above. Even on very cold days this shed is cozy and warm inside. The chicks scratch and exercise while they store up ultra-violet energy. It doubles the floor space. It is cheap and easy to build. All you need is a roll of GLASS CLOTH and a few scraps of lumber. Full directions are sent with each order. Take advantage of our Special Trial Offer today.

There Is Only One Glass Cloth--Avoid Imitations

Genuine, durable GLASS CLOTH is made only by Turner Brothers., under exclusive patents. No other concern can copy our process. No other has the same weather resisting formula. Quality and results are of first consideration in buying GLASS CLOTH. Therefore, beware of imitations.

Real GLASS CLOTH is a very strong fabric specially treated to make it transparent, waterproof and weatherproof. Originated in 1916 and proven by eleven years' success. So much cheaper and better than glass it has won wide popularity all over the United States and Europe.

GLASS CLOTH comes in rolls 36 inches wide and any length you order. It is easy to put up. Simply build a framework from any lumber you may have on hand and tack the GLASS CLOTH down with moulding or lath to prevent its tearing loose. It is absolutely wind-proof and water-proof. It sheds a soft, diffused light which it scatters to all parts of the enclosure. We guarantee you will like it better than any other. We recommend that you take advantage of the Special Trial Offer made in this ad. Mail the coupon today.

Brings Eggs All Winter

Big winter egg yields are easy to get. Simply put up a good area of GLASS CLOTH on the sunny side of your hen house to let in the ultra-violet rays of the sun. (Plain glass stops them.) Science has discovered it is the absence of these rays that makes hens quit laying in winter. But under GLASS CLOTH the egg glands are given new activity and produce two and three times the usual number of eggs. They lay like it was June. All you need to put up GLASS CLOTH windows or scratch shed is a roll of GLASS CLOTH and a few scraps of lumber. High winter egg prices repay its cost quickly. It is not too late to make a good profit yet this winter. Try it. It is a money maker.

Glass Cloth Pays

There are two great reasons for buying GLASS CLOTH, first, the big increase it makes in poultry profits and, second, the fact that it is so much cheaper than glass. Profit is the big reason. If GLASS CLOTH cost ten times as much as it does it would still be well worth its price. In a single season it pays for itself many times over. If you have never used GLASS CLOTH you should try it at once. Take advantage of the special price in the trial offer below. It costs you only three and a third cents a square foot. That is cheap.

SPECIAL TRIAL OFFER
BIG ROLL $5.00!

Learn by actual use the bigger profits GLASS CLOTH can bring you. Send $5.00 for a big roll 45 ft. long and 36 ins. wide, postpaid. (135 sq. ft.—enough to cover a scratch shed 9x15 ft.) You may buy as many rolls as you need at this special price. If, at the end of ten days' use, you do not find it more satisfactory than glass or any glass substitute, return it and we will refund your money. Common sense instructions, "Success With Baby Chicks," with each order. Catalog illustrating all the many uses of GLASS CLOTH free on request. Mail the coupon with remittance at once. (GLASS CLOTH is also sold by many dealers.)

GLASS CLOTH
Better and More Economical for HOTBEDS

GLASS CLOTH is the cheapest and best covering for hot beds. Costs but a small fraction as much as glass and gives far better results. Vegetables and flowers started under GLASS CLOTH mature weeks earlier and produce bigger yields because GLASS CLOTH admits the life-giving ultra-violet rays of the sun. (Plain glass stops them.) Under glass, plants grow tall and spindly reaching for the rays glass robs them of. Under GLASS CLOTH they get an abundance of these rays. The plants grow stronger and hardier. When transplanted they do not wilt under direct sun rays the way they would if grown under glass. This prevents setbacks. Market growers and florists all over the United States now use GLASS CLOTH instead of glass. GLASS CLOTH holds the heat of the sun and throws it to all parts of the frame. Try it on your hot beds this year. Order now. Take advantage of the Special Trial Offer. Mail the coupon for a big roll today.

Dealers Order Now

If you have delayed putting in a stock of GLASS CLOTH wire your order to your jobber or wire us, giving your jobber's name. GLASS CLOTH is selling as never before.

Two Factories Give Quick Service

The tremendous demand for GLASS CLOTH has made it necessary to add another factory. For quick service address orders to nearest office.

Amco Dairy Feeds
are built from these ingredients

CORN DISTILLERS GRAINS
SOYBEAN OIL MEAL
LINSEED OIL MEAL
COTTONSEED OIL MEAL
GLUTEN MEAL
GLUTEN FEED
PEANUT OIL MEAL
WHEAT BRAN
WHEAT MIDDLINGS
HOMINY
CORN MEAL
GROUND OATS
MOLASSES
STEAM BONE MEAL
GROUND LIMESTONE
SALT

AMCO Feed Mixing Service buys these ingredients on the world's markets for thousands of users. Independent of any particular ingredient, its selection is based on quality and economy. Expert buyers and expert chemists are constantly choosing the best and with such volume only the best need be taken. *This means quality.*

These ingredients are blended into Amco Dairy Feeds in formulas which are the result of the creative thought of the feeding authorities of the colleges of agriculture, supported by the practical experience of the feeders whom they serve. *And these formulas are public.* Every feeder can see just how much of each ingredient is in each ton of feed that he buys.

Amco Feed Mixing Service distribution is based on principles worked out as carefully as the principles on which Amco feeds are mixed. The one basic policy is to get the ingredients available for feeding to the cows in a perfect *open formula* feed at the least possible cost for mixing and distributing. The volume of Amco Feeds is now such that these handling costs are low. They will be lower as volume goes up. Add your order to the orders of 10,000 and more other satisfied users.

Honest values in the bag and on the tag

AMCO
FEED MIXING SERVICE
AMERICAN MILLING COMPANY
PEORIA, ILL.; OWENSBORO, KY.; OMAHA, NEB.

Pennsylvania feeding authorities advise a feed mixture containing 24% protein as the most economical with average Pennsylvania roughage. Results on farms prove the advice sound.

Amco 24% Dairy, mixed always from standard ingredients, is a *market feed*, that is, the formula changes whenever the feed market shows that a shifting of the quantities of ingredients will make a more favorable price. No change is ever made without careful study of feeding principles and market tendencies. All changes are approved by the Pennsylvania representatives of the College Feed Conference Board. Every change is shown on the tag as soon as it is made. The dairyman who uses Amco 24% Dairy produces milk at the lowest possible feed cost.

See your Amco Agent or, if you haven't one in your community, write the address below.

The Man Who Buys the Best Seeds Is the Man Who Sells the Best Crops

By Dr. C. E. MYERS
Professor of Plant Breeding, Pennsylvania State College

IF YOUR CROPS DON'T STARVE—

Prize Contest Announcement

IN RECENT issues we have talked about INCREASING PROFITS BY REDUCING PRODUCTION COSTS. Readers have told how they cut costs by the use of MODERN EQUIPMENT and GOOD SEED.

But there is no profit in going thru the motions of farming if the soil doesn't have enough fertility to produce a crop. So now let us hear about the third great factor in lower costs, FERTILIZER.

Readers are invited to write us a letter on this subject:

HOW I HAVE PROFITED BY THE USE OF COMMERCIAL FERTILIZERS

For the best letters the following prizes will be awarded:

First prize	**$15.00**
Second prize	**10.00**
Third prize	**5.00**

Other contest contributions published will be paid for at space rates. All letters should be in our hands by Tuesday, March 22. Address them to the CONTEST EDITOR, PENNSYLVANIA FARMER, 261 South Third Street, Philadelphia.

TOO frequently the matter of obtaining seed is considered an incidental affair. This is especially true of the home gardener. As a matter of fact he is the one who should give the greatest attention to this important matter. Usually, however, when the season for gardening arrives he gets busy with his tools and prepares the land and when ready to seed too frequently depends on the local ten-cent or corner grocery store for his seeds.

Recently the New York Agricultural Experiment Station at Geneva made a study of the viability of six hundred representative packets of vegetable seeds purchased under these conditions. The product of thirty different concerns was represented. Of the lots tested 8.8 per cent were absolutely worthless for planting purposes. In addition to these 9.3 per cent of the total numbers of lots molded so badly that they were considered unfit for planting. The test indicated that the product of a few concerns was quite satisfactory, and that the standard is maintained from year to year. But this is not true with the large majority of the samples tested.

This result is in accord with an experience I had a few years ago. I needed some turnip seed for sowing in my home garden. I purchased an ounce of seed from the grocery store, sowed it and as a reward for my labor harvested four turnips.

A study of the bulletin published by the Geneva Station giving the results of its tests will be well worth while as an introduction to the gardening program of 1927.

With the splendid work on the part of seedsmen in general there is little excuse for failure of crops because of poor seed if reasonable precautions are taken. Never before have the reputable seedsmen of the country put forth such earnest efforts to meet the legitimate needs of their customers.

The Silent Salesman

Perhaps the great majority of the sales of garden seeds is made by means of catalogs. Recently marked progress has been made in the appearance of these silent salesmen. The exaggerated illustrations and descriptions composed of numerous superlatives are rapidly being replaced by splendid photographs of type specimens. In many instances some of the leading sorts are shown in the natural colors. The descriptions are definite, conservative and usually carry a message which is worth while.

The wide-awake seedsman realizes more than ever before that his business is one of confidence. The seeds he sells must produce satisfactory results for the person who plants them. He realizes that it is better to understate than to exaggerate the merits of his product, knowing that the best advertisement and the surest means of success are pleased customers who give him their business year after year.

There is also a tendency on the part of some seedsmen to reduce the number of varieties offered of a particular sort, and include only those which are distinct and which are of proved worth. This is a move in the right direction. It reduces the number of stocks the seedsman must carry, many of which are of very restricted demand, and permits him to use his energy in securing or developing superior strains of those which are really important.

Early Order Gets the Best

Practically all seed catalogs may be had for the asking. It is well to secure several and thus learn of the relative merits of each. Some seedsmen specialize in certain crops while others pay particular attention to different ones. Usually each has its introductions or leaders in which it takes particular pride. The catalogs should be secured early in the season so that they may be carefully studied and the contended merits of the various offerings considered.

It is always advisable to place your seed order early. This will insure it being filled promptly and before a stock may become depleted so that substitutions have to be made or else the order refused.

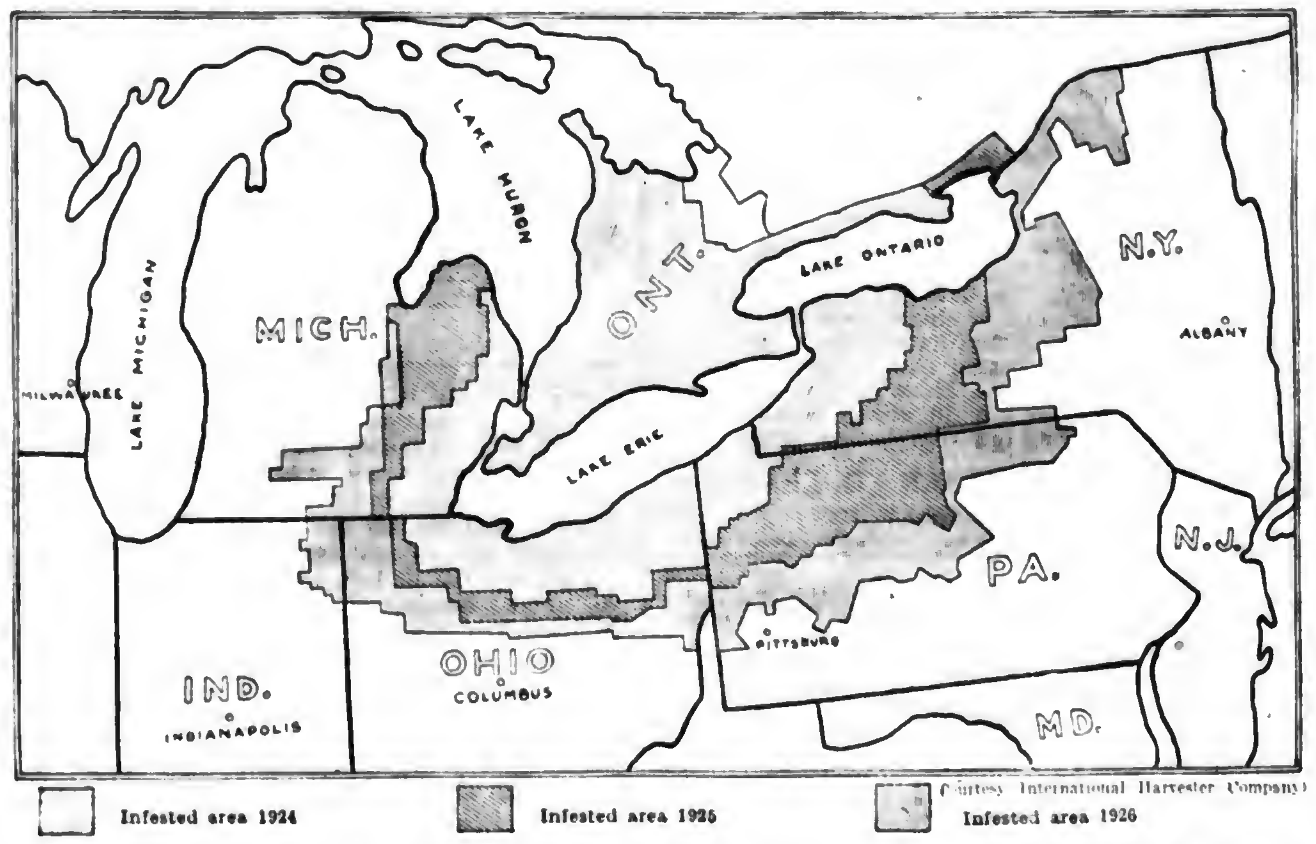
It is usually desirable, also, in case of the more important crops which are planted in considerable amounts, to purchase from more than one seedsman. A comparison of strains may then be made. First, a test should be made to determine the vitality. This is preferably made in soil, but if this is not possible a definite number of seeds placed on blotters on damp sand between saucers will be a good guide, and may give some information which is very much worth while.

Sometimes the sample may be so low in vitality that it may be necessary to get a new lot, or it may show the need of making a heavier sowing. If the strains are kept separate, the season will usually show that some are better than others. If a considerable supply of seed has been purchased, the next planting may be from that which proved best, and the others may be discarded. There are few investments the gardener can make which will give greater returns for the money and time invested than that of knowing the probable performance of his seeds before he plants them. This can be done in subsequent years if he will make the preliminary test.

It's Worth the Cost

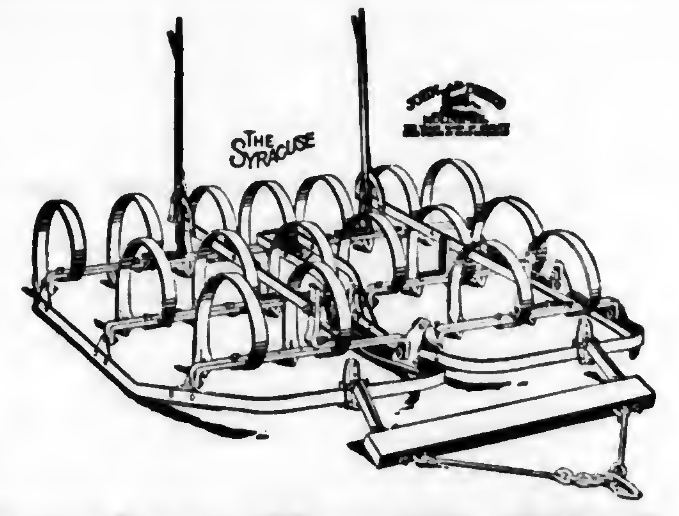
Finally, show a willingness to pay what good seed is worth. At best the cost of the seed represents a very small part of the ultimate value of the crop. Seed of an improved strain may give enough additional profit at the first harvesting to more than pay the entire cost.

The Borer Spreads to East, South and West



(Courtesy International Harvester Company)

The European corn borer has been found in all the shaded territory, but has done most damage in counties bordering Lake Erie. Many farmers on the north shore of the lake, where the borer first was found, have given up growing corn. A small quarantined area in New Jersey, close to New York City, is not shown on the map.



Spring Teeth Make Better Seed Beds

Deep, clean seed beds with the soil well pulverized and all weeds destroyed are made with the

John Deere-Syracuse Spring-Tooth Harrow

The high-carbon steel teeth dig in and clean out the root stems of weeds and bring them to the surface. Effective in hard, gravelly ground. Does not clog. An opening between sections allows the weeds and trash to pass through, so they can be readily hauled away.

Ground is worked from bottom to top and thoroughly mixed.

Teeth are clipped to the bars—no bolt holes to weaken them. Teeth points set at any angle are in correct position for penetrating and getting all of the weeds.

Use this harrow to stimulate production. Write for literature describing it. Address John Deere, Moline, Ill., and ask for Folder ST-736

NESHAMINY GARDENS

WHERE AN EDITOR WORKS AND THINKS

BY R. P. KESTER

MARCH again has the boards. Because of the usual freakish and disagreeable weather most people dread March more than any other month in the year. Yet, for farmers, and especially fruit growers and market gardeners, it is absolutely necessary to do much important work. In spite of soft ground and muddy dirt roads, storms and cold spells, the farmer must get out and hustle if he is to have a successful year. March is not an attractive month in the country, but it is an important one for certain work.

◆ ◆ ◆

SEED must be sown, hotbeds and cold frames put in order, grapevines and fruit trees should be pruned in March. If the weather is sufficiently mild to start buds early, certain spray work must be done. None of this work is enticing in bad weather, but the progressive farmer looks beyond the momentary discomfort to the harvest which he hopes to see. He remembers the Bible statement that, "He who will not plow by reason of the cold, shall beg in the harvest and have nothing."

◆ ◆ ◆

SO FAR as I have been able to discover, the cold snaps of last winter have not injured the peach buds. The mass of weeds which grew after cultivation was stopped helped to check growth and give the wood time to ripen, even tho the wet fall weather tended in the opposite direction. We are hoping that the Oriental moth will not be more of a nuisance than it was last year, when it did but little damage.

◆ ◆ ◆

CONCERNING the Jap beetle, we have no reason to feel so hopeful. We found several last year and the reputation of this persistent little cuss is that when it gets a foothold it stays right on the job multiplying and replenishing its species most industriously. All that we found were feeding on smartweed. Hence, we learn that smartweed is good for something. If we can only learn as much concerning the Jap beetle maybe we can view his approach more philosophically.

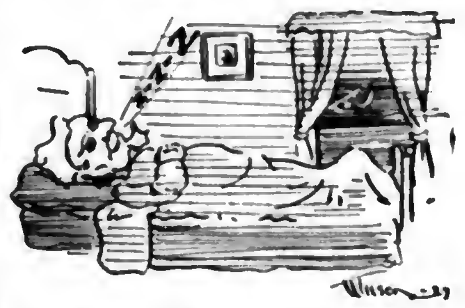
IT MAY be remembered that I referred two weeks ago to a letter received from a young man who would like to start a poultry farm, and who criticised rich men for being so free with advice and so stingy with their cash. A man with whom I was talking the other day had read the article and was inclined to side with the young man of the letter. He believes that the greatest good rich men could do would be in the direction of starting young men with farms, instead of endowing colleges and libraries. I shall not argue the question here, but will leave it by asking two questions: Would it be a good thing for agriculture? Is there need for more liberal credit?

◆ ◆ ◆

I ALWAYS get a thrill out of visiting the new house being built at Neshaminy Gardens. I went over the other day and found twelve men working,—carpenters, plumbers, painters, heater men and masons,—the latter finishing the fireplace. A fireplace always appealed to me and I have always hoped to have one sometime in my own home, and will if—. I do not know of any other experience that gives one so much of a "kick" as building a house and planning the grounds and equipment. That is one experience which nearly all our forefathers had, but is something which most people in modern times miss because they start in houses already built.

◆ ◆ ◆

IT has been something of a mystery in the neighborhood as to who is going to live in the new house, especially after it was learned that we were not. Well, it may as well be told now, since there is no longer any reason for keeping it secret. The two little boys,—the grandsons,—Lewis and Walter, will make it their home. They are to have the influence of the fine view, the growing trees, the healthful fruit and vegetables, and the budding flowers. Here, they will have all the opportunity there is to grow into strong, sane men. Of course, their parents will probably follow them to the new home, and their grandparents may drop in at times.



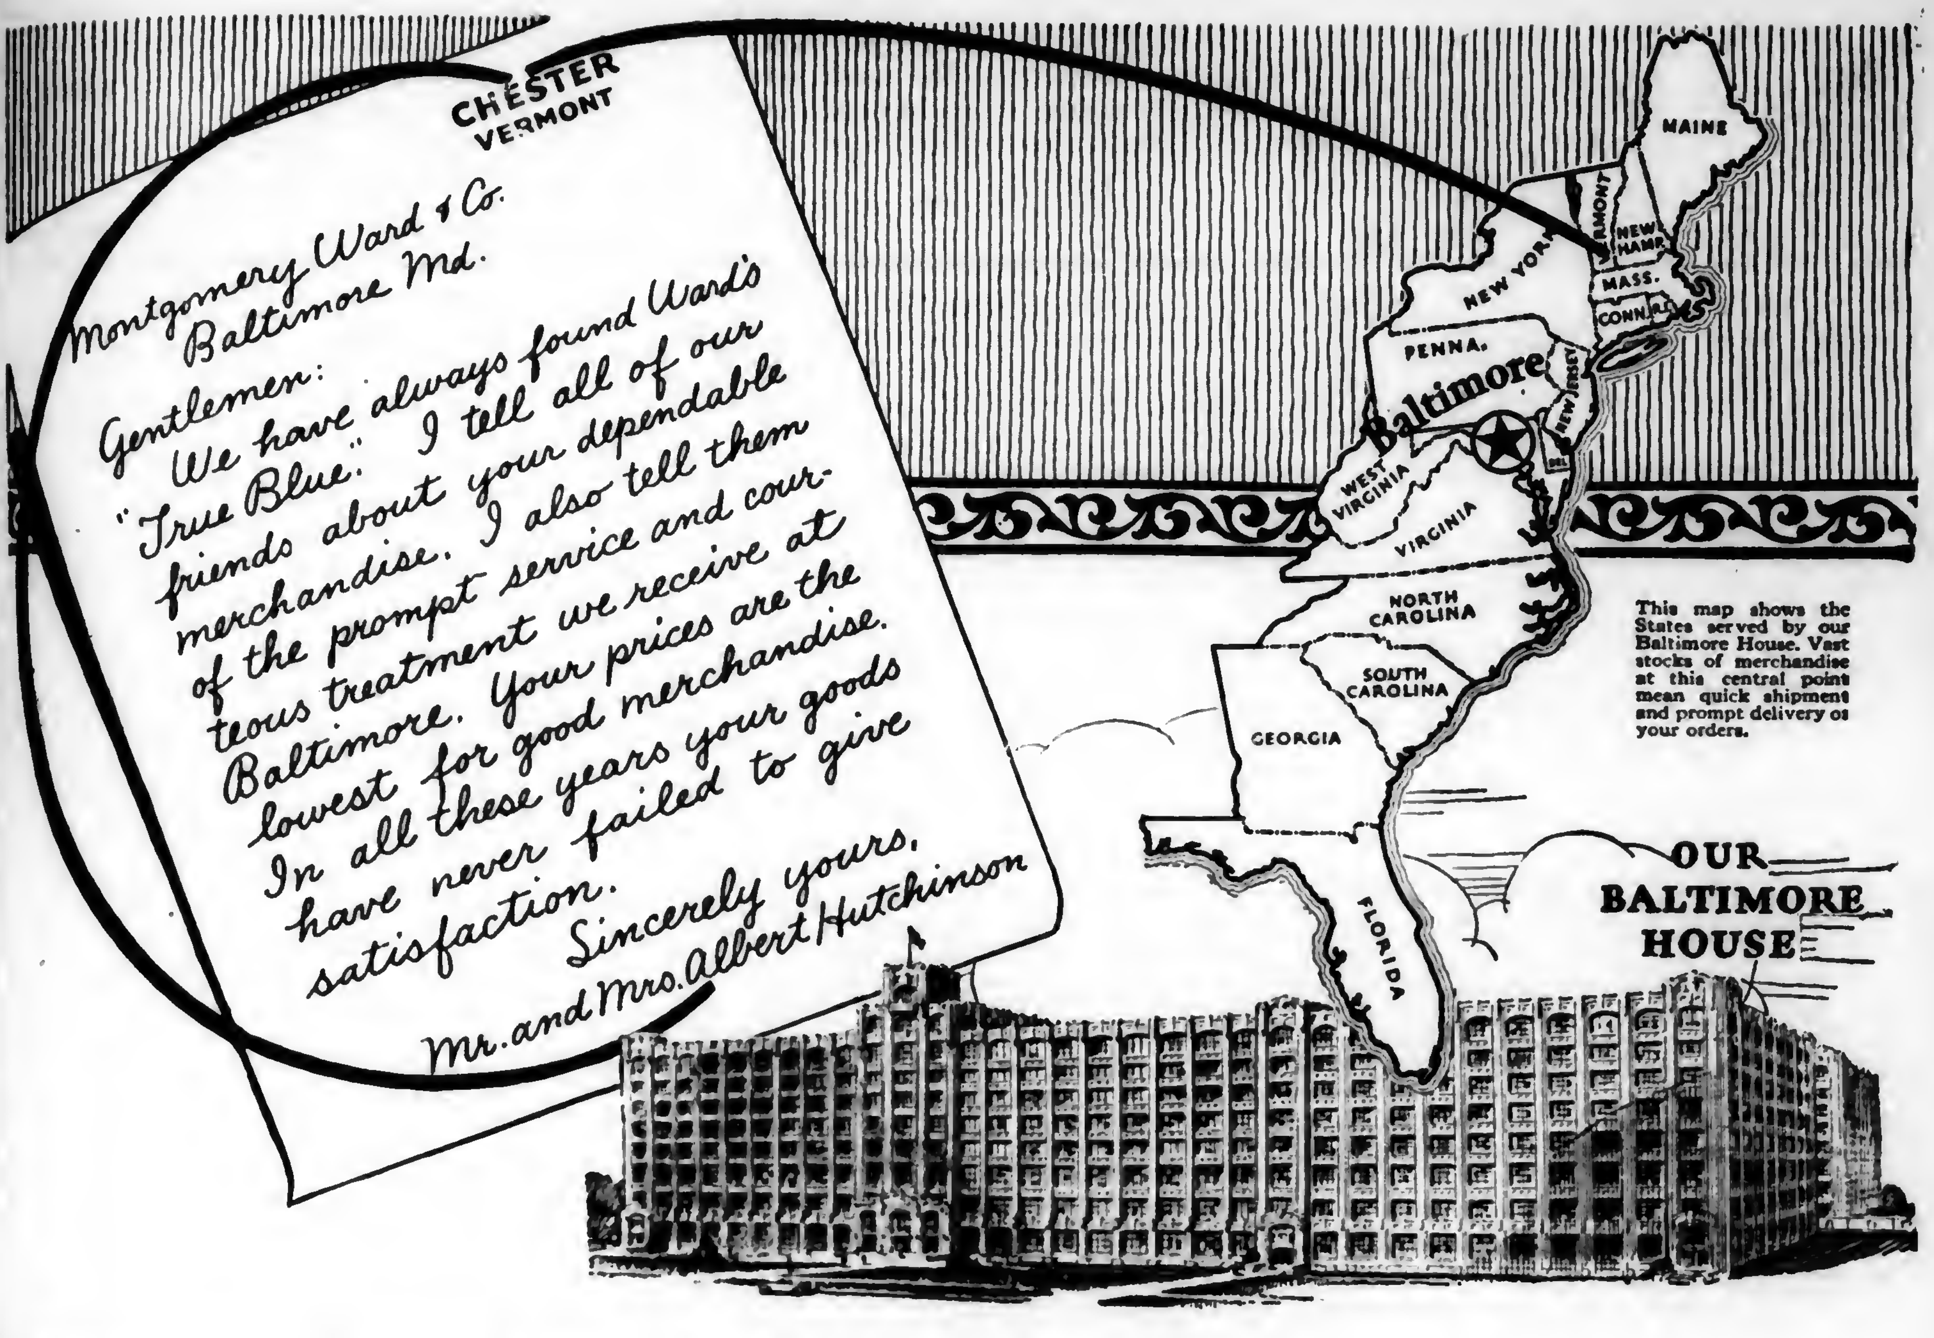
The Cheerful Plowman

Sound Sleep

SOUND sleep is the greatest of blessings on earth; I've slept every night since the day of my birth! The moment I land with my back on the hay,—ker-zipp, off to Dreamland I'm wafted away! You see, in the course of my everyday life, I've never robbed neighbor, or stranger, or wife, and I am not bragging nor puffing myself, nor hiding old secrets away on the shelf, when I say with unction each dollar I own was won by real effort, with honor alone! No hungry eyes haunt me when I am in bed, no eyes that are swollen, and weary, and red; my dreams are not filled with the wailing of those who thru my tight dealings are wanting for clothes!

I've paid for each shoe and each garment I wear, in helping the weary I'm doing my share; I've paid for each shingle and window, and board that went in my house,—that is known to the Lord! I've done by my family the best that I could, they've never lacked shelter, nor clothing, nor wood! In charities, boosting, in public bequest I've shouldered my share with wise and the best!

Yes, sleep is a blessing, without it, I fear, the world would be weary, and chilly, and drear! The comfort I get when I land on the hay each night of my life at the close of the day is the comfort that's sweetest and best, if you please; I always sleep soundly,—My mind is at ease!—J. Edw. Tufft.



Montgomery Ward & Co.
Baltimore Md.

Gentlemen:
We have always found Ward's "True Blue." I tell all of our friends about your dependable merchandise. I also tell them of the prompt service and courteous treatment we receive at Baltimore. Your prices are the lowest for good merchandise. In all these years your goods have never failed to give satisfaction.

Sincerely yours,
Mr. and Mrs. Albert Hutchinson

This map shows the States served by our Baltimore House. Vast stocks of merchandise at this central point mean quick shipment and prompt delivery of your orders.

Better Quality Brings a Saving Equal to the Saving of Lower Price

This big Baltimore House of Ward's was built to be near to you, to bring closer to you our service of Saving and Satisfaction.

And there is for you a saving on everything you need to buy. There is a saving in cash every time you use your Ward Catalogue, every time you take advantage of the thousands of bargains it offers.

Sixty Million Dollars in Cash Make Ward's Low Prices Possible

Cash buys cheaper than credit—always. But large buying brings still lower prices.

Ten dozen are bought cheaper than one dozen—always. One thousand dozen can be contracted for still closer to the actual cost of manufacture.

Buying for You—*our eight million customers*—we buy in the largest quantities, and we buy for cash. No merchandising power can buy at lower prices than Montgomery Ward & Co., or sell at lower prices, without sacrificing quality to make a lower price.

Ward High Quality Assures You a Double Saving

At Ward's satisfactory quality, the serviceability of an article, is considered first. We do not deal in merchandise that is skimped in quality to make a seemingly low price.

At Ward's, Quality is always maintained. We do not adulterate, or substitute inferior materials. We do not put "price" ahead of your satisfaction.

At Ward's we never sacrifice Quality to make a low price.

Use Your Catalogue For Everything You Need to Buy

There is a saving of $50 in cash this season for you—if you *use* your Ward Catalogue, if you look in your Catalogue to fill every need.

There is for you in this Catalogue a genuine service of Saving and Satisfaction. There is for you at Ward's big Baltimore House a convenience, a time-saving that will be a delight to you.

So use your Catalogue. Compare prices—compare quality! and take full advantage of the Saving and Satisfaction that will be yours, if you send all your orders to Ward's.

To Investigate "Prosperity"

SENATOR WALSH, of Massachusetts, has asked for a commission of fifteen senators to "investigate the economic state of the nation." The declared intention is to lay the groundwork for the making of a national program of constructive action for the prevention of sectional and national depressions. The agricultural situation in the West, the depression of the textile industry of New England, and the cotton price slump in the South are real and serious situations which no amount of private or official prosperity-boosting can cure or dissipate. What is needed is a full understanding of needs and conditions before it is possible to unite the intelligence and efforts of all the people in the making of a program which will bring universal and lasting prosperity. Let us hope that, should the committee be appointed, the information gained will result in just that.

The United States and Canada

THE relationship and international goodwill which exists between this country and Canada, and which has existed unbrokenly for over a century, might well be taken as an example by the rest of the world. Of course, there are certain elements in this situation which are not found in other places, for example, there is a similarity of interests and resources, both are strong and rich, the same language predominates, and each has its racial roots in the same Old World soil.

But above all this is a sane spirit of honor and independence. The Canadian people are frugal and not afraid to work. The population of the entire Dominion is only that of Pennsylvania, yet during the past year they have paid $95,000,000 on their national debt, and reduced their taxes ten per cent, or $27,000,000 a year. The people of the United States rejoice in the financial success of Canada, partly because of the mutually satisfactory trade relations between the two countries. This nation sells across the border about $750,000,000 worth per year, and buys from Canada about $500,000,000 worth. With no other country in the world, except the United Kingdom, do we have a larger trade.

European papers please copy.

Let Us Vote on It

A BILL has been introduced into the legislature which would appropriate $30,000 for erecting a memorial statue to the late Senator Boies Penrose. All the citizens of the state who favor the bill please say, Aye.

Those opposed, say No.

The "No's" have it.

Will the World Disarm?

THE invitation which President Coolidge sent out in February, asking the five big powers of the world, Great Britain, France, Italy and Japan to sit down with us and talk over ways of further reducing the armaments of the nations met with almost unanimous approval in this country. The British government accepted the invitation, as also did Japan. But France and Italy definitely refused. Just what will be the result because of this cannot be said definitely at this time. Italy is under a unique form of government now, having a king who does not function and a dictator by sufferance who is the most effective dictator in the world. So far, Mussolini has not shaken the big stick outside of his own domain, but since his authority is based upon force and the influence of his own unique character, surrounding nations, of which France is one, no doubt feel some apprehension. It is difficult to explain France's refusal to embrace an opportunity to lessen her killing load of taxes except upon the grounds of fear. The refusal of this country to become a member of the World Court is made the basis of some charges of inconsistency.

Strengthen the Election Laws

THE past year's experience with the election laws of Pennsylvania should be sufficient to put every honest, loyal citizen squarely behind the move to make a repetition of the scandals impossible. The legislature which met in extra session in 1926 for this purpose refused to pass the bills recommended by Governor Pinchot. Now, Governor Fisher has recommended the passage of bills for this purpose which are known as administration measures. Surely, the odious notoriety which the late elections have brought upon the name of Pennsylvania should be enough to make even hardened politicians unwilling to turn these measures down this time. Governor Fisher in his inaugural address declared himself in favor of strengthening the election laws and all the truly American citizens of the state are behind him in this.

A Few of the New Bills

GRIST continues to pour into the hoppers of the legislative mill at Harrisburg. In the last few days many new bills have been introduced, among which are the following:

Making appropriation of money to duplicate federal funds to fight the corn borer.

Appropriating $250,000 from the motor license fund for the abolition of grade crossings.

Providing a three-cent tax on gasoline.

Changing requirements for search warrants by making it necessary to have purchased liquor at a place before warrant is issued.

Basing taxable assessments on actual property and providing for annual instead of triennial assessments.

Appropriating $30,000 for a statue in memory of Boies Penrose.

Appropriating $500,000 for site and new executive mansion at Harrisburg.

Making it a felony to hold membership in any oath-bound corporation whose chief executive officer is a resident or citizen of a foreign country.

Repealing all laws which provide for the "binding out" of minors.

Increasing the license of motor trucks to be imposed according to weight; fees vary from $1 to $250.

Permitting the use of $500,000 of motor license funds for maintaining Philadelphia highways.

Making an appropriation of $4,234,500 to Pennsylvania State College for the following purposes: maintenance, $2,181,000; $1,000,000 for new buildings; $403,500 for research work, and $650,000 for extension service.

If you have convictions on any of these subjects, write your senator and representative. It is a good citizen's duty.

The Sixty-Ninth Congress Ends

AS THIS is written only sixty minutes of the life of the sixty-ninth Congress remains. The time of the last few days has been wasted largely by the Senate in filibustering. Senator Reed, of Pennsylvania, has been using this questionable privilege in his attempt to prevent further action in relation to the Vare election investigation carried on by a committee headed by Senator Reed, of Missouri. Many important measures remain to be acted upon, but the indications are that some of them will fail because of lack of time. The only way Congress can prolong its life at its closing session is to turn the hand of the clock back, since the Constitution provides that its lifetime ends at twelve o'clock on the fourth of March. The voters of Pennsylvania may remember several things said and done by Senator Reed when he comes up for re-election next year.

Editorial Sidelights

IT WOULD be difficult to find anyone better qualified to write about seeds (Page 3) than Dr. C. E. Myers, professor of plant breeding at the Pennsylvania State College. Doctor Myers is more than a professor, as that word is usually understood. He practices what he teaches, to the benefit of Pennsylvania farmers.

The Penn State Ball Head variety of cabbage (see box on Page 8) is the result of plant breeding experiments conducted by Doctor Myers. The Penn State Earliana tomato was also developed by him.

THERE IS SOMETHING awe-inspiring about a large baby chick hatchery. We cannot overcome a feeling of wonderment at the thought that in those great incubator machines hundreds of thousands of living beings are being brought into existence.

It is all more wonderful because every one of those little individuals has a personality of its own. That is something people forget, unless they have lived close enough to a small flock of chickens to observe the traits and peculiarities of the different birds. They are almost "human."

It was Mr. Scharring-Hausen's article on Page 12 that called forth the above thoughts about chickens. Ever since our first visit to a large hatchery we have been "sold" on hatchery chicks. The competition between baby chick producers is so keen that the object of each hatcheryman is to produce the kind of chicks that will bring his customers back for more year after year. With each man striving to do a better job than his competitor it is not strange that the industry has grown so rapidly.

VETO WAS EXPECTED

President Can't Be Swayed by Political Expediency—Banking Bill Opposed by Grangers Passed.

Washington, D. C.

THE veto of the McNary-Haugen bill by President Coolidge was a foregone conclusion. Promoters of the bill had no cause to think he would do otherwise. Undoubtedly a considerable number of votes in Congress were cast for the bill with the expectation that he would veto it. That he believed certain features of the bill were inimical to the country's best interests and that it would not help the farmers, has long been known.

Whether the President took the wrong or right view of the matter is a question upon which honest men differ widely, but he cannot be accused of inconsistency. He has let it be emphatically known that he cannot be swayed by political expediency.

Other Plans Will Appear

Farm organization representatives in Washington, who favored the bill and regret its failure, are evincing a desire to confer with the proponents of other farm relief measures, and in conference develop a new farm relief plan embodying the workable features of the old bill, and which will meet the approval of both the Congress and the President.

While President Coolidge might have more clearly set forth the plans for farm relief that in his opinion would most effectively help the farming business, it is frankly admitted by his severest critics that he has left no cause for misunderstanding as to the proposals that do not meet his approval.

Appointments Confirmed

The appointments of Edward J. Brossard, of Utah; Sherman J. Lowell, of New York, and Lincoln Dixon, of Indiana, to be members of the United States Tariff Commission have been confirmed by the Senate. The nomination of Abram F. Myers, of Iowa, as a member of the Federal Trade Commission, has also been confirmed.

Mr. Lowell is a past master of the National Grange and an extensive farmer and fruit grower of western New York.

Doesn't Meet with Approval

The McFadden branch banking bill has become a law. It was opposed by representatives of the National Grange and other farm organizations, who regard it as a move to centralize control of finances and credit in a few large financial organizations. It also perpetuates the Federal Reserve System, and contains provisions which, it is believed, will compel all banks to operate under the system, or go out of business. At the beginning of the depression in agriculture, the belief was generally held by farm organization spokesmen that the Federal Reserve System was responsible for the deflation in farm prices, and this new move to enlarge the power and extend the life of the Federal Reserve Board is far from meeting their approval.

Complaints Not Justified

The Hare anti-dumping bill, designed to prevent destruction of perishable products by commission dealers, has passed Congress. Those who have investigated the matter say there is little need for such a law. A. M. Loomis, of the American Dairy Federation, who was assistant secretary of the New York State Food Commission, back in the World War period, says he investigated every case of alleged food dumping that came to the attention of the commission. Not a single case investigated justified a complaint against the commission merchants.

States Hold Up Action

The federal appropriation of $10,000,000 for corn borer eradication is now available, but the campaign against the spread of the European corn borer will be delayed until the legislatures of Pennsylvania, New York, Ohio, Michigan and Indiana have appropriated funds to supplement the federal appropriation. This delay will reduce the effectiveness of the campaign, according to Dr. A. F. Woods, of the Department of Agriculture, who says it may make it necessary for the department to postpone the corn borer eradication work until next season.—E. E. R.

ON THE HOME STRETCH

Legislature Mill Won't Turn Out Much Grist This Year—Higher Gas Tax Wanted to Pay for Roads.

Harrisburg, Pa.

PLANS for the legislation to be enacted at this sitting of the General Assembly of Pennsylvania have been about worked out. This week the lawmakers start on the home stretch as the close of the sitting is scheduled for April 14 and it is the idea to adhere to that date. If the acts of Governor Fisher thus far are to be taken as any indication, the grist of laws this year will not be large. Less than half a dozen bills have received his approval. There is no lack of raw material, but the leaders in the legislature are not willing to do much in the passing line. The Governor has shown a disposition to be economical and they are rather apprehensive as to his use of the veto.

About all the budget matter is now in hand and the appropriation work is to be pushed; hearings held and the administration bills given good tracks. Compensation and other biennial problems are in course of being worked out.

Higher Gasoline Tax Likely

It seems pretty certain now that the proposition of raising the tax on gasoline if additional good roads are to be constructed will be up to the legislature. There is much opposition to it, but the demands for improved roads are growing constantly and the city members are showing a disposition to go along on many of the schemes to add roads to the state system in the vicinities of their communities. There have been rumors that if the "gas" tax advance is not approved there may be a move for higher motor vehicle licenses. Hence, the legislators are giving serious thought to the gasoline tax. Changes in truck fees are also under discussion.

Starting All Over Again

Electric companies failing to get charters from the last state administration have been starting all over again. They are presenting their papers, altho in some instances there are changes from what met opposition from the people in power last year. The Public Service Commission is not showing much disposition to rush thru incorporations, most of the charters granted having been for rural districts.

Want Marketing Bulletins

One of the interesting facts in connection with the letters coming to the State Department of Agriculture for printed matter is that there are many people asking for publications dealing with marketing, especially wheat and potatoes. The subject is one to which much time has been devoted and the requests will be followed up for ideas or for opportunities to be of assistance.

Big Fight on Borer Planned

State authorities are giving much care to the planning of the campaign against the corn borer now prevalent in the western half of the state and it is probable some additional legislation will be asked for closer linking of the federal and state activities. The inspection work will be much closer than last year and will be as vigorously conducted as in the case of the Japanese beetle which is just at present also engaging thought at the State Capitol. Emergency funds will be made available for use a year hence if required.—R. T.

COVERS WIDE SCOPE

Bill Before Legislature to Provide Complete Eradication of T. B.—Seed Corn Tests Arranged Free.

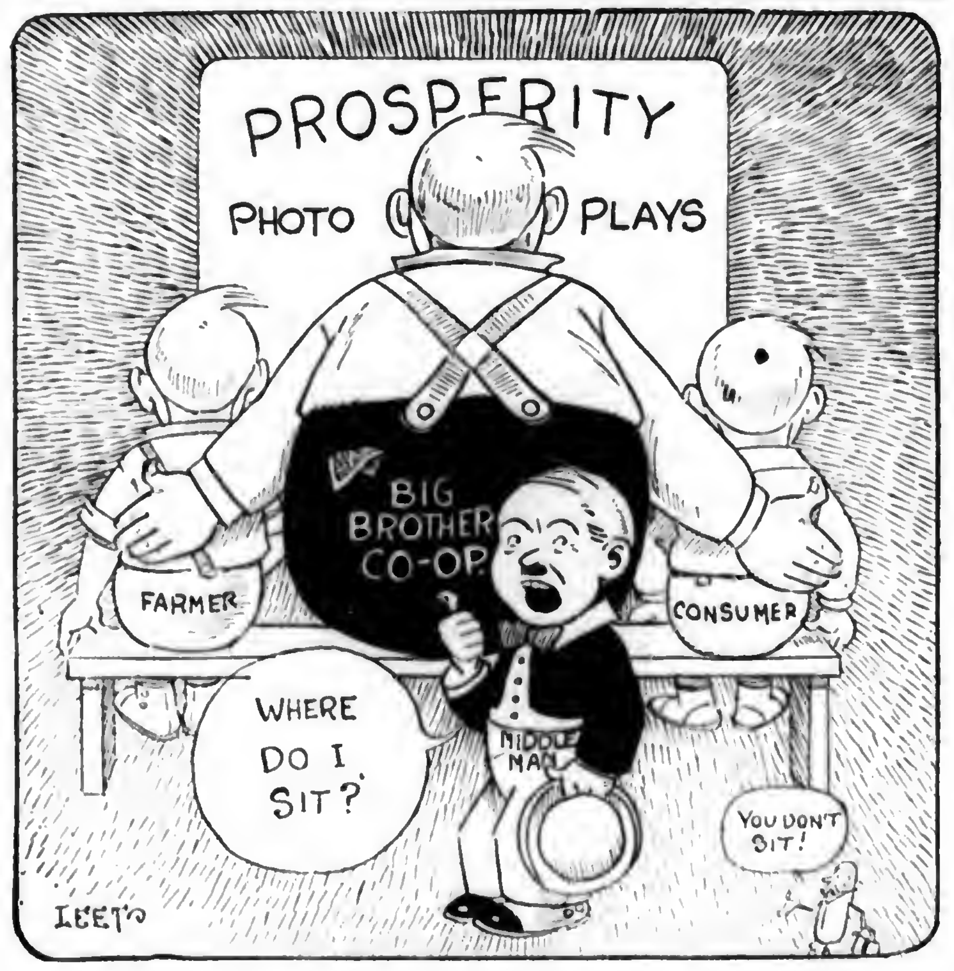
Trenton, N. J.

THE intention of the bill before the New Jersey Legislature relating to the area test plan is to provide a method by which townships and counties may completely eradicate tubercular cows. Representatives of the breed associations at the call of the Animal Industry Committee of the State Board of Agriculture have backed the measure and Morris County is greatly interested in the plan. The committee which prepared the measure consists of H. W. Jeffers, Plainsboro, chairman; C. E. Snyder, Pittstown, and C. Fred Day, Paterson. In addition to these men, Fred Lippincott, of Moorestown, and J. W. Miller, of Princeton, have conferred at the committee meetings.

Seed Corn Testing Widespread

Reports of farmers and county agents on home-grown seed corn held on the farms indicate the general condition of such seed to be unsatisfactory thruout the state. Hunterdon County has taken an aggressive position in arranging for systematic testing of samples from farmers of the county. The county Superintendent of Schools, his teachers as assistants, will correlate samples of seed corn at the local schools and forward them as a unit for scientific germination tests at the state college. The tests are run free of charge to the farmers. The same service is open to the farmers of other counties and with the general run of farm corn apparently so poor, the testing this year promises to assume some proportion.

STANDING ROOM ONLY



Live Topics Interest Fruit Growers

Apple and peach growers in Burlington County have secured the Moorestown community house for a series of fruit meetings to be held weekly on Friday during the spring months. In this intensive fruit growing section the growers are jointly preparing to meet orchard problems in an aggressive way.

Another Dairy Meeting Planned

C. V. N. Davis, of Somerville, was recently elected president of the Somerset County Cow Testing Association at its meeting in Harlingen. J. V. D. Bergen, of Belle Mead, was elected vice president and George C. Van Nuys, of Neshanic, was elected secretary-treasurer. The benefits of the association to its membership were discussed at length by I. D. Phillips, who has been in charge of the testing work. The association decided to hold a similar meeting in May to which all dairymen and interested farmers of the county will be invited. The meeting will probably be held in Somerville.—B.

EXPRESS APPRECIATION

Farm Public Says It with More Money—Law to Keep Criminals Imprisoned Meets Strong Support.

Ithaca, N. Y.

THE farm public is expressing its appreciation of the work of farm and home bureaus, thru generally increased county appropriations. So far as reported for 1927 the average appropriation for farm bureaus is $4062 a year, the minimum being $2000 and the maximum $10,000. With all but three of the county home bureaus reporting, eleven show increases in county support, and twenty-three show the same as last year. Both Erie and Monroe Counties give $8000 a year for work along home and community lines. The average county home bureau appropriation for last year was $3315. The city of Syracuse gave its home bureau the largest appropriation, $12,500. The average city home bureau last year received $11,123.

A Poultry Exchange

A bill has been introduced to incorporate a poultry exchange for New York City. Attorney General Albert Ottinger has completed plans for such a marketing service. He aims to make it impossible for dealers to parade a fictitious market in eggs as actual sales will determine prices. Both the state and federal governments have promised cooperation by furnishing information as to supply and demand and prices in other cities.

Baumes Law Supported by Farmers

One of the measures nationally supported by farm organizations and endorsed by farmers of this state is the Baumes law. An attempt will be made by the present legislature to modify the law here, but it will be staunchly opposed. Results are already seen. The law was in response to a demand that crooks be put in prison and kept there. A considerable number of criminals have been sent away for life, rather than given short sentences, permitting them to get loose and commit a fifth offense.—M. G. F.

Above: Arsenate of lead *without* Kayso: note uneven coating.—**At Left:** Arsenate of lead *with* Kayso.

Scientific tests and actual field use in all parts of the country have proved that Kayso is the ideal spreader and adhesive. Many authorities specify Kayso by name, and we have letters that indicate the successful use of Kayso on thousands of acres of fruit, vegetables, and shade trees.

For every spraying—in any season—or with any kind of material—Kayso *spreads the spray and makes it stay.* It is equally effective with Lime-Sulfur, Bordeaux, Arsenate of Lead, Nicotine, Whitewash, and as an emulsifier in the home-making of oil sprays.

Kayso costs so little and prolongs the life of the spray to such an extent, that it is poor economy *not* to put Kayso into every mixture.

So when you buy your spray materials always protect your investment by buying enough Kayso for all your spraying and dusting. Ask your dealer or write us direct for full particulars.

GOLDEN STATE SALES CORPORATION
175 Franklin Street, New York

When the Experts recommend
A CASEIN SPREADER
do you know how to buy the right kind?

Every grower who has been following government bulletins and farm journals for the past few years has learned the value of adding a Casein Spreader to the spray. Without a spreader, the ordinary spray mixture is deposited *in drops,* and leaves much of the surface exposed to insect pests and fungus diseases. And a spotty spray often causes blotches that lower the grading of the fruit.

To overcome this difficulty, the experts recommend the addition of a Casein Spreader, sometimes referred to as "calcium caseinate."

The Right Kind is Important

What is the best way—the sure way—to buy it?

Garden and Truck Crops

GILBERT S. WATTS, Staff Contributor and Adviser
Logan Spring Farm

Black Beetles, Men and Conventions

THE next annual convention of the Vegetable Growers Association of America will be held in Syracuse, N. Y., August 22-27, 1927. Everyone who has been accustomed to attend these meetings agrees that the fellow who specializes in vegetable crops cannot afford to miss them. Surely that is a busy time of year but after all it is not always how hard we work but how straight we think that determines our success. And intimate contact with other folks in our own line is a great help to straight thinking.

27 Tons per Acre

ERNEST E. BAKER, manager of Arch Spring Farm, near Tyrone, Blair County, Pa., planted a half pound of seed last spring. In the fall he harvested from that seed 22½ tons of cabbage. The yield from his cabbage patch was at the rate of 27 tons per acre.

The variety was Penn State Ball Head, originated by the "Burbank" of the Pennsylvania State College, Dr. C. E. Myers, plant breeding specialist.

Last Sunday afternoon the spring-like earthy smell and balmy air of my little greenhouse tempted me to sit down on a box and "luxuriate." I chanced to locate myself where the process of spading a bed of soil had been interrupted leaving a sort of trench, one side nearly vertical, pressed smooth by the spade and perhaps seven inches high. A slight movement caught my eye as a tiny black beetle fell from the face of this cliff and landed on his back in the trench below. Instantly he was on his feet and reattempting the climb. Four inches up his weight dislodged a tiny grain of soil and again he fell to the bottom of the abyss. Without a moment's hesitation he was at it again.

Just by Accident He Succeeds

Eight times this was repeated in exactly the same manner, at the same point of attack and with the same result. However, the eighth time the beetle had gained a greater height and in his fall he rolled several inches to his left. Here he found himself at the base of a miniature landslide. In a moment the easy gradient enabled him to reach the summit without further loss of energy and he hastened away to what I hope was the successful conclusion of the business in mind for he certainly displayed perseverance and pluck.

After he had gone I began to wonder in how many ways I am trying to do things in an impossible or most difficult manner all because I lack the perspective to see the easier and simpler ways. I often feel I am so close to my job I cannot see things in their true proportions. Time and again I have debated the cost in time and money of a trip to a grower's convention or some producing district. Usually I have weakened and gone and each time I have come back to the job seeing it more as a stranger would see it, as a whole and in truer perspective. And always I have seen here on my own farm certain things which surprised me and in the change of which I have found profit

Liming Now Saves April Days

From the time this reaches our readers it may be but a few weeks until outdoor plantings can be begun. We have been enjoying unusually mild winter weather here in Blair County and the opportunity has been taken to rush things for a flying start when planting time actually does arrive. A level fall plowed field has been limed. On a short drive the other day I saw several others at the same job. Just so many days saved from the April rush.

It is well to keep in mind that few of our major vegetables can be expected to produce good crops in sour soil. Watermelons, carrots, beans, peas, radishes, and tomatoes are among those more tolerant to acidity. Celery, spinach, beets, lettuce, onions and asparagus are especially sensitive to acidity. There is no economy in trying to do without lime when it is needed.

A reader has asked about the relative value of the different forms of lime for vegetables. Where several forms are available the relative cost at the farm figured on the basis of neutralizing value (ability to correct soil acidity), will answer the question. Taking the averages for the State of Pennsylvania as given by the latest Lime Report Bulletin it will require in even numbers 2500 pounds of hydrated lime or 3200

Reduced prices. We have a splendid assortment of Evergreens, Shrubs, Shade trees, Roses, Azaleas, Pink Dogwood, Boxwood, Magnolia, Hedge, Fruit trees and small fruits. We have a reputation for satisfactory dealing. W. T. HOOD & CO., Chamberlayne & Rennie Aves., Richmond, Va. Est. 1866.

pounds of pulverized limestone to do the work done by a ton of burned lime. Burned lime at $9 per ton, hydrated lime at $7.20 per ton and pulverized limestone at $5.63 per ton will cost about the same for the neutralizing value received.

On Logan Spring Farm we are very partial to pulverized limestone. It does not burn one in handling, can be applied thru any kind of grain drill, fertilizer drill or lime spreader and can be spread when too windy to get the lighter forms onto the ground.

Soon the Rush Will Come

We have been fixing up the driveway and parking space about the roadside market. Cinders, limestone screenings or gravel put on in liberal amounts will save mud and dust next summer. A smooth firm surface on which to stop will look much more attractive to drivers in crowded, swiftly-moving traffic.

From experience I believe it pays well to have, not only ample parking space off the highway, but in addition to provide an approach at least 100 feet long, smooth enough and hard enough so that your prospective customer can edge out of traffic at 35 miles per hour when necessary, slowing down off the highway as he comes to the stand. Equally important, cars moving some little distance parallel to the highway before turning out onto the pavement are seen by approaching motorists to be in motion several seconds before they actually break into the traffic stream, minimizing, thereby, danger of collision.

If water under pressure is available and the distance is not too great a pipe line laid to the roadside stand and ended with a frostproof hydrant will attract folks with radiators to fill and will make it possible to keep vegetables crisp and fresh. Wet beets and carrots show twice the color of even slightly dry ones and sell ten times as fast. There will be no time to lay pipe lines next summer.—Gilbert S. Watts.

March Plays Tricks on Gardeners

MARCH is here and gardeners everywhere are in the midst of plant growing operations. It is a month of sudden changes.

A few years ago, on St. Patrick's Day "in the mornin'," at 1 A. M. to be exact, the sky being cloudy and the outside temperature 30 degrees F. our greenhouse fire was banked. At 6.30 A. M. the mercury had fallen to 17 below zero and the greenhouse thermometer stood at 33, one degree above freezing. That was a close call and the same principle applies to the temptation to leave the mats off plant beds when nights promise to be warm early in the season.

The amount of faithful attention and skill which we put into growing our plants now will determine the quality of plants we may expect to set out in April and May.

At night and on cloudy days lettuce, cabbage and cauliflower may be carried at 40 to 50 degrees F. while tomato, pepper and eggplant may be run at 60 to 70. When it becomes advisable to advance or retard growth higher or lower temperatures may be used.

Some fresh air on all but the most severe days will help control disease. Damping off, the rotting off or drying up of the stem at the surface of the ground, is seldom troublesome where new or sterilized soil is used and where watering and ventilation are carefully managed. In order that the foliage may dry off before night water in the mornings of clear days as soon as the bed has begun to warm up.—Gilbert S. Watts.

Clover Seed

Catalog FREE

Here's a Seed Catalog That's Different

DEALS entirely with important Farm Crops that mean profit or loss on the season's work. Offers kinds adapted to your soil and your climate. Gives ten pointers to success with Alfalfa, and ten more for Soy Beans—also practical ideas on other crops. Write for your copy today.

Clover Seed: Extra-quality Red Clover Seed,—safe to sow—hardy and suited to Eastern farms. Also Mammoth and Alsike. Finest White Blossom Sweet Clover, scarified. Free from foul weeds. Tested . . . . high germination.

Alfalfa: Genuine "Grimm", State-Certified and sealed . . . splendid quality. Also our famous "Northwest" Brand. Free from weeds, bright and plump. High in germination. Let us quote prices.

Seed Oats: Seven kinds, including both "horse mane" and "tree" types. "Shadeland Climax", our leader for 11 years; "White Russian", "Swedish Select", etc. Heavy plump oats from the North—extra vigor—will increase your oat yield.

Potatoes: Choice Maine-grown and Michigan-grown stock. The Standard commercial varieties—early and late kinds—Selected and Certified Seed. These Northern grown Seed Potatoes will outyield and outpay home-grown stock.

Seed Corn: Lancaster County-grown, well cured, dry, hard, sound Seed. Tested—90 to 95% germination and better. "Lancaster County Sure Crop"—an extra value, all-around corn—fine for the silo and a good husking corn, too. A dozen other good varieties—white and yellow dents and quick-maturing flints.

Soy Beans: We have a good supply of "Wilson Black"—the Variety most popular with Eastern farmers. The quality is splendid and the prices reasonable. Also other standard varieties.

Grains—Grasses: Barley, Spring Wheat and Rye. Fine clean Timothy Seed. Hay and Pasture Mixtures. Millet, Sudan Grass, etc.

Other Seeds: Canada Peas, fine for early green feed . . . . Vetches, Rape, Cowpeas (several varieties)—also Seeds for other forage crops and cover crops . . . . Write today.

LIME for BIGGER FARM PROFITS
Warner

CRAM-FULL of practical information on the Use of Lime on the Farm—authoritative—based on actual experience where liming the soil has increased crops to put big profits in farming. Also information on the use of lime for feed, for spraying, building and whitewash.

Warner's "Limoid" is pure hydrated lime. For 26 years it has been used to correct soil acidity and for all other farm uses. "Limoid" is economical; because of its extreme fineness, it more thoroughly impregnates the soil and goes further than other forms of lime. Easy to apply; no danger of burning grass, roots or soil humus. Every dollar invested in "Limoid" will turn a profit for you.

"Limoid" comes in the handy 50-lb. strong paper bags—easy to handle—safe to store.

New Way Ends Frost Damage

Insure Against this Hazard — "Hotkaps" Stimulate Growth, too, so You Can Be Earlier to Market for Better Prices.

USE "Hotkaps", individual hothouses that completely cover each plant, *protecting them from frost,* and stimulating a rapid, healthy growth. "Hotkaps" also shield plants from practically every danger, stimulating their growth to earlier maturity. Yet they get ample moisture and can be easily ventilated.

The most economical, and the most certain insurance for plants known against frost, rain, excessive heat, and wind. The cost is small—in quantities less than a penny each. Now widely in use in 38 of the states of the Union.

Your dealer probably has them in stock. Go see. *If* not, send the coupon now for additional information.

Staff Contributor and Adviser
Head of the Department of Horticulture
Pennsylvania State College

Cooperative Marketing Can't Succeed with Mediocre Fruit Poorly Packed

FOR the benefit of those attending the annual meeting of the State Horticultural Association of Pennsylvania held in Harrisburg in January, Mr. M. C. Burrett, of Hilton, N. Y., who is prominently identified with the cooperative movement in western New York fruit growing, summed up his experience with this movement in the remark, "Cooperative marketing of fruit must follow, rather than precede, the general improvement of the quality of the pack and standardization of grades."

In his judgment it is futile to attempt cooperative marketing until the members of the association have reached the point where they are willing to rigidly eliminate all mediocre varieties from their orchards, and to follow such cultural practices as may be necessary to produce a high grade of fruit. "We need in the East," he said, "not so much more cooperative packing houses, or better advertising, as the more general production of a higher grade of fruit, which will largely advertise itself."

Only One in Ten As Marked

In support of his statement that the poor average pack of eastern apples is still the heaviest millstone about the neck of the industry, he told of a recent meeting of western New York growers in which fifty sample barrels of apples were opened. These barrels were taken at random from storages by federal inspectors, one barrel from the stock of each grower. All were marked "No. 1." The inspectors graded these apples at the meeting before their owners, but the fruit was known only by number, not by name of grower. Forty-five of the fifty barrels were below grade. This demonstration carried conviction to many who had thought that they were putting up a good pack.

A good pack depends, first of all, on growing good fruit. In western New York, Mr. Burrett reports, there is a tendency for growers to neglect their orchards, particularly pruning and spraying, during these low-price years. Some are even pulling out their trees.

No Reason to Uproot All Trees

He sees nothing in the present situation to warrant the wholesale uprooting of apple orchards, but does see the urgent necessity of culling out varieties that are unprofitable over a term of years, and also individual trees of profitable varieties that have passed their usefulness. The members of his cooperative association have 105 varieties in their orchards; only 15 of these have been approved by the association.

The state apple grading law of New York has been a disappointment, largely because growers can pack tree run if they wish, and most of them do so. Mr. Burrett believes that it is impracticable to compel good grading by law, whether state or federal; that improvement must be sought thru voluntary action, not compulsion. This was the recommendation of the recent conference of New York apple men. They favored an organization of growers to establish a high grade brand of farm packed fruit, all individual packs subject to federal inspection, but the

(Continued on next page)

It Paid to Advertise

THE extent to which the citrus industry is willing to spend money to push the sales of its products is shown in the following extract from the report of the California Fruit Growers' Exchange for the year ending October 31, 1926. The report is of particular interest at this time to the apple growers of the country, who are now considering how to raise funds to advertise the apple, which is a competitor of citrus fruits.

"The expense of marketing the fruit shipped was 1.96 per cent of the f. o. b. value. The deduction to cover the expenses of the central exchange was 5.48c a box, and the average deduction for the district exchanges' service was 1.38c, making a total average deduction for marketing, exclusive of advertising, of 6.86c. This was 1.60c less than for the preceding year. The deduction for advertising was 4½c a box for oranges and grapefruit and 7c a box for lemons. This was the same as for the two preceding years.

Widespread Campaign Gave Results

The 1925-26 advertising program included 99,000,000 individual advertisements in national magazines; 486,000,000 advertisements, featuring hot lemonade, in 275 newspapers; a special newspaper campaign on Sunkist oranges for the holidays in newspapers in 73 cities; an orange campaign in 220 daily newspapers reaching 16,125,296 people; and 150,600,000 advertisements featuring lemons for all-the-year use.

Bulletins, wall charts and colored posters were distributed to persons engaged in educational work as follows: Bulletins to the number of 2,604,780 to domestic science teachers and extension workers; 144,735 dietetic bulletins to nurses, 6,029 wall charts were hung in class rooms, 11,155 colored posters were mailed out, and 1250 commercial tea rooms were supplied with a series of educational bulletins.

Equipment Supplied at Cost

About 25 per cent of the advertising appropriation was used for dealer service work in the United States and Canada. Personal calls were made on 48,682 fresh fruit dealers, 28,796 window displays were installed, 272,918 pieces of display material were distributed, 4108 fountain displays were arranged, and 218,592 letters were mailed to the trade.

During the year, 6600 Sunkist electric fruit-juice extractors were sold at cost to fountains, hotels, restaurants, clubs and individuals. The number of extractors now in use is more than 33,600. It is estimated that these extractors increased the demand for oranges and lemons by about 4000 carloads in the year."—S. W. Fletcher.

growers to determine how the fruit is to be sold, whether cooperatively or not. These growers feel that there is greater need right now for cooperation in production, to secure better fruit, than for cooperation in marketing.

The local central packing house is gaining in favor in New York but the central sales agency is still on trial. The chief problem is to keep down the cost of packing. This is uniformly higher than in well organized private packing houses. It runs from 35 to 48 cents a barrel, as compared with 20 to 28 cents in private houses. It is imperative to keep the overhead at the lowest possible point; therefore, use the cheapest building that will answer the purpose.

Cost Varies with Volume Packed

Rarely does it pay to put over $5000 into a central packing house and usually it should cost much less. On a 10,000 barrel output even this is a charge of five cents a barrel. The greater the volume of fruit packed, the lower the cost. Charge for packing by the bushel, tree run, as delivered at the house, not by the bushel of packed fruit.

It is Mr. Burrett's experience that the longer the grower keeps control of his fruit on its journey from the orchard to the consumer the better price he usually gets. In western New York the apple grower gets 22.8 per cent of the consumer's dollar, and the shipper 13.5 per cent. In the western box apple district the grower gets 24 per cent and the shipper 5 per cent.

He called attention to the rapidly expanding business of chain grocery stores, which now buy very large quantities of fruit direct from growers. This is one means of increasing the grower's margin.

According to this well posted fruit man, the apple business of western New York is in a rather bad way "not only because we are losing our markets to other fruits, but also because we are growing a lot of stuff that the market does not want. No advertising campaign can sell this junk at a profit to the grower. We must raise better fruit, of the best varieties, and pack it better. When we have done this, and can stand back of our product, advertising will increase sales."

Tree Run Preferred by Peddlers

H. B. Tukey, of Hudson, N. Y., reported a marked increase in the sale of tree run apples in New York City, the fruit being sold just as it comes from the trees. The peddler trade prefers these mixed sizes.

The basket manufacturers in New York State sold 50 per cent more bushel baskets in 1926 than in any previous year. About half of them were straight side bushels. This is evidence of the decided drift toward the bushel package for fruit that formerly went into barrels.

The New England states have given a good demonstration of the capacity of the eastern fruit grower, when fully aroused, to fight for possession of his home markets. Ten years ago Washington and Oregon apples dominated New England markets. Now 70 per cent of the apples sold in New England are home grown.

Mr. Tukey reported an increase in the number of small cold storages on Hudson Valley fruit farms. These hold 3000 to 5000 barrels and cost from $2.00 to $6.00 per barrel capacity. They are used for general purposes, such as for storing eggs, butter and poultry, as well as for fruit.—S. W. Fletcher.

Less than 12 per cent of the fruits and vegetables grown in Pennsylvania are shipped to market. Practically all of the remainder, except those used for seed, are sold in the state's unexcelled local markets.

Get these facts firmly in mind

THIS IS WHAT ENGINEERING LEADERSHIP MEANS TO THE LIGHT CAR BUYER

The *Whippet* is the only light car nationally equipped with 4-wheel brakes.
The *Whippet* is the most economical car on the market.
The *Whippet* has all the speed you will ever want.
The *Whippet* has more leg-room than any other light car.
The *Whippet* is the smartest appearing light car.
The *Whippet* has established a new National Economy Record, averaging 43.28 miles per gallon in a 3,559 mile coast-to-coast trip.
The *Whippet* has standard tread with ample road clearance.

Now at these remarkable reduced prices, the Whippet is more than ever the leader in light car value.

when March ~~winds BLOW~~ feed FUL-O-PEP CHICK STARTER

Protect your baby chicks from this month's uncertain weather—insure the life of every fluffy little bird—enjoy the profit and satisfaction of saving your hatches

You can't control the weather, but when you feed Ful-O-Pep Chick Starter in March the little chicks respond to it as they do to sunshine and June weather. For Ful-O-Pep Chick Starter is the feed that "works like sunshine." It contains Cod Liver Oil, so that bone-weakness is eliminated.

And it also contains Cod Liver *Meal*—that marvelous substance that helps the nourishing oatmeal and other ingredients put their goodness right into the blood, flesh, and frame of the baby chick.

Cod Liver Oil gives the chicks a plentiful supply of the vitamins that prevent rickets, soft bones, toe-picking and other destructive troubles.

And oatmeal, the base of this "sunshine ration," is especially good for chicks. It is soft, and easily digested by the chick's tender digestive organs. To the oatmeal are added minerals, proteins, and other ingredients to form a *complete*, balanced feed. Chicks started on Ful-O-Pep can be raised into profit-making poultry—heavy layers, vigorous cockerels, or prime early market fowl.

It's easy to feed Ful-O-Pep Chick Starter; buy it from the dealer near you who handles Quaker Feeds. He has Ful-O-Pep Fine Chick Feed, too.

Send for your FREE copy of the 1927 Ful-O-Pep Poultry Book. The 10th annual edition is ready, and it's just full of valuable information. Fill out the coupon, mail it today.

POULTRY

R. L. SCHARRING-HAUSEN
Staff Contributor and Adviser
Glenview Farm

The Poultry Editor welcomes inquiries concerning poultry problems and will reply promptly by personal letter to all questions sent in to him. Correspondents should give as much information as possible stating age and breed of birds and method of feeding, in order that the most help can be given. Address, R. L. Scharring-Hausen, Care of Pennsylvania Farmer, 261 S. 3rd St. Philadelphia, Pa.

Artificial Methods Replace Whims of Setting Hen

TWO things have made the business of poultry keeping possible on a commercial scale: the use of artificial methods for hatching and brooding chicks. The whims and vagaries of the time-honored setting hen could never have been depended upon to produce the millions of chicks that are turned out by the hatcheries annually, nor to brood them after they were hatched.

Awhile back, farmers attempted to do their own incubating with oil lamp incubators. While these generally gave good results if managed right, the present tendency seems to be to let the commercial hatcheries take over that branch of the business. Men who keep good-sized flocks either send their eggs away to be hatched or buy baby chicks outright.

Recruits to Fill the Ranks

In the one case it is necessary to maintain a breeding flock of old hens, but if all the chicks are bought, only pullets need be kept, arranging matters so that early hatched pullets are ready to take the place of the older birds as they stop laying.

There are three outstanding advantages in buying chicks. The first is that they can be had all at once. This enables a person to raise a nice uniform flock all of an age and coming into lay at the same season. Such a flock is much easier to handle and care for. The chicks also do better than when chicks of different ages run together as all have an equal chance.

Or, it is possible to buy the chicks in two or more lots, say an early bunch to provide fall eggs, and the bulk of them somewhat later, to divide up the danger of an early molt from the early hatched chicks. It is sometimes a problem to know whether high priced fall eggs will offset the profits lost from an early molt, so while taking a chance on some early birds, most poultrymen put their main reliance on pullets to start laying in October.

This question of earliness is very important, especially with the heavier breeds. Old farmers often did not expect eggs during the winter, as the hens were recovering from the molt and the pullets were not yet mature. The late hatched pullet is seldom very profitable, and by purchasing chicks at the right time and rearing them in colony brooders, the pullets should certainly all be laying by Thanksgiving at the latest.

Still another point in favor of buying is the chance to get better stock. Good hatcheries use only mature hens of good type as a source of eggs, and these hens are mated to superior cockerels bred from high-producing stock. Chicks from such matings are far superior to the common run.

Different Types of Hatcheries

Hatcheries are of several kinds. First, there is the chick jobber, whose office is the station platform. He gets orders for chicks and has them filled at hatcheries which quote the lowest prices, re-shipping the chicks to the customer when they arrive and, of course, making a profit on the deal. Such a gyp is a man to avoid, for obvious reasons.

Then there is the hatchery that makes a specialty of cheap chicks. The eggs are bought wherever they can be had without paying much attention to the flocks whence they come, and the chicks are a pretty common lot.

The better hatcheries have their eggs produced by flocks that are under expert supervision: the hens are carefully selected and mated to good cockerels. Chicks from these hatcheries cost a little more, but are worth a great deal more than "cheap" chicks.

Investment Won't Be Regretted

There is still another type of hatchery, or breeding farm. These are run by men who have built up special strains by years of trapnesting and contest work. The eggs come from carefully selected hens of the best blood lines, mated to highly bred pedigreed cockerels. Such farms produce all the eggs they hatch. The chicks are comparatively high priced, ranging from $20 to $30 per hundred, but for a poultryman who understands his business they make the very best investment.—R. L. Scharring-Hausen.

Planned to Face the South

This colony brooder, recommended by the New Jersey Experiment Station, was described in last week's issue.

GOOSE OR GANDER?

How to Determine Sex of Geese—Gander Helps Raise the Goslings

Will you please tell me how to tell a goose from a gander? After a goose starts to lay shall I take the eggs out or leave them in the nest? After the goslings hatch shall I let them run with their mother or put them in a pen? Will they eat young potato vines? What shall I feed goslings?—Mrs. W. A. S., Mercer County, N. J.

The following paragraph on determining the sex in geese is copied from a government bulletin:

"The gander is usually somewhat larger and coarser than the goose and has a shrill cry, while the female has a coarse cry. The male has a heavier, longer neck and a larger head. The sex may be determined by inspecting the sexual organs or by the actions of the geese at mating time. The sphincter muscle which closes the anus of the female is folded and winding or sinuous if stretched, while a light pressure on the corresponding section in the male will make the sexual organ protrude."

Ungathered Eggs May Freeze

I always take the eggs out of the nest as they are very liable to freeze or become broken if not gathered. The eggs can be set under fowls, and the goose broken up when she gets broody. Treated so, she will lay a second and sometimes a third clutch of eggs. The goose can be allowed to set on the later eggs.

The goslings should be removed from the nest as soon as hatched and put in a box lined with cloth and set near the stove to dry off. When the hatch is over and the goslings are strong, they can go back to the nest. Old geese make very good parents, and the gander helps to raise the goslings. It is advisable to keep them in a small yard at first, unless the weather is nice and warm, otherwise the geese may take the goslings too far.

Bread and Milk Fed Often

Bread and milk makes a good first feed, and should be given when the goslings are 36 hours old. This should be fed five times a day for the first week. They should have plenty of water to drink, and get some green feed such as lettuce or tender grass. The second week they can have dry cornmeal in place of two feedings of bread and milk and by the third week you can cut this out and keep the cornmeal before them all the time.

By the fifth week you can work the meal over to a chick growing mash. Be sure that the goslings get lots of green feed, which is their natural food, also plenty of drinking water and some fine grit or sand. Many people let the young goslings run with the geese after they are a few weeks old, and let them make their growth on good pasture.

I don't think that you need worry about the young potato vines if they have good grass pasture. But keep them out of the young corn.—R. L. Scharring-Hausen.

To Get Rid of Lice

Please let me know what I can do to destroy chicken lice.—A. S., Dauphin County, Pa.

Sodium fluoride is the best thing to destroy body lice in fowls. It is a white powder that you can get at the drug store. Rub a pinch of this in the feathers around the vent, under the wings, on the back, and on the neck. We always use this on the pullets when they are shut up in the fall, and they have no lice all winter.—R. L. Scharring-Hausen.

"Compare it with the finest cars of Europe and America—and you will discover that the only difference is one of wheel-base and price" . . .

$1095

Of all the changes which have occurred in the automotive industry during recent years, none is of greater significance than the trend of public opinion toward the Oakland Six. *Each year more buyers have seen that no other car of comparable price provided such masterly engineering, such scrupulously fine construction and such superlative performance results!*

That the Greater Oakland Six is the Oakland triumph of all, is clearly revealed by the spectacular popularity it has enjoyed from the day of its introduction. It offered such valued features as commandingly beautiful bodies by Fisher, the widely imitated Harmonic Balancer, four-wheel brakes, air cleaner, oil filter. It introduced the now famous Rubber-Silenced Chassis and foot controlled tilting beam head-lights. *And it took all America by storm!*

If you know the many benefits and advantages attached to the ownership of a truly fine car—come in and see the Greater Oakland Six. Compare it with the finest cars of Europe and America—and you will discover that the only difference is one of wheel-base *—and price!*

more EMPIRE Milking Machines than any other make—why?

WHEN a national farm paper recently asked its readers whether they owned milking machines and what they thought of machine milking, *more reported owning and preferring Empire Milking Machines than any make listed.*

Why? In letters to us, farmers have said:

"Cows are less nervous and give more milk per day, for more days, when they are Empire-milked."

"One person can milk more cows in less time with an Empire than two or three expert hand milkers."

"Cows keep healthier and milk is cleaner."

"The wages and keep of a hired man are saved by the work an Empire Milking Machine does."

"It makes dairying a pleasanter, more profitable, better business."

Sold on easy payment plan. Send for booklet—mail the coupon today.

New B B Marvel Cream Separators—More Cream without More Cows

The improved, permanently balanced bowl of the new B B Marvel gets extra cream from every can of milk—more cream without more cows It gets all the cream all the time. The bowl does not vibrate nor tilt because it is mounted on an automatically oiled ball-bearing spindle, supported by a stationary shaft. It has no neck springs nor bushings to wear out and cause trouble. It skims cleaner and lasts longer.

When you run the skim milk from any other separator through a B B Marvel you too will want the extra cream. See a B B Marvel in action. Sold on easy payment plan—a size for every herd. Mail the coupon today.

You can afford the Empire Water System

Complete motor, pump and tank equipment of the Empire Water System costs only about what you pay for a first-class radio set. It gives you comfort and saves time and work 365 days in the year—lasts a lifetime.

Costs about a nickel a day to operate and makes kitchen, laundry and dairy work easier. Provides bathroom conveniences, cuts down fire insurance costs, supplies cows and hogs with all the water they want—means more milk and heavier hogs.

The Empire Water System is easy to install, silent and automatic in operation, capacity 300 gallons per hour. Sold on the easy payment plan. Mail the coupon today.

Staff Contributor and Adviser
Head of the Department of Dairy Husbandry
Pennsylvania State College

Dairy Cows Pay the Freight on Fruit

MR. H. A. FREED, proprietor of Rockland Fruit Farm, Lawrence County, Pa., has the happy faculty of being able to do two things at the same time and doing them both well. A substantial fruit farm is his main enterprise, while dairy cows "pay the freight."

Mr. Freed formerly got manure from Pittsburgh to maintain the fertility of his fruit farm, but prices on freight and loading became prohibitive, so he decided to get some cows. Opposed to scrubs, he bought two purebred registered heifers about to freshen. These two animals did so well that Mr. Freed attended a dispersal sale and purchased five granddaughters of the noted bull, Pontiac Korndyke.

Mr. Freed's next step was to apply the tuberculin test to his herd. This resulted in the loss of the first two animals purchased. He then joined a cow testing association in order to find out the actual production of each cow and afford a basis for herd improvement. After getting the yearly record of production of each cow he sold the two poorer cows and has built up his present herd largely from the three remaining cows mated with purebred bulls.

Doesn't Like to Work for Boarders

A few grades are kept, but only such as have three or four registered bulls back of them. Mr. Freed thinks it does not pay to raise the grade heifers as he can get $75 to $100 more for registered heifers when due to freshen the first time.

Regarding the value of the cow testing association, Mr. Freed says: "The cow we thought was the lowest in butterfat proved to be our highest average tester. The association enables me to keep the heifers from our best cows. I can get more for bull calves that have good cow testing association records and know I am not working to entertain a bunch of boarders. I like to get paid for working."

The cows are pastured in summer and also receive one pound of grain for every four to five pounds of milk produced. When pasture gets short Canadian field peas and oats are fed, followed later in the season with sweet corn.

The winter ration includes home-grown alfalfa hay, cow beets, grain and an abundance of fresh water from individual water cups. Mr. Freed mixes his own dairy ration, using the following grain mixture:

400 lbs. winter wheat bran from local mill
800 lbs. corn and oats chop from local mill
400 lbs. 34 per cent linseed oil meal
600 lbs. 23 per cent corn gluten feed
200 lbs. dried brewers' grains

Mr. Freed gets results. His herd led the Westfield, Lawrence County, Cow Testing Association in production for the year ending September 1, 1926. The association includes twenty-five members. His herd average for the year was 11,406 lbs. of milk and 392.2 lbs. of butterfat. His purebred Holstein cow, Korndyke Jewel Ormsby DeKol 312081, was the highest producer among the 300 cows in the association with a year's record of 14,630 lbs. milk and 526 lbs. of butterfat.—A. A. Borland.

Inter-State Milk Prices

THE Philadelphia price for milk in effect March 1, as announced by the Inter-State Milk Producers' Association is as follows: For the basic quantity, $3.29 per 100 pounds, 7.1 cents per quart. The February surplus prices are: Class 1 surplus, $2.61 per 100 pounds, 5.6 cents per quart; Class 2 surplus, $2.20 per 100 lbs., 4.75 cents per quart.

These quotations are for 3 per cent milk. The differential is 4 cents for each tenth point and 2 cents for each half tenth point up or down in butterfat test.

Taber Visits Students

LOUIS J. TABER, Master of the National Grange, will be guest of honor at the annual banquet of the Penn State Grange, March 19th. This subordinate Grange is made up largely of students in agricultural courses at the Pennsylvania State College. P. H. Dewey, who recently resigned his position as Master of the Pennsylvania State Grange to become manager of the Workmen's Compensation Fund, will also be present as the guest of the student-Grangers.

Korndyke Jewel Ormsby De Kol, Mr. Freed's Holstein which produced more milk than any other cow in the Lawrence County Cow Testing Association last year.

Inter-State Holds Series of Meetings in Peninsula

LARGE numbers of dairymen on the Del-Mar-Va Peninsula attended community dairy meetings held the last week in February in the Eastern Shore counties of Maryland and northern Delaware by the Inter-State Milk Producers' Association and the Philadelphia Inter-State Dairy Council. Meetings were held at Cambridge, Hurlock, Princess Anne, Easton, Centerville, Middletown and Chestertown.

Practically the same program was given before each group of dairymen. The features were a talk on "Who Is Making Money in Dairying and Why," by Mr. Cohee, head of the Quality Control Department, Inter-State Dairy Council; a discussion of "New Problems of the Dairy Industry," by H. D. Allebach, president of the Inter-State Milk Producers' Association, and a talk on the problem of contaminated milk by Mr. Davis, production manager of one of the large Philadelphia milk distributors. Robert W. Balderston, secretary of the Council and of the Association took part in some of the meetings.

William Shiftless Convicted

The less serious part of the program included a "lecture" by "Professor Happy" Goldsmith, of the National Dairy Council, and a mock trial. The trial, conducted by the Court of Common Sense, resulted in the conviction, amid much merriment, of one William Shiftless, accused of selling contaminated milk.

In his address Mr. Cohee reminded the Eastern Shore dairymen of their natural advantages,—nearby markets, low land values, a mild climate and a long pasture season. He suggested the use of silos and more leguminous crops as important aids to economical milk production and urged higher production per cow as the important factor in greater profits for dairymen. Farmers in some parts of the Inter-State Association's territory are shipping three times as much milk per cow as those in some other sections. Owners of poor cows may make money when milk prices are high, but they cannot possibly operate with a profit when prices are low.

Mr. Cohee showed some charts which made very plain the hardship unnecessarily borne by the dairyman with low producing cows. These charts showed that:

In one section in the Philadelphia milk shed TWO COWS GIVE ONE PAIL OF MILK.

In average Inter-State territory ONE COW GIVES ONE PAIL OF MILK.

But in the good cow-testing associations of Pennsylvania ONE COW GIVES TWO PAILS OF MILK.

Exerts Lots of Waste Labor

In other words, the owner of poor cows,—as well as the owner of good cows poorly fed,—is milking four animals to get as much milk as his neighbor gets from one.

Mr. Allebach stressed the importance of making the milk supply fit the market demand. The Philadelphia housewife doesn't want two quarts of milk a day in the fall and six quarts in the spring. She isn't interested if cows produce too much on fresh pasture and not enough when feed is short. She wants an even supply the year around. The Philadelphia price plan is designed to encourage the production of a uniform milk supply without disastrous price fluctuations.

The status of tuberculosis eradication in Maryland was explained by Mr. Allebach. The state legislature should appropriate funds to carry on this work if dairymen are to be protected against the possible closing of their markets, in the not distant future, to milk from untested herds.—C. L. W.

DON'T Build—Remodel Ventilate or Equip A Hog House, Dairy Barn Horse Barn or Poultry House Until You Get Our Free Book

TELLS WHY Jamesway COSTS LESS and Saves Costly Mistakes

If you are thinking of building, remodeling or ventilating a cow or horse barn, hog or poultry house, or if you are considering the purchase of labor and time-saving equipment for such buildings, by all means, fill out coupon in this advertisement and let us send you free our valuable Jamesway book.

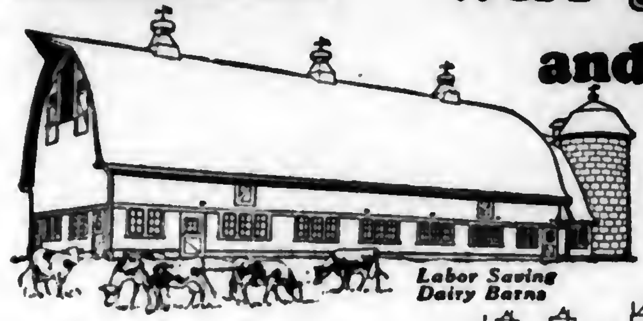
This book will show you how you can save money and have your buildings planned and equipped so that they are most convenient and practical. If you will avail yourself of Jamesway service, you'll have the same gratifying experience as H. L. Hartly, Manager of Island Farms, Duluth, Minn. Here's what he writes:

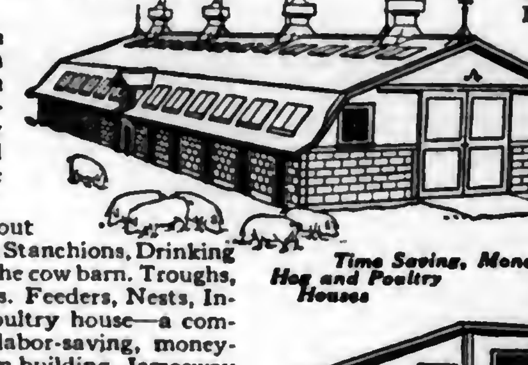
"We very much appreciate the splendid architectural service you have rendered us. The ability you showed to adapt plans to meet results desired were a revelation to me. Your suggestions saved me considerable in material and time."

Our many years' experience in planning and designing farm buildings enables us to save you money on materials and construction—show you how every door, window and general arrangement should be to make buildings convenient.

This book also tells you all about Jamesway Equipment—Stalls, Stanchions, Drinking Cups, Litter Carriers, etc., for the cow barn. Troughs, Waterers, etc., for hog houses. Feeders, Nests, Incubators, Brooders for the poultry house—a complete line of every kind of labor-saving, money-making equipment for any farm building. Jamesway Equipment is better and costs less in the long run.

Mail coupon today. Tell us just what you are interested in—whether building, remodeling, ventilating or equipping cow barn, horse barn, hog or poultry house, and we will send you the book that tells you just what you want to know.





Time Saving, Money Making Hog and Poultry Houses

"If—for *any* reason, the valve chamber on this Milker should be damaged, or get out of order, we will repair or replace it free of charge, during the life of the machine."

What THIS Guarantee Means

19 years ago, the first Hinman Milker carried the above guarantee.

From that day to this, *no Hinman owner has ever had to buy a new valve to replace the original one.*

THIS GUARANTEE MEANS

1. That from the start, the Hinman idea has been to sell *dependable, day-after-day machine milking*—not just a machine.
2. That the Hinman Valve, so simple it hasn't even a spring, *has* to be reliable or we couldn't afford to make that guarantee.
3. That of the two moving parts on the Hinman (aside from power) the only one that needs factory attention to adjust it, is protected by free service *as long as you operate a Hinman Milker.*

Think what that guarantee means! And then get *all* the facts. Find the other reasons why the Hinman is today "the milker most dairymen use."

Send for the Hinman Catalog. Write today.

SAVE MILK
-and earn a Double Profit!

Why raise your calves on milk when the market value of dairy products is so much more favorable? Thousands of farmers have adopted this better and far more profitable way of raising their calves.

By feeding RYDE'S CREAM CALF MEAL you are assured of two profits: one from the milk sold and the other from the grown animal raised, as compared to the high cost of dairy cows when purchased.

Aside from that, you take no chances with the home-grown animal which has been raised under your care.

Ryde's
CREAM CALF MEAL

is an economical milk substitute on which your calves will thrive and grow. Calves like it, and eat it in preference to any other food you may place before them. Prepared from choicest materials (not a "by-product") especially milled and steam-cooked for easy digestion. Has proteins, fats and minerals in abundance for rapid, normal growth.

Think of the saving, 100 pounds makes 100 gallons of rich, nutritious milk substitute! We guarantee complete satisfaction.

For sale at your dealer's in 25, 50 and 100-pound bags, with full feeding directions enclosed.

RYDE "AGGRESSIVE POLICY" POULTRY FEEDS. Push your poultry along, from newly hatched chick to laying hen. Give these well known feeds which contain elements adapted to every stage of growth—choicest granular grains, whole seeds with natural oil retained, fresh meat scraps and dried buttermilk. At your dealer's in 25, 50 and 100-pound bags, or write us. Satisfaction guaranteed. RYDE & CO., Mfrs., 5434 Roosevelt Rd., Chicago.

Leaves from a Cow Tester's Diary

By B. E. WHITNEY

A YEAR at cow testing association work is usually regarded by agricultural school students as a stepping stone to a higher education. We have no quarrel with this viewpoint. But, after seven years' experience in this line, we feel that this vocation is worthy, on its own account, of a deeper appreciation than it is commonly accorded.

The association tester has opportunities for personal contacts which are denied to the other members of the agricultural extension staff. If he is a success at his work he can offer at critical times the advice of not only an expert but of what is often worth far more—that of a friend. At the same time, for his own benefit he has the chance to consult with a score or more of experienced farmers; to obtain a working knowledge of human nature and, if he is intellectually inclined, to add to his mental equipment a cross-section of life which is almost invaluable.

A woman, it is said, first suggested cooperative cow testing. Originating in Denmark in 1895, the idea of the cow testing association was imported to this country in 1905 when the first association was organized by Mr. Helmer Rabild. This form of cooperation has become so popular that, by the latest advices, there are 732 associations in the United States.

The equipment of the association tester is usually something like this—an ancient horse drawing an equally antique wagon, the animal, in spite of his hoary head, bearing unmistakable signs of good living; at the driver's feet, a suspicious looking gallon jug; strapped to the rear of the vehicle, a tall can, a wooden box and a suitcase or two.

The Modern "Circuit Rider"

All these are queer symbols of progress but with this primitive outfit this modern representative of the "circuit rider" has carried the gospel of better dairy cows to uttermost parts of the country.

The Canton Association, with which the writer was connected from 1918 to 1925, was one of the first in Pennsylvania and, at the present time, is one of the oldest in the United States. During the seven-year period mentioned above the organization served 120 farmers. A number of these were in what is known as double tests where the test-

(Continued on next page)

Getting Facts and Figures Before Making the Venture

We are contemplating the opening of a dairy farm and intend purchasing 40 of the best grade Holsteins.

Before getting started we want to be reasonably assured that there is money in the business.

(1) What should be the average daily yield of milk from 40 purebred (fresh) heavy milking Holsteins?

(2) Average selling price?

(3) What should the daily feed bill be at first, assuming that all would be purchased in the beginning?

(4) What should the daily labor cost amount to?

(5) Any other costs per day?
—G. F., Northampton Co., Pa.

I will answer your questions in order:

(1) Purebred heavy milking Holsteins that are fresh would probably average five or six gallons per cow daily. However, this is not a good basis for a year's work. You will have to feed these cows thruout the year, and therefore, you should take a figure for production which will be approximately the average yield of your cows for a year rather than simply their production when fresh. I think it is more likely that your good Holstein cows will not average over four gallons of milk per day thruout the year.

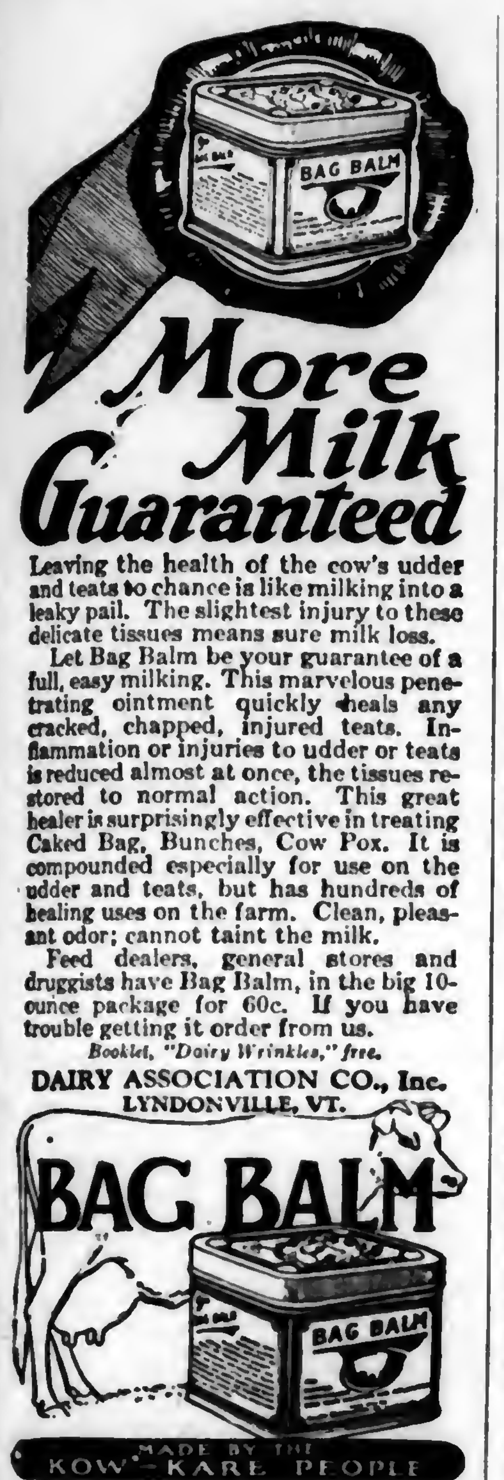
(2) The selling price of milk depends on your local market. I am, therefore, not in a position to answer this question. It is probable, however, that an average price of $2.50 to $3.00 per 100 pounds, according to the test, will not be far wrong, if you are wholesaling the milk.

(3) The feed bill for your herd daily would probably run about $16. This would allow ten pounds of grain at 2c per pound and twenty pounds of hay or other dry roughage at an average price of 1c per pound. As a matter of fact the average cost of feed per cow daily for herds averaging about 4½ gallons of milk in cow testing associations averaged about 41c per cow daily. This computation included data from thirty-five cow testing associations, most of which completed their work in 1921 and 1922.

(4) The daily labor cost for taking care of your herd would probably run from $6 to $8. In the study referred to above the average cost per cow for labor for the year for high producing herds was $56.32. For 40 cows this would be $2252.80 or approximately $6.26 daily.

(5) Referring again to the study just mentioned, I find that the current expenses per cow yearly for herds averaging 14,939 pounds of milk and 429 pounds of butterfat is $42.94. The charge for hauling milk amounted to $12. This makes a total cost per cow per year of $54.94 for current expenses and hauling the milk. For a herd of 40 cows this would make a cost daily of $6. This does not include interest on investment and depreciation on the herd.

I trust this will be of assistance to you.—A. A. Horland.



More Milk Guaranteed

Leaving the health of the cow's udder and teats to chance is like milking into a leaky pail. The slightest injury to these delicate tissues means sure milk loss.

Let Bag Balm be your guarantee of a full, easy milking. This marvelous penetrating ointment quickly heals any cracked, chapped, injured teats. Inflammation or injuries to udder or teats is reduced almost at once, the tissues restored to normal action. This great healer is surprisingly effective in treating Caked Bag, Bunches, Cow Pox. It is compounded especially for use on the udder and teats, but has hundreds of healing uses on the farm. Clean, pleasant odor; cannot taint the milk.

Feed dealers, general stores and druggists have Bag Balm, in the big 10-ounce package for 60c. If you have trouble getting it order from us.

Booklet, "Dairy Wrinkles," free.

HARVEY L. MILLER'S FARM SALE
Monday, March 14th, 1927, one mile southwest of Manheim, Lancaster Co., Pa. Farm stock, Implements, Poland China Hogs. 20 Head of High Grade Guernsey Cows and Heifers bred to Registered Guernsey Bulls of No Plus Ultra, Golden Secret and May Rose King Breeding. Herd T. B. Tested under Federal Supervision. Sale of Household goods announced later.

er takes care of two members in one day. Of the 120 tested, three have since died and fourteen have retired from farming. In support of the beneficial results claimed for association work, we might say that two of the retiring members have entered the ministerial profession.

The prosperity of the association was unchecked until 1922 when the slump in milk prices and general deflation of farm products caused a slackening of interest and a serious defection of membership. The association weathered the storm, however, and from 1923 on has improved steadily. I understand the present year has been very successful.

To cover the operations of this organization with any degree of fulness would require a volume but space forbids any more than a few general details. The territory covered by the association—the hills surrounding Canton and the valley of the Towanda—has been a prosperous dairy district for nearly a half a century. Prior to 1913 there was no general attempt at herd improvement. The average farmer cashed his butter check each month with a slight regret that it was not larger but thinking little of the matter the rest of the time.

The County Agent Started It

In 1913, however, a new era commenced. The Farm Bureau was organized and D. K. Sloan came to Canton as farm agent. One of the first problems tackled by Mr. Sloan was herd improvement and the result of his labors was the commencement of work by the Canton Cow Testing Association on July 24, 1913. W. L. Kellogg was the first tester. During his year Mr. Kellogg covered the western half of Bradford County but in 1914 the work in the northern half was taken over by the Troy Association.

The five years following 1913 marked a great expansion in the dairying industry around Canton. Almost simultaneously with the organization of the first cow testing association, the market underwent a great change. The Sheffield Farms Company invaded the locality in search of fluid milk for New York City. Later, with soaring of prices for canned milk, a condensery company erected a plant at Troy. With these newcomers the local creameries could not compete. Their patrons fell away and most of them were forced to close their doors.

Milk Supply Brought in the League

Another newcomer was the Dairymen's League. Numerous branches of this organization were formed in Bradford County after the milk strike of 1916. Such was the general situation when the writer came to the region in the fall of 1918.

The winter of 1918-1919 was one of the best seasons which dairymen have encountered. This fact, however, was not generally recognized until later times. In January, 1919, the maximum price of $3.87 for 3 per cent milk was paid at Canton. Prices of feeds already had begun to soar but did not reach their full height until twelve months later. Grade cows were bringing good prices. One of the members of the association in the spring of 1919 sold ten grade cows for $2000, another farmer disposed of nine head for $1500. Purebred stock was also high, practically any registered cow would fetch $300.

January, 1919, it is true, saw the great milk strike but this event, altho marked by considerable bitterness, was brief and bore little resemblance to the protracted struggle following April, 1922. A season of dairy prosperity always means an increase of interest in herd improvement and the Canton Association while organized before the end of the World War had a full membership.

(To be continued)

A DECIDED PREFERENCE
For De Laval Separators and Milkers by Members of
Cow Testing Associations

IN the United States there are approximately 22,000 members of cow testing associations—the most progressive group of dairymen in the country.

Each cow testing association is in charge of a competent tester who weighs, tests and records the milk from each cow, and frequently tests the skim-milk from the cream separators of the members. The testers know exactly what each separator does and are in an ideal position to observe the work of milking machines.

Reports recently received from approximately 29% of all the cow testers in the United States show that of all the members using cream separators and milkers

60.2% use De Laval Separators
29.5% use De Laval Milkers

A remarkable showing, not only on separators but on milkers as well, in view of the fact that most of these De Laval Milkers have been put in use within the past six years.

The reasons for the greater use and popularity of De Laval Separators and Milkers are simple. The Babcock Test proves the De Laval Separator skims cleaner. Years of use prove it gives longer and better service. The milk scale and production records prove the De Laval Milker milks better. The watch proves it milks in less time.

In the long run De Laval Separators and Milkers are by far the most economical. They pay for themselves. See your De Laval Agent or write the nearest office below for full information.

Lighten Work and Increase Production and Profits

Do you want to cut labor costs in half? Do you want to lighten the work on your truck farm and, at the same time, increase your income by a fourth to a third? Then find out how Held's Gro-Mor Power Cultivator and Spra-Mor Traction Power Sprayer help you do these very things.

Held's Gro-Mor Cultivator shown above is widely known as the most practical, efficient cultivator on the market. Perfectly balanced and measuring only 13" from wheel to wheel, the Gro-Mor cultivates rows 10" apart with ease. Its 15" clearance permits cultivation until plants are completely matured. Breaks up hard soil without effort—eliminates weeds and clods—and takes the push out of the push plow.

For complete information and illustrations of the Gro-Mor Cultivator and the Spra-Mor Power Traction Sprayer, write direct to

THE HELD TRACTOR COMPANY
609 North Fourth St., Columbus, Ohio

SPRA-MOR Power Sprayer shown here handles all insecticides for controlling insects and all chemical solutions for destroying fungus diseases. A versatile, easily operated machine that coats every plant with a dense, fine-sprayed mist that affords 100% protection.

RADIO DEPARTMENT

The Man Behind the Voice

"THIS is Wentworth announcing" has already become a familiar slogan to many listeners-in. Ralph Wentworth, one of the more recent additions to the announcing personnel at WEAF, New York, like the majority of WEAF's announcers, has a wealth of musical education. Mr. Wentworth's musical abilities were recognized by his parents when he was eleven years old. He was placed in the choir in an Episcopal Cathedral and shortly became soloist.

Ralph C. Wentworth, one of the announcers of WEAF.

To further his education along musical lines he was given piano instruction and later studied the pipe organ.

There comes a time when all boy sopranos hit high C and "crack." Mr. Wentworth foresaw this and stopped singing altogether before his voice began to change. When it did change he "found himself a bass," as he expresses it. A native of the state of Washington, he attended the University of Washington. While there he joined a male quartet which was giving engagements from time to time in the local vaudeville theater when previously scheduled acts failed to put in an appearance and was later rewarded when the quartet was given a steady booking.

After a bit of the theatrical world, Mr. Wentworth tried teaching school for a semester and also tried a very brief excursion into business, in neither of which, he says, "did I make any marked success."

The war came along and as he lived near the Canadian border, he tried in 1916 to enlist in the Canadian Army, but being some fifteen pounds underweight was told by the recruiting officer to "wait awhile until he grew up." When the United States entered the "big fuss" he made up his mind that he wouldn't be fooled a second time, and in his own words, "with the aid of several dozen bananas and lots of water applied where they would do the most good," finally made the grade and was considered good enough for a second-class private. But this rank was not for long, for when he reached the point of embarkation he was raised to the awe-inspiring rank of corporal from which, he tells us, "I was very successfully removed after a brief excursion into the great metropolis of New York with some of my theatrical friends."

Studied in Paris

Mr. Wentworth was shipped overseas during the month of October, 1917, and saw just enough action to be able to say with certainty that there was a war. After the Armistice he went to Paris and had the opportunity to study at Sorbonne as well as the Conservatory of Music in Paris.

Coming back to the United States, Mr. Wentworth decided to stay in New York to continue his musical education. He soon found himself in demand for concert work and later traveled with a well-known musical comedy. When radio broadcasting was fairly established, he applied to WEAF for booking on their programs and later, upon learning that there was a vacancy on the announcerial staff, filed his application and was picked from hundreds of others.

Mad Dogs Kill Five—The Law Must Be Enforced

THERE is at present in the State of Pennsylvania an epidemic of rabies. Mad dogs are running at large. Luzerne County, parts of Allegheny and Westmoreland Counties are under quarantine. During the past year in the state two hundred and fifty-two persons have been bitten by mad dogs and five have died from hydrophobia. These facts should convince every one that the Dog Laws of the state must be enforced.

In brief the Dog Laws are: Every dog over six months of age must be licensed, must wear a collar and tag, must be chained or securely housed after sundown unless accompanied by owner. Licenses and tags can be procured direct from your County Treasurer or thru a Justice of the Peace, Alderman, Magistrate or Notary Public.

May Be Fined or Jailed or Both

The license fee is $1.00 for male dog, $2.00 for female dog. Any person violating the Dog Law is liable to a fine of from $5.00 to $100.00, or thirty days in jail, or both.

The money derived from the licensing of dogs is used to pay all damages done by dogs to domestic animals and poultry; in addition it also at present finances the Bureau of Animal Industry of the Pennsylvania Department of Agriculture in its work for the prevention, control and eradication of tuberculosis, hog cholera, abortion, rabies and other transmissable diseases, as well as poultry diseases.

Dog Tax Insures Clean Milk

Bear in mind that when you pay your dog tax you are paying for the eradication of tubercular cows that your children may drink milk free from the germs of tuberculosis. If you are not obeying the law, get busy as once. Get your dog licensed and keep him chained. Our Dog Law Enforcer may visit your home any day. We do not wish to prosecute any one but will prosecute every violator of the law without fear or favor.

With this kind, earnest warning you will have no reason for complaint if thru neglect of yours, proceedings for prosecution are entered against you.

If you know of any violators of the Dog Laws please send their names to Dr. T. E. Munce, Bureau of Animal Industry, Harrisburg, Pa.

Sincerely yours for Law Enforcement
C. G. JORDAN,
Secretary of Agriculture.

Compare a Radiola 20 with any competitor—at any price

COMPARE it in quality of musical reproduction! Tune in, yourself, and listen! Test it as the experts do . . . listen at least ten minutes to the Radiola 20, with an RCA Loudspeaker 100. Then switch to another set, and your ear—trained to the clearer music—shows up the difference in an instant! Radiola 20 has challenged any competitor, regardless of price, to this comparison of tone. And thousands of tests have proved it finer.

Compare it for performance, too! It is twenty times as selective as the ordinary radio set—and has the distance reach of larger sets that have more tubes. A special form of "amplification" makes this possible. On near stations, it is single controlled. And on far stations, two verniers add sharp accuracy to distance tuning.

And look into its reputation for dependability! If there's one thing about radio that is most important for the farmer, it is that. Will his set work every time he tunes in?

Radiola 20, with Radiotrons, . . . $115
RCA Loudspeaker 100, ... $35

Will it stand up under daily use without servicing and tinkering? The Radiola 20—with all the skill of RCA, General Electric and Westinghouse behind it, has *proved* its sturdy quality. It is no experiment—but thoroughly tried, tested and perfected.

What a big place in the farmer's day this Radiola fills! It brings in the weather and market reports so clearly—and the helpful lectures from the agricultural colleges. There are talks, lectures, news and stories for Mother and the children. Fun and entertainment every evening. The best dance music. And the world's finest singers and musicians. And with broadcasting getting better and better, the Radiola 20 is replacing thousands of other sets—to match the finer programs with finer reception!

RCA Radiola

At peace with the world

PEACE and contentment, I say, are not a matter of how much money you have accumulated. They come with a clear conscience, good health, and the right companionship. No comrades mean more to me today than my trusty pipe and good old Prince Albert.

I start the day with a pipe in my mouth and a song in my heart. It has been like that for a good many years now. Before I settled upon Prince Albert as the one and only tobacco for me, I had "played around," as you young fellows say, with many brands.

I think it was the rich, rare fragrance of P. A. in the tidy red tin that spurred me to try a load of it in my pipe. I found the taste more than matched that wonderful aroma. It was cool. It was sweet. It was mild . . . mild, yet completely and delightfully satisfying.

Perhaps a leaf from my book of experience will set you on the road to peace and contentment. I tell you, in all seriousness, that you don't know . . . you simply can't know, how much your pipe can mean to you until you have filled it with Prince Albert!

P. A. is sold everywhere in tidy red tins, pound and half-pound tin humidors, and pound crystal-glass humidors with sponge-moistener top. And always with every bit of bite and parch removed by the Prince Albert process.

PRINCE ALBERT

—no other tobacco is like it!

In the dairy barn—and everywhere the farm job takes you—these "U.S." Blue Ribbon boots will keep you dry-shod and comfortable. And they are as husky as they look!

Farm tested . .

"U.S." Blue Ribbon Boots *come in red or black—sturdy gray soles—knee to hip lengths*

This "U.S." Blue Ribbon Boot *stands the hardest wear . .*

Stretches five times its length!

If you cut a strip of rubber from a "U.S." Blue Ribbon boot or overshoe—you'd find it would stretch more than 5 times its length! This rubber stays flexible and waterproof—long after ordinary rubber would crack or break

75 YEARS of experience in boot-making by the largest rubber manufacturer in the world—that goes into every "U.S." Blue Ribbon boot. This boot is *built* to stand every farm test.

It's just as husky as it looks—extra strong, every inch of it. You can't kick through that thick, oversize sole—it's as tough as the tread of a tire.

And the uppers—they are made of the finest rubber—rubber so elastic that you can stretch a strip of it more than five times its own length! No wonder, where inferior rubber splits and cracks, "U.S." Blue Ribbon boots stand up!

And at every vital point where wear is hardest, from 4 to 11 separate layers of tough rubber and fabric are anchored in behind that strong surface—to give *extra* strength. Only "U.S." Blue Ribbon boots and overshoes have so many!

* * *

We know you will like the plus farm value in "U.S." Blue Ribbon boots and overshoes.

Every pair is built by master workmen—and built *right*. They fit better, look better, wear better. Get a pair and notice the difference.

United States Rubber Company

The "U.S." Blue Ribbon Walrus *slips right on over your shoes. Its smooth rubber surface washes clean like a boot. Made either red or black—4 or 5 buckles*

Friendly Talks

By EDGAR L. VINCENT

BEFORE now when going down thru the field have you not all at once caught a breath of the most fragrant perfume, coming up from the grass under your feet? How good it smelled! "Penny royal somewhere," you thought, and, if you are like me, you stopped right where you were and hunted around until you found the homely little plant and picked a few sprigs to chew or to carry home with you.

Probably you would not have enjoyed that rich perfume, or have known of the flower's presence, if you had not all unwittingly stepped on one of the penny royal plants. It was the pressure of your foot that brought the fragrance from the heart of the leaf. There are other plants like that. Never until they are brought into the closest possible contact with you do they shed their fragrance. They look beautiful; some faint traces of the perfume stored up in them drift up to you as you pass, but it takes the close touch, perhaps even the strong pressure of the fingers, to bring out the fragrance nature has given them.

We Spoke but Didn't Know Them

For a good many years we lived near a man and his wife and never really knew them. We always smiled when we met them and they smiled back, and we said, "What good folks they are!" But only when we were in trouble and needed a helping hand did we find out what good hearts they had! The man did my chores and other work while I was sick, and the wife sent flowers and did all she could to make life easier for the mistress of our home. It seemed as tho there was nothing they could do that they did not do. This was our first real acquaintance with those who had so long lived near us.

I wonder why we let so many years go to waste in this way sometimes? Is it because we are so busy about our own work and (shall I use that harsh word) so selfish, that we pass our neighbors by with a nod and a "How do you do?" and let it go at that? Or is it that we do not feel the need of an intimate, heart-to-heart relationship with others? Sometimes it seems as tho we do feel our importance and our independence so deeply that we hold aloof from our fellows, caring not that we do not know them or regretting that they are comparative strangers to us. But when the pinch comes we see more clearly what we have missed by our neglect or indifference.

The Penny Royal's Story Is True

But it ought not to be so. We can make no greater mistake than to think we can live to ourselves and be really happy. The lowliest creature on earth, cast up on an island, will hunt the place over from end to end in search of one of its kind, and it is not at peace until it has accomplished this purpose.

It is just so with you and me. We may think we can get along without friends, but all the time there is a great vacancy in our hearts. It is filled only when we live for and love others. And the more closely we live to everybody, and the more of love we give out, the more of peace and joy there is in our hearts.

Is there a man down the road that needs your touch to bring out the fragrance of his life? Hunt him up today. Take him by the hand and say, "I need you, my friend, and I want to feel the touch of your life on mine. It will make us both better men!" For always and everywhere the story of the humble penny royal plant is true.

WHEN you haul away corn, wheat, cotton and such crops you pay high marketing costs and reduce the fertility of your land. But by feeding your grain *on the farm* and selling hogs, cattle, sheep, poultry, eggs, wool and dairy products you get good prices, have low marketing costs, buy less food and increase the fertility of your soil.

SuperZinc-ed
REG. TRADE MARK

Pittsburgh Perfect and Columbia Fences

meet the first requirement for modern, diversified farming. They make and keep your fields hog-tight so you can rotate crops, grow live stock and pasture fields most profitably. Grow what you eat!

Judith of Blue Lake Ranch

By *JACKSON GREGORY*

Copyright Charles Scribner's Sons

The Story Thus Far

JUDITH SANFORD, part owner in Blue Lake Ranch since the death of her father, Luke Sanford, fired Bayne Trevors, general manager, because he wasn't square. The men grumbled. Trevors made trouble in every way possible. Bud Lee, horse foreman, and old Carson promised to stay. Judith could depend on them and on "Doc" Tripp, veterinarian and a friend of her father.

Busy days followed. Mrs. Simpson took up her duties caring for the ranch house and Pollock Hampton, part owner of the ranch, arrived with his guests—Major and Mrs. Langworthy and Marcia, their daughter; Marshal Rogers, lawyer, and Frank Farris, artist.

On May 30 Charlie Miller, returning from Rocky Bend with the pay roll, was robbed. To avert a walkout, Bud Lee covered 80 miles in six hours and put the money into Judith's hands in time in spite of smokeless powder and a silencer that put his horse out of business. Next day, while searching for clews of the holdup, Bud Lee and Judith came upon three of the troublemakers. In the fight that followed Bill Crowdy was injured but Chris Quinnion, the man Judith believed responsible for the death of her father, escaped. Pollock Hampton captured Shorty, who, tho locked in the grain house that night, also escaped. Someone on the ranch was double-crossing.

Farris and Rogers expected to leave the ranch at the end of June; the Langworthys might stay, but in the probability of their going Judith planned a farewell party for Marcia. As Bud Lee joined the dancers he kept wondering what Judith would be like without flopping hat, boots and spurs. What he saw was a lovely Judith, vividly beautiful. Without a word he caught her and swung her into the dance. When introduced to Lee, the artist, Farris, recognized him. Several years before Lee had lost property, two friends failed him and he'd dropped out of his old useless life in society. Farris tried to persuade him to return but he wouldn't go back. At the end of his second dance with Judith he caught her in his arms, crushed her to him and kissed her. "So," she cried softly, "this is the sort of gentleman into which a dress-suit has made Bud Lee, horse foreman!" Laughing she left him. Lee watched her go, turned and went down the knoll.

Continued from last week

GOING down the knoll to the bunk-house, Bud Lee cursed himself at every stride. He cursed Carson when the cattle foreman, turned to follow him, addressed a merry remark to him concerning his "lady-killing clothes." The words reminded him of Judith's and he didn't cherish the remembrance. In the bunk-house Carson watched him curiously over his old pipe as Lee began ripping off his dress-suit.

"A feller called you up a while ago," said Carson, still bright-eyed with interest but pretending that that interest had to do with the new wall telephone recently installed. "Sandy Weaver, it was. Said—"

"What did he want?" demanded Lee, swinging suddenly on Carson, his coat balled up in his hand and hurled viciously under a bunk.

"Wasn't I telling you?" Carson grunted. "What's eating you, Bud? You ac' mighty suspicious, like a man that had swallered poison or else was coming down with the yeller jaundice or else was took sudden an' powerful bad with love. They all treats a man similar—"

"Darn it," growled Lee irritably, "can't you tell me what Weaver said?"

"Said, call him up, real pronto," replied Carson cheerfully. "Say, Bud, where in heck did you get that outfit? By cripes, if I had a regalia like that I'd be riding herd in 'em ev'ry Sunday! On the square now—"

But Lee wasn't listening to him and Carson knew it. He had gone quickly to the telephone, had rung the one bell for "Central," and a moment later was speaking with Sandy Weaver of the Golden Spur saloon. Carson sucked at his pipe and kept his eyes on Lee's face.

The ensuing conversation, only one side of which came to Carson, was brief. Most of the talking was done by Sandy Weaver. Lee asked three questions; the third a simple, "Sure of it, Sandy?"

Then he jammed the receiver back upon its hook, and with no remark continued his hurried dressing. When he had come in, his face had been flushed; now it was suddenly red, the hot red of rage. His eyes, when they met Carson's once, were stern, bright with the same quick anger. When he had drawn on his working garb and stuffed his trousers into his boots, he went to his bunk and tossed back the blanket. From the straw mattress he took a heavy, old style revolver. Carson, still watching him, saw him spin the cylinder, slip a box of fresh cartridges into his pocket and turn to the door.

"Riding, Bud?" He got to his feet, stuffed his pipe into his pocket and reached for his hat. "Care if I mosey along?"

"What for?" asked Lee curtly.

"Oh, heck, what's the use being a hawg," Carson grumbled deep down in his brown throat. "If you're on your way to little ol' Rocky hunting trouble, if they's going to be shooting-fun, why can't you let me in on it?"

Lee stood a moment framed in the doorway, frowning down at Carson. Then he turned on his heel and went out, saying coolly over his shoulder: "Come on if you want to. Quinnion's in town."

AS THEIR horses' hoofs hammered the road for the forty miles into Rocky Bend the two riders were for the most part silent. All of the explanation which Lee had to give, or cared to give, was summed up in the brief words: "Quinnion's in town."

To Judith, Lee had said that night they fought together at the Upper End that he had recognized Quinnion's voice; "I played poker with that voice not four months ago." That he had had ample reason to remember the man as well, he had not gone on to mention. But Carson knew.

Carson had sat at Lee's left hand that night, across the table from Chris Quinnion, and had seen the look of naked hatred in two pairs of eyes when Lee had risen to his feet and coolly branded Quinnion as a crook and a card sharp. For a little the two men had glared at each other, their muscles corded and ready, their eyes alert and suspicious, their hands close to their pockets. Then Quinnion had sneered in that evil voice of his: "You got the drop on me this time. Look out for the next." He too had risen and with Lee's eyes upon him had gone out of the room. And Carson had been disappointed in a fight. But now—now that Bud Lee in this mood was going straight to Rocky Bend and Quinnion, Carson filled his deep lungs with a sigh of satisfaction. Life had grown dull here of late; there wasn't a fresh scar on his battered body.

THO the railroad had at last slipped thru it, Rocky Bend was still a bad town and proud of its badness. To the northeast lay the timber tracts thru which the Western Lumber Company was tearing its destructive way; only nine miles due west were the Rock Creek mines, running full blast; on the other sides it was surrounded by cattle ranges where a lusty brood of young untamed devils were constrained to give themselves soberly to their work during the long, dusty days. But at night, always on a Saturday evening, there came into Rocky Bend from lumber camps, mines and cow outfits a crowd of men whose blood ran red and turbulent, seeking a game of cards, a "whirl at the wheel," a night of drinking or any other amusement which fate might vouchsafe them. Good men and bad, they were all hard men and quick. Otherwise they would not have come into Rocky Bend at all.

Lee and Carson riding out of the darkness into the dim light of the first of the straggling street lamps, passed swiftly between the rows of weather-boarded shacks and headed toward the Golden Spur saloon.

Tho the hour was late there were many saddle ponies standing with drooping heads here and there along the board sidewalks; from more than one barroom came the gay ragtime of an automatic piano or the scrape and scream of a fiddle. Men lounged up and down the street, smoking, calling to one another, turning in here or there to have a drink or watch a game.

The two newcomers, watching each man or group of men, rode on slowly until they came to the building on whose false front was a gigantic spur in yellow paint. Here they dismounted, tied their horses, and went in. Carson, with a quick eye toward preparedness for what might lie on the cards, looked for Lee's gun. It wasn't in his pocket; it wasn't in his waistband, ready to hand. It wasn't anywhere that Carson could see. At the door he whispered warningly:

"Better be ready, Bud. Ain't lost your gun, have you?"

Lee shook his head and stepped into the room. At the long bar were three or four men, drinking. Quinnion was not among them. There were other men at the round tables, playing draw, solo, stud horse. One glance showed that Quinnion was not in the room. But there were other rooms at the rear for those desiring privacy. Lee, nodding this way and that to friends who accosted him, made his way straight to the bar.

"Hello, Sandy," he said quietly.

Sandy Weaver, the bartender, looked at him curiously. A short, heavy, blond man was Sandy Weaver, who ran a fair house and gave his attention strictly to his own business. Save when asked by a friend to do him a favor, such a favor as to keep an eye on another man.

"Hello, Bud," returned Sandy, putting out a red hand. All expression of interest had fled from his placid face. "Come in right away, eh? Hello, Carson. Have somethin'; on me, you know."

Lee shook his head.

"Not tonight, Sandy," he said. "Thanks just the same."

"Me," grinned Carson. "I'll go you, Sandy. Same thing—you know."

Sandy shoved out whiskey bottle and glass. Then he turned grave eyes to Lee.

"One of these fellers can tend bar while we talk if you want, Bud," he offered.

"You say Quinnion has been talking?" asked Lee.

"Yes. Considerable. All afternoon an' evening, I guess. I didn't hear him until I called you up."

"Then," continued the man from Blue Lake ranch, "I don't see any call for you and me to whisper, Sandy. What did he say?"

"Said you was a liar, Bud. An' a skeerd-of-your-life darn bluff."

A faint, shadowy smile touched Lee's eyes.

"Just joshing, Sandy. But that wasn't all, was it?"

"No," said Sandy, wiping his bar carefully. "There was the other word, Bud. An'—say, Billy, tell him what Quinnion had to say down to the Jailbird.

LEE turned his eyes to Billy Young. Young, a cattleman from the Up and Down range, shifted his belt and looked uncomfortable.

"Darn if I do!" he blurted out. "It ain't none of my funeral. An' if you ask me, I don't like the sound of that kind of talk in my mouth. Maybe I can't find my way to church of a Sunday for staggerin' with red-eye, but I ain't ever drug a nice girl's name into a barroom."

"So," said Lee very quietly, "that's it, is it?"

"Yes," said Sandy Weaver slowly, "that's it, Bud. Us boys knowed ol' Luke Sanford an' liked him. Some of us even knowed his girl. All of us know the sort she is. When Quinnion started his talk—oh, it's a song an' dance about you an' her all alone in some darn cabin, trying to crawl out'n the looks of things by accusin' Quinnion of tryin' to shoot you up! —well, folks jus' laughed at him. More recent, somebody must have took him serious an' smashed him in the mouth. He looks like it. But," and Sandy shrugged his thick shoulders elaborately, "if it's up to anybody it's up to you."

For a moment Bud Lee, standing very straight, his hat far back, his eyes hard and cold, looked from one to another of the men about him. In every face he saw the same thing: their contempt for a man like Quinnion, their wordless agreement with Sandy that it "was up to Bud Lee." Lee's face told them nothing.

"Where is he?" he asked presently.

"Mos' likely down to the Jailbird," said Billy Young. "That's where he hangs out lately."

Lee turned and went out, Carson at his heels, all eyes following him. In his heart was a blazing, searing rage. And that rage was not for Quinnion alone. He thought of Judith as he had seen her that very night, a graceful, gray-eyed slip of a girl, the sweetest little maid in all of the world known to him—and of how he, brutal in the surge of love for her, had swept her into his arms, crushed her to him, forced upon her laughing lips the kiss of his own.

"I was mad," he said within himself, "I was mad. It would be a good thing if I got Quinnion tonight—and he got me. Two of a kind," he told himself sneeringly.

AS HE made his way down the ill-lighted street, his hat over his eyes now, Bud Lee for a moment lost sight of the rows of rude shanties, the drowsing saddle-ponies, the street lamps, and saw only the vision of a girl. A girl clean and pure, a girl for a man to kneel down to in worship, a girl who, as he had seen her last, was a fairylike creature born of music and soft laughter and starlight, a maid indescribably sweet. In the harshness of the mood which gripped him she seemed to him superlatively adorable; the softness of her eyes at the moment before he had kissed her haunted him. As he strode on seeking Quinnion, who had spoken evil of her, he carried her with him in his heart.

The horrible thing was that her name had already been bandied about from a ruffian's lips. Lee winced at that even as he had winced at the remembrance of having been brutally rough with her himself. But what was past was past; Quinnion had talked and must talk no more.

"He'll start something the minute he sees you," cautioned Carson, his own revolver loose in the belt under his coat, his hard fingers like talons gripped about the butt. "Keep your eye peeled, Bud. Better cool off a speck before you tie into him. You're too mad, I tell, you, for straight, quick shooting."

Lee made no answer. Side by side the two men went on. They had left the sidewalk and walked down the middle of the rusty, rut-gouged street. Every man they met, every figure standing in the shadows, received their quick, measuring looks.

"Most likely," suggested the cattle foreman, "by now he's got drunk an' gone to sleep it off."

But Lee knew better than that. Quinnion wasn't the sort that got drunk. He'd drink until the alcohol stirred up all of the evil in his ugly heart; then he'd stop, always sure of his eye and his hand. It was far more likely that with a crowd of his own sort he was gambling in the card room of the Last Chance saloon, the Jailbird saloon as "white" men called it. For there was an ill-famed hang-out at the far end of the straggling town, just at the edge of the Italian settlement, that of late had come to be frequented by such as Quinnion; men who were none too well loved by the greater part of the community, men who, like Quinnion, had served time in jail or penitentiary. Black Steve, who was both proprietor and bartender, and who looked like a low-class Italian, tho he spoke the vernacular of the country, was the god of the "dago" quarter, the friend of those who had gotten entangled with the law. Only last year he had killed his man in his own saloon, then gone clear, thru the combined perjury of his crowd.

The street grew steadily gloomier, filled with shadows. In front of the Jailbird the only light came from within and made scant war on the lurking darkness without. Lee's ears were greeted with the crazy whine of an old accordion, and with men's voices lifted in laughter. He shoved the swing door open with his shoulder, Carson pushed the other half back, and the two stood on the threshold, their eyes swiftly seeking Quinnion.

As tho their presence had been a command for silence, a sudden hush fell over the Jailbird. The accordion man drew out a last gasping note and turned black round eyes upon them. Black Steve, oily and perspiring behind his bar, caressed a heavy black mustache and looked at them out of cold, expressionless eyes.

The first glance had shown Lee that Quinnion was not there. At least not in the main room. But there were the card-rooms at the rear. He gave no sign of having felt the hostility of the many eyes turned upon him, but went quickly down thru the room, turning neither to right nor left.

"Hol' on there," came the big booming voice of Steve. "What you fellers want, huh?"

Lee gave him no answer but strode on. Carson, at Lee's heels like a grim old dog, showed his teeth a little. Steve, striking the bar with a heavy hand, shouted in menacing tones:

"Hol' on, I say! Nobody goin' to break in on a play that's running in my card rooms. If you fellers want anything, you ask me."

"Go ahead, Bud," said Carson jocosely. "It's only the ol' black calf bawling same as usual."

But Lee needed no urging. He had heard voices beyond the closed door in front of him, among them a certain high-pitched, snarling, indescribably evil voice which he knew. He put his hand on the knob and found that the door was locked. With no waste of time, he drew back a step, lifted his foot and drove his heel smashing into the lock. Then, throwing himself forward, driving his shoulder into the door, he burst it off its hinges.

At last he had found Quinnion.

Here were half a dozen men, not playing cards, but interrupted in a quiet talk. Standing on the far side of the table was a man who was as evil a thing to see as was his voice to hear, his face twisted, drawn to the left side, the left eye a mere slit of malevolence, the uneven teeth showing in an eternal, mirthless grin, a man whose hands, when his arms were lax as now, hung almost to his knees, a man twisted morally, mentally, and physically.

BUD LEE had eyes only for this man. But suddenly Carson had seen another man, seeking to screen himself behind the great, misshapen bulk of Quinnion, and with new eagerness was crying:

"It's Shorty, Bud! He's mine!"

But Shorty was no man's yet. At his back was a window; it was closed and the shade was drawn, but to Shorty it spelled safety. Head first he went thru it, tearing the green shade down, crashing thru the glass, leaving discussion behind him. With a bellow of rage Carson went after him, forgetful in the instant that there was another matter on hand tonight. Shorty, consigned to Carson's care and the grain-house, had slipped away and had laughed at him. Ever since, Carson had been yearning for the chance to get his hands on Shorty's fat throat. Before the smash and tinkle of falling glass had died away Carson, plunging as Shorty had plunged, was lost to the bulging eyes which sought to follow him, gone head first into the darkness without.

Lee kept his eyes hard on Quinnion's. He moved a little, so that the wall was at his back. His coat was unbuttoned; his left hand was in his pocket, his arm holding back his coat a little on that side. The right hand was lax at his side like Quinnion's.

He had seen the other men, tho his eyes had seemed to see only one man. One of them he knew; the others he had seen. They were the sort to be found in Quinnion's company. They were the nucleus of was was spoken of as Quinnion's crowd.

"QUINNION," said Lee quietly, "you are a dirty-mouthed liar."

The words came like little slaps in the face. Of the four men still in the room with Quinnion three of them moved swiftly to one side, their eyes on their leader's face, which showed nothing of what might lie in his mind.

"I have taken the trouble," went on Lee coolly, when Quinnion, leering back at him, made no reply, "to ride forty miles tonight for a little talk with you. You are a crook and a card cheat. I told you that once before. You have been telling men that I am a coward and a four-flusher. For that I am going to run you out of town tonight. Or kill you."

Then Quinnion laughed at him.

"Just for that?" he jeered. "Or because I've been tellin' a true story about you an'—"

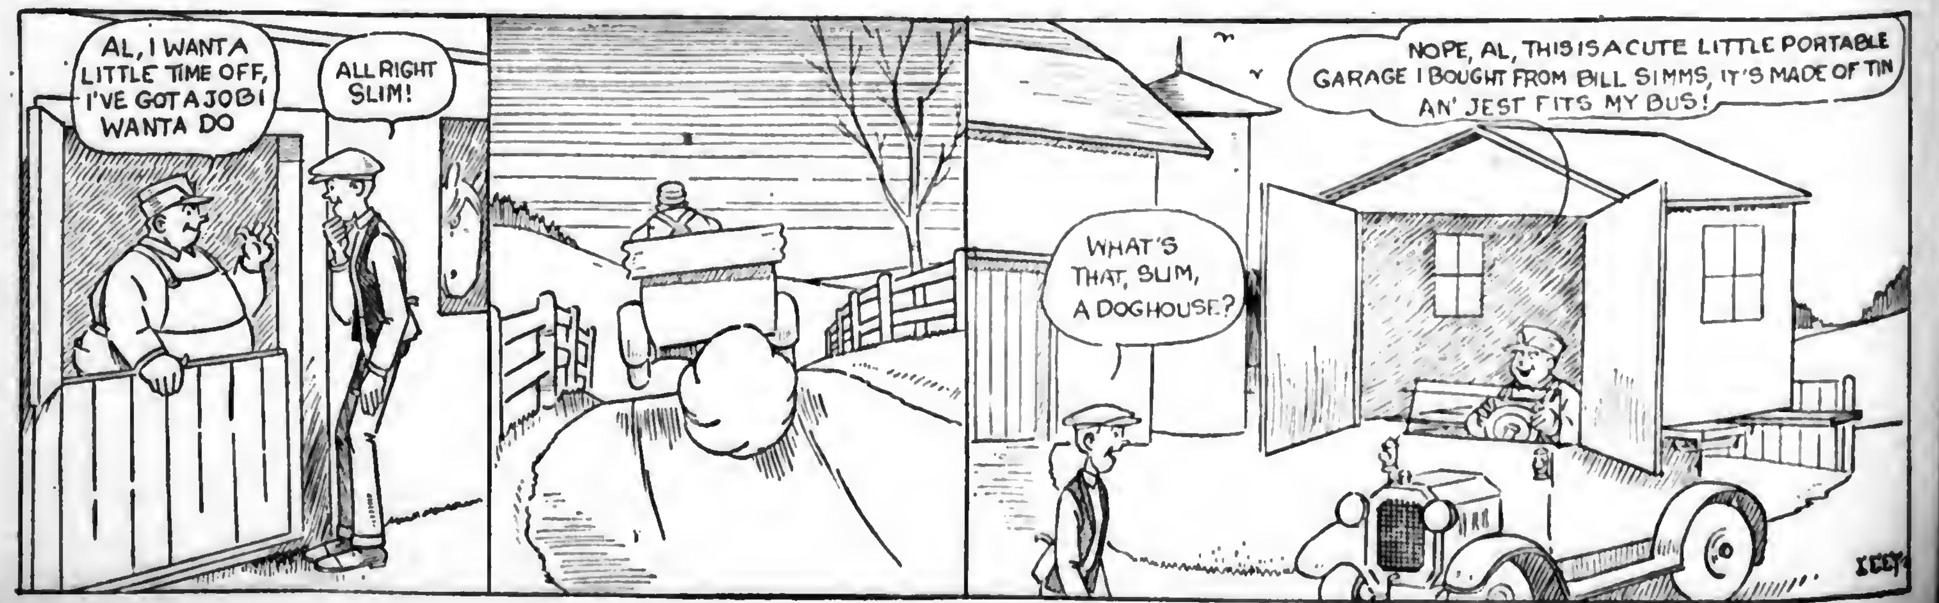
He didn't get her name out. Perhaps he hadn't expected to. His eyes had been watchful. Now, as he threw himself to one side, he whipped out his gun, dropping to one knee, his body partly concealed by the table. At the same second Bud Lee's right hand, no longer lax, sped to the revolver gripped under the coat at his left armpit.

It was a situation by no means new to the four walls of the Jailbird nor to the men concerned. It was a two-man fight, with as yet no call for the four friends of Quinnion to interfere. It would take the spit and snarl of a revolver, the flash of flame, the acrid smell of burning-powder to switch their sympathetic watching into actual participation. No new situation certainly for Chris Quinnion who took quick stock of the table with its heavy top and screened his body with it; no new situation for Steve, the big bartender who was at the shattered door almost as Bud Lee sent it rocking drunkenly.

Quinnion was down and shooting, with but ten steps or less between him and the man whom he sought to kill; Bud Lee was standing, tall and straight, back to wall, his first bullet ripping into the boards of the table, sending a flying splinter to stick in Quinnion's face, close to a squinting, slitted eye; and as the two guns spoke like one, a third from the open barroom shattered the lamp swinging from the ceiling between Lee and Quinnion. Steve, the bartender had taken a hand.

(To be continued next week)

Activities of Al Acres: *Slim's Flivver Is Like the Snail* : : ; : : : : By Lee



AL, I WANTA LITTLE TIME OFF, I'VE GOT A JOB I WANTA DO
ALL RIGHT SLIM!
NOPE, AL, THIS IS A CUTE LITTLE PORTABLE GARAGE I BOUGHT FROM BILL SIMMS, IT'S MADE OF TIN AN' JEST FITS MY BUS!
WHAT'S THAT, SLIM, A DOGHOUSE?
LEE

Saves Hours of Hard Work

The low, easy-running manure spreader is considered indispensable on the modern farm. It's one way of cutting production costs.

Did you ever hear this one?—

He Had the Right of Way

McGuinness nad been posted to keep guard over the entrance to a road which led to an old and unsafe bridge. Presently a car came along and he held up his hand.

"What's the matter?" growled the driver.

At that moment McGuinness recognized him as the county magistrate.

"Oh, it's yerself, Yer Honor," he said genially.

"Yes, it is!" was the snappy answer.

"'Tis all right, tnen," said Mac, as he stepped politely out of the way. "I got orders to let no traffic thru because of the rotten bridge, but seein' it's you, Yer Honor, 'tis a pleasure—go right ahead, sir!"—American Legion Weekly.

Those Healthy Nonagenerians!

Old Uncle Eben Jones went into a life insurance office and requested a policy.

"Why, Uncle," said the president, "you are too old for us to take the risk. How old are you?"

"Ninety-seven come next August," said the old man, and added testily: "If you folks will take the trouble to look up your statistics, you'll find that mighty few men die after they're ninety-seven.—Earth Mover.

Spur to Heroism

Because he had crawled out on thin ice and rescued a playmate who had broken thru, little Willie was the center of a group of admiring men and women.

"Tell us, my boy, how you were brave enough to risk your life to save your friend," said one of the ladies.

"I had to," was the breathless answer. "He had my skates on."—Life.

What the Tutor Taught Her

Here is a contributed tongue-twister:

If a Hottentot tot taught a Hottentot tot to talk e'er the tot could totter, ought the Hottentot tot be taught to say aught, or naught, or what ought to be taught her?

If to hoot and to toot a Hottentot tot be taught by a Hottentot tutor, should the tutor get hot if the Hottentot tot hoot and toot at the Hottentot tutor?—The Outlook.

It's the Truth

"This is a good restaurant, isn't it?" said the customer to the waiter who had brought his order.

"Yes," replied the waiter. "If you order a fresh egg here, you get the freshest egg in the world. If you order a good cup of coffee, you get the best cup of coffee in the world, and—"

"Yes, I believe you. I ordered a small steak."

Nothing but the View

First Passenger—Isn't the ocean grand and majestic?

Second Ditto—Yes; and there's an indefinable something about it that impresses me strangely.

First—I feel that way, too. I guess it's the utter absence of billboards.—Boston Transcript.

Mrs. Bridey (at 1:00 A. M.)—Oh, Jack, wake up! I can just feel there's a mouse in the room.

Husband (drowsily)—Well, just feel there's a cat, too, and go to sleep.—Boston Transcript.

OUR YOUNG PEOPLE'S FORUM

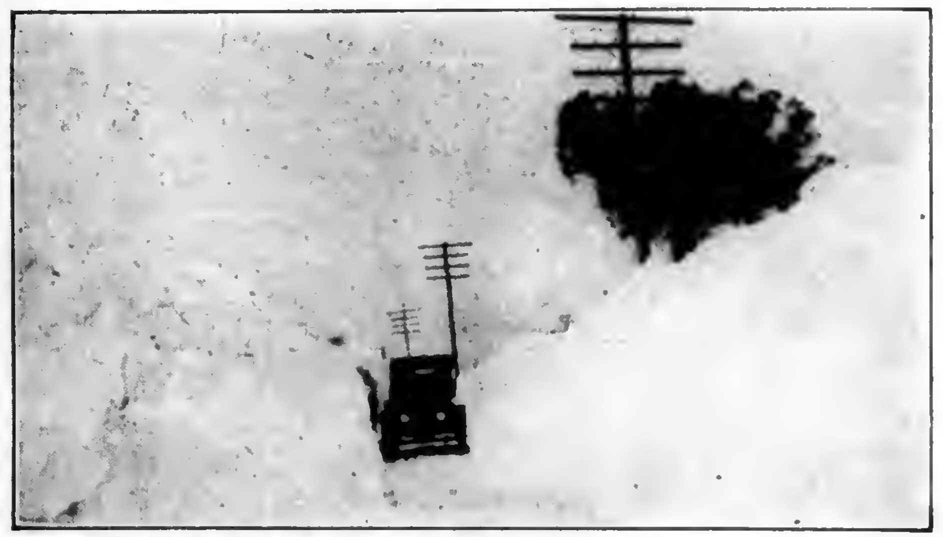
From Forum Members and Friends

Dear Cousin Ruth:—For pets we have a dog, three cats and a pony. My pony's name is Betty. She is a Shetland pony.

Last summer we took a trip to Gettysburg. I saw many cannons and other things. I saw the house where Jenny Wade was shot and the place where the bullet went thru the door. I also saw the old fashioned bread tray in which she was making bread when she was shot.—Violet Hoffman, (X), Perry County, Pa.

Dear Cousin Ruth and Forum Friends:—Sometimes our teacher comes and sled rides with us. For a pet I have a pony, which is all white. Her name is Topsy. I sure do like to ride horseback.

"Winter Days" Contest—Second Prize—Over Twelve



COMING HOME FROM DOWNINGTOWN A YEAR AGO
Olive Nichols, (X), Chester County, Pa.

About Thanksgiving time we had a big program. The schoolroom was filled with people. After the program we had a social.—Helen Daniels, twelve (X), Mercer County, Pa.

Dear Cousin Ruth:—We are going to have an entertainment in school in March. I like school very much. I am sending some riddles.

1. When is a plant like a pig?
2. When are potatoes like gate posts?
3. What has eighty-eight keys and still can't unlock a door.

We have much fun skating and sleighing. We have a radio.—Anna A. Smith, Berks County, Pa.

MY SISTER
Anna A. Smith,
Berks County, Pa.

SCHOOL DAYS
Anna L. Durham
York County, Pa.

Dear Cousin Ruth:—We have a nice home near Forest Hill, Md., but we are now farming for my aunt near Woodbine, Pa. We all like Pennsylvania Farmer. Here is my picture taken in school.—Anna L. Durham, nine, York County, Pa.

Dear Cousin Ruth:—We have very much fun coasting. We had an entertainment at our school February 22 which consisted of dialogues, plays, music and recitations.

When I was four years old my father died, then mother put me in an orphanage. Mr. and Mrs. Ness then adopted me. I have a good home.—Grace E. Smith, York County, Pa.

Dear Cousin Ruth and Forum Friends:—I will tell you about my trip this summer to Yellowstone National Park. We left here about 1:00 o'clock, got to Pittsburgh at 6:30. We had from 6:30 till 12:00 in Pittsburgh. The next morning we were in Chicago. At Madrid, Iowa, we went to see some relatives. We went to the hotel for that night. The next day we had callers at the hotel. Some people from Boone, Iowa, called and told us to come up there. They came down after us and we went up there and stayed one week. While we were there they had a Throckmorton reunion. There were fifty-some first cousins.

On Tuesday we left to go to see my aunt in Belvidere, Nebraska. We reached there that night. A bus took us from the depot to their house. The next day Helen Spragg, my cousin, and I took a horseback ride and took pictures. We stayed a week. On Tuesday we started from Belvidere to Yellowstone National Park. We traveled all next day but did not stop. We saw Indians on our way.

After stopping in Cody we started into the park. We saw a large bear, large and small buffaloes (took pictures of them), and petrified trees. We went to Old Faithful. It is a beautiful sight with the searchlight thrown on it. It threw steam up 150 feet every 63 minutes. We went on a hike that afternoon and went swimming.

When we left the park we went to the Great Salt Lake. We swam in it. We went thru the Capitol at Salt Lake City. We then went to Colorado Springs and then back to Belvidere to my aunt. On the way home we went to St. Louis, St. Joseph, and Cincinnati, Ohio.—Ruth E. Throckmorton, (X), Greene County, Pa.

Dear Cousin Ruth:—Last summer we went on a fishi , trip. We went to the Conewago Creek near Falmouth. We started around 10 o'clock in the morning. It was Ascension Day. My brother and I had just gotten our new steel fishing rod and brass fishing reel. We did not have any luck at all. We didn't catch anything. We then took our outfit and went to the Susquehanna River. The water was very low and I had bad luck. My line got tangled in the axle of my fishing reel. We didn't get anything there, either. We came home without anything, but happy.

I am sending you a poem I made up in our health class.

THE MOSQUITO

The mosquito is a filthy thing,
And what do you think! He was once king.
Down in the Panama Canal Zone
His way was his very own.

The mosquito is a murderer in first degree,
He was king and had men under his knee.
The mosquito causes yellow fever
Of which the female is the only giver.

One of the heroes was Walter Reed.
He was a man of American breed.
He's done much for the people of the U. S. A.,
By inventing a way, the mosquito to slay.

We should spray the swamps with larvicides,
To kill the mosquitoes in their abides.

—Allen Hollinger, twelve (X), Dauphin County, Pa.

Dear Cousin Ruth:—I built a house and it has four rooms in it. I got a tool set for Christmas and a building block set that I can build houses with. My brothers, Raymond and Allen, each got a train and a track. I like winter but think summer is best.

We took a trip to the Seven Mountains and another to Gettysburg. I was thru Jenny Wade's house and saw a lot of old guns and other relics.—Harold Shirk, eight (X), Lancaster County, Pa.

BOATING WITH FANNY
Edward R. Williams, (X),
Luzerne County, Pa.

Dear Cousin Ruth:—My father and brothers farm three farms, our own and two neighboring farms. My brother and his family live on the one farm. I went out coasting this morning as soon as I had my breakfast, it was fine.

I live close to Menges Mill, the Frederick Division of the Pennsylvania Railroad, and the York and Hanover trolley passes right at our door.

We get our evening paper, The York Dispatch, thrown off the trolley every day.—Sarah E. Spreakle, York County, Pa.

How Long Is Your List?

HOW are you coming along with the contest? Have you found heaps and heaps of words in the two words PENNSYLVANIA FARMER? I thought perhaps I would find time to hunt some myself but I haven't yet so I guess I'll have to depend upon you to let me know how many words are hidden away in the name of our paper. If some of you who read this wonder what on earth I am talking about just scurry around and hunt up last week's Pennsylvania Farmer and on page 24 you'll find your wonderings answered. The contest closes March 19th. Jot down words as you think of them and before that date you'll find you have a list worth sending in.

COUSIN RUTH.
Care of Pennsylvania Farmer,
261 S. 3rd St., Phila., Pa.

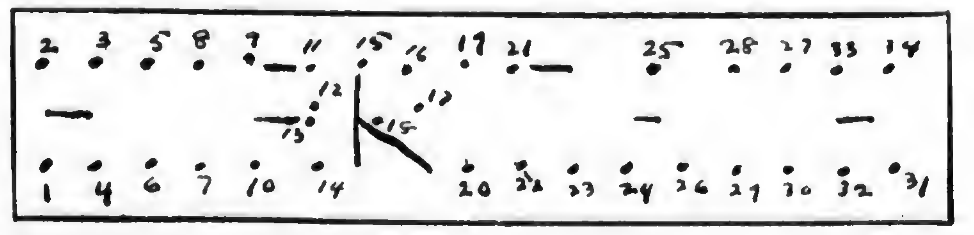
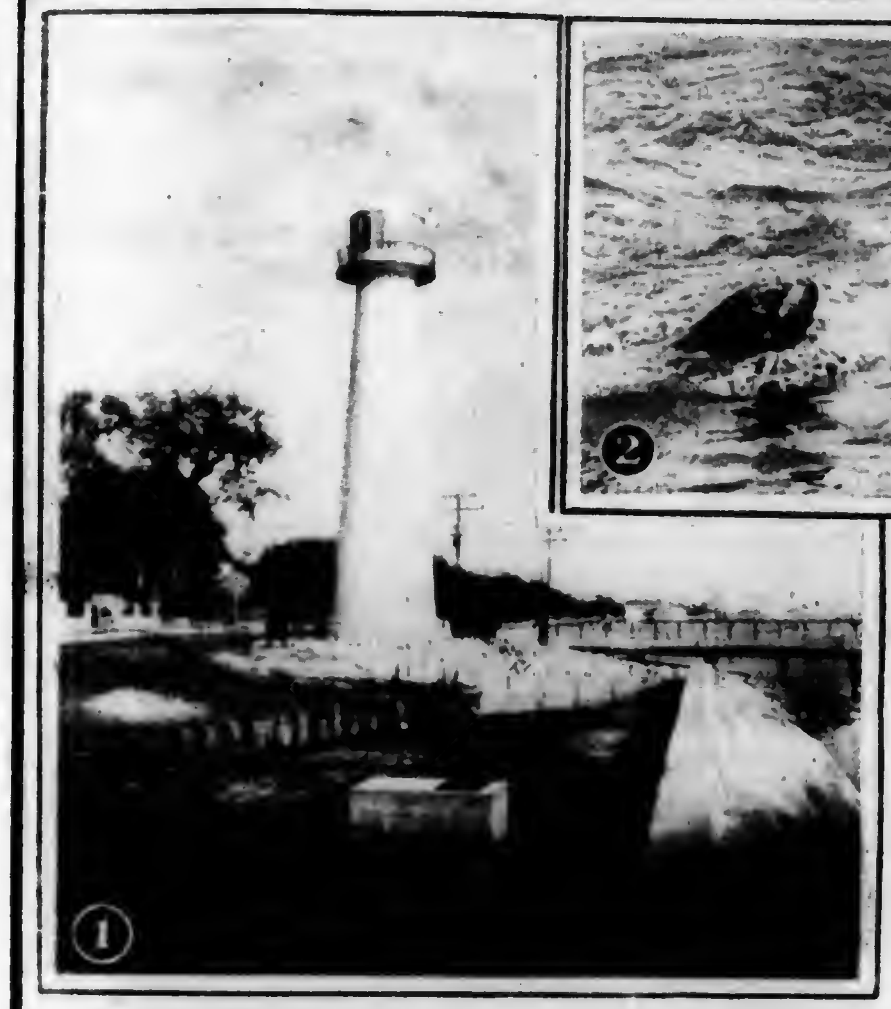
OUR LITTLE FOLKS PUZZLE CORNER

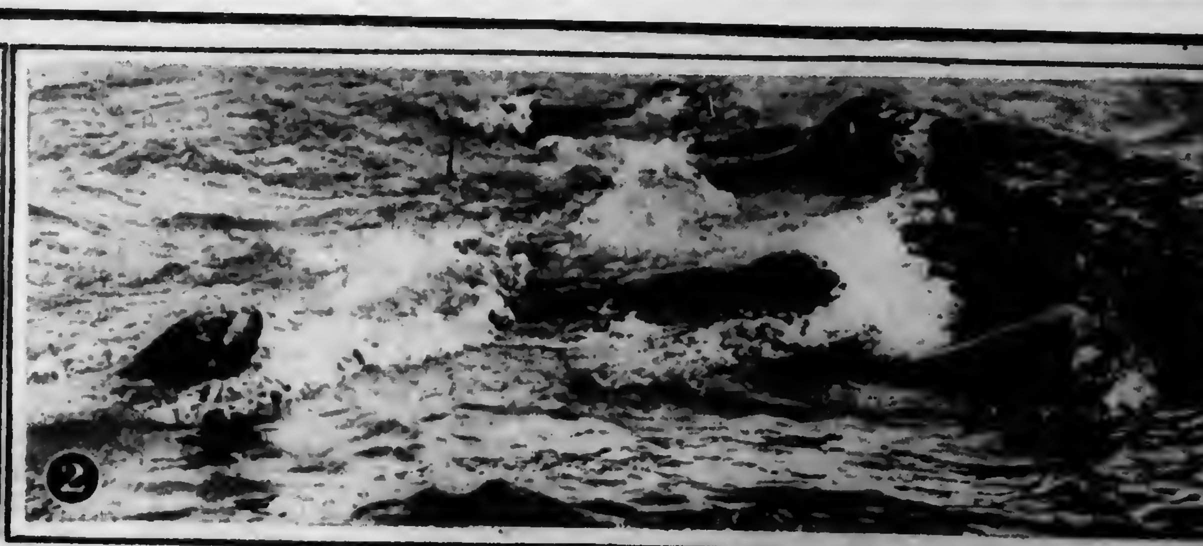
DEAR LITTLE FOLKS:—There's something about striding along an open road on a bright brisk day that makes people like to twirl a stick or cane. I'm not sure that they help you to get along faster, but I know the kind of walking-stick you will find in the puzzle is just about the fastest kind there is—in fact, I don't think I'd like to have this particular kind when out for a walk. All you have to do to find out about this swift stick is to draw lines from the dots beside the figures. Start with the dot beside the figure 1 and draw to the dot beside the figure 2. Draw from the dot beside 3 to the dot beside 4; then from 5 to 6, to 7 and, to 8; from 9 to 10; from 11 to 12, to 13, to 14; from 15 to 16, to 17, to 18; from 19 to 20; from 21 to 22, to 23; from 24 to 25, to 26; from 27 to 28, to 29, to 30; from 31 to 32, to 33, to 34. Let me have the name of this very fast walking-stick on a postcard, or in a letter, by March 19th. BE SURE TO SAY HOW OLD YOU ARE, and please tell me the name of your county and when your birthday comes. The ten children, sending in the correct answer, whose cards or letters are the best in grammar, spelling, punctuation, penmanship and general appearance will be awarded prizes. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia.

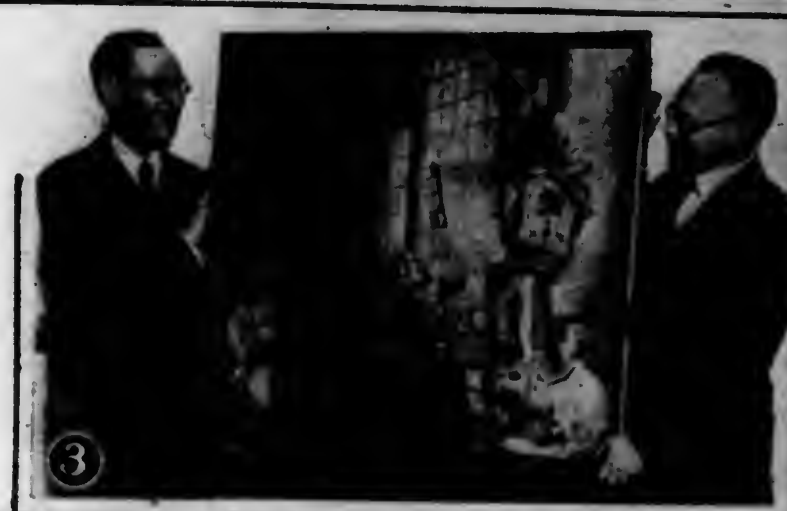
The answer to the missing letter puzzle we had in the issue of February 19 is: A ROLLING STONE GATHERS NO MOSS. The ten Little Folks who received prizes because their answers were the best in every way are: Mildred Brubaker, age 13, Port Trevorton, Pa.; Anna Marie Greenawalt, age 8, Steinersville, Pa.; John L. Hunter, Jr., age 9, Smithfield, Pa.; Robert Jones, age 9, Harbor Creek, Pa.; Elizabeth Matthews, age 10, Freehold, N. J.; Caroline Ranck, age 11, Refton, Pa.; Harry Smith, age 7, Sicklerville, N. J.; Delia May Strike, age 8, Chambersburg, Pa.; Donald S. Weida, age 8, Allentown, Pa.; James Claire Wood, age 10, Girty, Pa.

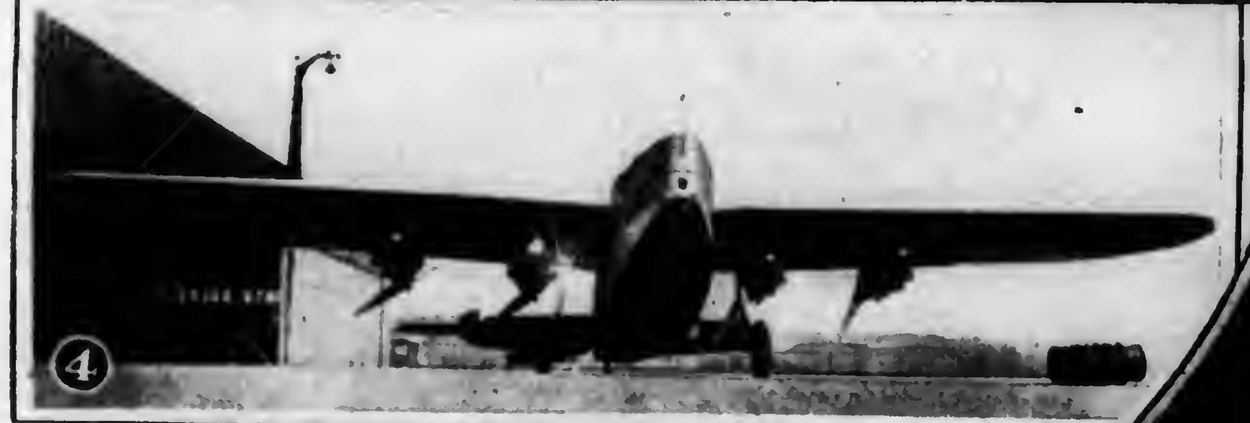


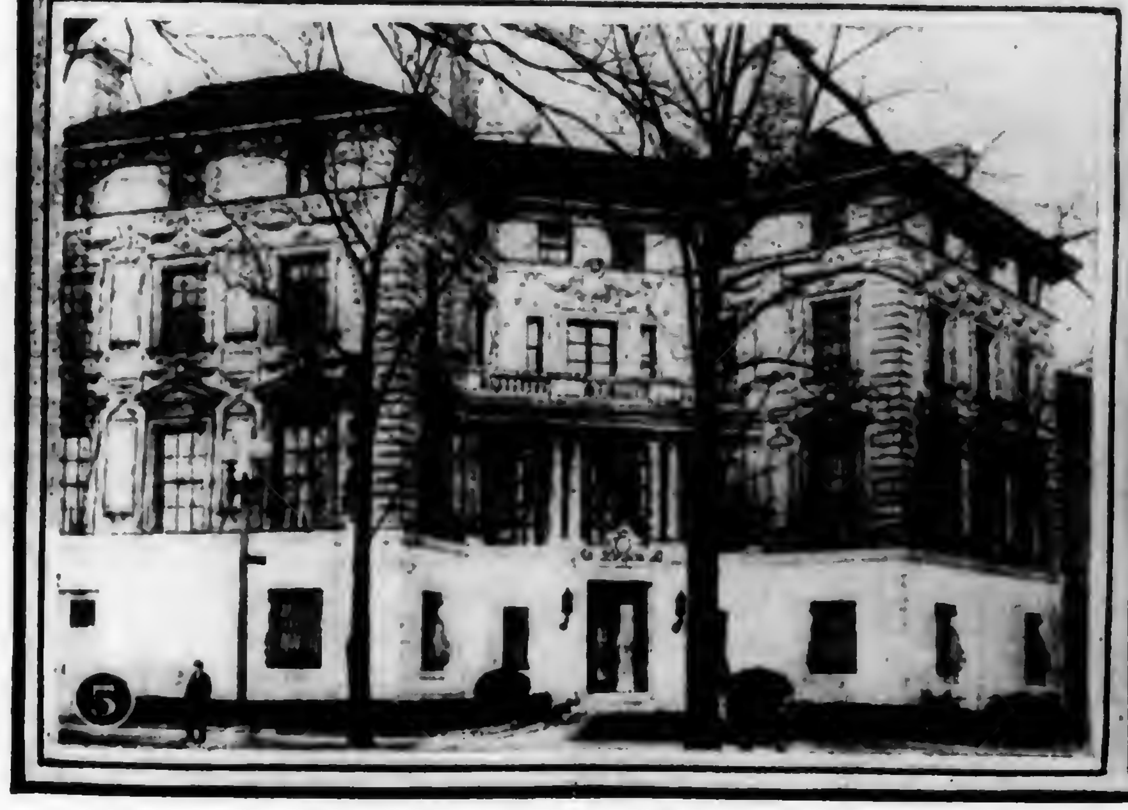
PASSING EVENTS IN PICTURES

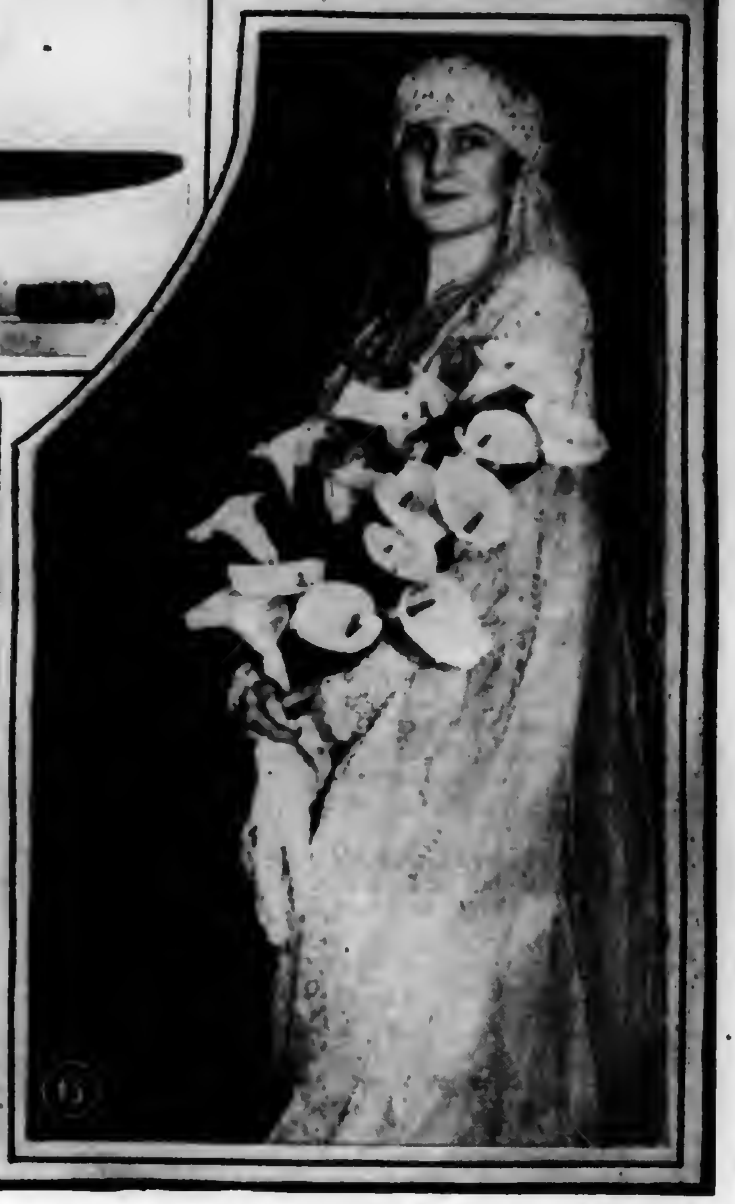












1.—Two women, the widow and the daughter of the former keeper, are taking care of the lighthouse at Biloxi, overlooking the Mississippi Sound, which is said to be the oldest lighthouse in America.

2.—Seals have swimming races, too.

3.—At the International Convention of Decorators, held recently in Milwaukee, a historical painting was shown. In it Washington and Lafayette are pictured hanging wallpaper at Mount Vernon during a strike of decorators.

4.—A new-type airplane, developed in Germany, has four motors on the wings.

5.—While repairs are being made to the White House, President and Mrs. Coolidge are using the home of Mrs. Elmer Schlesinger as a temporary residence.

6.—On February 19, Miss Allison Roebling, the granddaughter of the builder of the Brooklyn Bridge, became the bride of Baron van der Elst, a member of the Belgian Embassy in Washington. As the groom's parents were unable to come over from Belgium to attend the ceremony, the Belgian Ambassador and Baroness de Cartier took their places.

One Today—Thousands in August

Round Up the Fly Fighting Apparatus Early or Mr. and Mrs. Fly Will Be Victorious

FRIEND husband will have a few more days before the pressing farm tasks begin, so why not have him help you repair or paint the screens for windows and doors? Or perhaps you need to have a few new ones made, especially for the kitchen and bedrooms. Put it off no longer. House flies start buzzing with warm April days. In fact, I have found a few on the sunny attic windows already, and with a handy swatter, I pride myself on killing every one that appears these first mild days.

They start to breed in June, and did you know that one female is responsible for more than 100 eggs at a time and that those eggs hatch in twenty-four hours and in hot, moist weather in less time? In about 10 days a full grown fly flits about. A female will lay from 5 to 10 of these 100 egg clusters so it is no wonder that flies are often thick. Let's adopt a few measures to get rid of this dangerous and very wasteful pest.

Just how are they dangerous? They carry germs—thereby spreading disease. You may not have known that house flies are largely responsible for spreading tuberculosis, typhoid fever, diarrhea, cholera and carbuncles. Those are dread diseases—yet what are we doing to get rid of flies?

Several Methods Advised

All of us who wish to promote health and happiness fight the fly by several methods. 1. We keep yards and surroundings clean—free from any garbage or old cans. Scald or burn out all food cans before putting them in places of disposal. 2. Have outdoor toilets built with concrete vaults and keep them well closed at all times. 3. Insist that the manure heap be as far from the house as practical. 4. Protect our family and the home with well built close fitting screens. 5. Get a dozen swatters now and keep one in each room. Kill every fly we see these early spring days. 6. Use commercial sprays, powders and baits.

After we have removed and cleaned up all decaying matter—all refuse in which flies may breed—we will still have the pests about the kitchen doors, and will need every known method of eradication if we are to conquer them. We have already told you in these columns of the good home made traps described and pictured for building in our library book, "Home Handicraft for Boys." We shall be glad to lend the book to anyone sending in 15c to cover postage. These traps are invaluable about the stables and other breeding places.

Flies Become Intoxicated

On the market today are many good baits and poisons, all of which serve a place in fly warfare. I hang long-necked bottles, filled half full of diluted honey in the trees near the house. The flies become intoxicated and cannot escape. During June, July and August those bottles need emptying every five days.

Another bait I find helpful is made with a teaspoonful of formaldehyde to a glass of sweet milk. I pour the solution into low bowls and place a small piece of bread in the center to serve as a good lighting place. If there is no water about this is a sure kill and can be used anywhere that flies congregate and babies cannot reach.

These are but a few of the many useful schemes to keep flies downed. No one can afford to let them reign. Their dirty work is a thousand times more costly than the most expensive spray or powder, either of which will go far in thinning them out. Let's read and study what has been done and what remains undone. Farewell to the flies!—Gertrude S. Stewart.

Patrick Was a Jolly Old Saint

LET us make the most of St. Patrick's Day. It is foolish to buy a new green outfit for the occasion, or even a new article if a package of dye is at hand. It's the easiest thing in the world to mix up a little green dye bath and tuck in a few odd pieces, and presto! they come out a St. Patrick's costume that will delight the kiddies. Even grown-ups won't despise a few perfectly matched accessories to wear to the St. Patrick dinner.

Every child enjoys a jolly little party in honor of the old saint and nothing is more easily planned. Just put on your thinking cap and assemble a few good old Irish songs and melodies—you'll find them in any school song book or other collection of popular music—and some evening make a paper pattern and cut "half a bushel or so" of paper shamrocks from rather heavy construction paper. Any other bright green paper that may be at hand will do if it won't tear too easily.

Decorate your rooms with green crepe paper streamers interspersed with plenty of shamrocks. Invite the guests with little green shamrock invitation notes, ask each to come prepared to tell an Irish joke. Serve an Irish luncheon.

Color Scheme Carried Out in Menu

Of course, the refreshments must include Irish potatoes and since March is so cold they should be creamed or scalloped so they will be hot. Serve any pretty salad with a green (lettuce) garnish, cucumber pickles, green gelatine with light colored fruits, lettuce sandwiches, frosted cookies in shamrock shape, a layer cake decorated with green shamrocks on the icing, and coffee or cocoa.

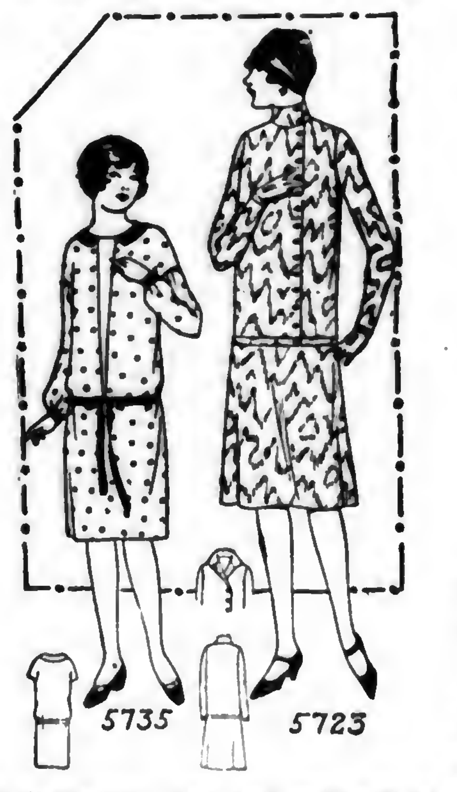
Have some pianist play while the guests join in singing Irish songs for a farewell 'round the piano. Any good old fashioned Irish game, like "My Father and Mother Were Irish," will be hailed with delight, and the jokes may be reserved for the supper hour.

I've noticed that older people, too, enjoy a holiday touch in their entertaining—try a St. Patrick Dinner on the Ladies' Aid and see if some of the gray hairs don't grow less conspicuous and if some of the outsiders don't begin to say "There's something doing at that Aid and it's always a jolly good time."—Mrs. E. M. Anderson, N. Y.

It Won't Take Long to Make Them

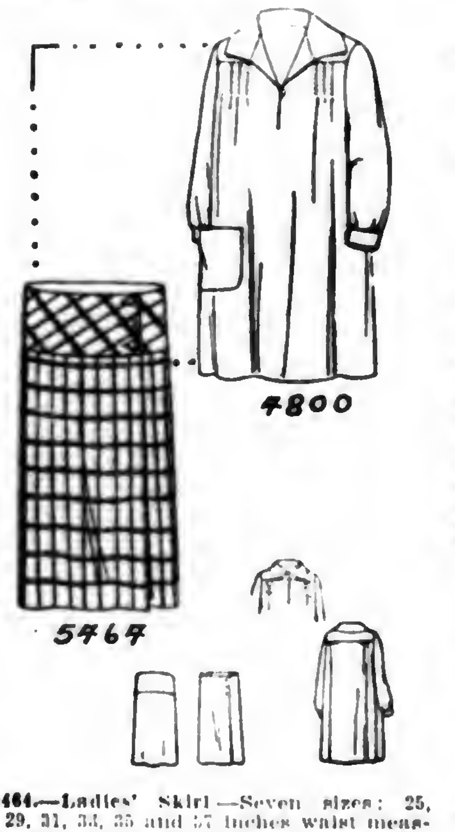
Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5735.—For Any Occasion.—Four sizes: 8, 10, 12 and 14 years. A 10-year size if made as illustrated will require 2⅝ yards of 32-inch material together with three-eighths yard of contrasting material for facings on collar, band cuffs and the string girdle, also one-half yard of material 6 inches wide for facing on the vestee. Pattern, 10 cents.



5735 5723

5723.—A Stylish Design.—Seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size will require 2¾ yards of 54-inch material. The width of the dress at the lower edge is 1¾ yard. Pattern, 10 cents.



4800 5464

5464.—Ladies' Skirt.—Seven sizes: 25, 27, 29, 31, 33, 35 and 37 inches waist measure, with corresponding hip measure, 35, 37, 39, 41, 43, 45 and 47 inches. To make the skirt with the yoke for a 29-inch size requires 2 yards of 54-inch material. If made without the yoke 1¾ yard is required. The width of the skirt at the lower edge is 1⅝ yard. Pattern, 10 cents.

4800.—Smocks Are the Thing.—Four sizes: small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 3 yards of 36-inch material. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date spring and summer 1927 Book of Fashions.

The Kitchen Cabinet

FOR a cold winter day, a dish of oysters is always appreciated and any of the following is easily prepared.

OYSTERS WITH ONIONS

Peel eight small onions and dice them. Fry until a golden brown in two tablespoonfuls of butter. Add 60 oysters and the liquor in which they came, 1 teaspoonful finely chopped parsley, 1 teaspoon lemon juice, and a seasoning of salt, pepper and red pepper. As soon as the edges of the oysters begin to curl pour into a hot tureen and serve.

• • •

OYSTER POTATO PIE

Boil one dozen medium sized potatoes. Add butter and the liquor from the oysters and mash. In the bottom of a baking dish put a layer of the potato, dust with salt and pepper and a little chopped parsley. Cover with a layer of oysters and repeat until dish is filled, having potato on top. Cook ten minutes, in medium oven, increase the heat and brown over top.

• • •

OYSTERS WITH TOMATOES

Melt 2 tablespoons of butter, add 1 tablespoon chopped onion and fry until brown. Pour in one cup stewed tomato, and 1 pint of drained oysters. When the edges of the oysters begin to curl add ¼ teaspoon of salt, a few drops of tobasco sauce and a tablespoon of chopped parsley. Serve on slices of buttered toast.

• • •

JUGGED BEEF

Cut two pounds of round steak in slices, roll each slice and tie. Put in a jar, add one good sized onion stuck with cloves, salt, pepper and a little poultry flavoring. Pour in a coffee cupful of tart fruit juice and cook until the meat is tender. This dish may be cooked in the oven, on the back of the kitchen range or with the jar set in a pan of boiling water.—L. M. Thornton, N. Y.

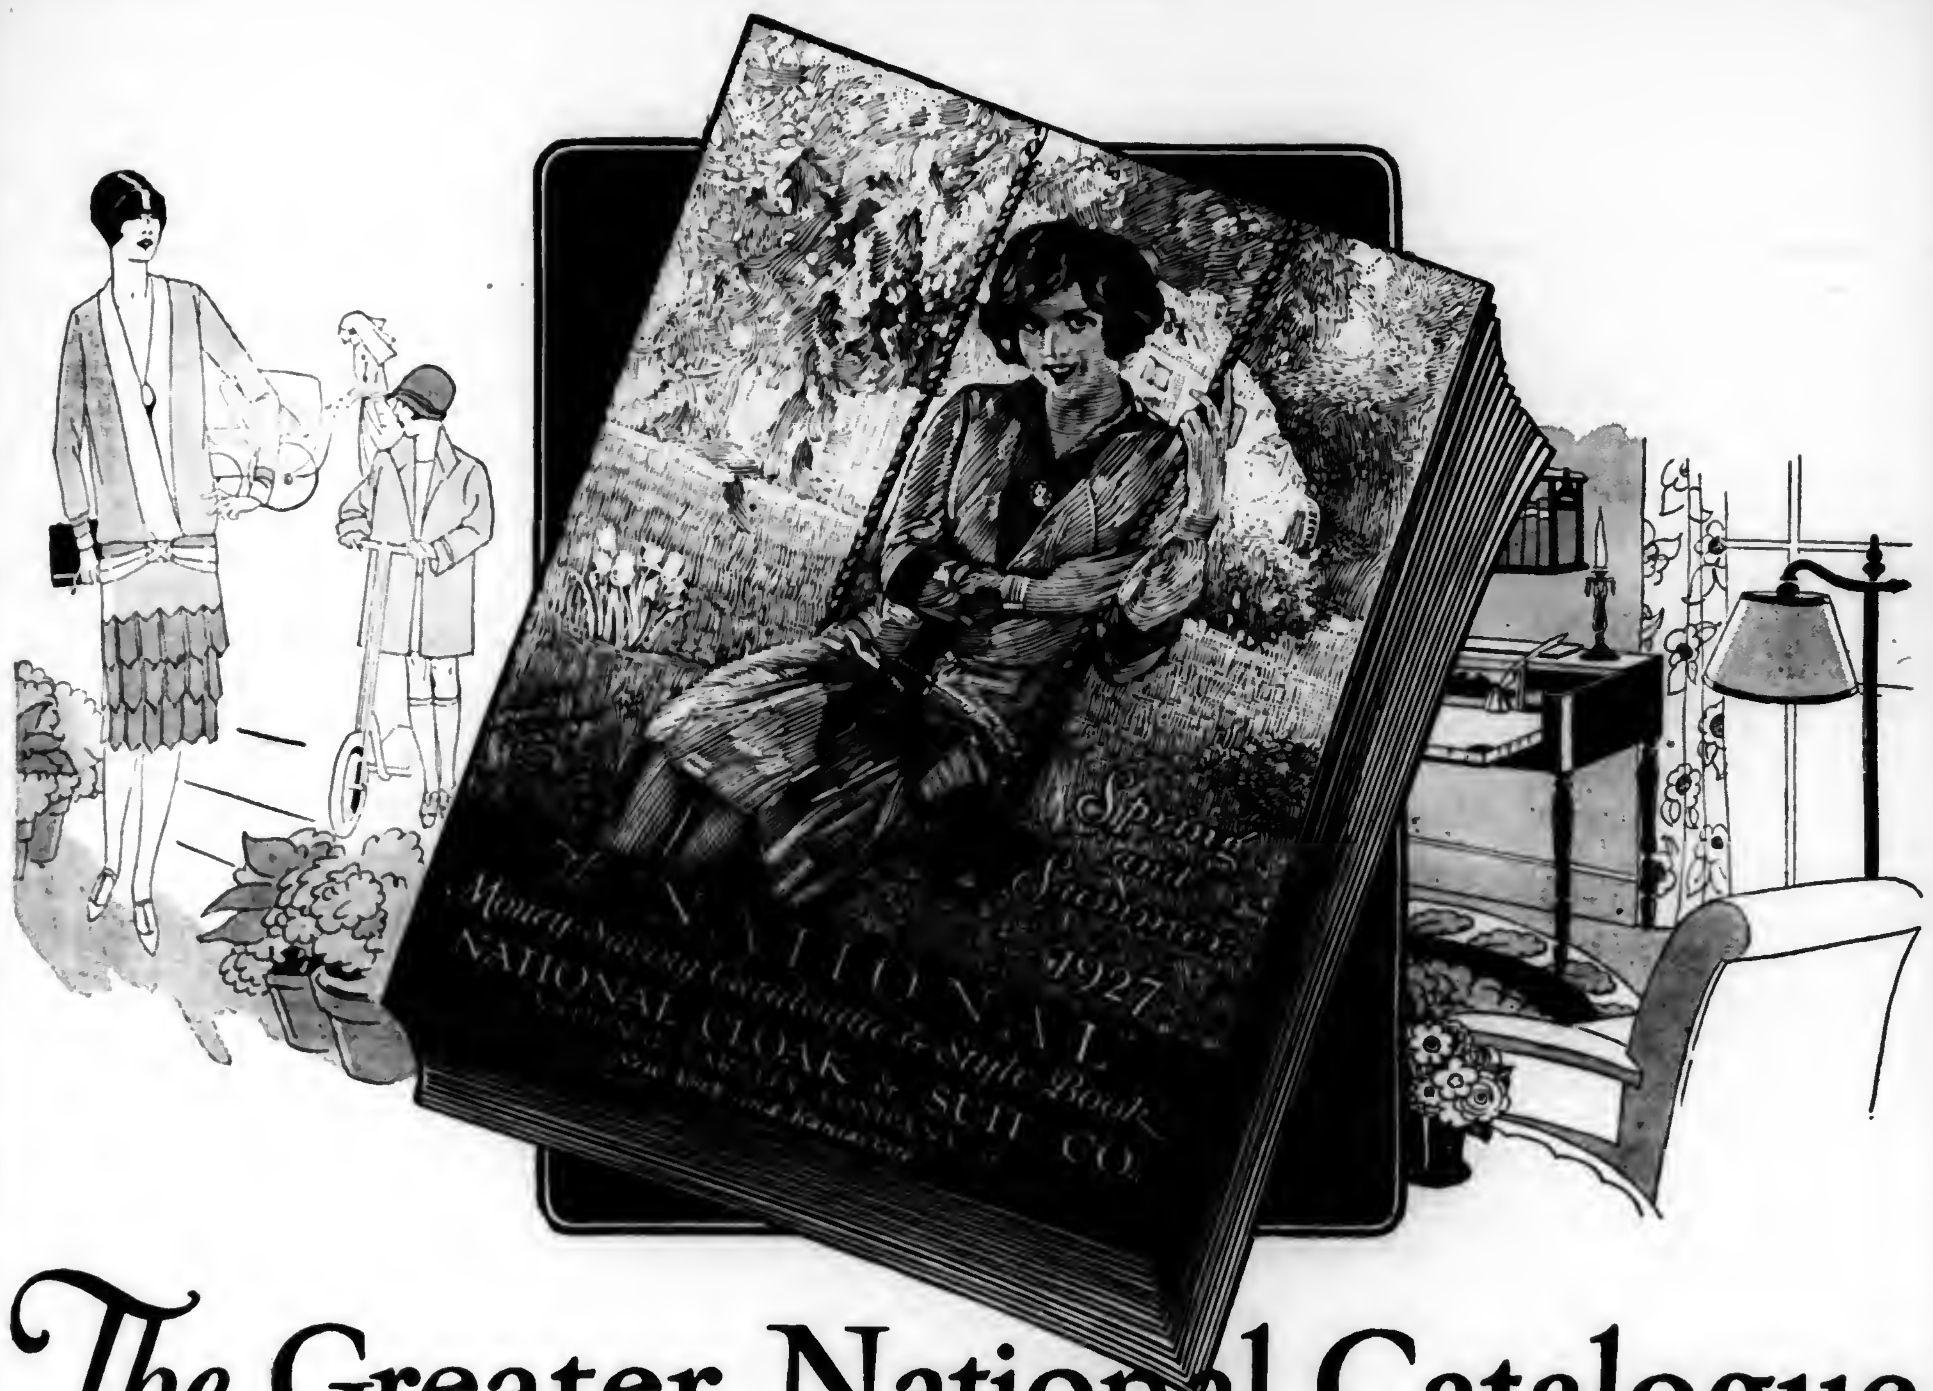
External and Internal Doses

I AM sending you an extra good hand lotion recipe. The farm woman will find it very good for herself and the children. When going out to hang up the clothes, dry the hands well and apply a few drops of this lotion. Put some on at night before retiring and your hands will look so well you will be surprised. My hands are as soft as anyone's can be and I do all kinds of tasks.

1 ounce glycerine
½ ounce tincture benzoin
10 drops carbolic acid
Add distilled water to make 8 ounces
Shake well.

Grandmother's Cough Syrup

Here is a good cough medicine which has nothing in it to make it keep. I have the ingredients on hand and make it up whenever I need it. Put 2 tablespoons of flaxseed in 1 quart of water, boil down to 1 pint, then dissolve ¼ pound of rock candy and 1 cup of brown sugar or honey in it. Next add the juice of 1 lemon and strain. Take a half-teaspoon when the throat is irritated. It doesn't cost much, and is a whole lot cheaper than losing a night's sleep.—Mrs. Geo. Gardner, Pa.



Spring and Summer 1927
NATIONAL
Money-Saving Catalogue & Style Book
NATIONAL CLOAK & SUIT CO.

The Greater National Catalogue
First in Style always . . .
Now offers the greatest savings for the home

You need look no further than this National Catalogue to see and to know—and *to have*—the *Best* and *Most Beautiful* styles for Spring.

Every important source of Fashion, all that New York has to offer in beauty, in exclusive design, has been utilized in making this most important collection of Fashions for Spring.

Thirty-eight years' experience in the Style World of New York has given the National a mastery, a supremacy in Fashion that stamps every offering in this book with the Seal of Style authority.

Best Style in Things to Wear
Best Taste in Everything for the Home

SANTA'S GIFT

Many, Many Times Have I Thanked Him for My Dutch Oven

SANTA CLAUS left the nicest and most useful gift under my branch of the Christmas Tree and I am anxious to tell you about it. It lifted heavy and I knew it was my long-wished-for dutch oven. My mother had several and I am sure that is why her pot roasts were the best ever.

My dutch oven has several splendid new features to enable us to cook cheaper cuts of meat in royal flavor. Yesterday we had a very cheap roll of beef and it was as delicious as any prime ribs roll I have ever cooked or tasted. No tiresome basting is needed as the drip rings on the under surface of the tight fitting cover distribute the juices over the fowl or meat.

I loaned my oven to a neighbor to roast a tough old gander for a hog killing party. The guests could not distinguish it from slices of yearlings roasted by old utensils in the oven. This oven can be used on top of the stove or in the oven with equal satisfaction.

My dutch oven is a great time saver, too, for it needs little or no watching during the cooking process and is easily cleaned after dinner. Roasts never burn or stick.

Save your time, your fuel and even your money by buying a dutch oven. They never break nor wear out. Generation after generation will enjoy one you buy today. Mine pleases me so well that I wish every country mother could have one like it. Send me a self-addressed stamped envelope and I'll tell you the make and where you can get one.—Gertrude S. Stewart.

Please Tell Me Why

WHY do not more farm women attend Home Economics meetings? Do they think they "know it all" or are they just indifferent? When we have a Farmer's Institute practically all the farmers for miles around fill the community hall to its capacity, coming to learn the best methods of growing corn, potatoes, etc., and the best rations for the growing pigs and for "Old Bossy" that she may produce the most milk; but when the wife has a chance to learn what "rations" are best for the growing boys and girls, she is quite often conspicuous by her absence.

Only Two Instead of Twenty

We have had Home Economics meetings in our community for almost a year and they have been very interesting and of much help to us, but there are so many young mothers who do not attend.

We have but two Home Economics clubs in our county when we should have fifteen or twenty. I wish I knew just how to get more farm women interested in these meetings. Some seem to think it a confession of ignorance to attend them.—Mrs. A. Ward, Pa.

Editor's Note:—You readers who are learning so much that is helpful in better homemaking may arouse interest by the quiet power of your own example. You may also sound the praises of the good influence of your study thru the spoken word among your friends and neighbors. Your pen too may awaken the slumbering multitude. Write us from time to time of your accomplishments due to study in classes of Home Economics. We are always glad to print all that applies to better living.

Desserts to Make on Top of the Stove

VARIETY is the spice of life, and it is also one of the secrets of good cooking. A change of dessert is usually welcome in any family, and here are two you can try out when the cupboard is bare of pie and cake, and you don't feel like heating up the oven for baking. They can be made on top of the range, the oil stove, or on the carbide gas hot plate if you have this modern convenience in your home.

COFFEE GELATIN

Soak two tablespoons of granulated gelatin in a half cup of cold water, to get the best results: then add one cup of boiling water and stir until thoroly dissolved. Next add one-third cup of sugar and stir until dissolved. Add two cups of strong coffee, mix thoroly and allow to cool and solidify. Serve with cream or milk. (For adults only.)

CARAMEL PUDDING

Mix one cup of brown sugar and one and a half cup of milk. Scald in double boiler until sugar is dissolved. Mix one-quarter cup of flour with two beaten egg yolks and another half cup of milk; add this to the hot milk, stirring constantly until it boils. Fold in stiffly beaten egg-whites and allow to cool. It should be served cold with whipped cream, or just plain cream or milk.

The Crusader

By Anna Snow Fitts

If you are right and ninety-nine are wrong,
Stand up against that number and be strong.
They cannot hurt you, whom the gods defend,
You will protected be unto the end.

For courage is the harvest of that soul
Who dares to venture all to reach his goal.
To him, the vision of reward in sight
Is not so much desired, as to be right.

'Tis sure he will meet hatred in the crowd,
Yet hate but spurs to victory the proud,
If so it be that pride is based on theme
Transcending selfish aim and worldly scheme.

So as a true crusader in the land
Follow your captain's well-thought-out command.
The craven spurn (whose children's children reap)
And stalwart be, your sacred compact keep.
Then down the ages there shall walk—
Your children, who with saint and God shall talk
Because you, brave crusader, true and strong
Dared face the crowd, and calmly fight the wrong.

One of our readers is anxious to learn what others do to make rubber boots and overshoes last longer. He asks for a recipe to make a waterproof flexible cement to apply to the soles to prolong their usefulness. What are your experiences? Address all letters to Gertrude S. Stewart, Home Page Editor.

That One Thing Needful

We Pass This Way But Once and There Are Finer Things Than Cleanliness

I SAW an intriguing title in a recent magazine, "The Gift of Leisure." I have been wanting to write a farm play—rather a vaulting ambition—and I thought maybe this article would give me the recipe for the needed time.

It was a well-written article, based on carefully collected data, showing that electricity if made the servant of the farm home would give farm women leisure. That should give me a thrill of hope for very recently the representative of a great electric company sat in our living room and unrolled a beautiful blueprint. There was the hillfield with Mr. Gumble's name on it, the orchard field, three white rectangles exactly placed for the house, the barn, the shed. We are to have the modern servant.

But that will not help all of you that read. I am not sure it will help me far toward this precious thing called leisure—time to express something beautiful within us, whether it is a patchwork quilt, a poem, a story, a braided rug, or a bit of exquisite beadwork on buckskin.

Leisure Is Deliberate Choice

I am forced to believe that leisure is not so much a gift as a deliberate choice. Farm women are good housekeepers, good cooks. We do the family sewing, mending, laundry work, canning. We have a pretty full program. Some philosopher has told us that the measure of a man is his way of employing the odd moments. But there are days when a farm mother needs a high-power microscope to locate any odd moments.

So because I can have electricity I am not deluded into thinking that I'll have to ask Dad as official executioner to use the ax on any of my spare time. I am going to keep on eliminating non-essentials. I have put the old cross-stitch motto: "Cleanliness is next to godliness" in the spring bonfire. I can think of a lot of things in human life finer than cleanliness. I might mention charity, which is love; patience, which suffers long and does not lose the Way. I have seen women so "clean" that they conducted a private inferno of such excellence that Mephisto could get some dazzling ideas. Just to convince myself that the saw wasn't divine I looked it up in the "Word Book." I did not find it.

You Know the Story, Too

But I did find a picture that I deeply understand. Jesus was visiting at a home in Bethany. Martha, the elder sister, knew all the good things men like to eat and was making herself nervous getting them all for one meal. Mary stayed outside in the shade of the vines and "heard His word." Things went badly for Martha. The cake fell, the meat scorched, the fire had a tantrum.

It was beyond endurance. What matter if "His word" was to echo thru two thousand years? Martha came to Him: "Lord, does Thou not care that my sister hath left me to serve alone? Bid her therefore that she help me."

"Martha, Martha, thou art careful and troubled about many things: But one thing is needful: and Mary has chosen that good part, which shall not be taken away from her."

What shall we choose? I long ago gave up thinking Santa Claus will put leisure on my Christmas tree. I face the hard fact that I must plan for it, sacrifice for it, deliberately take it. I do not know why I pass this way, but I pass this way but once. I am afraid to spend my days sweeping harmless cobwebs from the attic.—Nora Del Smith Gumble.

"The more thoroly you do nothing when there is nothing to do, the better you can do something when there is something to do."

The Garden Closed the Deal

A MAN wishing a loan on a farm that he contemplated buying asked the agent to go out and look at the prospective purchase. He was enthusiastic about the soil, the buildings, the drains and all that pertained to the place which he considered a bargain. The agent went with him and was interested in all he saw, but when the inspection was finished he said quietly to the man that he wanted to see the place on which he was at present living as a renter. The man gladly complied, but said the place was run down as the landlord would not repair anything that could possibly be put off until later.

The agent made no comment, but went directly to the barn which, tho old, was in fine condition as to cleanliness. Some of the window panes were missing and the spaces boarded over, but it was free from dusty cobweb festoons and piles of rotting fertilizer. The sheds showed similar conditions while the premises were free from disorder, tho shabby in the extreme. All the machinery was housed and showed that the owner had been repairing it at odd moments.

Getting at the Root of the Matter

The tenant could see why the man was interested in all this, but when he inspected the garden lying bleak and bare under the wintry sky he was amazed. If he had but known it the garden figured largely in the man's idea of letting out money.

"I can't show you much here, but I'll take you into the cellar and show you what we raised," said the tenant. "We just about live out of the garden summer and winter." And that was what the agent had been waiting to hear.

Loan Granted on the Spot

When he saw the rows and rows of canned fruit and vegetables in the cellar that was carefully banked to keep out frost, he granted the loan on the spot. "I never saw a man stay in debt long who knew the value of a good garden," said the agent. "As a mortgage lifter the garden has no equal." And when the tenant said in astonishment that he rarely had much surplus to sell and that the family ate what they raised, the agent was not shaken in his conclusions.

"Vegetables and fruit make for health and energy," he said positively. "I never like to place a mortgage for a man who is sickly, or has a sickly family. The pile of tin cans at the back door and the condition of the garden summer or winter often decide the granting or rejecting of a loan. I once refused a farmer a loan because he said he had no time to bother with a garden. And my judgment proved correct. Two years later the man who did lend him the money had to buy the farm to save the amount of the mortgage. A good garden and a mortgage seldom continue long together.—Hilda Richmond, Ohio.

Put health first when you buy a bedspring

It is wisdom to think first and to buy afterward. Your spine *should* have perfect support—your nerves *do* need better relaxation—your body *deserves* the utmost quality in sleep. And if you think of these important things first you will buy a Foster Ideal Spring, for this efficient bedspring with its 120 super-tempered, form-fitting, spine-supporting spirals will make you a happier, healthier man, or woman.

Manufactured by
THE W. R. HARRISON COMPANY
MASSILLON, OHIO

These TWO for the price of ONE!

FOR a limited time only, dealers who sell Las-Stik Tube Patch give a No. 1 size Las-Stik Balloon Tire Casing Plaster with each purchase of a can of Las-Stik Tube Patch — a 75c value for 50c.

We want you to know at first hand the absolute dependability of the new Las-Stik Plaster — how it binds the cords of the tire together again, keeping out all the sand and water that ruin tires; how it strengthens the entire casing around the break; and how it becomes vulcanized and an integral part of the tire.

It makes a perfect, permanent repair to casings—as lasting and workmanlike as a repair shop job and at less than one-fourth the cost.

At your regular garage or accessory dealer. If not, order from us direct, enclosing the 50c for the Tube Patch, and we'll include the Casing Plaster free.

LAS-STIK PATCH MFG. CO.
Hamilton, Ohio

Las-Stik Casing Plaster

The secret lies in the two piece arrangement — the thick wad of uncured gum that fills up the hole and the three-ply gum coated cord tire fabric that strengthens the tire.

Las-Stik Tube Patch

Without heat, special tools, or equipment, Las-Stik Tube Patch repairs tubes permanently. Stretches with the tube. Self vulcanizes. Won't creep or come loose. Repairs any size holes.

Doctor Lipman's Weekly Talk on Soil Fertility Problems

Combinations That Will Supply Succession of Green Feeds for Cows

This year I want to keep 12 cows on 35 acres of land in four fields. At present one field is in wheat and vetch, another in rye and one in blue grass pasture. I want to sow one field in sweet clover for pasture next year. I am thinking of planting lots of soy beans and fodder corn. Which will come the earliest, Black Wilson soy beans or oats and peas? I want to have a lot of green feed for the cows as the field I have in blue grass pasture is not very good. Will sweet clover pasture cause cows to bloat if fed fodder corn with it?—L. W. A., Salem County, N. J.

The question of furnishing livestock with a succession of green feeds is an interesting one. A great deal of work was done on the subject at the New Jersey Station between the years 1897 and 1905-1906. The results of these investigations were published in the annual reports of the New Jersey Station, and have been widely quoted in this country and abroad.

A very large number of possible combinations may be adopted. By way of illustration, the following succession of crops reported for the College Farm, New Brunswick, New Jersey, 1902-1903, may be given. They were fed green: Rye, May 1-12; wheat, May 12-June 1; crimson clover, June 1-10; first cutting alfalfa, June 10-14; oats and peas, June 14-July 7; mixed grasses, July 7-11; second cutting alfalfa, July 11-18; barnyard millet, July 18-25; vetch and oats, July 25-August 1; mixed grasses, August 1-5; cow peas and Kafir corn, August 5-9; cow peas and millet, August 9-19th.

Length of Feeding Varies

In the case of rye there were two or three seedings in the fall, and likewise there were two or three seedings of oats and peas in the spring. The length of time during which each particular crop is fed will depend on the areas sown as well as on the palatability of the particular crop. For instance, rye when tender makes a good soiling crop, but it matures quickly after the middle of May, and is no longer suitable for the purpose.

As you note in your letter, soy beans might be a very good crop for soiling purposes. They have been grown at the College Farm, New Brunswick, for many years and have given satisfactory results. Should you plant Black Wilson or any other variety of soy beans, the planting could not be done much before early May. The soy beans would not be ready to cut as green feed until August. On the other hand, oats and peas should be ready to cut toward the end of June.

Sweet clover pasture need not cause bloating provided the pasturing is regulated carefully.—J. G. Lipman.

Angleworms Flooded Out

Last fall I raised a fine crop of yellow turnips but before the time came to harvest them I found the common angleworm working at the bottom of the roots. Later I found the entire crop ruined and unfit to sell. My own opinion is that the wet weather caused the worms to work up near the surface of the soil and work on the turnips. Please let me know if I am right.—W. K., Bucks County, Pa.

Serious injury to turnips by angleworms as you describe is uncommon. The explanation which you offer seems to be as reasonable a one as any that can be suggested. It is well known that when the ground is saturated with water, or nearly saturated, angleworms come to the surface. Their principal food is decaying vegetable matter in the soil and when this is not available they may be driven to attack the roots of plants.

It is not at all unlikely that the rise of water toward the surface caused some decay of the roots of the turnips and made the decaying vegetable matter thus resulting in a source of food for the angleworms. —J. G. Lipman.

Write your views and comments briefly on any question of social, economic or educational importance and thus share them with others. It will be necessary to limit such articles to 200 or 300 words. Publication of an article in this department does not signify editorial endorsement.

Thinks It Poor Logic

I WOULD like to make a few statements regarding an article entitled, "He Made a Profit and Did Not Know It," which appeared in a recent number of your paper.

In the first place, the farmers that make what would pass for a labor income of three thousand dollars per year are extremely hard to find.

Secondly, the farmer having the mental and physical ability to actually command such an income but still so lacking in knowledge that he thinks he is losing money until a smooth-tongued income e x p e r t "kids" him into thinking otherwise, is certainly a freak. I have never seen such a person and never expect to see one.

Gives a False Impression

The details in this article are somewhat meager, but one is led to infer that the automobile used by this farmer is purely a pleasure car, even tho 99 per cent of its trips are business and not pleasure. That because he has fresh milk, butter and eggs for himself and family he should charge himself with board equal to that at a high-priced city restaurant.

That because he has a reasonably comfortable and roomy house to live in he should charge himself rent equal to that in the heart of the large city, even tho he has no water system, bathroom or electric lights, his heat is none too good and he lives on a dirt road where it is mud and drifts many months of the year.

I am writing this article for the reason that many farmers are very conscientious and might be persuaded into paying an income tax even tho their standard of living and their financial status are a long way short of warranting it.—A Doubter.

Old Lawyer (to new one)—Well, my boy, how's your practice?

New One—In the mornings practically no one comes and in the afternoons the rush falls off a bit.—Buffalo Bison.

White Diarrhea

Remarkable Experience of Mrs. C. M. Bradshaw in preventing White Diarrhea

The following letter will no doubt be of utmost interest to poultry raisers who have had serious losses from White Diarrhea. We will let Mrs. Bradshaw tell of her experience in her own words:

"Dear Sir: I see reports of so many losing their little chicks with White Diarrhea, so thought I would tell my experience. I used to lose a great many from this cause, tried many remedies and was about discouraged. As a last resort I sent to the **Walker Remedy Co., Dept. 510, Waterloo, Iowa**, for their Walko White Diarrhea Remedy. I used two 50c packages, raised 300 White Wyandottes and never lost one or had one sick after giving the medicine and my chickens are larger and healthier than ever before. I have found this company thoroughly reliable and always get the remedy by return mail."—Mrs. C. M. Bradshaw, Beaconsfield, Iowa.

Cause of White Diarrhea

White Diarrhea is caused by microscopic organisms which multiply with great rapidity in the intestines of diseased birds and enormous numbers are discharged with the droppings. Readers are warned to beware of White Diarrhea. Don't wait until it kills half your chicks. Take the "stitch in time that saves nine." Remember, there is scarcely a hatch without some infected chicks. Don't let these few infect your entire flock. Prevent it. Give Walko in all drinking water for the first two weeks and you won't lose one chick where you lost hundreds before. These letters prove it:

Never Lost a Single Chick

Mrs. L. L. Tam, Burnetts Creek, Ind., writes: "I have lost my share of chicks from White Diarrhea. Finally I sent for two packages of Walko. I raised over 500 chicks and I never lost a single chick from White Diarrhea. Walko not only prevents White Diarrhea, but it gives the chicks strength and vigor; they develop quicker and feather earlier."

Never Lost One After First Dose

Mrs. Ethel Rhoades, Shenandoah, Iowa, writes: "My first incubator chicks, when but a few days old, began to die by the dozens with White Diarrhea. I tried different remedies and was about discouraged with the chicken business. Finally, I sent to the Walker Remedy Co., Waterloo, Iowa, for a box of their Walko White Diarrhea Remedy. It's just the only thing for this terrible disease. We raised 700 thrifty, healthy chicks and never lost a single chick after the first dose."

You Run No Risk

We will send Walko White Diarrhea Remedy entirely at our risk—postage prepaid—so you can see for yourself what a wonder-working remedy it is for White Diarrhea in baby chicks. So you can prove—as thousands have proven—that it will stop your losses and double, treble, even quadruple your profits. Send 50c for package of Walko (or $1.00 for extra large box)—give it in all drinking water and watch results. You'll find you won't lose one chick where you lost dozens before. It's a positive fact. You run no risk. We guarantee to refund your money promptly if you don't find it the greatest little chick saver you ever used. The Pioneer National Bank, the oldest and strongest bank in Waterloo, Iowa, stands back of our guarantee.

Status of Bills in Legislature That Affect Farmers

ELECTION, gasoline tax and appropriation bills have been the center of interest in the Legislature during the past week. More than thirty bills to revise the present election laws have been up for consideration. It is anticipated that some of them will be enacted into law.

• • •

THRET CENTS OR TWO?—While a three-cent gasoline tax bill was introduced last week, it is not the Administration bill, according to reports. Governor Fisher has a bill in course of preparation but it is not known at the time of this writing whether the tax will be set at two or three cents.

• • •

TO AID COUNTY FAIRS.—The appropriation bills are beginning to move. The Stark bill, appropriating $125,000 to county fair associations to cover the past two years, has been reported from committee. This bill is intended to make up the deficiency resulting from a veto of a similar bill two years ago by Former Governor Pinchot. The veto power was exercised because a provision was not incorporated in the bill which would permit the Secretary of Agriculture to withdraw state aid from fairs which had undesirable amusements. Another bill has been introduced which appropriates $100,000 for local fairs for next two years.

• • •

FUNDS FOR BEETLE AND T. B. FIGHT.—The general state appropriations bill is now in the House Committee on Appropriations for amendments. This bill provides $650,000 for the Department of Agriculture for general maintenance, etc., during the next two years. It also provides $100,000 for Japanese beetle control and $100,000 for corn borer control. The amount for general maintenance is the same as that appropriated two years ago. The Japanese beetle appropriation is also the same while the corn borer amount is an increase from $15,000 two years ago. However, it was found necessary to use a portion of the $100,000 state emergency fund for corn borer control last year. A separate bill calls for $2,000,000 for indemnity for tubercular cattle.

• • •

COLLEGE ASKS THREE MILLIONS.—The Pennsylvania State College is asking $3,234,500 for college maintenance, research and extension work for the next two years, and $1,000,000 for new buildings. An item of $403,500 is asked specifically for agricultural research work.

• • •

TO WORK TOGETHER AGAINST BORER.—The Plant Pest bill which makes adequate provision for cooperation between the state and federal departments of agriculture in the control of the corn borer, is going thru the Legislature in record time. While introduced on February 22, it is expected that the bill will be signed by the Governor by the time this reaches the reader. The federal bill providing $10,000,000 for corn borer control, was signed by President Coolidge with the understanding that this money would not be available for work in any of the states concerned until all pass satisfactory legislation for control work.

• • •

TAX COLLECTORS AGAINST SCHANTZ BILL.—The Schantz bill providing for centralized collection of taxes has not made any progress during the past week. It is said that this new plan would save the taxpayers several million dollars each year. Reports are prevalent that a lobby composed of tax collectors and others opposed to centralization in public affairs, is vigorously fighting the measure.—J.

CBP BRAND PULVERIZED TOBACCO POWDER

Try this Simple Way of Controlling Round Worms

FULLY one-half of the diseased chickens received for examination at the New Jersey Agricultural College are infested with round worms. Your flock may be suffering from worms, without your knowing it.

The easiest and safest way to keep your flock free from this profit-destroying pest is to feed

C.B.P. BRAND
Pulverized Tobacco Powder
Guaranteed High Nicotine Content

How to Free Poultry from Round Worms

Simply mix 2 lbs. of C.B.P. Brand Pulverized Tobacco Powder with every 100 lbs. of mash and feed as usual. This method is recommended by Experiment Stations and practical poultrymen as the simplest and most effective preventive and remedy for round worms in poultry. It is also an effective Lice Powder.

Send $1.00 for Trial Bag

BABY CHICKS

SAY you saw the advertisement in Pennsylvania Farmer when you are writing to our advertisers.

FLEX-O-GLASS ADMITS Ultra Violet Rays
PAT. PEND. T. M. REG.

1/8 Cost of Glass And Much Better

Keeps Baby Chicks Healthy

Prevents Weak Legs, Diseases and Deaths

Don't keep chicks behind glass. It shuts out the sun's Ultra-Violet rays, causes leg weakness, rickets, disease and finally death. Leading State Experiment Stations and scientists have proved this in many tests. But these scientists also found that chicks kept under FLEX-O-GLASS were safe from rickets, weak legs, stayed healthy; were full of pep and grew amazingly in this warm sunlit room—because the chicks absorbed the energizing Ultra-Violet rays that FLEX-O-GLASS admitted.

These tests were made for you. Put your chicks under FLEX-O-GLASS. Prevent weak chicks, diseases and deaths in this easy way. Every chick will mature or reach frying size much sooner than ever before because they absorb the tissue building Ultra-Violet rays that pass thru FLEX-O-GLASS. Poultrymen everywhere have replaced glass with FLEX-O-GLASS, which makes use of the sunshine—Nature's only health-producer—indoors where chicks are out of slush, snow and rain. Fast, strong chick growth will be astonishing. Just build a FLEX-O-GLASS scratch shed easily and replace all poultry house windows with FLEX-O-GLASS. Just cut with shears and nail on. The results will actually amaze you. Use 15 yards for 300 chicks. This cozy sunlit brooder-house will pay for itself many times the first season alone and next winter keep your hens in it. The Ultra-Violet rays will keep them healthy and active, stimulate the egg glands and make them lay to the limit in coldest weather.

Better than Glass for Hotbeds

Gardeners—get stronger bigger plants that will grow when transplanted. Because FLEX-O-GLASS admits concentrated Ultra-Violet rays and Infra Red (heat) rays, it makes plants grow much stronger and faster than when under plain glass. (Glass stops these rays). Have plants earlier. Get more money for them. FLEX-O-GLASS is installed much easier, holds heat better and costs far less than glass. Scatters light just as needed. Frames are lighter and easier to handle.

PRICES—All Postage Prepaid

Per yd. 36 inches wide; 1 yd. 50c; 5 yds. at 40c ($2.00); 10 yds. at 35c ($3.50); 25 yds. at 32c ($8.00); 100 yds. or more at 30c per yard ($30.00).

FLEX-O-GLASS MFG. CO.
1451 N. Cicero Ave., Dept. 198, Chicago, Ill.

Genuine FLEX-O-GLASS GUARANTEED Most DURABLE

FLEX-O-GLASS was the original material advertised for admitting Ultra-Violet Rays from the sun. It always has been and is today made on a stronger, better cloth base. That's why we get so many letters telling that FLEX-O-GLASS is best. Always looks new and bright, even after many seasons of exposure to wind, rain and snow. Cut with shears and nail on. Lasts for years. Make sure of getting the genuine, by ordering direct from Flex-O-Glass Mfg. Co., the sole manufacturers.

Mrs. T. J. Jensen of Nebr. states:—"When Flex-O-Glass is installed beside another, it speaks for itself."

SPECIAL $5 TRIAL OFFER

We will send you 15 yards of FLEX-O-GLASS in a roll 3 feet wide and 45 feet long, postage prepaid, for $5.00. This big roll covers a scratch shed 9 x 15 ft. (size for 300 chicks) or use for brooder-house fronts, hotbeds, poultry, barn or hoghouse windows, enclosing porches, storm doors, etc. If after 15 days not satisfied FLEX-O-GLASS gives more warm healthful light than glass, or if it isn't the most durable, send it back and your money will be refunded without question. You must be absolutely satisfied or your money back. Mail check or money order today. Use Guarantee Coupon below, which is backed by $1,000 deposited in the Pioneer Bank of Chicago. Send $9.50 for 30 yds. if you wish larger trial roll. 24 hour service. FREE catalog contains valuable poultry information—with your order.

Market Prices Continue to See-Saw

Review of the Week Ending March 5

POTATOES—The eastern potato markets were irregular during the week and conditions varied considerably with local conditions. The Maine and New York shipping points made some improvement due to better inquiry. In Philadelphia the market opened dull and draggy but trading became more active toward the middle of the week and prices on the best stock advanced. At the higher prices the demand slackened but was still sufficient to hold prices firm.

BUTTER—Prices were erratic in the butter markets on account of a general lack of confidence on the part of dealers and buyers. Early in the week there was a fair volume of business but as the supplies of fresh butter were liberal, the market weakened.

EGGS—The New York egg market was firm toward the close of the week. Supplies of mid-western and southern stock were moderate and considerable quantities were going into the warehouses. The weather in some sections was unfavorable and farmers were unable to haul on account of the bad roads. The demand was good and prices made slight advances. The market on fancy nearby white eggs was firm under a fair demand. Prices held firm and extra fancy stock brought a premium.

POULTRY—Receipts of live poultry were liberal in New York and the market weaker. Light fowls met a fair demand but heavy birds moved slowly at lower prices. Express receipts of live poultry generally sold slowly and on the same basis as freight receipts. The market for dressed poultry was rather quiet. Hothouse broilers and other early broilers were active, especially on the smaller sizes. The next Jewish holiday falls on March 17 and at this time there will be a demand for fat fowl and hen turkeys.

LIVESTOCK—The Chicago hog market was strong and prices averaged higher. Practically all classes of cattle advanced. Beef steers, cows, heavy calves, vealers and heifers sold at higher prices. Stockers and feeders were about steady. Fat lambs, yearling wethers and fat ewes were generally higher, while feeding lambs made sharp advances.

GRAIN—Prices were irregular and the markets were recovering from last week's slump. Wheat prices were higher due in part to advancing prices in foreign markets. Corn was higher early in the week but closed lower than last week. Oats were irregular.

HAY—Supplies of timothy and alfalfa hay were more than ample for the demand at most markets. The eastern markets were firmer on best grades and these sold readily.

FEEDS—The feed markets were about steady under a slow demand. Production of most feeds was limited and this helped to maintain prices. Cottonseed was about steady and linseed meal slightly weaker in the East. Gluten feed was barely steady.

County News and Comment

Cameron County, Pa.—Had a big snow on 19th and 20th. Chickens began to lay well during open spell of weather early in February and eggs dropped to 15c in local store. Butter still 50@55c. Mail delivered only one day last week. It's claimed bears are coming to town to get meals. Many deer seen in orchards this winter.—Q. E. T., March 1.

Clearfield County, Pa.—Roads almost impassable. More interest now in ways and means to secure more concrete road than in growing big crops. Eggs down to 30@40c; butter, 50@60c; timothy and mixed hay, 24@28c; most of this will be used locally as roughage is scarce. Winter grain has been covered most of the time and the early sown wheat looks well.—D. H. W., March 1.

Dauphin County, Pa.—Have just had first heavy snow of winter. Traffic practically at standstill. Weather has been too wet for grain. Many farm sales. More demand for cows than for horses. Some corn husked during past month. Much fodder still in fields. Indications are that acreage of potatoes will be large, also that more barley and less oats will be sown. Many farmers ordering baby chicks. Local prices: wheat, $1.30; corn, 80c; oats, 50c; hay, $22; butter, 60c; eggs, 30c.—I. F. M., February 25.

Fulton County, Pa.—Blizzard on 19th and 20th blocked roads. Wheat fields brown and bare. Farm work at standstill, very few farm sales this spring and few farms will be vacant. Eggs have declined rapidly, selling for 20c now; butter, 35c; wheat, $1.30; oats, 55c.—T. H. T., February 26.

Lawrence County, Pa.—Weather thruout month freakish. Many sales billed for March. Wheat and rye look badly. Farmers plan for larger acreage of potatoes the coming season. Greater demand for fresh cows as price of milk is higher. Eggs plentiful, selling at 45c; good country butter, 50c; live poultry, 25c; wheat, $1.40; oats, 48c; rye, 95c; clover hay, $24; timothy hay, $20; ear corn, 38c; oat straw, $15.—M. L. V., February 28.

Lebanon County, Pa.—Had most severe snow of winter of 19th and 20th. Fields bare again. Some wheat fields look fairly good, others in poor condition. Many attending farm stock sales daily. Good stock and implements command high prices. Good cows bring from $100 to $200. Highest price paid recently for a cow was $365, a registered Guernsey. Baby chicks being ordered. Some farmers have ordered clover seed. Prices: wheat, $1.40; corn, 70c; oats, 50c; hay, $22; straw, $14; potatoes, $1.50; butter, 55c; eggs, 25c.—P. L. M., March 3.

Monroe County, Pa.—A foot of snow fell February 19 and 20th. Many roads badly drifted. Very few public sales advertised. Eggs, 28c; veal, 13c; buckwheat, $1.10; corn, $1; oats, 60c; potatoes, $1.75.—G. E. S., February 28.

Montgomery County, Pa.—February exceptionally mild. Quite a few farms changing hands. The site for the new Eastern Penitentiary will probably be in the section northeast of Graterford. Farmers have been ordered to vacate their properties. This is causing an extra number of farm sales. Work in industries is very poor but there will be quite a few large building operations as weather permits. The egg market has declined rapidly, cold storage companies are buying in already. Retail price is 30c. Other prices: poultry, 30c; veal calves, 14c; fat hogs, 18c; wheat, $1.30; oats, 60c; potatoes, $1.50.—C. N. D., March 1.

Somerset County, Pa.—There was a gain in Somerset County in coal in the year 1926 over 1925 of 732,493 tons. In 1926 there were 10,362,385 tons mined. A few farm sales here and there and tenant farmers looking for farms to rent. Not much change in prices of farm produce.—H. W. B., February 27.

Sullivan County, Pa.—Snow last week tied up traffic. Many farmers have been putting out food for small game during entire year. Most farmers favor new restrictive game laws and a stricter enforcement of existing laws.—M. G., February 27.

Union County, Pa.—Wheat crop mostly marketed at from $1.32 to $1.35 and not much held for May market. Many bushels of apples held in cold storage. Much corn moved as some is not keeping in cribs. Several carloads of western horses have been shipped into the county and sold at private sale by local dealers. Farmers in county have stopped raising horses and there is not a purebred stallion in the county. Public sales have begun. Many farmers are waiting for the second tuberculosis test. Since the first test a number of purebred cows have been shipped in from accredited herds of other counties.—J. N. G., February 26.

Wyoming County, Pa.—February not as severe as December or January. Many peach buds killed. Fruit very dull on market and movement slow. Potato market lower and there seems to be liberal supply in county yet. Local price varies from $1.25 to $1.50. Certified seed for planting $2.90 by carload. Eggs bring 30c per dozen at local stores; heavy hens, 30c; Leghorns, 26c. The price of milk is the same. More farmers joining League than are dropping out. Farmers drawing lime and fertilizer.—J. J. J., February 26.

York County, Pa.—Wheat does not look very promising and the outlook for hay is not of the best. A few cases of hog cholera reported in county. Hens have not been laying as well as usual but in spite of this price of eggs has been steadily declining. Now 20c. Other prices: wheat, $1.30; oats, 45c; corn, 75c; 4 per cent milk, $2.60; hogs, $12.50@13, live weight; chickens, 26@27c. Feed at retail: bran, $1.90; midds, $2.10; cottonseed, $2; oil meal, $2.75; fish meal, $2.75.—W. K., March 1.

Marietta, Ohio

The Famous Mount Gilead Line of Presses

For fifty years the Hydraulic Press Mfg. Company has built cider presses for farmers and orchardists. Whether it's a hand press for making a few barrels of cider or a hydraulic custom press, there's a Mount Gilead press that exactly fits your needs.

MORE PROFITS

Mount Gilead Hydraulic Presses average 3½ to 4 gallons of cider per bushel. When used for custom presses they frequently pay for themselves the first year. And the Mount Gilead Orchard Press for roadside cider sales is a sure money-maker. Write for free booklet, full of valuable information.

THE HYDRAULIC PRESS MFG. CO.,
805 Lincoln Ave., Mount Gilead, Ohio.

Mount Gilead CIDER PRESSES

Pure Bred Heifers and Heifer Calves

from an Accredited Herd. All are good producing dams and most of them from my 30-lb. bull King Mahwin Johanna Hue, a son of The King of The Johanna Lads from a 30-lb. dam.

Also offer for sale a pure bred bull mostly white and of good individuality. Will offer for sale a few good grade cows.

Pure bred heifers and heifer calves are all good Holstein individuals and only offered for sale because I am overstocked and about to dissolve a partnership. Will sell at very moderate prices if I can sell before April 1st.

Eugene B. Bennett, The Old Home Farm. The Drew Brothers, Allamuchy, N. J.

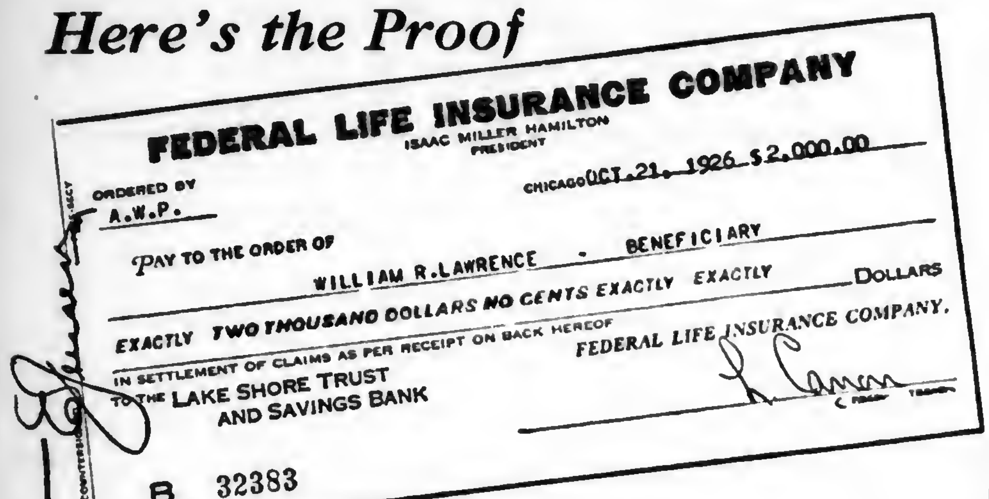
INSURANCE PAYS

Here's the Proof



FEDERAL LIFE INSURANCE COMPANY
ISAAC MILLER HAMILTON PRESIDENT
CHICAGO OCT. 21, 1926 $2,000.00
ORDERED BY A.W.P.
PAY TO THE ORDER OF WILLIAM R. LAWRENCE - BENEFICIARY
EXACTLY TWO THOUSAND DOLLARS NO CENTS EXACTLY EXACTLY DOLLARS
IN SETTLEMENT OF CLAIMS AS PER RECEIPT ON BACK HEREOF
FEDERAL LIFE INSURANCE COMPANY.
TO THE LAKE SHORE TRUST AND SAVINGS BANK
B 32383

$2,000 for $1.00 Invested

The reproduction of this check represents the payment of a claim to a subscriber of Pennsylvania Farmer, the result of an automobile accident in which his son was fatally injured. It also represents an investment of only $1.00.

When Henry D. Lawrence, of Bridgeton, N. J., sent in his application for a $5000.00 Travel-Accident Insurance Policy no one foresaw the sad tragedy ahead of him. He was only nineteen years old and anticipated many active years but he realized the dangers that stalk our daily lives and was thoughtful of those who had loved and cherished him from childhood. If anything happened to him he wanted them to be protected. Less than six months later Henry was killed. No money can repay the loss of the bereaved family but the check for $2000.00 from the Federal Life Insurance Company helped take care of the unexpected expense. No one can afford to be without this protection when it can be secured for such an insignificant cost—Only $1.00 per year.

Here is what it is worth to you

$5,000.00 For loss of life by wrecking of railroad passenger car, street, elevated or subway car as specified in policy.

$2,000.00 For loss of life by wrecking of horse drawn or private motor driven vehicle, bus, taxi-cab or passenger elevator as specified in policy.

$1,000.00 For loss of life by being struck or knocked down while on a public highway or being struck by lightning, cyclone, tornado, as specified in policy.

$10.00 Weekly for fifteen weeks for injuries sustained in the above manner as specified in policy.

A few of the many claims paid to Pennsylvania Farmer readers

CHAS. R. KEHRES, Rebuck, Pa.	$38.57	ANNA R. HARRIS, R. 3, Salem, N. J.	$20.00
WM. H. TURNER, Salem, N. J., R. 4.	$20.00	JOHN WILSON, R. 1, Sewell, N. J.	$40.00
FRANK MOLLO, Smethport, Pa.	$28.57	CLARK B. JOHNSON, R. 8, Towanda, Pa.	$40.00
HENDRICK VAN CLEEF Cliffwood, N. J.	$10.00	K. B. DEEMER, Reynoldsville, Pa.	$70.00
LLOYD C. LEISTER, R. 3, Lewistown, Pa.	$20.00	WM. H. JOHNSON, R. 1, Erie, Pa.	$14.28
CHAS. F. BOSTWICK, Athens, Pa.	$11.43	JAMES W. FELTON, 3707 N. 5th St., Phila., Pa.	$60.00
SAMUEL E. WEAVER, New Holland, Pa.	$52.86	CLARENCE D. CAREY, R. 5, Coatesville, Pa.	$15.00
HENRY D. LAWRENCE, R. 1, Bridgeton, N. J.	$2,000	CLARENCE S. KATES, Glenlock, Pa.	$38.57

This policy is offered to readers of Pennsylvania Farmer for only $1.00 a year for each policy. If you already have a policy renew it before it runs out as by so doing you will add 10 per cent value to all parts of your policy except the $10.00 weekly indemnity clause.

☐ NEW POLICY
Check here if for new policy

☐ RENEWAL POLICY
Check here for renewing policy

If you are sending for your renewal policy, check above where indicated and fill in below ONLY lines 1, 2 and 3. If you are sending for a new policy, it is necessary for you to fill in every line, otherwise there will be a delay in issuing the policy to you.

Notice: Not more than one policy can be issued to any one person, but any and all members of a reader's family may each secure one.

Application

Print each name and address clearly and carefully. Illegible names will delay the delivery of your policy.

for $5,000.00 Travel-Accident Insurance Policy issued to readers of PENNSYLVANIA FARMER, Phila.

Leghorns Deserve Blue Ribbons

AVERAGING 21.4 eggs per bird two flocks of White Leghorns led the pullet flocks of 100 or more birds on Pennsylvania demonstration farms in January, according to the monthly report of the Pennsylvania State College poultry extension service. The leaders were 313 birds owned by John Toivonen, Girard, and 378 owned by Charles C. Luehm, McKeesport.

Other high pullet flocks were those of Edward D. Clark, Harbor Creek; William Heimberger, Saltsburg; John E. Donaghy, Atlantic; Harry B. Danner, Oxford, and Lone Oak Farm, Emporium. All were White Leghorns except the Clark flock which was composed of Rhode Island Reds.

The flocks of 100 or more hens and pullets were led by 745 White Leghorns in the flock of Horace DeLuzio, Grove City, which averaged 18 eggs each. Other high flocks were those of Orwell Ridge Farm, LeRaysville; Edwin B. Wallis, Liverpool; W. J. Brenner, Carlisle, and W. D. Black, Marion Center. All were White Leghorn flocks.

C. F. Erway's 128 White Leghorns at Middlebury Center and C. R. Garland's 668 White Leghorns at Oakdale averaged 11.8 eggs each for the best records among the flocks of 50 or more hens. Other high flocks were those of J. F. Bradford, Lewistown; William Heimberger, Saltsburg; Verna Shadler, Latrobe, and John E. Donaghy, Atlantic. All were White Leghorn birds.

Coal Ashes "Yes"— Wood Ashes "No"

We have plenty of coal and wood ashes. We use them in the hen houses for birds to dust in. Is it advisable to do so?—H. F., Ulster County, N. Y.

Coal ashes sifted are excellent for hens to dust in, and are also good as an absorbent when sprinkled on the dropping board. Wood ashes are good for neither purpose. The alkali they contain roughens the feathers and may make the legs sore, while the lime drives out the ammonia in the droppings, which is the substance that makes hen manure so valuable a fertilizer.

If you will store the wood ashes and hen manure separately in a dry place until spring, and then harrow them into your garden, you will find it an excellent fertilizer combination.—R. L. Scharring-Hausen.

Operation Cost High

I am thinking of installing an electric incubator in a room having hot water heat, constant temperature 70 degrees, current 10 cents per k.w.h. Will the current cost more than ½c per egg?—G. E. S., Northampton County, Pa.

Electric incubators are not as common as the other kinds because, as a rule, they are more expensive to run. If you have any special make in mind the manufacturer would be able to give you data on the cost of operation, which would vary with individual makes. There is no reason why an electric incubator put out by a reliable concern should not be perfectly safe and reliable.—R. L. Scharring-Hausen.

Over half of the cabbage used in Philadelphia last year came from New York growers. The "City of Brotherly Love" consumes more cabbage per capita than any other eastern city. Part of last year's supply of 17 million pounds came from Holland.

Milk is now being shipped to the Philadelphia market from West Virginia.

Money In Accurately Sawed Lumber

The CENTAUR

The Best Investment You Can Make

Why not make your plowing, harrowing, planting and cultivating easier and more profitable this year? You can do it with the simple, powerful CENTAUR, which only costs a few cents an hour to operate—and is a riding tractor for every field job.

Plows 7" Deep — Has a Reverse

With a CENTAUR TRACTOR you can do your farm work at less cost than with a horse and you can do it better, quicker—more comfortably. It will do your plowing, harrowing, discing, seeding, cultivating, mowing, hauling, sawing, feed grinding and other jobs —in double quick time and at lowest possible cost!

Low Price — Easy Payments

Seven years of successful service. The CENTAUR is fully guaranteed and offers you the biggest tractor value ever placed upon the market. Write today for full information and our easy payment plan.

LIVE STOCK

W. H. TOMHAVE
Staff Contributor and Adviser
Head of the Department of Animal Husbandry, Pennsylvania State College

Number Raised Governs Initial Cost

WITH the approach of farrowing time the swine grower is confronted with the problem of saving a high percentage of the pigs farrowed. It goes without saying that it is important to save as many of the pigs farrowed as possible, because the initial cost of the pigs raised is governed, not by the number farrowed but by the number actually raised. The mortality among pigs is greater during the first few days than at any other time except during an epidemic of hog cholera.

Brood sows should be kept in good thrifty condition but should not be too fat. The feed supplied should contain some bulk and a liberal amount of protein. Brood sows can not produce strong, vigorous pigs when fed on corn alone. The corn should be supplemented with tankage, fish meal, skimmilk or buttermilk. A liberal allowance of clean alfalfa or clover hay can also be fed to advantage.

Minerals Prevent Weak Pigs

Many sows farrow weak pigs because the ration that has been used is low in mineral content. This can easily be overcome by feeding legume hay or by allowing the sows a mineral mixture made up of 40 pounds steamed bone meal, 40 pounds ground limestone and 20 pounds salt. This may be put in a box or trough where the sows will have free access to it.

The gestation period of sows is about 112 days. If a record has been kept of the date when the sows were bred it is an easy matter to figure the approximate date of farrowing. Two or three days before the sow is due to farrow she should be placed in a suitable pen. Placing the sow in the farrowing pen this length of time in advance of farrowing will give her an opportunity to get acquainted with her new surroundings. Guard rails placed around the pen about six inches from the floor are desirable as they will keep the sow from lying on the pigs.

A reasonable amount of straw should be placed in the pen. Too much straw is objectionable because little pigs are easily smothered. The floor should be dry and clean with sufficient bedding to keep the pigs warm. If the pigs are chilled any time during the first two days they are likely to die or have their growth retarded.

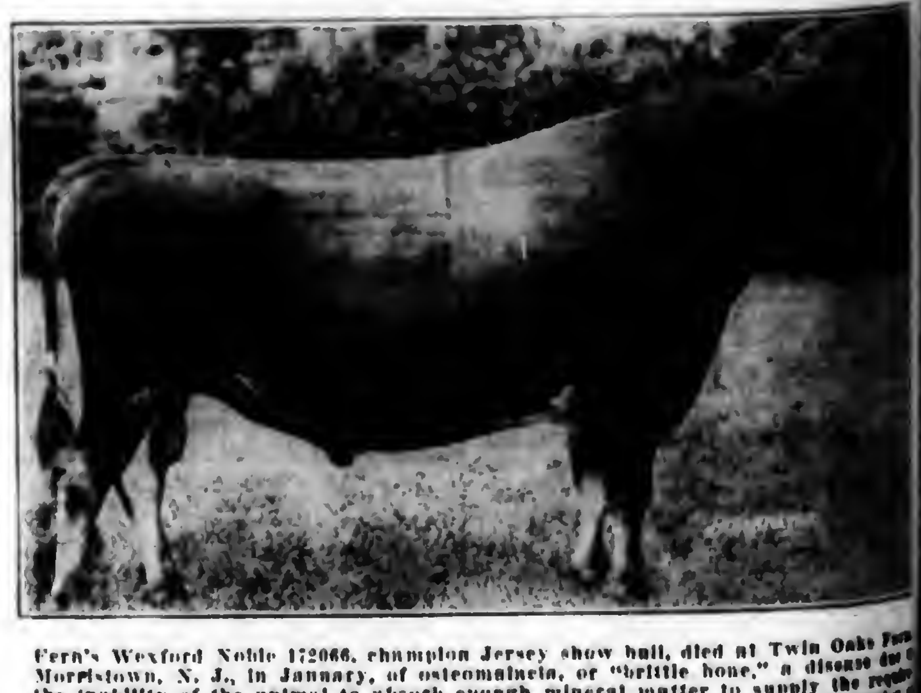
Brood sows should not have their full allowance of feed for a couple of days before and after farrowing. An allowance of about one-half the usual ration is sufficient. On the day of farrowing, a liberal allowance of lukewarm water and a small amount of middlings is all the system requires. If the sow is quiet and does not seem nervous the pigs can be left with her. If she seems unruly and there is danger of lying or stepping on the pigs they should be removed and placed in a basket or box where they can be kept warm and placed with the sow every two hours for nursing.

The amount of feed to give the brood sows after two days must be governed by the amount of milk required by the litter. A litter of eight or ten pigs will take all the milk produced at the end of two or three days. From this time on the sow may be fed about all the grain that she will consume. The mixture should be rich in protein which is necessary to produce milk. Exercise is also necessary. It will stimulate the milk flow if the proper ration is fed and also keep the sow in better physical condition.

May Eat Grain When Two Weeks Old

When the pigs are about two weeks old they will begin to take a little grain. This should be fed in a trough where the brood sows cannot get at the feed. The grain mixture for the pigs should contain feeds rich in protein. A simple combination is made up of four parts corn meal and 1 part digester tankage or fish meal. A combination with a little more variety is made up of six parts corn meal, three parts wheat middlings and one part of digester tankage or fish meal. Skimmilk may take the place of the tankage or fish meal when it is available. The amount of feed consumed by the pigs at the beginning will be small, but it must be gradually increased as the pigs are able to take more. Liberal feeding is important as the pigs will then become accustomed to grain before weaning time and there will be no setback during that period.—W. H. Tomhave.

Champion Jersey Dead



Fern's Wexford Noble 172066, champion Jersey show bull, died at Twin Oaks Farm, Morristown, N. J., in January, of osteomalacia, or "brittle bone," a disease due to the inability of the animal to absorb enough mineral matter to supply the requirements of its body. He was just eight years old. Wexford was Grand Champion at the National Dairy Show in 1922, 1923 and 1924. His sons, Fern's Rochette S and Oxford Wexford Noble, were Grand Champions in 1925 and 1926. His get won first in the Get of Sire Class at the 1925 and the 1926 National. Other sons and daughters have show-ring winnings and production records too numerous to list here.

I will condition a horse or cow in twelve days.
Put flesh on its bones. Give it life and [illegible] I will add 50 per cent to looks and value. Satisfaction guaranteed or no pay. Send postal for free offer.

Veterinary

Conducted by Dr. J. F. Shigley
Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Livestock.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

COW FAILS TO BECOME PREGNANT—SOW NOT DOING WELL.—I have a cow that has been served three times and is still not with calf. Also, I have a sow that has fallen away in flesh. Has no appetite.—E. H. N., Mascot, Pa. Have this cow examined by a qualified veterinarian to determine the condition of the reproductive organs. The treatment would depend upon his diagnosis. Give this sow milk if it is available. Feed a mixture of 100 lbs. corn, 10 lbs. tankage or fish meal, 5 lbs. oil meal and 5 lbs. ground alfalfa. In case you have alfalfa or clover hay, this may be fed instead of the ground alfalfa.

COW IS CONSTIPATED.—I have a heifer I think is with calf. She is very costive. I gave her a good physic but she is just the same. What shall I do for her?—J. H. R., Wapwallopen, Pa. Feed roots, bran mashes, oil meal and plenty of roughage to insure rapid elimination from the intestinal tract.

HYSTERIA OR RUNNING FITS.—I have two Shepherd pups about six months old. They have been in good health until a few days ago when one was taken with a curious spell, running and crying and trembling. This pup had two spells the same day and the following day the other pup had one exactly the same. Please advise what you think might be the trouble and remedy, if any.—C. P., Uniondale, Pa. This condition may be due to parasites, faulty feeding (which involves over-feeding) the use of too much starchy food, and irregular feeding. This condition might also be due to faulty nutrition of the mother of these pups before they were born. Secure some good reliable worm medicine, preferably from your veterinarian. Feed milk once daily and raw or cooked meat that is not finely chopped. Do not overfeed.

WARTS.—Will you please tell me how to get rid of warts on a bull?—M. W., Barnesville, Pa. Try applying a paste made by pulverizing blue vitrol and mixing it with vaseline. Apply vaseline around the wart first before the mixture is rubbed on. Repeat daily for 3 days. Large warts may be removed by tying a silk thread around the wart close to the skin.

Seedsmen Beware!

DR. E. M. GRESS, Pennsylvania State Botanist, warns seed buyers not to buy seed from one Thomas E. Nokes.

In a public statement Doctor Gress says: "Mr. Nokes has been doing a fraudulent seed business in Maryland. He solicits orders for seeds at ridiculously low prices and requests a deposit with the order. He then fails to deliver the seed. He is now operating in Pennsylvania, claiming to be associated with the Interstate Corn Growers of Frederick, Maryland, from which place he has very recently been requested to leave by the Chamber of Commerce.

"We understand, too, that he is using test reports from the Pennsylvania Department of Agriculture. These reports are said to have the signature of Dr. E. M. Gress, State Botanist. How he has received these reports we do not know since, to our knowledge, we have done no work for him.

"Our advice to all seedsmen is to buy only from reliable wholesale seedsmen and to all farmers to buy only from reliable retail seedsmen."

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 100,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (65 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

THE BOOT WITH THE MUSCLES

"Muscled"
like a pile driver

JUST as its "muscles of steel" give tremendous hitting power to a pile driver without adding unnecessary weight—

The "muscles" or ribs of tough, live rubber give remarkable wearing strength to Top Notch Buddy Boots without adding extra weight.

Examine a pair of these boots. See for yourself how the muscles, tough as whalebone, strengthen the uppers and prevent them from cracking. Note how light and comfortable the boots are. And as for wear—your dealer will stand behind them to the limit!

Soles and heels are double thick. The rubber strip reinforcement next to the sole fortifies another vital point of wear. The trim shaped leg prevents your foot from sliding up and down.

You get the most for your money in wear and comfort when you buy a Buddy!

Rubber footwear for all the family

BOOTS, arctics, heavy and light rubbers, all styles and sizes for men, women and children. Made with unusual care to safeguard our 26 years' record for building durable, distinctive footwear. Ask for Top Notch Rubber Footwear by name and look for the Top Notch Cross. The best stores carry it or will get it at your request.

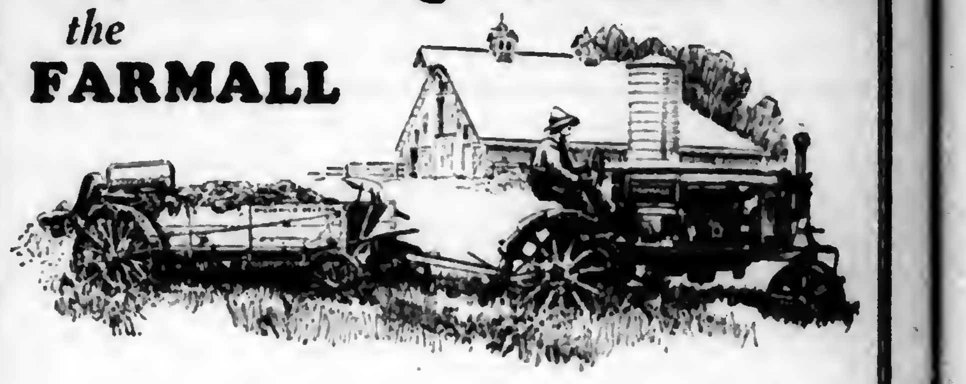
McCormick-Deering Manure Spreader *and the* FARMALL



The Road to Farm Profit

The old-fashioned ways that made money in farming before the war have gone by the board. Everything is changed. The man who sticks to the old ideas has a hard time of it nowadays.

Yields must be increased, operations must be handled more efficiently, labor must be saved. Better equipment must produce bigger and better crops at lower costs—or there is little profit.

First, fertility must be put in the soil, and the scientific method is by McCormick-Deering Manure Spreader. The speed and ease with which fresh manure is handled and put evenly on the fields with this spreader encourages the full use of valuable fertility.

You will like the design and build of the McCormick-Deering. It is light of draft, simple and strong, and does everything a good spreader should do. Low for easy loading, with adjustments for different manures and light or heavy spreading. Built in two sizes. Note the features at right. Other machines *handle* crops; this machine *increases* them.

See this spreader at the McCormick-Deering dealer's store.

Note these features:
1. Auto Steer
2. Front Wheels Track with Rear
3. Two All-Steel Beaters
4. Wide-Spread Spiral
5. Narrow Tread
6. Self-Aligning Bearings
7. Steel Main Frame
8. Six Feed Speeds
9. Positive Apron Drive

INTERNATIONAL HARVESTER COMPANY

McCormick-Deering

WHY did we so easily sell tons of Badger Balm last year and why will we sell many more tons this year? The answer is obvious. Our customers like it and recommend it. Badger Balm is a pleasing, soothing, healing antiseptic balm, easily applied and positively gives satisfaction.

If you have ever used Badger Balm, we know you are using it now. If you have never used Badger Balm, get a box, try it, — you will then, like thousands of others, become a constant user.

For Veterinary Use

Sore teats, Cow Pox, and chafed udders in cows; Scratches, cracked heel and inflamed swellings in horses and other domestic animals.

For Family Use

Chapped hands, sore feet, chilblains, frost bites, sunburn, Salt Rheum, Eczema, and many other forms of skin diseases. Also excellent for piles, hemorrhoids, sore or inflamed breasts and scalp ailments.

Here's Our Offer Use Badger Balm as directed. If you are not satisfied with it, your money will be refunded without argument. Ask your dealer. If he does not have it, send direct. Price post paid 50c. Badger Balm is one of 44 prescriptions Dr. Roberts has used successfully in his practice for more than twenty-five years.

Write for free copy of The Cattle Specialist and how to get the Practical Home Veterinarian without cost. Veterinary advice free.

MAR 17 1927

Practicing up for cultivating time.

Beginning in this issue: The Rambles of a Pennsylvania Fruit Grower—a series of vacation letters from Doctor Fletcher.

Ford owners pleased! The improved Mobiloil "E" gives a double surprise

More mileage between carbon removals.

More mileage between band replacements.

When the improved Mobiloil "E" was announced, some asked, "But in getting the new smoothness in starting and stopping, how can you retain the unusual freedom from carbon which we have always found in Mobiloil 'E'?"

Our reply was, "That has been our chief concern. That is why we waited years to change Mobiloil 'E.' Ingredients used in many Ford lubricants to provide easier starting have resulted in extra carbon and valve troubles. It was only after years of experimenting that we got the two results: Real freedom from jerky starts and stops *plus* real freedom from carbon."

Today's Mobiloil "E" is cheaper than ever to use. Here is why—

More Ford miles per dollar.

By increasing the life of transmission bands you postpone the expense of replacement. That's saving number one. By cutting down carbon deposits you pay for fewer carbon removal jobs. That's saving number two. Nor is that all.

The improved Mobiloil "E" splashes freely in the Ford lubricating system. It reaches all engine, clutch and transmission parts where protection is vital. And today's Mobiloil "E", due to its clinging, resisting character shows remarkable economies. Less wear. Fewer repair bills. More power. A sweeter-running Ford engine.

And due to the great "wearing" qualities of Mobiloil "E" you will use less oil.

Four quarts to prove it

Mobiloil "E" will cost you less to use than other oils despite the fact that Mobiloil "E" costs 5 cents more per quart. Four quarts, a Ford crankcase full of the genuine Mobiloil "E", will prove this to you.

After you have once tried the improved Mobiloil "E" you will want to keep a supply on the farm. A nearby Mobiloil dealer has Mobiloil "E" in various sized cans and drums. Each container offers real economy and convenience in handling oil.

The year around use Mobiloil "E" in your Ford car and Ford truck. In your Fordson tractor use Mobiloil "BB" in summer and Mobiloil "A" in winter. Ask the Mobiloil dealer what grade of Mobiloil to use in cars, trucks and tractors of other makes. All Mobiloil dealers have the complete Mobiloil Chart of Recommendations.

Rambles of a Pennsylvania Fruit Grower

I. In the Shenandoah Valley of Virginia

By Dr. S. W. FLETCHER

Staff Contributor and Adviser

Doctor Fletcher Is Traveling

AFTER several busy years as head of the Department of Horticulture at the Pennsylvania State College our Staff Contributor on Horticulture has broken away for a vacation. When we asked some months ago about his plans for his leave of absence he said he had no plans, except these: to set out with his family in his car and go wherever he felt like going. As he would be starting in winter he would head south, and he hoped eventually to reach the Pacific Coast, visiting most of the country's great fruit growing regions.

The accompanying article is the first of a series he is writing as he rambles where his fancy dictates. In explanation of his first sentence, Doctor Fletcher owned large orchards in Virginia from 1908 to 1915. During the same period he was Director of the Virginia Experiment Station.

WHEN I left the Shenandoah Valley, ten years ago, it was nearing the climax of one of the several "booms" that have cursed the apple industry during the last seventy-five years. Good, bearing orchards sold for $500 to $1000 an acre. Not infrequently a man might buy an orchard in May for, say, $23,000, sell the crop on the trees in August for $12,000, and then sell the orchard itself a few months later for $36,000.

It certainly was a get-rich-quick proposition. Tales of big profits and easy money passed quickly from mouth to mouth, gaining a little at each telling. Even shrewd business men and conservative farmers caught the fever. Orchards changed hands rapidly, each time at an enhanced price. I recall one orchard which was bought for $24,000 and sold six months later for $58,000. Hundreds of acres of new orchards were planted hurriedly. Much of this new planting was on land wholly unsuited for orchards; it will never be profitable and will soon pass out.

Those were the days of "colony" and "unit" orchards—plausible schemes designed solely to tempt money from the pocket of the small investor into the pocket of the promoter. These were five- and ten-acre tracts of young trees which, according to the inspired prospectus, could not fail to support a family of five in ease and comfort after the sixth year.

Ten years have passed; now the picture on the screen is quite different. As I drive thru this beautiful valley I see plenty of evidence that the apple boom has gone. It departed several years ago, leaving no forwarding address. With but few exceptions, the growers have made no money for seven years. This is a long time to live without nourishment; it is no wonder that some of my old friends, like Cassius, have "a lean and hungry look."

Present Decided Contrast

Many of the orchards are beginning to show neglect. These, however, are mostly the orchards of speculators which were bought or planted during the boom; the orchards of bona fide fruit growers, who are in the business for a lifetime, are being maintained.

The promoted orchards, of course, are swept away, leaving the investors only a bad taste in the mouth, and considerably more experience. An orchard that was bought in 1910 for $20,000, sold in 1917 for $54,000, was capitalized in 1918 for $150,000, and finally changed hands two years (to page 29)

The Kirbys Had a 76-Acre Tomato Crop

With Modern Equipment and Wholesale Methods They Handled It Easily

By THOS. H. WITTKORN

One truck takes 475 baskets to market safely over good roads.

LAST year C. E. Kirby and his son, James, grew 76 acres of tomatoes in Gloucester County, New Jersey. It was some job, you can well imagine, from seed to selling but it was their only crop and they made a success of it.

Four years ago, on account of the difficulty in getting steady and reliable help, Mr. Kirby decided to raise tomatoes exclusively and ship them under contract to a soup company in Camden. This one crop plan has simplified his work considerably and so far he has not regretted giving up all the things he used to grow.

Seeds Coin Dollars

Last year his crop was so good that he had the seed saved from 2000 standard Jersey five-eighths bushel baskets of the recently developed Marglobe. This variety gave him 125 pounds of seed which he has sold for $10 a pound, or $1250, besides receiving the regular canning house price for the tomato pulp.

Mr. Kirby grows all his plants and wants to have them as strong and stocky as possible when setting-out time comes. Heretofore he has just sowed them in rows under glass sash and pulled them for field planting. This year he has built a greenhouse and will start his plants early so as to put them all under frames where they can develop awhile before he takes them to the field.

He never could have undertaken to raise such a large acreage if a new check-row transplanting machine had not been perfected last year. With it and four men he was able to set eight acres a day. One man drove the team, two rode on back to feed the plants and a fourth kept the supply coming from the beds.

The plants were field set between May 15 and June 1 and were thoroly worked at least once a week until the crop was made. Riding cultivators were used at first but as the plants grew one-horse implements had to take their place.

Bugs and blight are fought with power sprayers which straddle one row and cover three with their spray. The 100-gallon tank on these machines will cover two acres. A gasoline engine gives enough pressure so that the spray covers all sides of the plants. Last year the big green tomato worms were especially bothersome and seemed to come and go with no apparent cause.

The crop is picked by large gangs of Italians for five to ten cents a five-eighths basket. The price varies according to the condition of the crop, being highest when the tomatoes are scarce, early and late, as the pickers want to average six to eight dollars a day for their work.

Trucked Twenty Miles

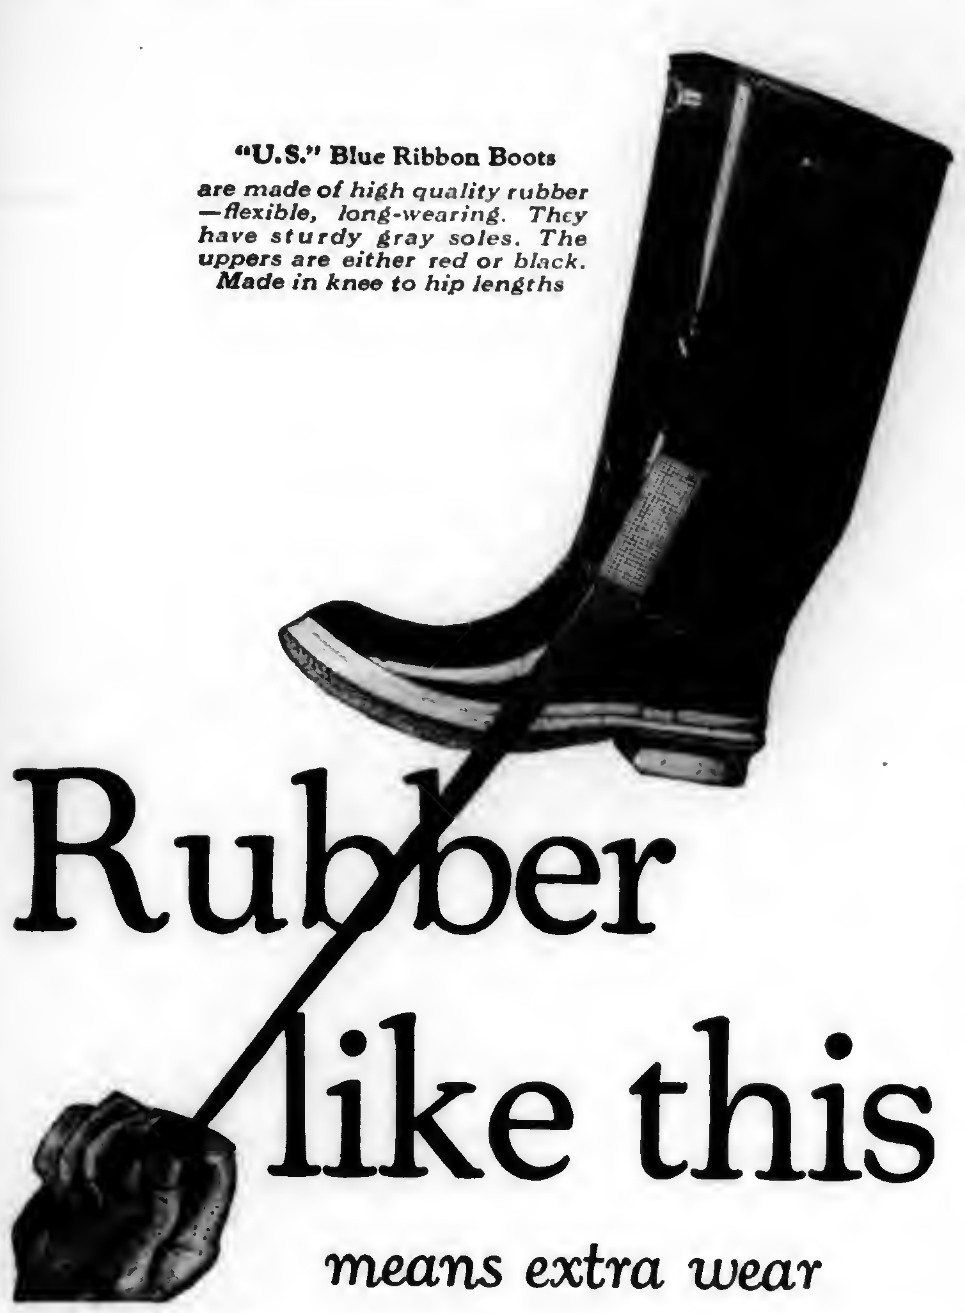
It is twenty miles to the cannery and about half of Mr. Kirby's crop is hauled there by contractor's trucks for five cents a basket. The truck shown in the photograph has a load of 475 baskets which can be delivered without mishap due to good roads. At the height of the season Mr. Kirby has shipped as high as 2000 baskets a day.

Last year the cannery paid $22.00 a ton all thru the season for tomatoes. This year the contract price is $22.00 a ton from August 1 to September 6 and after that time $20.00 a ton, for the rest of the season. The fruits must be red ripe and have no stems on them.

While Mr. Kirby is the largest grower he is only one of a hundred or more men surrounding Mullica Hill who each year send thousands of baskets of tomatoes to the soup factory. While they have a supposedly sure market for their product sometimes, when the factory has more than it can handle, the shipments come back, and they lose the same as the men who depend on the general markets.

"U.S." Blue Ribbon Boots

are made of high quality rubber —flexible, long-wearing. They have sturdy gray soles. The uppers are either red or black. Made in knee to hip lengths



Rubber like this

means extra wear

in "U.S." Blue Ribbon Boots

IT'S a real test for the quality of rubber in your boot! You can stretch a strip cut from the upper of any "U.S." Blue Ribbon boot more than five times its own length. That means strength — long life where inferior boots give way.

The gray sole is oversize, tough as a tire for wear.

And the carcass is right. At every point in the "U.S." Blue Ribbon boot where wear is hardest from *4* to *11* separate layers of rubber and fabric reinforcements are *anchored in.* Here is a boot that is husky all through—and to spare.

Seventy-five years' experience in making waterproof footwear is back of "U.S." Blue Ribbon boots and overshoes. They fit better, look better, wear better. Get a pair and notice the difference.

United States Rubber Company

"U.S." Blue Ribbon Walrus

slips on right over your shoes. Its smooth rubber surface washes clean like a boot. In red or ***black—4 or 5 buckles***

NESHAMINY GARDENS

WHERE AN EDITOR WORKS AND THINKS

BY R. P. KESTER

IT SEEMS as tho I had stirred up a little feeling in some quarters by my comments in reply to a young man who is desirous of starting in the poultry business and thinks rich men should be more generous in furnishing money for starting poor boys in agriculture. Two letters follow:

"I have read your piece about the Young Man who would like to start in the poultry business, but hasn't the means. I am another one who would like to have a new coop and some other new buildings, but it takes so long to make anything on the farm. I fed my chickens nearly all the grain I raised on the farm to get them to laying, and now when they have begun eggs have come down to twenty cents a dozen. It would take nearly 3,000,000 dozens at that rate to build a coop. You say the Young Man must have a spell of the blues, or else has the wrong slant. I think it is you that has the wrong slant. Why not raise the taxes, or issue bonds, and put some new buildings on the farms like they do in the cities? There are many reasons why people want to leave the farm. If they go into debt it is not long until the sheriff sells them out. It is very hard for a farmer to get along unless he is rich."—P. M., Clarion County, Pa.

"Dear Sir:—I always enjoy reading your Neshaminy Garden notes, but your answer to 'Young Man' has aroused my feelings. I can sympathize perfectly with him. You older folks and more well-to-do people forget one thing: Fifteen years ago, if a man had $300 in cash and "a few friends" he could buy a farm and stock it, but not now. I know of none who started with little money and no friends and made a success. Either they inherited money, or had many friends. Now, nobody wants to help a poor man to start farming. 'Young Man' will not be able to save enough money to stock a farm at present. If he must go to a factory or other business to do so, he will stay there. Preaching is all right, but why not help them to stay on the farm.—Reader."

I feel justified in using my space this week to publish these letters and my comments, because the letters reflect a spirit which is rather common in rural communities. I am also 100-per-cent rural minded, but circumstances have given me an opportunity to see more sides of a question than would have been possible had I spent all my time right on the farm without the chance to see a good bit of the other side of life. There was a time when I felt that I was badly used, and that the "other fellow" had all the advantages.

I know full well that agriculture is now passing thru a trying period. No one knows better than I the difficulty of making a profit at present prices, sufficient to live according to modern standards. Without question, farmers are not adequately recompensed for their labor and investment. They naturally feel soured at the sight of the unusual prosperity in other lines of industry.

Will Come Into Its Own Again

But a knowledge of the past shows me that agriculture will again come into its own. It has passed thru many similar experiences periodically. It shows also that labor and industry have had similar experiences. The see-saw action of national economics is as regular and persistent as the ebb and flow of the tides. The successful and permanent farmers of the nation are those who have recognized this fact and have stuck to their posts thru thick and thin.

Now for the real question at issue. Making it easy for a beginner to start in farming, or any business when that business is in the dumps, and before he has learned the business and proven himself competent, is a mistake to all concerned. It has always been easier for farmers to get credit than to get good prices.

It has always been a favorite charge of young people in all ages that the older generation had a better chance to start when they were young than have the young generation. That is because the young people do not know all that their parents went thru. If land and stock were cheaper, so were wages. As a matter of fact, farm wages have gone up more in the last ten years than

(Continued on page 32)

The Cheerful Plowman

Children's Parties

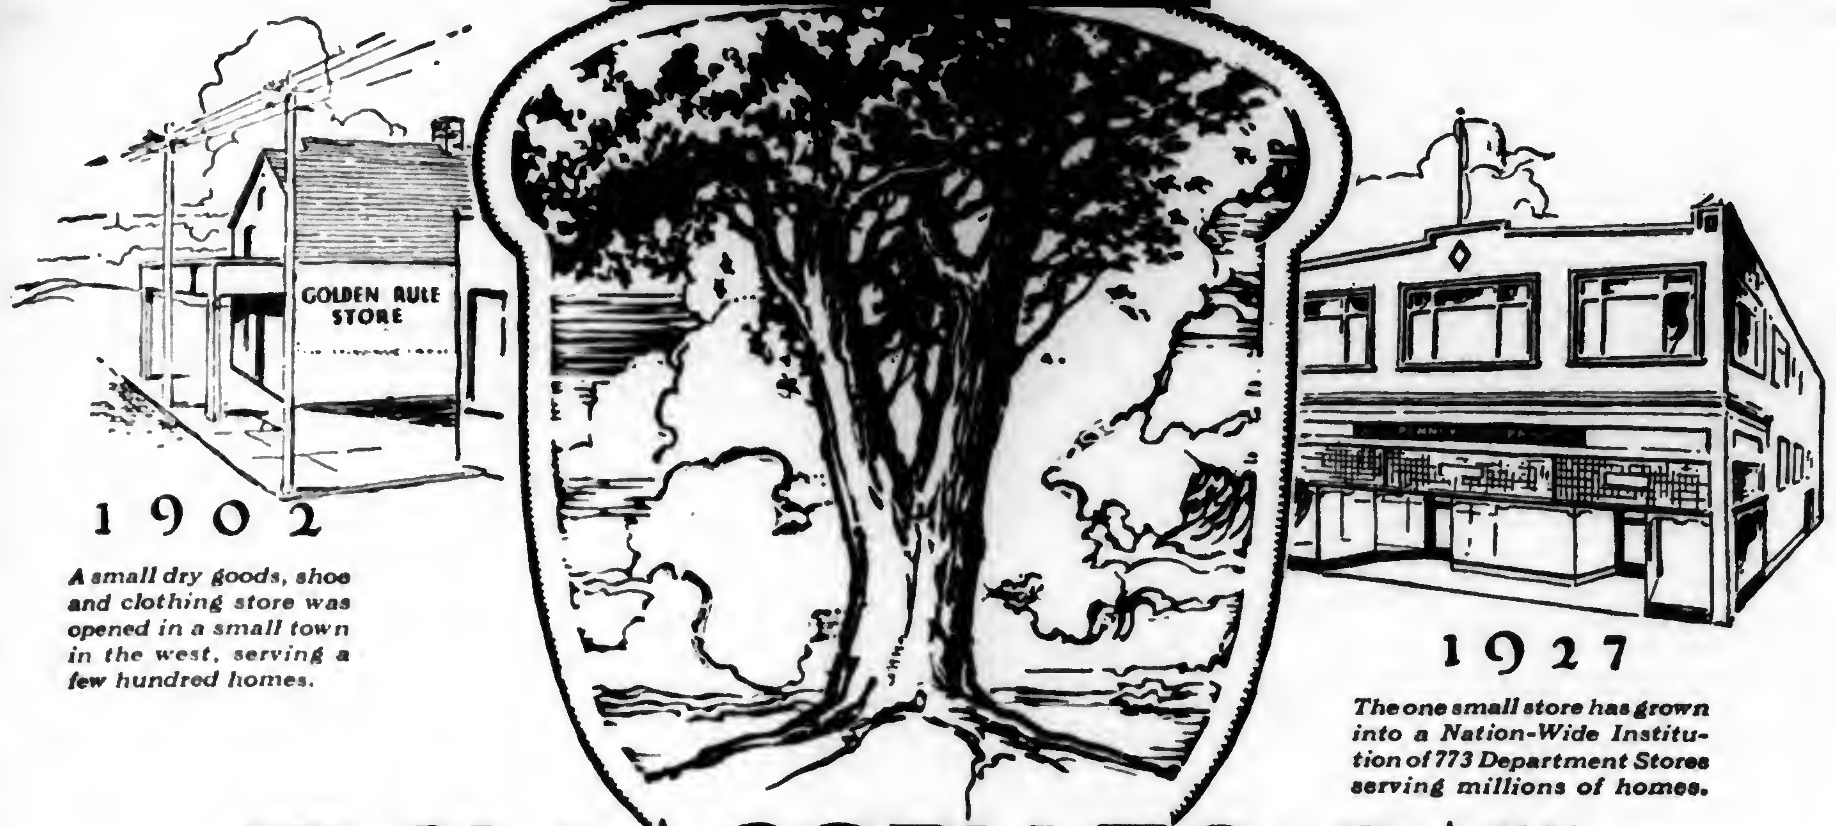
WE'RE fond of small children, the Mrs. and I, we like them as well as a sailor likes pie; so since we've had Herbie it's been our delight to put on kid parties and do them up right. 'Most any excuse that occurs to us now is sufficient excuse for a party, somehow! A birthday, a holiday, any old day that the calendar man can throw into the way is a reason, we feel, for the girls and the boys to come to our home for a season of noise. Pauleeny is pleased to garnish the eats, the cookies, the cakes and the various treats; she's glad to help "ma" in the plans for the games—the women folks here are not fidgety dames!

You see, as a youngster I failed to acquire those nice little graces I so much desire. I'm bashful at heart, I am hesitant yet, I missed on a training I never can get. "Inferior complex,"—that's it, I suppose, a handicap surely, as everyone knows,—has me in its clutches somewhat, to this day, my timid soul shrinks from the light, I might say! In company—well with an effort, of course, by holding myself and applying the force, I conquer timidity, make it skidoo but there is an effort in all that I do!

I want little Herbie, while yet he's a lad, to throw out the fear that's a bane to his "dad." I think all these parties we're staging for him will doll up his nerve and put courage in trim! I want him to always feel hearty and free—I don't want the lad to be bashful, like me!—J. Edw. Tufft.

J.C. PENNEY Co.

A NATION-WIDE INSTITUTION-



1902

A small dry goods, shoe and clothing store was opened in a small town in the west, serving a few hundred homes.

1927

The one small store has grown into a Nation-Wide Institution of 773 Department Stores serving millions of homes.

FROM ACORN TO OAK

After 25 years of growth now a nation-wide shopping service

WE are celebrating with pride and thankfulness our Twenty-fifth or Silver Anniversary—with pride for the privilege of serving the American public—with thankfulness for the generous response that has come to our effort.

Since the Spring day in April, 1902, when Mr. Penney inaugurated, in a small and inconspicuous manner, a Retail Shopping Service which was destined to become one of Nation-wide Helpfulness, a quarter of a century has passed.

It has been a period of notable growth and expansion, of winning millions of friends, of serving them faithfully, of basing achievement upon the good will of mutual satisfaction.

During all these eventful years, we have been mindful of our responsibilities to the legion of patrons who have contributed and are today contributing, so continuously and so generously, in helping make our Service one not of profit alone but of the confidence that rests on good will.

Never for a moment have we knowingly wavered from the responsibility of this relationship. It has always been to us an inspiration to reach out for greater things, that we might be the better prepared to render a Service which should prove to be more and more beneficial to the increasing numbers who come to us.

Not only is that one little Golden Rule Store of 1902—now itself grown to far larger proportions—still serving the people in and about Kemmerer, Wyoming, but there has sprung from its applied principles and policies, others to a present total of 773 Department Stores, scattered over 46 States.

All these are children of what we now affectionately term, The Mother Store; all happily operate in the Service of the public under the name of the J. C. Penney Company. The Founder of this Organization—Mr. James C. Penney—builded in his pioneering days more enduring and substantially than he knew.

His ideals and practices—square treatment alike to all always—and the extent to which he packed Value into every Dollar of purchase—these constitute the pattern according to which this enormous business has been shaped and which has caused it to grow until it has now become a Nation-wide Institution, serving more than 3,000,000 homes.

The dynamic selective and buying power of the Company created by its tremendous volume of cash sales, which, in 1926, amounted to $115,682,737.86, gives *a saving power to the public* which means much to the thrift and to the economic life of the people of every community where it operates a Store.

At this milepost in our history, we pause only long enough to express our thanks to the great American people for their continued confidence and appreciation of our efforts in their behalf and to offer the assurance that in the future as in the past we shall strive to serve not only well but better and better with each succeeding business day.

OUR ANNIVERSARY CELEBRATION BEGINS APRIL FIRST!

National prestige is associated with power, but it never prospers by the assertion of it.—Charles Evans Hughes.

Third Institute of Cooperation

THE third meeting of the American Institute of Cooperation will be held this year in Chicago, from June 20 to July 16th. The initial Institute was held in Philadelphia in 1925 where it was found that a careful, academic study of the principles of cooperation was necessary to place the work on a safe and practical basis. The prospects are that the sessions this year will be more definite and practical than ever. More than 130 trained and experienced experts have been engaged to lead the discussions. Most of the time will be devoted to a study of cooperative methods relating to livestock, wool, dairy products, fruit and vegetables.

Do You Favor a Three-Cent Tax?

WE LEARN that Governor Fisher has proposed raising the tax on gasoline to three cents a gallon in order to get more revenue for road work. An effort is being made to amend the tax law to this effect. We are opposed to such a move. The Governor expressly stated in his inaugural address that he was opposed to levying any new taxes. Evidently this statement meant that he was opposed to any additional taxes on corporations for state purposes. But adding to the taxes of the unorganized and more or less impotent general public is another thing. However, if all the interested millions would sit down at once and write their legislators and the Governor that they oppose this fifty per cent increase in the gasoline tax, it might have some effect in heading it off. But it must be done NOW.

Sauce for the Goose Is Not Sauce—

A GREAT many people are asking the question why a law giving special favors to one business may not ethically be extended to other lines. To be exact, they are asking why the McFadden banking bill should be accepted and acclaimed while the McNary-Haugen bill was condemned and vetoed when (it is claimed) the former is quite as much class legislation as the other. An editorial in a national magazine, while condemning the principle of the farm relief bill, feels that the McFadden Bill should have been rejected for the same reasons. It says:

"Here is a private government concession (banking), heavily subsidized by many privileges, charging for its commodity the highest rate that any commodity is sold for, a towering super-control in business and politics—here is this thing, coming in the plentitude of its power to ask for still more privileges, still more ascendency over industry, still more control over business, and the extension of all these perpetually—."

People Buy When They Have Money

TWENTY years and more ago it was the almost universal practice among corporations and big business men to fight labor unions and their demand for increased wages. It was accepted as the right and logical thing to do. But the labor movement went on and succeeded. Labor attained a position where it could and did demand big wages,—wages such as the world never knew before. The result of this increased buying power is shown in the unparalleled trade activity of the present. The old-time opponent of high wages finds that his own business has increased as never before and that he is able to pay the wages because of the increased business. And to this end hangs a tale.

The demands of farmers for better prices have been met with the same kind of stony stare as was given labor a few years ago. Even if not expressed, the sub-conscious thought in the mind of the consuming public is that if the farmer gets higher prices the public's food will cost more. Suppose it did,—what would be the result? Just what occurred when wages were boosted. Give 35,000,000 people—the farming population—a corresponding return for their labor, and the factories would run night and day, and labor and capital would find their incomes increased. The thing that happened to labor must happen to agriculture before the nation can truthfully be said to be prosperous.

Deer Do Much Damage

THERE is no question that farmers and fruit growers living in the sections of the state where deer abound suffer loss each season from their depredations. The questionnaire published in this paper two weeks ago came back in a hurry from those parts of the state, and each one enumerates the number of trees and crops damaged or destroyed by deer.

Without question the game laws have been drawn and enforced with too little regard for the rights of tax-paying citizens. The business of game stocking and game protection has been carried out with the sole purpose of affording sport to gunners during a short period each year, while the rights and the livelihood of people living in the game producing regions have been too largely ignored. In other words, the protection of game has come to be considered as of more importance than the protection of the welfare of citizens. There is no reason why public opinion should not allow a fruit grower or farmer to shoot any deer found destroying crops at any season of the year. At present he is considered an outlaw by many. Such a practice would very quickly drive all deer from cultivated land and keep them in the wooded sections where they belong.

The time will soon come when the state must recognize its responsibility for damage done by protected game and pay for it the same as any other owner of livestock doing damage to another man's property. If property owners will keep up their demands and unite in a strong body which will bring sufficient moral and political pressure upon legislators, legislation can be effected which will correct the weaknesses and unfairness of the present game laws.

Hands Off the Farm Land Banks

BECAUSE of the efforts that have been made and will probably be made again to amend the Farm Loan Act and take away some of its most valued features, L. J. Taber, Master of the National Grange, has prepared for the National Grange Monthly for March a timely and instructive article. In it he reviews the experience of farmers in getting loans and the interest they paid, and the advantages derived from the operation of the Federal Land Banks and the Joint Stock Land Banks. He closes his article in these words:

"The forces that would destroy the Federal Farm Loan Act are actuated by purely selfish and mercenary motives. They want to restore the high interest charges of a generation ago; they want to bring back high commissions and fees paid to loan representatives thruout the nation.

"The Farm Loan system is not in serious danger, but its friends must be awake, for its enemies never sleep. This question should be discussed everywhere. Let us strengthen the Farm Loan Act; let us broaden its powers; let us correct its mistakes and stand like firm against any attempt to weaken or destroy the Act."

Trees the Best Crop

IN PROCLAIMING April 24 to 30 American Forest Week, President Coolidge said that one fourth of our soil is better suited to timber than anything else. "I cannot escape the conviction that our industrial and agricultural stability will be strengthened by bringing into full productive use this great empire of land. Altho much progress has been made in public forestry and hopeful beginnings in private forestry, we still have a vast aggregate of idle or semi-idle forest land, and another large aggregate of poor farm land that might more profitably grow timber instead of adding to the problem of agricultural production."

When we look around at the vast acreage of unproductive land that was cleared, farmed for a few years, used as pasture for a few years more, and finally abandoned, we realize that in the East the situation the President points out is correcting itself. It remains only for the owners of the rough, hillside fields to take the final step by planting a crop that doesn't need cultivating, forest trees.

When western farmers stop cultivating semi-arid prairie land that is so poor that a profit can be made only in times of highest prices, they will help solve the whole crop surplus problem.

Editorial Sidelights

THE series of travel articles by Doctor Fletcher beginning this week (Page 3) will be a real treat to all thoughtful readers, whether they are fruit growers or not. As we write this our Rambling Horticulturist has just reached Florida,—and is suffering more with the cold there than he ever did in Pennsylvania.

THE CORN BORER is a great menace and a great campaign is being planned to put it under control. A general outline of the plans for this campaign will be found on Page 36. Some later news about it and Secretary Jordan's comments appear in the report of the Delaware County Agricultural Extension meeting on Page 28.

IN ADDITION to our regular Harrisburg letter we are publishing each week, while the Pennsylvania Legislature is in session, a review of legislative activity as it affects farmers' interests. This summary of the status of agricultural bills will be found this week on Page 15.

69TH CONGRESS CLOSES

Filibuster Marks Last Days and Blocks Action on Bills—Only Inspected Milk Shall Enter.

Washington, D. C.

THE 69th Congress closed its labors after a three-day filibuster in the midst of a legislative jam unequaled in the history of Congress. In all 24,729 bills and resolutions were introduced during the two sessions, and 1422 became laws. Of these 878 were public, many of them bridge bills, and 544 were private laws and resolutions.

Several highly important measures were lost because of the filibuster, among them being the second deficiency appropriation bill, carrying $93,716,000, and the $125,000,000 public buildings bill.

The bill providing $300,000 for the purchase of a national arboretum in Washington was signed by the President, but the appropriation was lost in the Senate tie-up, as was also the $8,000,000 seed loan bill and the Capper-Ketcham bill providing for expanding the state extension work. The postal rate reduction bill which was all thru except adoption of the conferees' report, failed by reason of the Senate filibuster.

Radio Control Delayed

Two members of the new Radio Control Commission failed of confirmation, and the machinery set up by Congress for regulating radio broadcasting is of little use for a time at least because of the failure of the Senate to approve the appropriation of funds for its operation and the salaries of the commissioners. Radio control is a very important matter which cannot long be delayed. There are now 735 broadcasting stations with only 89 available wave bands between the broadcasting limits of 200 to 545 meters. This development cannot go on much longer without control by a government organization.

Will Control Imported Milk

Among the bills that became laws of special interest to dairymen is the Lenroot-Taber measure, prohibiting the importation of milk and cream from Canada unless the importer holds a permit from the Secretary of Agriculture, given under the assurance that the milk is inspected and produced under the same sanitary requirements as are imposed upon milk producers and shippers in the United States.

The $10,000,000 appropriation for corn borer control is regarded as one of the most important laws enacted by this Congress, beneficial alike to the farmer and consumer.

Bank Bill Affects Farmers

The effects of the new branch banking law upon the country as a whole and the farmers in particular cannot now be accurately forecasted. Some farm organization leaders look upon it as of far more importance to agriculture than any other measure enacted by the 69th Congress. The law grants the 12 Federal Reserve Banks a perpetual charter. The bill would not have passed this Congress had it not been for a coalition of the advocates of the McNary-Haugen bill and the banking interests in agreeing to permit a vote on both measures.

The anti-dumping law, designed to prevent destruction of perishable products by commission merchants as a means of maintaining or boosting prices, and the Capper-Tincher law to prevent discrimination against cooperative marketing associations by boards of trade and similar organizations, are measures of considerable interest to farmers.

Enforcement Reorganized

The prohibition enforcement bill, which became a law, creates a separate Bureau of Prohibition Enforcement in the Treasury Department. It puts prohibition agents under the civil service, and the Treasury officials claim it will tend to more economical administration and more efficient enforcement of the prohibition law. The drys in the Senate were able to put it thru in spite of the filibuster, having more than two-thirds of the Senate membership on their side.

Muscle Shoals Bids Rejected

Before adjournment the House Committee on Military Affairs agreed on a report rejecting the two bids providing for the leasing of Muscle Shoals, and saying that unless a satisfactory bid is received by the time the next Congress convenes in December, an effort should be made to obtain an operating contract for fertilizer production at Muscle Shoals, and in default of that the committee should consider operation of Muscle Shoals for fertilizer production by a government corporation.

The committee decided that any bid must contain a provision for the forfeiture of the power rights and fertilizer provisions if there is any failure to produce nitrates in the amount of at least 40,000 tons per year.—E. E. R.

AFFIX SIGNATURES

State and Federal Forces Fight Borer—Beetle Quarantine Cards Posted—Dragging Policy Works.

Harrisburg, Pa.

WHAT is expected to be the most aggressive move ever proposed by the Pennsylvania Department of Agriculture against a pest endangering farm produce has been approved by high authorities following signing of the agreement between the state and federal governments on the corn borer quarantine. Plans call for establishment of headquarters in numerous counties in the infested area. When Governor Fisher signed the Haines bill providing changes in the state laws to enable the department to combat the pest in conjunction with the national government, he helped make available large amounts of money which the state will supplement. According to one estimate here the state will obtain about a million dollars of federal funds. The campaign against the borer, however, will not interfere with vigorous prosecution of work against the Japanese beetle in the southeastern section or with the bean beetle battle in the southwestern area.

Ready in New District

As a result of meetings held in Lancaster and other counties added to the Japanese beetle quarantine area by the proclamation of last year, arrangements have been made for cooperation between nurserymen, farmers and state and federal officials. The cards announcing the quarantine have been posted in all affected counties and inspections along the roads and at farms will be worked out where necessary.

Active Period Starts

The really busy part of the legislative session started March 14 when the committees began to send out the revenue, appropriation and other important legislation and hearings on election and other administration bills will start. Members of the General Assembly remaining in Harrisburg over the week-end have come out in favor of pushing along the measures and closing the session on April 14 regardless of the fate of the salary raising bills about which so much concern has been manifested. One result of the dragging policy pursued the first half of the session will be that bills which have little merit will be lost in the final rush. The Governor has announced he will hold appropriations within revenues and that if the budget is disregarded he will use the pruning knife.

Laboratory Not to Be Moved

Reports that the Chambersburg Laboratory of the State Bureau of Plant Industry would be moved are baseless. It is to be maintained. The laboratory of the Bureau of Animal Industry will be concentrated near Harrisburg, but the Chambersburg laboratory will remain near its present location. The experiments conducted for the last half dozen years will be extended.—T. C.

ANNUAL DUES REDUCED

Hope to Stimulate Greater Interest in Roadside Plan—Pruning Demonstrations Aid Fruit Men.

Trenton, N. J.

IN ORDER to stimulate membership and spread the standard roadside market plan widely thruout the state, the Farmers' Roadside Market Association of New Jersey has reduced its annual dues to $5 a year. The inspection charges have been placed on a sliding scale payment, with a minimum charge for inspection of $4 the first month and with an increase of $1 per month for every additional month the market is operative. The association has done much to promote the honest pack and to rebuild consumers' confidence in farmers' roadside markets. The inroads of unscrupulous dealers and others have been seriously affecting roadside sales the last two years. The association will actively promote its field working during the coming few months.

Burlington County Develops Program

Fruit growers in Burlington County, under the auspices of the county agent's office, have been developing an active program on fruit and vegetable work for the coming season. There will be held in the county twelve general pruning demonstrations. The top working of peach and apple trees is another problem of considerable importance on the program, while the long time apple pruning demonstrations will continue as in the past. The spray card service instituted several seasons ago will likewise be continued. Twelve orchard management studies are under way.

Salem Has New County Agent

Albert D. Long has been appointed County Agent for Salem County to succeed R. O. Vaughn who resigned early this month. Mr. Long comes to Salem County with a background of practical fruit and market gardening experience. He was also herdsman and foreman of a large dairy farm for several years. Mr. Long took his technical agricultural work at the Massachusetts Agricultural College and for the last two years was assistant in the county agent work in Orange County, N. Y.

Fertilizer Prices Lower

The general level of fertilizer prices in central and southern New Jersey has been close to pre-war levels this year. The lower prices in effect have prevailed on both mixed goods and straight carriers of acid phosphate, potash and nitrogen.—B.

MUST MEND WAYS

Potato Growers Better Cater to Buyer—Experts Believe Compulsory Grades Only Possible Solution.

Ithaca, N. Y.

"THE first thing banned by the doctor or the beauty specialist who tells a woman how to reduce is potatoes, and other starchy foods," said Prof. Rasmussen of Cornell to a meeting of potato growers this week. He spoke not as an alarmist, but drew a pessimistic picture of the future of growers unless they mend some of their ways. Consumption is decreased, generally. A study of the markets of the state had disclosed Maine potatoes in wide use, at 60 cents a bushel more than state potatoes. Tubers from Long Island sell for 30 cents a bushel more than up-state potatoes. A majority of New York City buyers refuse to buy up-state potatoes if they can get Maine or Long Island potatoes. These are facts that spell disaster for growers if they do not heed the demands of buyers, and cater to their preferences. "I believe that 10 out of 12 chain stores here in Syracuse, a center of potato growing, are selling Maine potatoes."

Poor Potatoes Killed Market

According to a recent study, 146 cities and villages of up-state New York are buying outside potatoes, the reason being that up-state potatoes are very poor. Of 58 cars recently shipped to New York from up-state 14 were frozen, 10 were below grade, 5 had shortages, others were red and white mixed stock, showing wire worm and disease defects. Too many Rural Russets are grown. These cook up dark in color. Compulsory potato grades are the only solution, in the opinion of experts. These grades have gone into effect in Idaho and Michigan, competing states, while Maine growers have long graded with care.—M. G. F.

County News and Comment

Armstrong County, Pa.—Rough feed will be quite well cleaned up at the end of the feeding season. Many light hogs are being slaughtered and sent to market at a price 2@3c per pound below last month's price. Beeves, on the other hand, are going out at an advance. Butter has advanced a couple of cents on the pound and eggs have declined to 25c. Ear corn has molded in cribs. Much clean-up work has been done in orchards. Those who deferred buying clover seed early are now paying as high as $28 per bu. for good domestic seed. A few have already sown their seed. Wonderful preparation has been made for fence replacement and an effort is being made to use only such material as carries a guarantee that means something. Those who have a surplus in hay and straw are busy baling. There is much demand for both in neat, medium-sized bales. There is a very light demand for apples and potatoes. The former is selling at 75c@$1 per bushel, while the latter of good quality for domestic use brings $1.75 the bushel. Good, bright, white seed oats are not abundant. This year's meadows promise a light cut of hay and as a consequence stock on hand is being thinned out. Some spring litters of pigs coming now and heavy losses on account of weather severity. Much opposition to the proposed gasoline tax.—W. M. P., March 4.

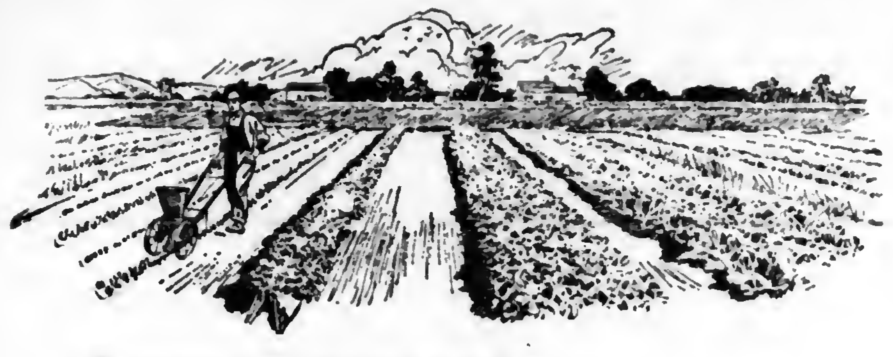
Carroll County, Md.—Weather is fair and warmer. During February it was mild. February 19 and 20 a snow and sleet storm visited county, playing havoc with telephone lines. It was estimated 250 poles blocked automobile traffic, upsetting bus service and at one point the railroad was blocked by debris. At present farmers are busy hauling manure and getting out year's wood supply. Farmers have been pruning trees and trimming grape vines. Wheat fields are brown but are beginning to brighten a little. Growing grain is looking good considering the fact that it has had very little protection. Hatching season is on. A number of farmers depend on custom hatcheries. Various meetings are being held in the county, covering wide range of subjects, as follows: sheep, tractor, clover and orchards. Farmers are studying their problems. The biggest is the labor problem. A cow testing association was organized the latter part of 1926. Red clover seed is scarce and high. Mostly northern French-grown seed being offered locally at 35c per pound, while a small amount of U. S. grown seed is being offered at 46c per pound. Market is growing stronger. Farm produce prices: wheat, $1.32; eggs, 30c.—H. I. R., March 5.

Centre County, Pa.—A field survey is in progress in six Pennsylvania counties, of which Centre is one, to determine the maintenance cost of farm operating equipment. In an effort to raise money for the Grange memorial dormitory to be erected on the Penn State campus several Centre County Granges have organized a play league with the purpose of each giving a play within the next month. A silver loving cup will be awarded the players presenting the best play. Unimproved roads are in very bad condition. Market quotations: wheat, $1.25; rye, 90c; corn, 75c; barley, 70c; buckwheat, 90c; oats, 40c; butter, 45c; eggs, 35c; lard, 15c; veal calves, 12c; fat pork, 12½c.—A., March 5.

Crawford County, Pa.—There has not been much snow since February 2nd. Pomona Grange No. 26, of Crawford County, held its first quarterly meeting March 2 and 3 at Conneaut Lake, with the largest attendance of patrons since its organization. Sixty-four were initiated in the fifth degree. State Master Hoah, of Lawrence County, was present, also State Deputy Clark of Ohio. Many questions pertaining to legislation, taxes and voting were discussed. Most of the sugar bushes are opened with a good run of sap. Hens are laying well and milk flow increasing. Farm produce prices: market milk, $2.59 for 3.6 test; butter, 50c; eggs, 22c; hay, $10; potatoes, $1.25; apples, $1.—O. W. G., March 8.

Frederick County, Md.—The largest snow so far this winter fell on February 19 and 20, accompanied by high wind. Country roads have been in the worst condition for years. There seems to be a rapidly growing sentiment that part of the gasoline tax which is being agitated for a raise to 1½c per gallon should be spent in the county from which it is raised to fix country roads. There is still some corn to be husked. Grass and grain

(Continued on page 35)



7 more growers "swap experiences"

Here are a few reports of actual experiences with Arcadian Sulphate of Ammonia. Study them!

CROP	GROWER	Arcadian Sulphate application per acre	Increased Yield per acre
Sweet Corn	D. M. Chalcroft, Beech Grove, Ky.	240 lbs.	528 doz.
Apples	A. M. Nichter, Elizabeth, Ind.	200 lbs.	80 bu.
Potatoes	H. O. Brandt, Luther, Mich.	150 lbs.	55 bu.
Tomatoes	Roger Sondag, Valmeyer, Ill.	100 lbs.	217 bu.
Cabbage	Lynn Heatley, Midland, Mich.	200 lbs.	12,840 lbs.
Apples	A. J. Marble, Omro, Wisc.	200 lbs.	240 bu.
Cherries	Donald C. Pharis, Harrisonville, Mo.	325 lbs.	81 bu.

Top-dressing with Arcadian Sulphate of Ammonia—25¼ per cent Ammonia guaranteed—will help all kinds of crops—backward or bumper. Try Arcadian Sulphate of Ammonia for yourself. Will send you—FREE—enough Arcadian Sulphate to fertilize 25 square feet of soil. Just fill in and mail the coupon.

Amateur Asks Advice on Tomato Culture

Will you please answer these questions for me? I am not in the trucking business. Is the Earliana tomato the best early tomato? How is the Matchless for a late tomato? Also, does it pay to use fertilizer on tomatoes? If so, what grade and how would you apply it? I have plenty of poultry manure. Would it be all right? Also, do you think it pays to spray tomatoes? If so, what would you use and when would you apply it? Is there anything to control aphis on cucumber vines? Every year they destroy all of ours.—H. M. M., Blair County, Pa.

If you plant about one-third each of Earliana, Bonny Best and Marglobe I believe you will have a good supply of tomatoes thruout the season. The latter variety is rather new but has been tried out all over the country and promises to become a leading main crop sort.

You state you have plenty of poultry manure. This may be broadcasted before planting and well harrowed into the soil along with 500 pounds per acre of acid phosphate which may be broadcasted right on top of the poultry manure.

I have never found it necessary to spray tomatoes but it does pay under certain circumstances. To combat flea beetles and leaf diseases Bordeaux mixture is the standard spray. If you are troubled with potato beetles on your tomatoes the addition of 2 pounds of calcium arsenate to 50 gallons of the Bordeaux will help.

The aphis which has been destroying your cucumber vines in the past more than likely feeds principally on the under leaf surfaces so it will be important, whether you spray or dust, to secure good penetration.

A 3 per cent nicotine dust applied when the air is still and during the warmest part of the day has been used successfully against this pest. As a spray 3 ounces of 40 per cent nicotine sulphate and 1 pound yellow laundry soap in 25 gallons water may be used and should be applied thoroly and in such a manner as to hit the insects.—Gilbert S. Watts.

Fertility Determines Amount of Fertilizer

I raise all kinds of garden truck for market. I use about 1500 pounds of a 4-8-7 fertilizer to the acre. I would like to know if it is safe to sow nitrate of soda broadcast over the vegetables when they are one or two inches tall and how much to use for each? I plant 5000 mango plants each year. I grow lots of stalk but they don't bear till late in season. My truck garden is sand and some clay soil. It forms a crust after each rain. Would it pay to buy sheep manure and sow on top of soil after planting?—M. W. B., Luzerne County, Pa.

Your practice of using 1500 pounds per acre of 4-8-7 fertilizer for your truck is in line with what is considered good application.

Whether or not to use nitrate of soda in addition as a top dressing will depend on the present degree of fertility and the kind of growth you secure. If your peppers are running mainly to stalk I would hesitate to use additional nitrogen. If nitrate of soda is broadcasted over foliage all this must be done when the leaves are perfectly dry or while a heavy rain is falling. A common rate is 150 to 250 pounds per acre.

Sheep manure in a quantity sufficient to prevent soil baking or crusting will be rather expensive. Liberal amounts of stable manure or green manures plowed down at every opportunity will probably solve this problem in time. Lime may also help.

In regard to your mangoes, several factors may enter into the trouble. Well-grown plants of the earlier varieties when set at distances which eliminate danger of crowding will stand a fairly rich soil.—G. S. Watts.

Good Spinach a Money-Maker

SPINACH is an important truck crop in Pennsylvania and New Jersey and many growers consider it a money-maker. It is comparatively cheap to grow and often brings a good price. The price depends largely upon the amount of spinach on the market and on the quality of the stock. Quality is important at all times but it shows up most when the market is oversupplied.

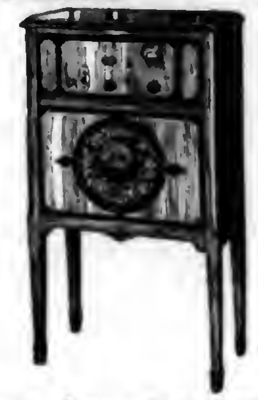
On account of more than 10 per cent waste from coarse, fibrous stalk this spinach plant will not grade U. S. No. 1.

The most popular package for spinach is the bushel basket and the five-eighths basket. A buyer who is purchasing will first note the general appearance and will then lift the baskets. There is a great amount of variation among lots from different growers and the heavy basket will practically always bring more than enough to pay for the extra pounds of spinach. Not only will it bring more but it will sell more quickly.

When shipping to a nearby market it usually pays to wash the spinach as large amounts of sand and loose leaves are removed. It helps keep the spinach fresh and makes it more attractive. Some growers place a small cake of ice in the center of the basket, especially on early summer shipments.

The stools or heads should be of fair size and free from yellowed leaves. It should be cut at the proper stage of maturity and not allowed to get coarse and seedy. In packing spinach in baskets it is best to pack the top with the stems down as it makes a better apearance.—W.R.W.

This attractive specimen meets all requirements of U. S. No. 1 grade.



The CROSLEY MUSICONE
The finest loud speaker you can buy—not the costliest. Enormous demand has kept price at an incredible low level. Crosley patented actuating unit will reproduce sound perfectly. Volume is tremendous. 12 inch size, $9.75—16 inch size, $14.75.

New! Amazing! 6 tube
CROSLEY
SINGLE DRUM CONTROL
RADIO $60.

Distant stations louder and clearer—cut through summer static with this powerful 6 tube radio.

Folks who own this new Crosley set are going to enjoy radio as much this summer as in winter. 1927 summer broadcasting will be more extensive than ever. With this 6 tube marvel stations formerly in the far-away class become neighbors.

Crosley radio is the farm radio because farmers as a whole spend their money very carefully. They are business men. They have learned to look for value. Actual count shows more Crosley radios owned on farms than any other make.

This new set of Crosley is a wonder. Match it against any set of 6 or 7 tubes. The volume of its reproduction will keep radio a delight all summer.

Crosley radios are high in quality.
Finely finished cabinets, beautifully decorative in two tones and gold metal trimmings. Up to the minute single drum control. Easiest set on the market to tune.

Crosley radios are low in price,
because Crosley mass production methods permit spreading expenses over many units instead of few. Second cost is reasonable too, because battery consumption is unusually low.

See them at your Crosley dealers. Write Dept. 205 for descriptive literature if your dealer cannot supply you

THE CROSLEY RADIO CORPORATION

POWEL CROSLEY, Jr.
President.

CINCINNATI,
OHIO.

Crosley sets are licensed under Armstrong U. S. Patent No. 1,113,149, or under patent applications of Radio Frequency Laboratories, Inc., and other patents issued and pending.

The 6-60 is a beautifully finished 2-toned mahogany cabinet. All stations found with and written down on single drum. Acuminators find stations missed on ordinary single dial control sets. Crescendon brings distant stations in like locals.

The 6-85. Same radio mechanism as in table model 6-60. Same startling results. Same complete radio satisfaction. Genuine Crosley Musicone built in this pleasing console. Beauty of tone and fidelity of reproduction unmatchable. A rare value and a set that will give you pleasure for years to come. Price, without tubes and batteries....... $85

CROSLEY DEALERS EVERYWHERE
Look for the Crosley sign on radio dealer's door or window. Authorized Crosley dealers have been selected because of the service they can render their customers.

Bigger Farm Profits from "LIMOID"

EXPERIMENTS by State and Federal Agricultural Stations over many years show increases in crop values of from $3.33 to $9.33 per acre because of liming the soil.

Sour acid soil cannot produce profitable crops. 75% to 90% of all soils need lime. Liming corrects soil acidity and gives you three kinds of profits: (1) annual crop profit; (2) value of increased future productiveness of the soil; (3) increased land value.

Warner's "LIMOID" is the most effective and economical form in which lime is furnished. "LIMOID" is pure hydrated lime, and because of its extreme fineness it more thoroughly soaks into the soil and thus goes farther than other forms of lime. It comes in 50-lb. strong paper bags, is easy to handle and apply; can be stored with no fire risk. It may be used also for whitewash, feeds and building.

Send the coupon TODAY for your free copy of *"Lime for Bigger Farm Profits."* It tells you in language and figures easy to understand what you should know about the farm use of lime.

Seed Oats

Cleaned Right—Free From Weeds

GOOD Oats Seed is scarce this year, because of weather conditions last harvest. We offer sound, bright seed of strong germination. All dependable yielders. Cleaned so carefully as to be free from foul seeds of all kinds.

"Silver Mine"— A standard "sprangle" variety of sterling merit. Very hardy. Strong, stiff straw that won't lodge easily. Kernels, bright with very thin hulls—popular with rolled oats makers. A good variety for heavy soils. Early. Often sowed with Canada Field Peas.

"Swedish Select"— popular for a quarter century. Great root development makes it drought-resistant. Does well on trying soils. Succeeds in all sections.

"Cluster"— A typical "horse mane" or "side" variety, kept pure by hand selection of the seed stock. Extremely early. Grain large and plump with medium thin hull.

Clovers, Alfalfa, Timothy, Pasture Grasses

Medium Red that is hardy and safe. Mammoth and Alsike of high germination. Genuine White Blossom Sweet Clover, scarified. Alfalfa—hardy strains—genuine "Grimm" and our own "Northwest" brand. Clean Timothy.

Other Field Crops: "Lancaster Sure Crop"—Corn—best double purpose . . silo-crib . . corn. Maine-Grown and Michigan-Certified Seed Potatoes. Soy Beans. Cow Peas. Canada Field Peas and other Specialties.

Quicker Solubility

HEAT-TREATED AT 1200 DEGREES IN ROTARY CALCINATORS

MICHIGAN LIMESTONE

Is Given Faster, Improved Solubility In Contact With Soil Acids

This new heat-treatment hastens the well-known easy solubility of Michigan Limestone—making it more sensitive, more speedily active in the soil. Not only does it work fast, but it is more COMPLETELY soluble. It maintains its high effectiveness until every bit of sour soil has been neutralized. The great natural purity of Michigan Limestone is thus fully released and made highly available through this latest method of heat-treatment.

CALCITE BRAND
MICHIGAN LIMESTONE
OVER 99% PURE

The new improved Michigan Limestone gives you the highest limestone value in the world. More for your money; more in results; more in profit for you, and no increase in price.

To Profit Lycoming Growers Must Select Varieties Suited to Locality

THE annual meeting of the Lycoming County Fruit Growers Association was held March 5, in the office of County Agent Van Sant, Federal Building, Williamsport, Pa. The former officers were re-elected for another year.

Discussion as to the advisability of purchasing orchard supplies in quantities resulted in the appointment of a committee to look into the question and report at the next meeting.

Mr. Snyder, of State College delivered an address which will long be remembered by the fruit growers present. He emphasized the importance of selecting for commercial planting only those varieties of apples that are known to do well in the county. Mr. Snyder displayed a chart showing the actual cost of producing a bushel of apples. Inasmuch as it costs no more to produce a bushel of a good variety than a bushel of an inferior variety, the importance of selecting only such apples as experience has proven can be profitably grown was clearly shown.

The following varieties were mentioned as having proved their worth in Lycoming County: Grimes Golden, Smokehouse, McIntosh, Baldwin, Rome Beauty and Northern Spy.

Not So Bad As It Seems

Mr. Snyder expressed the opinion that the outlook for the orchardist, while not particularly bright, is not so bad as last year's bumper crop might indicate. This was an exceptional year, and the experience of the apple industry has clearly shown that there have been other times in the history of the industry as bad, if not worse, yet it has survived.

The orchardist must expect lower prices in the future, and more care must be given to the selection of such varieties as have proven profitable; otherwise, the poor varieties will eat up the profits of good varieties. Mr. Snyder's figures were taken from actual sales records, and fully demonstrated the great importance of selecting the proper varieties.

The actual cost of production naturally varies, depending upon the individual, location, etc., but based on the figures shown it costs anywhere from 50c to over a dollar to produce a bushel of apples. It is estimated that a great many growers lost money last year, but conditions were exceptional, and with proper care in the selection of varieties, and using every precaution to keep production costs down to a minimum, the apple grower has a fair chance to succeed, but there is indication of over-production.—W. F. MacVeagh.

Carloads of Strawberries on the Move

FOURTEEN cars of Louisiana strawberries were on their way to market by February 26, this year, whereas the first car of last season did not move until March 25th. All indications point to a bumper harvest of berries this season, if weather continues favorable. Acreage has been increased in many important sections and plants are reported mostly in excellent condition.

Strawberry markets are very sensitive to changes in supply and in quality of arrivals. It is easy to overload a market with such a highly-perishable product and thereby force prices to unprofitable levels. In January, 1926, the jobbers in New York City were paying an average of about 90c a quart for best Florida arrivals. When carlots began to come in February, the price dropped to 70c. Heavier supplies during March were accompanied by a price level of 50c and the market gradually declined, as arrivals from various states increased.

May opened with an average quotation of 45c; 62 cars had been received that week. The following week's receipts exceeded 200 cars, and the price dropped 20c to an average of 25c per quart. The market remained at this level until June, when an accumulated supply forced quotations down to 18c.

(Continued on next page)

Bunching Beets for Retail Trade

Table beets are tied from three to six in a bunch on Thomas F. Biddle's truck farm, Hustleton, Pennsylvania. They are tied by hand so as to make as attractive a bunch as possible for retail trade. A tying machine is used for other crops such as rhubarb, of which ten acres are grown. On the wholesale market last year table beets sold especially well from the middle of summer until fall, bringing from four to six dollars a hundred. This is considerably better than the one cent or half cent a bunch growers are often compelled to take.—T. H. W.

In other words, at the height of the berry season in New York City, jobbers paid only one-fifth as much as they did in January, when a few Florida strawberries were all that could be had. During all of last season, New York received more than 1500 cars of this fruit and Chicago more than 1500, out of the season's shipments by rail of 13,600 cars. Boston took nearly 1000 cars.

Florida Ships Most at Present

Recent supplies have been much greater than those of a year ago. New York dealers now are getting 25@50c, quart basis, for Florida stock, compared with an average of 55c in late February, 1926. During the past week, Florida originated 106 cars, or four times as many as during the same period last season. Shipments from Louisiana will slowly increase and within a month several other sections may begin shipping. Alabama, Mississippi, southern Texas, and the Imperial Valley of California are among the earliest sources of this delicacy, followed by the Atlantic Coast region and the great mid-western berry sections. According to carlot shipments last season, the leading states ranked in this order: Louisiana, Missouri, Maryland, Arkansas, Virginia, Tennessee and North Carolina.

Mid-Season States Curtail Acreage

In recent years there seems to be a tendency to increase the plantings in early states and to keep the acreage in mid-season states to a more moderate figure. This is a wise policy, if growers are to get anything like adequate returns at the height of carlot movement in May and June.

Last season, the estimated farm value of strawberries in the early sections ranged from 18c to 35c per quart. The second early states showed returns of 15c to 19c while growers in the intermediate group got 12c to 20c and the late states 11c to 19c a quart. The total commercial crop of 256,500,000 quarts had an estimated farm value of $44,500,000,—the highest value in three years.—Bureau of Agricultural Economics, U. S. D. A.

Oil Sprays Effective Before Growth Starts

IT IS the observation of the extension specialist in fruit growing at the New Jersey State College of Agriculture that New Jersey peach growers are getting poor results in controlling peach leaf curl because of applying a spray after growth instead of before growth has started. Since peach leaf curl is caused by a fungous disease which gains entrance into the leaves as soon as the buds swell, a spray application for its control must be made before any growth starts.

Conquers Red Mites and Scale

Where an oil spray has already been applied to the peach trees for controlling red mite, scale need not be considered when spraying for the control of peach leaf curl. The oil spray kills both red mites and scale infestations. Therefore, the mixture for peach leaf curl may be 3½ gallons of lime-sulphur to 50 gallons of water instead of 5 gallons of lime-sulphur to 50 gallons of water. This effects quite a saving for the peach grower. Some growers are using a 3-4-50 Bordeaux mixture instead of lime-sulphur and are getting excellent results, as either lime-sulphur or Bordeaux is a good fungicide for peach leaf curl.

Newly laid concrete highways in southern Ohio have been destroyed by the slipping of the soil on hillsides.

Drawings made from actual photographs.

College education secured by draining acres—

$2500 Worth of Muck Land Reclaimed at a Cost of only $200

TWO high school boys wanted to go to college, earnestly enough to work for their expenses. Their father, one of the owners of the Hartnagle Brothers Farm near Newark, N. Y., made them this business-like offer: "Drain the ten acres of muck land and you can have the proceeds of the crops raised on the land to pay your college expenses."

What was the cheapest and quickest way to ditch and drain these ten acres? The boys figured, asked questions, and finally decided to blast the ditches with dynamite.

After laying out the ditch line and punching holes to contain the necessary cartridges of 50% du Pont Ditching Dynamite, into the center hole was placed a cartridge containing an electric blasting cap with wires leading to a blasting machine in a safe position for operation by one of the boys. Down goes the handle to the blasting machine! BANG! Into the air is thrown muck, marl and stumps and scattered over the surface. The water is running down the blasted trench as the Hartnagle brothers come to see the results of their ditching with dynamite.

Ten acres of idle muck land produced the crops whose sale enabled two boys to pay their college expenses. A permanent, profitable improvement secured at a cost of $1.20 per rod—and a college education for two boys!

Haven't you land to clear? ditching to improve your fields? trees to plant? Du Pont dynamite can do this work quickly, easily and safely when used as directed in the Farmers' Handbook of Explosives—your copy is ready on receipt of a postal request.

FLEX-O-GLASS ADMITS Ultra Violet Rays
PAT. PEND. T. M. REG.
1/8 Cost of Glass And Much Better
Keeps Baby Chicks Healthy
Prevents Weak Legs, Diseases and Deaths

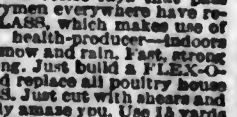
Don't keep chicks behind glass. It shuts out the sun's Ultra-Violet rays, causes leg weakness, rickets, disease and finally death. Leading State Experiment Stations and scientists have proved this in many tests. But these scientists also found that chicks kept under FLEX-O-GLASS were safe from rickets, weak legs, stayed healthy; were full of pep and grew amazingly in this warm sunlit room—because the chicks absorbed the energizing Ultra-Violet rays that FLEX-O-GLASS admitted.

These tests were made for you. Put your chicks under FLEX-O-GLASS. Prevent weak chicks, diseases and deaths in this easy way. Every chick will mature or reach frying size much sooner than ever before because they absorb the tissue building Ultra-Violet rays that pass thru FLEX-O-GLASS. Poultrymen everywhere have replaced glass with FLEX-O-GLASS, which makes use of the sunshine—Nature's only health-producer—indoors where chicks are out of slush, snow and rain. Fast, strong chick growth will be astonishing. Just build a FLEX-O-GLASS scratch shed easily and replace all poultry house windows with FLEX-O-GLASS. Just cut with shears and nail on. The results will actually amaze you. Use 15 yards for 300 chicks. This cozy sunlit brooder-house will pay for itself many times the first season alone and next winter keep your hens in it. The Ultra-Violet rays will keep them healthy and active, stimulate the egg glands and make them lay to the limit in coldest weather.

Genuine FLEX-O-GLASS GUARANTEED Most DURABLE

FLEX-O-GLASS was the original material advertised for admitting Ultra-Violet Rays from the sun. It always has been and is today made on a stronger, better cloth base. That's why we get so many letters telling that FLEX-O-GLASS is best. Always looks new and bright, even after many seasons of exposure to wind, rain and snow. Cut with shears and nail on. Lasts for years. Make sure of getting the genuine, by ordering direct from Flex-O-Glass Mfg. Co., the sole manufacturers. [illegible] "When Flex-O-Glass is installed beside another, it speaks for itself."

Better than Glass for Hotbeds



Gardeners—get stronger bigger plants that will grow when transplanted. Because FLEX-O-GLASS admits concentrated Ultra-Violet rays and infra-red (heat) rays, it makes plants grow much stronger and faster than when under plain glass. (Glass stops these rays.) Have plants earlier. Get more money for them. FLEX-O-GLASS is installed much easier, holds heat better and costs far less than glass. Scatters light just as needed. Frames are lighter and easier to handle.

PRICES—All Postage Prepaid
Per yd. 36 inches wide; 1 yd. 50c; 5 yds. at 40c ($2.00); 10 yds. at 35c ($3.50); 25 yds. at 32c ($8.00); 100 yds. or more at 30c per yard ($30.00).

FLEX-O-GLASS MFG. CO.
1451 N. Cicero Ave., Dept. 199, Chicago, Ill.

SPECIAL 15 TRIAL OFFER
We will send you 15 yards of FLEX-O-GLASS in a roll 3 feet wide and 45 feet long, postage prepaid, for $5.00. This big roll covers a scratch shed 9 x 15 ft. (size for 300 chicks) or use for brooder-house fronts, hotbeds, poultry, barn or hoghouse windows, enclosing porches, storm doors, etc. If after 15 days not satisfied FLEX-O-GLASS gives more warm healthful light than glass, or if it isn't the most durable, send it back and your money will be refunded without question. You must be absolutely satisfied or your money back. Mail check or money order today. Use Guarantee Coupon below, which is backed by $1,000 deposited in the Pioneer Bank of Chicago. Send $9.50 for 30 yds. if you wish larger trial roll. 24 hour service. FREE catalog contains valuable poultry information—with your order.

New Enzyme Digestant a Busy Bug

FOR some time the subject of enzymes, as related to poultry feeding, has claimed the attention of poultrykeepers. Enzymes are natural substances present in the digestive system of the fowl, intimately concerned in the digestion of food.

Mention has already been made of the enzymic ferment called "diastase," which is present in germinated oats, and acts on starch. Lately an enzyme digestant known as "protozyme" has been developed and put on the market in commercial form. This product acts not only on starch, but on protein as well.

The New Jersey Agricultural Experiment Station has conducted a series of experiments in poultry feeding with this new enzyme, and the results of two years' work are summarized in a very interesting circular that has recently been issued. The following table shows the egg production of individual birds consuming protozyme in mash December 1, 1924 to November 30, 1925.

Protozyme in mash by weight:

	5%	3%	1%	Check
Eggs per bird	150.63	159.69	146.16	139.67
Grain per bird, pounds	41.06	41.56	40.79	44.70
Mash per bird, pounds	38.66	39.37	38.49	38.34

the station draws the following interesting conclusions:

1. For the production of market eggs, it is profitable to feed 1 per cent, 2 per cent, 3 per cent, or 5 per cent, of protozyme in the mash.

2. The addition of 3 per cent protozyme to the mash is the most profitable for production of market eggs.

3. Higher percentages gave greater gain in, and better maintenance of, body weight during production.

4. Birds fed protozyme were more uniform in growth and appearance.

5. The birds fed protozyme gave greater egg production thru the winter and continued to lay longer.

6. Among the birds fed protozyme, mortality was materially decreased, especially among baby chicks.

7. Protozyme showed no forcing or stimulating tendencies.

In another experiment five pens of chicks, 200 to a pen, were fed various amounts of protozyme in the mash to determine its effect on growth and mortality.

Protozyme in mash by weight:

	5%	3%	2%	1%	Check
Wt. of chicks, 20 weeks, lbs.	3.24	3.03	2.89	2.80	2.65
Lbs. mash per chick	8.31	8.31	7.27	7.21	7.73
Lbs. grain per chick	7.65	7.67	7.68	7.70	7.77
Mortality	5	4	10	11	16

In further experiments with the pullets raised from these chicks (hatched March 1) the pullets that had not received protozyme started to molt in November, and took two and a half months to finish, while those that had received protozyme started in December and got over it much more quickly. During the molt the protozyme pens laid from 11.9 to 13.2 per cent, while the other pens laid from 4.2 to 9.3 per cent.

From these and other experiments

Protozyme was first introduced in my locality a little over a year ago. The local feed dealer who handles it made his first purchase 100 lbs.; now he buys it by the ton and puts out a ready-mixed mash containing protozyme. Some of my neighbors who use their own mash formulas add 2 or 3 per cent to their mixtures.

This fall I saw a bunch of pullets that had been raised on a protozyme mash, and when I saw them in November they were as well-fleshed and growthy a lot of birds as one would be likely to find. At that time they were doing about 40 per cent.

Last summer when I was selling off my culls, the dealer remarked that they were nice and fat, which was due in part at least to the protozyme they had been getting in the mash. Evidently we must reckon on protozyme in our poultry feeding.—R. L. Scharring-Hausen.

Chicks Thrive in Warm Home

BABY chicks must have a comfortable home all ready for them when they come from your hatchery. A good, thrifty bunch of chicks can easily be stunted by getting chilled while you are fixing a warm home for them, or by dumping them in a cold one upon arrival.

The house where your chicks are to be "at home" must have clean, dry floors of wood or cement. Damp floors mean chick troubles later on. The house must be free of drafts.

The brooder or brooder stove must be large enough to give an abundance of heat and space to allow all chicks to reach the heat in the coldest weather. It is better to have a stove too large even than just large enough.

Warmth, plenty of it, is the first need of the chicks for their first week at home. To keep chicks from wandering away from the heat in cold weather, strips of roofing paper, or fine mesh wire, cut 18 inches wide, can be set up some distance away from the hover. After a week these can be taken down to allow more room for exercise, but it is well on cold nights to use the strips to keep the chicks nearer the heat. The corners of the house should be turned, or cut off, to keep chicks from piling in them.—International Baby Chick Association.

Sour Milk Fed Exclusively Is Not Satisfactory

I have been recommended to use sour milk for baby chicks using nothing but milk for the first 15 days. I haven't sour milk but can obtain plenty of semi-solid buttermilk. Could I dilute this and would it be as good for them to drink as sour milk? How much water would you use to dilute it? Would the semi-solid and dry buttermilk both be too strong for the baby chicks?—H. R. H., Carroll County, Md.

I do not think that using nothing but sour milk for baby chicks for the first fifteen days will be at all satisfactory. However, giving the chicks semi-solid buttermilk to drink, diluted about 1 to 7 with water, is a good thing to do. The milk should be given in glazed porcelain founts.

I was talking with a man connected with a large hatchery, who last year reared several thousand pullets, and he advised giving clear water in separate founts along with the buttermilk as the latter does not seem to satisfy the thirst.

It would be all right to give buttermilk to drink along with a mash containing dried milk. Here is the mash formula recommended by the New Jersey Experiment Station: 20 lbs. wheat bran, 20 lbs. red dog, 20 lbs. whole yellow corn, ground, 20 lbs. ground rolled oats, 10 lbs. 50 per cent meat scrap, 5 lbs. dried milk, 2 lbs. oyster shell meal or limestone flour, 1 lb. salt, 1 qt. cod liver oil.

Here are feeding directions:

SCRATCH FEED: 2 parts fine cracked corn, 1 part fine cracked wheat.

FIRST 3 DAYS: condensed buttermilk diluted 1 to 7 to drink.

THREE DAYS TO ONE WEEK: feed mash in pans twice daily, all they will eat in 20 minutes; scratch feed 3 times daily, all they will eat in 20 minutes.

ONE TO 20 WEEKS: plenty of mash hopper space. Scratch feed three times a day. Feed tender greens in small amounts, increasing to what they will eat in 15 minutes.

I am feeding the New Jersey standard laying mash, composed of equal parts bran, standard middlings, ground oats, corn meal and meat scrap. This is a good and a simple mash.—R. L. Scharring-Hausen.

To Hustle Slow Ducks

I have five ducks and two drakes. Three are two years old and two are eight months old. Have not laid yet. The old ducks have not laid since July. They have access to dry mash same as the chickens and get green feed. Can you give cause and tell me what to do?—Mrs. L. C. B., Adams County, Pa.

Perhaps your ducks are not eating enough of the dry mash to make them lay. Try giving them a moist mash twice a day, what they will clean up in 30 minutes, and see that they have some oyster shell. They ought to start off pretty soon.—R. L. Scharring-Hausen.

They're Going Fast

I have lost four big birds inside of ten days. Two of them showed white on the vent. What is the matter?—A. K., Salem County, N. J.

It is a difficult matter to say just what is the matter with your hens, but the symptoms indicate some sort of digestive trouble. Moldy or spoiled feed would cause this. Be sure that everything they get is sweet and clean. A dose of Epsom salts, one pound per 100 birds, given in the morning drinking water and followed by fresh water in the afternoon would do them good. Some poultrymen physic their flocks in this way every few weeks during the winter, especially if green stuff is not fed.—R. L. Scharring-Hausen.

Surround Yourself with Safety!

One safeguard after another contributes to your feeling of security, when you drive a Buick.

There is extra power in the famous Buick Valve-in-Head engine—for hills—for passing slow-moving cars on crowded highways—for quick action in traffic anywhere.

There is extra protection in Buick 4-wheel-brakes because they are *mechanical*—direct, positive and reliable—with operating parts of *drop-forged steel*.

Buick's *five-bearing-surface* steering gear is much more dependable, besides more flexible and less tiring.

Surround your family and yourself with *safety*. Buy a Buick!

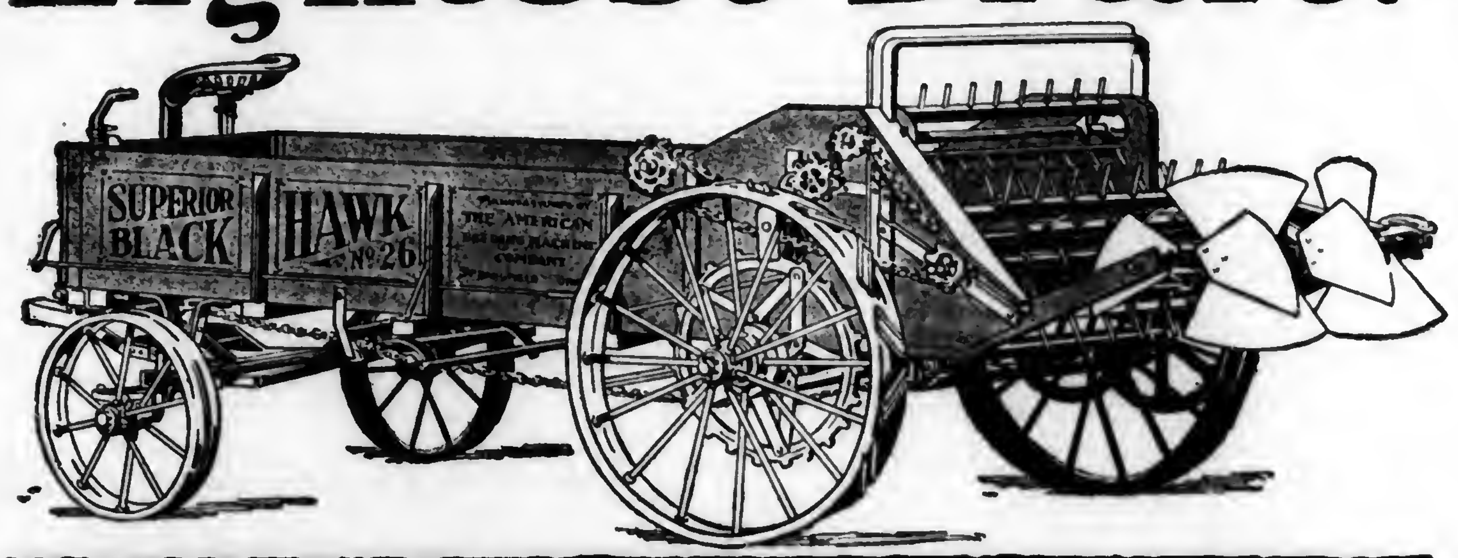
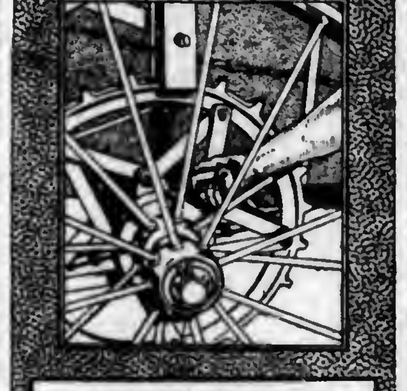
The Spreader of Lightest Draft!





The SUPERIOR-Black Hawk has Alemite lubrication which makes it easy to keep in perfect condition.

HERE is a spreader of large capacity yet light weight. It has the shortest turning radius of any spreader. It is a spreader of extraordinary strength and durability—and it is the lightest draft spreader on the market. Easily handled by a two-horse team. You'll see why if you will try it out yourself on your dealer's floor. Put it in gear and see how easily it rolls!

SUPERIOR BLACK HAWK
-with Complete Alemite Lubrication

The Superior Black Hawk Spreader does a perfect job of distribution. It thoroughly pulverizes the manure, spreading it as widely and smoothly as laying down a carpet. It has a spreading range of 4 to 28 loads per acre and it operates as effectively on hillsides as on level ground. See this better spreader at your dealer's, or mail coupon for descriptive literature.

The complete SUPERIOR line of farm implements meets every requirement of *fertilizing, planting and cultivating*. It includes SUPERIOR Grain Drills, Corn and Cotton Drills, Corn Planters, Lime Sowers, Buckeye Cultivators and SUPERIOR-Black Hawk Manure Spreaders.

Features of House Not Desirable

I am now erecting a poultry house 100x25 feet facing south to southwest, 12 feet high on the south side by 6 feet on the north side and am making it into five sections each 20 feet long by 25 feet wide. This front facing the south being 12 feet high and 20 feet wide, how would you suggest locating the curtain and glass spaces? Would you recommend a 2½ to 3-foot high curtain immediately next to the roof the entire 20-foot length, or would you recommend glass at the top to let more light farther back on to the roost, and the curtain next with another glass farther down? Is there any reason why a roost should not be put in the center of the chicken house? Should windows be hinged?—I. K. D., Lebanon County, Pa.

The plan of your house is higher in front and deeper than is commonly recommended. A type that has been very successful in New Jersey is 20 feet deep, 5 feet high in the back and 8 feet high in the front. A greater height than this wastes lumber enclosing space that cannot be used by the birds and also makes the house cold.

Useful Bulletin May Be Procured

Let me suggest that you write to the New Jersey Experiment Station at New Brunswick, for their bulletin on poultry house construction, which is free. This gives many useful pointers on the arrangement of windows, curtains, etc. If you go on with your present plans it would probably be best to put the glass nearest the roof, fastening the sash with wooden buttons so that they could be removed altogether in the summer for the sake of ventilation.

I do not know of any reason why a roost should be put in the center of a laying house. They are always put in the back because that location is warmest in the winter, being farthest from the windows and out of drafts. Placed in the center of the house the hens would be exposed to drafts from all sides. The roosts and dropping boards in this location would also throw the rear of the house into shadow.

I also think that you will like an arrangement of curtains in the center of the front of the sections, with a long sash on each side of this. It is customary to open the curtain frames except during storms and severe cold, and when this is done the curtains will cover the glass and exclude the light if you follow out the arrangement you have in mind.—R. L. Scharring-Hausen.

Nest Box Notes

I RECENTLY saw an ingenious arrangement for feeding mash to little chicks. It consisted of a galvanized pan an inch deep and fifteen or eighteen inches square, on which the dry mash was spread. When the chicks got large enough to scratch the mash out of this, the owner made a frame of 1x3 wooden strips that fitted tightly inside of the pan, thereby increasing the depth. This combination took care of the hopper requirements until the chicks were old enough to go outside and eat from a large trough hopper.

• • •

Baby chicks rapidly outgrow their feeding utensils. Some of the patented hoppers are all right for a week or two, after which more capacity must be provided or the chicks will not get enough to eat. This not only stunts their growth but may lead to bad habits such as toe picking or cannibalism.

• • •

Drinking fountains should be of glazed pottery ware, enameled ware, or galvanized iron. The last kind is unsafe to use in feeding milk.

• • •

It is a good idea to keep a newspaper and small supply of kindlings in each colony house. Then if a fire goes out, as sometimes happens, no time need be lost in hunting material to start a new one.—R. L. S-H.

Bills About Which Farmers' Interest Centers

ELECTION reform continues to hold the center of interest in the Pennsylvania Legislature. A total of thirty bills has been introduced. They deal with every phase of the election procedure from giving assistance to voters at the polls to the opening of ballot boxes. Committees have been busy considering these bills and trying to formulate a program. One bill proposes to put voting machines in every precinct in the state. The rural interests are seriously objecting to this because of the cost involved and the impracticability of having a machine for counting the votes in the small rural precincts. Considerable difference of opinion has developed on the amount of expenditures to be allowed candidates and the amount of assistance to be given voters at the polls.

• • •

FISHER BACKS 3-CENT GAS TAX.—The much-anticipated three-cent gasoline tax bill of the State Administration has made its appearance. This bill, according to reports, provides that two cents of the tax shall be permanent while the remaining cent shall be an emergency tax to expire June 30, 1929.

• • •

REORGANIZES PRODUCTS SHOW.—An amendment to the Administrative Code calls for the creating of a State Farm Products Show Commission which will take the place of the present Executive Committee of the Show. The Commission is to be made up of the Governor, the Secretary of Agriculture, such other person as designated by the Secretary of Agriculture, the Dean of the School of Agriculture of the Pennsylvania State College, the Director of Agricultural Extension, Pennsylvania State College, a representative of the State Department of Public Instruction, and three other members to be appointed by the Governor from nominees selected by the State Farm Products Show Committee. This Commission is to serve as the legalized executive committee of the Show with the Secretary of Agriculture as chairman.

• • •

WOULD HAMPER RURAL ELECTRIFICATION.—A bill which is drawing the opposition of parties interested in rural electrification is House Bill 784, which requires that all electricians and wiremen shall pass an examination and be registered by the state. This would make it impossible for a farmer to do any electrical wiring or installing of electrical equipment, even tho his work was approved by the insurance underwriters, unless he first qualifies as a skilled electrician, according to rural electrification enthusiasts.

• • •

PEST BILL MAKES RECORD.—The Plant Pest Bill has passed after a record journey thru the House and Senate. This bill was introduced on February 21 by Representative Haines and was passed finally on March 8, a total of 14 work days. This bill, in addition to bringing together all plant pest laws, provides for adequate cooperation with the Federal government in the control of the corn borer.

• • •

MAY ABOLISH ICE CREAM CONE.—The ice cream cone would be a thing of the past if a bill introduced last week should pass. It provides that ice cream, like milk, must be served in hotels, restaurants and other eating places in the so-called original container to overcome the undue handling by clerks.—J.

Goodness made Camel famous

CAMEL is the cigarette that won the world through quality. Camel's blending can be found nowhere else. It is rolled of the choicest Turkish and Domestic tobaccos grown. Even the cigarette paper is the finest—made especially for Camels in France.

If you want smoke enjoyment full and satisfying, get acquainted with Camel cigarettes. They will never tire your taste nor leave a cigaretty after-taste, no matter how many of them you smoke. To light a Camel is to discover a goodness in tobaccos — an entirely new sense of smoking pleasure.

Camels are famous because they are good. They lead the world in popularity and demand. They invite your comparison with any cigarette made.

"Have a Camel!"

The Wishbone COAL BROODER
Two Sizes
Has All These Features

1—Upper draft control is 6 inches above the hover out of the way and does not collect soot.
2—Uses full size stove lid and a 14 quart pail of water can set on it, supplying moisture or hot water.
3—Revolving hover, with trap door allows you to get at any place under the hover.
4—Shaker in front equally good for right or left hand.
5—Double automatic draft control—regulates perfectly even in high winds.
6—Sloping heater throws heat down to floor where needed. Large grate. Big coal capacity, yet economical in fuel.

Two sizes: 52-inch hover, 108 lbs., $26.50; 60-inch hover, 112 lbs., $30.00, f. o. b. factory. Can ship at once, freight or express.

A. A. BORLAND,
Staff Contributor and Adviser
Head of the Department of Dairy Husbandry
Pennsylvania State College

One Question Resolves Into Another

Do you believe that purebred stock does really pay for the investment?—E. O. M., Potter County, Pa.

Whether purebred cattle will pay for the additional investment depends on two things; first, the cow herself and second, the care and feed she receives. High producing cows pay regardless of whether they are grades or purebreds. Low producing cows do not pay regardless of their breeding. Therefore, the question is: Do purebred cows produce more milk and butterfat than grade cows?

The results from cow testing associations in Bradford County showed that purebred Holsteins produced on an average of 8467 lbs. of milk and 299.1 lbs. of butterfat, while grade Holsteins yielded only 7124 lbs. of milk and 260.4 lbs. of butterfat, an increase of 1343 lbs. of milk and 38.7 lbs. of butterfat from the purebreds. This increase shows 19 per cent more milk and 15 per cent more butterfat from the purebreds.

Yours for the Asking

TWO publications of particular interest to farmers have been issued by the Pennsylvania Department of Forests and Waters. They are: Bulletin 37, "The State Forests of Pennsylvania"; Bulletin 42, "Making Farm Woodlands Pay." These bulletins may be obtained free from the Pennsylvania Department of Forests and Waters, Harrisburg, Pa.

Grade Jerseys yielded 275.1 lbs. of butterfat and purebreds 307.8 lbs., an increase of 32.7 lbs. of butterfat, or 12 per cent. Purebreds on the average do yield more than grades, but there are numerous exceptions to the rule.

The only safe way in buying purebred cows is to purchase those that have an advanced registry record of a cow testing association record, so that you have evidence of their producing ability.

The care and feeding of the cow is important. No use putting a "purebred" cow in the hands of a "scrub" caretaker. Comfortable quarters and a properly balanced ration in kind and amount are essential if a purebred cow is to fulfill her possibilities. Under the conditions mentioned above, I would expect purebred cattle to pay for the investment.—A. A. Borland.

Test Before You Move

MOVING time will soon be here for many farmers. Those who are moving and taking their cattle with them should be sure that they don't move untested cattle into tuberculin tested quarantined areas. Violators of the state quarantine law will be subject to vigorous prosecution by the Bureau of Animal Industry.

The State Veterinarian, Dr. T. E. Munce, points out that tenants and other farmers who are moving should remember:

First: that herds must be tuberculin tested before being moved into the quarantined tested townships.

Second: that in order for the tuberculin test to be official and the owner to receive state and federal indemnity the tuberculin test must have been authorized in writing by the Bureau of Animal Industry.

Third: that each tenant farmer must file an area application blank with the Bureau of Animal Industry at Harrisburg, before the tuberculin test will be authorized by the Bureau.

Fourth: that each owner (tenant farmer) must agree to pay the local accredited practicing veterinarian for his services for applying the initial tuberculin test and retest of infected herds.

The necessary area application blanks may be procured from the Bureau of Animal Industry at Harrisburg, Pa., the Bureau District Agent in charge, any local accredited practicing veterinarian or the county agent.

When this procedure is properly carried out, the Bureau will promptly authorize the tuberculin testing of such tenant owned herds and will pay indemnity for any cattle that may react.

Grasses and Legumes Commonly Used for Permanent Pasture

By Dr. E. M. GRESS,
Pennsylvania State Botanist.

PASTURES may be either temporary or permanent. A clover or alfalfa field may be pastured temporarily after the crop has been harvested. Plants of short duration and of various varieties may be used for the temporary pasture. For the permanent pasture grasses of long duration must be used. Some short lived, quick growing plants may be used to insure quick pasturage but the plants which persist from year to year must form the bulk of the seed mixture.

Among the grasses and legumes used for making permanent pasture, the following are in common use: Kentucky blue grass, Canada blue grass, red top, orchard grass, meadow fescue, timothy, red clover, alsike clover and white clover.

Kentucky blue grass is climatically adapted to Pennsylvania. It is very slow to become established and will not thrive on acid soils. It grows best on fertile limestone soils.

Canada blue grass is less productive than Kentucky blue grass but will grow on less fertile acid soil. It should, therefore, be used in the permanent pasture mixture.

Red top will grow on acid wet soils on which the blue grasses will not thrive, which is a good reason for its presence in the seed mixture.

Timothy will not persist in a permanent pasture but it produces a good sod the first year or two.

Orchard grass withstands dry soil somewhat better than timothy. Its chief objection is that it grows in tussocks and makes an uneven sod. The seed is also rather expensive. This grass may be omitted from the mixture.

There are several types of meadow fescue. They thrive in climate suitable for timothy, probably being

(Continued on next page)

more persistent under dry weather conditions.

Red clover is a very good pasture plant. It makes an early growth and is good for the first year but usually disappears in about two years.

The alsike clover is more successful on acid, poor soil. Because of its ability to grow on acid soil its growth is not improved so much by an application of lime as red clover is. It is also more persistent and under favorable conditions will live from three to five years.

White clover is a creeping perennial which spreads by runners and by seeds. It is very hardy and should be included in the seed mixture.

Succession of Plants Necessary

In order to have a good permanent pasture a succession of plant growth is necessary. This is one of the reasons why a mixture of different grasses should be used. For example: Orchard grass makes a good growth in early spring and late fall while blue grass is best in the month of June and timothy during the month of July.

The soil of permanent pastures is not uniform. A grass that will thrive in one spot will not grow in some other spot, therefore, a well chosen mixture will furnish plant growth for all parts of the pasture.

In starting a permanent pasture a good seed bed should be prepared the same as for any other farm crop. If practical a fertilizer should be used. Lime will be very beneficial to such plants as blue grass and clover.

The summers in Pennsylvania are usually hot and dry, two conditions which will kill young plants which are not well established. Therefore, a permanent pasture should be started in the spring as early as the ground is fit for tillage so that the young plants will be well rooted by July and August. The pasture may be started also with about equal results in the late summer or early fall so that the hot weather may be past by the time the seeds germinate.

A permanent pasture should not be used before the grass has become well established and has made a good growth, and then should not be pastured too hard. It must be remembered that it takes some time to establish a good root system and that the food for this purpose is made in the leaves, therefore enough leaf surface must be left for the manufacture of food.

Mixtures Cornell Recommends

The following mixtures of seeds for permanent pastures have been recommended by Prof. E. G. Montgomery, of Cornell University:

No. 1. For soils that will grow blue grass and timothy:

Timothy	10 lbs.
Red clover	5 "
Red top	5 "
Orchard grass	5 "
Kentucky blue grass	10 "
White clover	3 "

Which makes a total of 38 pounds per acre.

No 2. On less fertile soils or those on which Kentucky blue grass and timothy will not grow:

Alsike clover	5 lbs.
Red top	5 "
Orchard grass	5 "
Canada blue grass	10 to 20 "
White clover	3 "

Which makes a total of 28 pounds per acre.

A combination of the above mixtures might be used. Three pounds each of red clover and alsike clover might be used instead of only the one kind. Five to ten pounds each of the two kinds of blue grass may be used. The number of pounds of timothy might be reduced a few pounds. It is better, however, always to sow too thick than too thin.

When the pasture is established it should be renovated each spring by sowing seeds on bare spots and by adding a top dressing of some fertilizer.

Explodes the theory

that one binder twine
is just as good as another

A MASTER FARMER'S EXPERIENCE

You probably know how I used to feel about binder twine. Bought the cheapest. Why not save a few cents per ball? What's the difference? Twine is twine.

Each year I'd nurse the binder along. A weak spot in the twine . . . break. A knot catching in the needle . . . break! I thought my back would break too—with so much re-threading. Then near the end, each ball would collapse and tangle up in the twine can.

Result—wasted twine and time! Wasted grain from loose bundles.

Plymouth twine stronger and better

Last year I happened to mention my trouble with twine to an implement dealer. He suggested a remedy—Plymouth Twine. I was skeptical. How could Plymouth be better than the others? But hope springs eternal, so I tried it!

Oh man, what a difference! Strong—yes! Evenly spun—yes! No breaks, snarls, or tangles. All the old grief of harvesting disappeared.

More length per pound in Plymouth

And I've discovered that Plymouth twine gives me more "money's worth." My farmer's club made actual measuring tests, and found that Plymouth runs its tagged length guaranteed to the pound,* while cheap twines run 7% to 16% shorter. I win all way round by using Plymouth!

**Plymouth Twine is spun 500, 550, 600 and 650 feet to the pound. Look for guaranteed length on tag.*

Plymouth—*more economical:*

the six-point binder twine

1. It's longer—full length to the pound as guaranteed on the tag;
2. It's stronger—less breaking, less wasted time, less wasted grain;
3. It's evener—no thick or thin spots—no "grief";
4. It's better wound—no tangling;
5. It's insect repelling—you can tell by its smell;
6. It's mistake-proof—printed ball—and instruction slip in every bale.

You can easily test Plymouth's length per pound against any other twine. The experiment pictured at the left has been made frequently.

Take a ball of Plymouth and any twine of the same weight and tagged as being the same length per pound and unwind them down the road. Then measure the length. Plymouth twine wins out—7% to 16% longer than cheaper twines.

GLOBE SILOS

A great improvement—
a good investment

A GLOBE SILO is a permanent improvement on the farm. It is constructed to last a lifetime. Made of carefully selected Northwest spruce and fir with double splines, sealed joints and adjustable doors, it keeps silage perfectly. *The extension roof, an exclusive feature, reduces the cost per ton capacity to a minimum.* The initial cost of a Globe is soon returned in extra profits from your corn crop. Get all the profit from your farm—get a Globe Silo.

Write for the name of our representative in your community and our catalog; tanks, tubs, ensilage cutters, stanchions, etc.

GLOBE SILO CO.
Box B Unadilla, N. Y.

UNION GRAINS

produces more milk at less cost

THE total upkeep cost, including feed cost, compared with your milk receipts, tells the story of profit or loss. When you buy dairy feed, don't figure on "how much per hundred or per ton" but on "cost per 100 pounds of milk." Keep the figures on the profit side by feeding Union Grains. One extra quart of milk a day means $12 or more income a year per cow, and this more than justifies an extra outlay of ten dollars a ton for feed. On the average, Union Grains will increase each cow's milk more than a quart a day.

Records show that cows fed on Union Grains produce more milk at less cost than on any other feed. That's because Union Grains has dried distillers' grains as its basic protein source. Added to other high concentrates in perfect balance, these dried distillers' grains make a ration that averages 24% protein, is more palatable and offers a greater variety in its sources of proteins than any other feed. Another factor that makes Union Grains the preferred ration is that it keeps cows pepped up and in perfect health. To return maximum milk profits for feed consumed, a cow must be kept in good physical condition at all times, a point not appreciated by all dairymen.

You can depend on Union Grains—it never varies. For over twenty years it has been the same high-grade, clean, quality feed it is today. Give Union Grains a try-out and see how much more milk it will make your cows produce. Keep a record of feed costs and milk sales and you'll stick to Union Grains.

UNION GRAINS is composed of Corn Distillers' Dried Grains, Choice Cottonseed Meal, Old Process Linseed Meal, White Wheat Middlings, Winter Wheat Bran, Hominy Meal, Corn Gluten Feed, Brewers' Dried Grains, ½% fine tablet salt.
ANALYSIS—Protein not under 24%, fat not under 5%, fiber not over 10%.

Quality in Feed is Economy in Feeding

Leaves from a Cow Tester's Diary

By B. E. WHITNEY

(Continued from last week)

IN DESCRIBING the cattle of the Canton, Pennsylvania, district I will endeavor at the same time to discuss a question which I have been asked times innumerable.

A cow tester is usually asked many questions. These questions may be something easy like the location of Latvia, a seaport of ancient Rome in five letters or the proper weight of a baby six months of age. Such queries, of course, anybody could answer. A more difficult one is "What is the best breed of cattle?"

Without hesitation I would say that the best breed of cattle for any farmer is the breed he likes the best. Some peculiar quirk of temperament seems to govern the choice of breeds. One man will choose Jerseys; another will have nothing but Holsteins; a third admires the Guernseys exclusively; a fourth is a Milking Shorthorn enthusiast; and finally somebody will bring up the rear proclaiming that the best of all are the Ayrshires. I do not admire, however, the man who is a Jersey breeder today, a Holstein breeder tomorrow, and something else the third day.

Four Cows—Four Kinds—No Results

In this connection I remember going into one dairyman's barn. The cow nearest the door was a huge Shorthorn, the next was a diminutive Jersey, the third was a decidedly beefy Guernsey and the fourth a massive Holstein. To my surprise, I later learned that the Jersey was the mother of the Shorthorn and the Shorthorn the mother of the Guernsey. No good results could be expected from such a hodgepodge of breeding and none were had.

As the territory covered by the association was an excellent dairy district, the quality of cattle was high, possibly one-third were purebreds, either registered or entitled to registry. Jerseys, Holsteins and Milking Shorthorns were represented in approximately equal numbers. A large number of the Jerseys belonged to stock upon which the registration papers had been neglected.

Besides these three leading breeds there was a steadily increasing proportion of Guernseys. The great bulk of the stock were grades, principally Holstein and Jersey. The old fashioned native cow had practically disappeared when the writer took over the association in the fall of 1918.

The first year the championship fell to a registered Holstein with 554 pounds of butterfat. This record was surpassed the second season by a registered Jersey with 660 pounds. The third season a Jersey of pure blood but with some unregistered ancestors raised the figures to 699 pounds, a mark which has not been approached since altho a purebred Holstein the fourth season reached 69 pounds. These figures will give an idea of the maximum of production and at the same time answer the query as to the best cow.

As one of the first purposes of a testing association is the elimination of poor cows some figures as to minimum production may be interesting. The poorest cow recorded showed a production of less than 100 pounds of butterfat for a twelve-month period. Like the champion she was a Jersey but on the purity of her blood information was lacking.

The most remarkable cow with minimum production was a purebred whose first year showed 150 pounds, the second year about 140 pounds and the third year somewhere in the neighborhood of 130. At the end of the third year she was disposed of for beef. Strictly against all dairy rules her heifer was retained for breeding purposes. This young cow made 325 pounds with her first calf. Never was the worth of a good sire more clearly demonstrated.

We do not care for axioms usually but with frequent repetition the following statements have something of that nature. A cow making less than 200 pounds of butterfat in a year is unprofitable: one making above 200 pounds will usually pay her way and something more; a cow with a record above 300 pounds on ordinary feed is a profitable dairy animal; one making 400 pounds is very valuable; one making 500 pounds is exceptional; cows with records above 600 pounds are comparatively rare in testing association work.

More Than Half Return Profits

In the Canton Association, as a rule, 50 per cent of the cows made over 300 pounds, 5 per cent over 400 pounds and about 1 per cent made over 500 pounds.

Herd averages, of course, varied widely. The minimum was about 11 pounds and maximum over 40 pounds. One of the members of the association, we believe, holds the championship for Pennsylvania in this respect. The average for the association for the seven-year period was 280 pounds, the maximum for any single year being 311 pounds.

As it is impossible to give, in the short space of this article, complete data for more than 100 herds, we will have to confine our sketch of individual dairies to a single example. We could give instances of dairymen whose progress has been truly royal, uninterrupted by any evil fortune. Such a degree of success, while gratifying to observe, is scarcely typical of dairying as a whole. We will pass these by and select a dairy which rose to a good position in the association but which, at the same time, encountered a series of too common vicissitudes.

(Continued on next page)

Sunshine Chases Away the Germs

Dark, damp bank barns are disappearing in Lancaster County, Pa. These barns at Forest Farms, equipped with electric lights, litter carriers, cork floors and ventilating systems, are built on the level and let in plenty of sunshine.

Mr. C. began as a dairyman about 1910. The herd which he obtained had ranked well at the local creamery. The cows were well defined grades. Being ambitious he added a pair of registered cows to their number after some years had passed. About 1916 he purchased five registered heifer calves. Everything seemed promising when he ran up against a difficulty which has perplexed breeders of lifetime experience.

Produced "Short-time Milkers"

Mr. C.'s first herd sire was an excellent one as his stock proved. This animal was replaced in 1914 by a young bull of good individuality and pedigree. As a stockgetter he was a failure. By 1917 Mr. C. had on his hands a bunch of what dairymen call "short-time milkers," i. e., cows which milk fairly well for about six months of the year. Somewhat disgusted he disposed of his bull and used in his place a registered sire belonging to a neighbor. In 1918 Mr. C. became a member of the Canton Cow Testing Association.

The first season the herd average was about 230 pounds. The registered heifers mentioned above freshened that year but failed to show any particular promise. One of them was so deficient as a milker that she went down the road to the butcher shop with a number of her stablemates.

Change of Sire Eliminated Defects

Fortune changed the second season. We have mentioned above that Mr. C. at this period was using a herd sire in the vicinity. In the fall of 1919 the daughters of this bull began to freshen and made around 300 pounds as two-year-olds while their dams scarcely reached 250 pounds at maturity. The registered heifers as three-year-olds nearly doubled their two-year-old production. One of these animals at maturity made over 500 pounds of butterfat, two of them exceeded 400 pounds and one made about 350.

The daughters of the neighbor's bull were excellent milkers but possessed a number of defects of individuality. In an effort to remedy this Mr. C. purchased another sire. In the offspring of the latter the defects practically disappeared.

Unhappy Ending Qualified

Mr. C. had five years of success with his herd but at the end of this time evil fortune intervened once more. A large number of the cows aborted. This disappeared after one season but it is not necessary to describe to dairymen the effects of this disease on milk production. We can qualify the "unhappy ending" by saying that the herd passed the tuberculosis test O. K. and after a couple of seasons will probably regain its old-time vigor.

In this article we have restricted our remarks to the technical division of association work and have said nothing of the human side of a tester's life. The latter subject is far too vast to be handled in the short space of a single essay.

Few Reactors Found

IS THE tuberculin test effective? Here are some figures that speak for themselves. The annual retest of all cattle in six townships of York County, Pa., has just been completed. The first test was made in 1926. Here are the figures on the percentage of reactors in the two tests:

Township	—1926— Cattle	—1926— % Reactors	—1927— Cattle	—1927— % Reactors
Codorus	1324	30.1	1326	1.28
lanheim	1030	30.3	1099	2.9
awn	1230	18.5	1325	.9
Chanceford	1514	27	1606	1.1
Hopewell	495	10.9	419	.47
P. Bottom	1213	20.1	1237	1.1

Burying your Stalks Controls the Corn Borer

The European Corn Borer is a plowing problem. Experts agree that clean plowing is the solution.

They recommend the following method of control:

1st. Start in the center of field and plow outward with OLIVER CORN BORER PLOW before May 1, covering all stalks and debris.

2nd. When all the field is plowed except the outside 12 or 14 rows of stalks, remove mouldboard and lift the stalks by plowing about two inches deep on the row.

3rd. Rake stalks over onto plowed ground.

4th. Replace mouldboard and finish plowing the field.

5th. When stalks are dry enough to burn completely destroy them by fire—Stalks must be destroyed before May 1.

Get in touch with your Oliver dealer immediately. Have him demonstrate the OLIVER CORN BORER SULKY OR TRACTOR PLOW in your fields. You have to plow *anyway* . . . it is just as easy to protect your crop while you are doing it.

Write for our latest literature on the control of the European Corn Borer.

THE DE LAVAL MILKER
IS SIMPLE AND EASY TO OPERATE

Facts about the De Laval Milker

1. 650,000 cows now milked the De Laval Way.
2. De Laval Milkers now in their eleventh year of use.
3. 83.27% of the users report average saving of 2 hrs., 12 mins. per day—saves half the time in milking.*
4. 97.13% of the users say it agrees with their cows.*
5. 99.4% of the users say they get as much or more milk with the De Laval as by hand milking.*
6. 9.49% average increase in production per cow is reported by those who claim the De Laval Milker increases production.*
7. 94.80% of De Laval users say their milker is easy to keep in a clean and sanitary condition.*
8. Average bacteria count of all reporting, 14,542—62% report counts of 10,000 and less.*
9. 96.45% of De Laval users say their milker is "the best," "one of the best," or a "good" investment, as compared with other farm equipment they own.*

*Based on reports from 1844 De Laval Milker users in all parts of the U. S. and Canada.

The pulsator is an example of the simplicity of the De Laval Milker—only one moving part!

THE simple design and rugged construction of the De Laval Milker provide ample assurance of absolute dependability.

You do not have to be a mechanic to operate a De Laval. It is entirely "fool-proof," for there are no adjustments to be made — no one can alter its action or change the speed at which your cows are milked.

Outfits for any Size Herd — Sold on Easy Terms

Garden Plans Anticipate Summer Sun and Rain That Grow the Vegetables Every Family Needs

ONE would not think of building a house without a plan, or of taking a journey, be it for business or pleasure, without first planning the trip, but we do much of our everyday work in hit or miss fashion. Many persons plant their gardens in this way but every woman who has the care of the garden should know just how much her family needs and plant accordingly.

First, we will begin with lettuce and cabbage, splendid old standbys because they come early. I have had the best results with the frostproof cabbage plants. These are sorry looking things when they arrive from the seed house, but appearances are deceitful for they take right ahold and grow. Onions are a choice early vegetable and the sets are the most dependable. Beans should be planted lavishly both for immediate use and canning. Have plenty of tomato plants started by May 1, and don't start these too early in the house. Thirty to forty days is plenty of time in which to get the plants big enough to set out. If older they become root bound and will be stunted.

Prefers Wrinkled Peas

The only kinds of peas I have had success with for canning have been the marrowfat varieties. That is the wrinkled pea. There are several good varieties on the market. They cannot be planted quite as early as the smooth pea for they are not so hardy and must be canned and eaten when young and tender.

Study your seed catalogs, they are the best reading I know of for any one interested in gardening. Every new vegetable that can be raised in this latitude has a place in my garden. Those we don't like I don't plant often unless they are especially beautiful, and to me growing vegetables are as beautiful as flowers. By planting again when the first crop has been gathered you can make your garden do double duty. I plant cabbage, lettuce, onions, peas, beans and early sweet corn. When these are over I have a large unbroken space in which to plant turnips, celery, endive, radishes and lettuce which will mature before frost.

I plant my early Eureka potatoes three feet apart and after they are cultivated the last time I start cucumbers, cantaloupes and watermelons between the rows. I always have more than we can eat. The melon family is rather a proposition in the small garden for they demand so much elbow room but in this way they can have it.

Fertilization is an important factor for without plenty of available plant food you cannot expect good results. Keep your soil sweet and rich, and don't forget there will be weeds.—Margie O. Wagner, Pa.

Rest Counteracts Fatigue Poison

THE woman who has much work to do will discover that she can accomplish far more in the long run if she stops a little while, when she feels tired, lies down and utterly relaxes for even so short a time as five minutes. When she starts to work again she will be surprised to find how rested she is, and how she can go at her work again with renewed energy, freed from the discouragement that often comes with fatigue.

When one becomes tired a poison is created in the system, which, when allowed to accumulate, causes many ill effects. Several short rests during a very busy day make it possible to do more work than continued effort with rest coming afterward and the result of such a plan is more far-reaching than one day's accomplishment of work with less effort. It tends to keep one looking young; it removes tired lines from worried faces; and helps to keep the woman who follows it regularly up to the standard of ideal Pennsylvania womanhood,—strong and active, efficient and happy.—Marian Cossitt Brackin, Pa.

Introducing Another One of Our Family

I WAS raised on a western Pennsylvania farm where money was scarce and work was plentiful. I learned to do every kind of house and farm work. After finishing grade schools I attended summer normal and then taught rural or village schools for seven terms. Then I resigned and married a modern farmer, and now I am living in a dear little home and constantly enjoying a wonderful view of a beautiful farming country.

I am interested in church and community affairs — attending church, Sunday School, Ladies' Aid, Literary Society, and Community Club meetings.

We have two lively, healthy boys of two and seven years, and I am anxious to be the best possible sort of mother.

My hobby is memorizing poetry and monologues, and I like to recite them to friends and fellow-members at literary meetings.

I read as many good papers and magazines as I can and I can assure you that I get as much or more help for the everyday problems of a farm mother, from the Home Pages of Pennsylvania Farmer, than from all the others combined.—Mrs. A. Ward, (Margaret B. Overdorff), Pa.

Mrs. Margaret B. Overdorff.

Possession Highly Prized

Two Housewives Sing the Praises of Pressure Cookers

IF I COULD tell you all I have benefited I am sure that by the time you were thru reading you would all want a pressure cooker.

I do all my canning in it and the past season I canned about 800 quarts. Vegetables are all hot packed and processed; fruit I cold pack, thoroly ripe, using a hot syrup; meats are done in different ways for variety; some I cold pack with salt adding no water, some I fry very fast for a short time just to get the brown broth for gravy and some I cut into chunks as large as I can get into a jar. Beef canned in this way is very nice to open and serve cold or to pack lunch.

Meat Canned for Future Use

When I can chicken I usually fry it a little, except the bony pieces, tho I cook soft enough in the cooker to pick off the bone, pack into pint jars and heat to 5 pounds pressure to insure keeping. I also treat beef bones the same way, picking off the meat and canning the broth. I use this for soup, usually with mixed vegetables which I can in season.

I am less enthusiastic about cooking potatoes in the cooker than any other vegetables because they deteriorate more than any other if a little over done, which frequently happens if I'm busy at something else or the phone rings when it is about time to take them off.

For vegetables that require a longer time, cookers are not only a great saver of time and fuel but make a much better finished product. String beans, red beets, sauerkraut and plain boiled cabbage are very nice cooked in this way and no odors escape if proper precautions are taken. The cooker should not be allowed to blow off steam and when taken from the fire should be allowed to cool before the petcock is opened or, better still, set in the sink and cooled by running cold water over it.

We think there is no corn so good as that prepared in the following way. We put a little water in the cooker and then the corn with only the outer husks removed. This we steam from 6 to 8 minutes at 15 pounds pressure. It is equal to any corn roasted in a fire out in the meadow and a lot less bother.

Another specialty is baked apples. Placed in inset dish with sugar, butter and a dash of cinnamon and processed 10 minutes they make a dish fit for a king in less time than you can heat the oven.

One Cake Dispelled Doubt

Last, but not least, is the great success I had this season with fruit cake. The book that comes with the cooker gives instructions for all these things but I must admit I was a doubting Thomas when it came to fruit cake. However, I determined to see whether it could be done. I put in just a little at first, but never again will I bake a fruit cake in the oven. When you try it have enough fire to make the water boil, set the cake in, steam according to directions and you'll have a cake come out ready to eat as soon as cooled, no hard crust, no scorched edges but nice and soft as you could wish.

But that isn't all of the fruit cake story. Just before Christmas a friend of mine said that if I would consent to sell fruit cake she was sure a lot of her friends in town would be glad to get some for Christmas. I consented and the orders came in fast. Since then requests have come in for fruit cake next season.

Toughness Disappears

So far I have not mentioned the roasting or cooking of meats for the table. No one can quite believe until they try it how good the oldest, toughest chicken can be when cooked only a short time in a pressure cooker. It takes only 30 minutes for a chicken less than three years old, 45 minutes for a three-year-old rooster. The time necessary for other meats is in proportion to the kind and size of piece.

This is a little of my experience with and pleasure derived from one of the greatest boons to the housewife. I am anxious to read articles giving the experience of others.—Mrs. J. K. Hershey, Ronks, Pa.

• • •

WHEN potatoes are to be baked, I usually use the pressure cooker to save heating the range oven. I place the dry cooker over the fire with the rack in place and raised on the long legs provided for it; or the colander may be inverted in the cooker; anything to bring the food to be baked well up in the center of the cooker.

The hot cover is then set in place with petcock open and loosened clamps. When cooker and cover are well heated I place the potatoes on the rack and bake for the same length of time I should use in the ordinary oven.

Scalloped potatoes are very nice baked in the cooker or cooked under pressure; in the latter case it may be desirable to brown them for a minute on the upper grate of the oven after they are removed from the cooker; or the cooker may be emptied and used as an oven for this purpose. Either process will save fuel and cooking under pressure will save time.

Scalloped Potatoes Are Good

Prepare scalloped potatoes in the usual way. Slice raw potatoes and place in an oiled inset dish with alternate layers of white sauce or, if preferred, sprinkle potatoes with flour and add milk to barely cover. Season with onion if liked. Cook fifteen minutes under ten pounds pressure.

These plain scalloped potatoes can be varied in many ways. Add grated cheese to the white sauce or season with chopped green peppers or with pimento. Buttered crumbs might be placed over the last layer.

If the combination is liked, place the sliced potatoes in inset, pour over them a can of corn, season and cook as above directed.

Browned potatoes are quickly and easily prepared. Put a couple of tablespoons of fat in the bottom of the cooker and heat. In this place rather small potatoes that have been thinly pared or, if new, scraped. Cook ten minutes at ten pounds pressure right in the bottom of the cooker.

Potatoes au gratin are fine for a

(Continued on page 23)

The Sunshine Wants In

Heavy Over-Drapes May Be Worse Than None

THE present vogue for colored over-drapes is pleasing, but when a room is none too light, some drapes tend to darken the room still more. The material used must be chosen with care.

In a very daintily furnished apartment recently visited, the over-drapes were of colored marquisette. In a bedroom in which the color scheme was blue and white, the curtains next to the windows were of sheer white net and the over-drapes of blue, thin marquisette.

In the living room, straight, simple, but fine lace curtains were hung next to the glass, while the over-drapes were of old rose marquisette. The dining room, which was done in tan and cream, had yellow marquisette curtains, making a gloomy room delightful.

Dyes Work Wonders

The mistress of this home explained that her curtains were easily laundered and the color renewed or brightened with convenient dyes. In this way, her draperies were always fresh and bright.

Where a heavier over-drape is wanted which will look like silk, cotton pongee is very satisfactory, as it has a silky finish and hangs in attractive folds. Cotton pongee comes in natural and dyed shades, and if borax is put into the rinsing water or into a thin starch when the drapes are washed and a little melted paraffin added to the starch, the laundered pongee will retain its soft sheen.

At the present time, the single curtain hanging almost plain next to the glass is often seen. This serves as a screen from curious, outside eyes, and dresses up the window, especially when over-drapes are used.

The Old Became the New

A thrifty housewife remade several sets of curtains in this way. The broken parts were cut away, and the bottom finished in three large scallops with a wash fringe which can be obtained for the purpose by the yard. Curtains and fringe were a pale cream color. Then a soft, cream pongee silk over-drape finished each window and matched rug and upholstery. By remaking several sets in this way she had enough for her house without the purchase of a single pair.

Some of the older houses have rather small windows. In order to make them look larger, rods may be set up from the top of the casing by means of special fixtures which come for the purpose. Extension rods will permit the draperies to be hung well out upon the wall surface, so as to leave all the window glass exposed.

Windows play an important part in both the outside and the inside appearance of a house, so they should be treated wisely in order to obtain the best possible effect.—Emma Gary Wallace, N. Y.

Useless Steps Waste Valuable Energy

AN example of how a number of New Jersey women have reduced the amount of walking necessary in cooking meals is given in an account of a Middlesex County woman by the state extension specialist in home management at the College of Agriculture, New Brunswick.

Mrs. R. H. Krog has a kitchen that is 16 feet long and it was her practice to keep small tools and utensils in various cabinets and in an old dresser. Tramping back and forth from the stove to these storage places took a considerable amount of energy, so she put up a double, hanging shelf over her work table, which is next to the sink and close by the stove. On the bottoms of the two shelves she put rows of hooks, so that such implements as the paring knife, egg beater, stirring spoons, and measuring cups could be hung up within easy reach.

On the shelves she keeps various things frequently needed at the table—scales, box of recipes, tea, cocoa, etc.

Mrs. Krog also had a shelf attached to the lower part of her work table and covered with linoleum. This has been found to be a splendid place for all the pots and pans in daily use.

Things needed frequently at the sink are kept on a shelf above it. By having the soap and scouring powders right there, bending over and walking aren't necessary.

On the shelf of the range, which is within reaching distance of the sink, are kept the salt and pepper boxes, and hanging near the range is a pot lid holder. This is high enough so that all the former stooping to get lids from obscure recesses is eliminated.

Mrs. Krog has found that she not only saves herself much fatigue by the new arrangement, but also gets her kitchen work done much more quickly.

If You Find It Hard to Have a Variety During Lent

HERE are a few main dishes one may serve during the Lenten season:

SHRIMP WRIGGLE

2 cans of shrimp
1 can of peas
2 hard boiled eggs
1 cup grated American cheese

Make two cups and a half of white sauce and season it. Melt cheese in white sauce. Add shrimps and peas and heat. Serve on toast, using sliced eggs for garnishing. Salt eggs and add dash of paprika.

• • •

RICE WITH CHEESE

Steam one cup of rice with 1 tablespoonful of salt. Cover bottom of casserole with rice, add 1 teaspoon butter, cut in pieces, cover with ½ pound grated cheese and a dash of pepper. Add milk to half the depth of casserole, cover with buttered cracker crumbs and bake until cheese melts.

• • •

KIDNEY BEANS

1 can beans
1½ cups milk
½ cup grated cheese

Put beans in frying pan, add milk and thicken. Add cheese and stir all until cheese melts. Season to taste. Serve on toast.

• • •

SALMON SOUFFLE

1 large can salmon
1 onion
¾ teaspoon salt
2 hard boiled eggs
¼ cup butter
½ cup cream
3 whites of eggs

Flake salmon, add grated onion, and eggs chopped fine. Mix well with butter, cream and salt. Fold in the stiffly beaten egg whites. Turn into buttered baking dishes and bake until puffed and nicely browned. Serve at once.—Betsy Ford.

Who Can Do It ?

FASTEN the end of a stout cord around a light ball and the other end to the top of a post or pole. The players stand on opposite sides of the post and bat the ball with open hand, each player batting in the direction opposite that of the one before him. The game is to see who can wind the string around the post until the ball touches the wood. —L. M. Thornton, N. Y.

This Cooking Secret
adds new zest and relish

THIS seasoning secret will give everyday foods a different, altogether delicious flavor. Just spread Gulden's on steak, ham, veal, hamburger, cabbage, etc., *before cooking*. As they cook, the mellow mustard flavor and the delicate spices in Gulden's spread through the food, making every mouthful taste like more! Try it in *your* cooking today. Write for free Recipe Book. Charles Gulden, Inc., Dept. D-13 48 Elizabeth St., New York City.

GULDEN'S MUSTARD
Use it as a seasoning in cooking

A good old Friend

Remember the old-fashioned mustard plaster Grandma pinned around your neck when you had a cold or a sore throat? It worked, but my how it burned and blistered!

Musterole breaks up colds and does its work more gently. Rubbed over the throat or chest, it penetrates the skin with a tingling warmth that brings relief at once.

Made from pure oil of mustard, it is a clean, white ointment good for all the little household ills.

Keep Musterole handy and use at the first sign of tonsillitis, croup, neuritis, rheumatism or a cold.

To Mothers: Musterole is also made in milder form for babies and small children. Ask for Children's Musterole.

FELTON SIBLEY
Ready Mixed Paints

Planting, gathering and marketing crops of various kinds *every month in the year*—that's what farmers in the South are doing. Many of these busy, prosperous, happy farmers have come from less-favored sections (and still they come) into the genial Southland. Here they can raise all kinds of crops—two or three crops a year on the same ground—all the time improving their land and making its market price greater.

Good farm lands at moderate prices; reliable farm labor at fair wages; family living at low cost—all here in the Southland for the farmer.

Write and say what kind of farming you want to do, and we'll tell you where and show you how to do it—and make more money farming than ever in your life before. Address G. A. Park, Gen. Imm. & Ind. Agt., L. & N. R. R., Dept. P-12 Louisville, Ky.

L&N

Improve your skin with **PURE PINE TAR**

CLEANSE and nourish your skin with virgin Pine Tar to keep it healthy and looking its best.

Apply this needed skin food by washing and bathing with Grandpa's Wonder Pine Tar Soap, which is pure pine tar and rich-lathering, quick-cleansing cocoanut oil. This combination of bland health oils is so soothing it is ideal even for a baby's tender skin—yet so thorough and antiseptic it kills troublesome body odors.

This wonder soap doesn't smart even when your skin is chapped, chafed, cut or scratched, as it is so apt to be if you work outdoors or over the cook-stove.

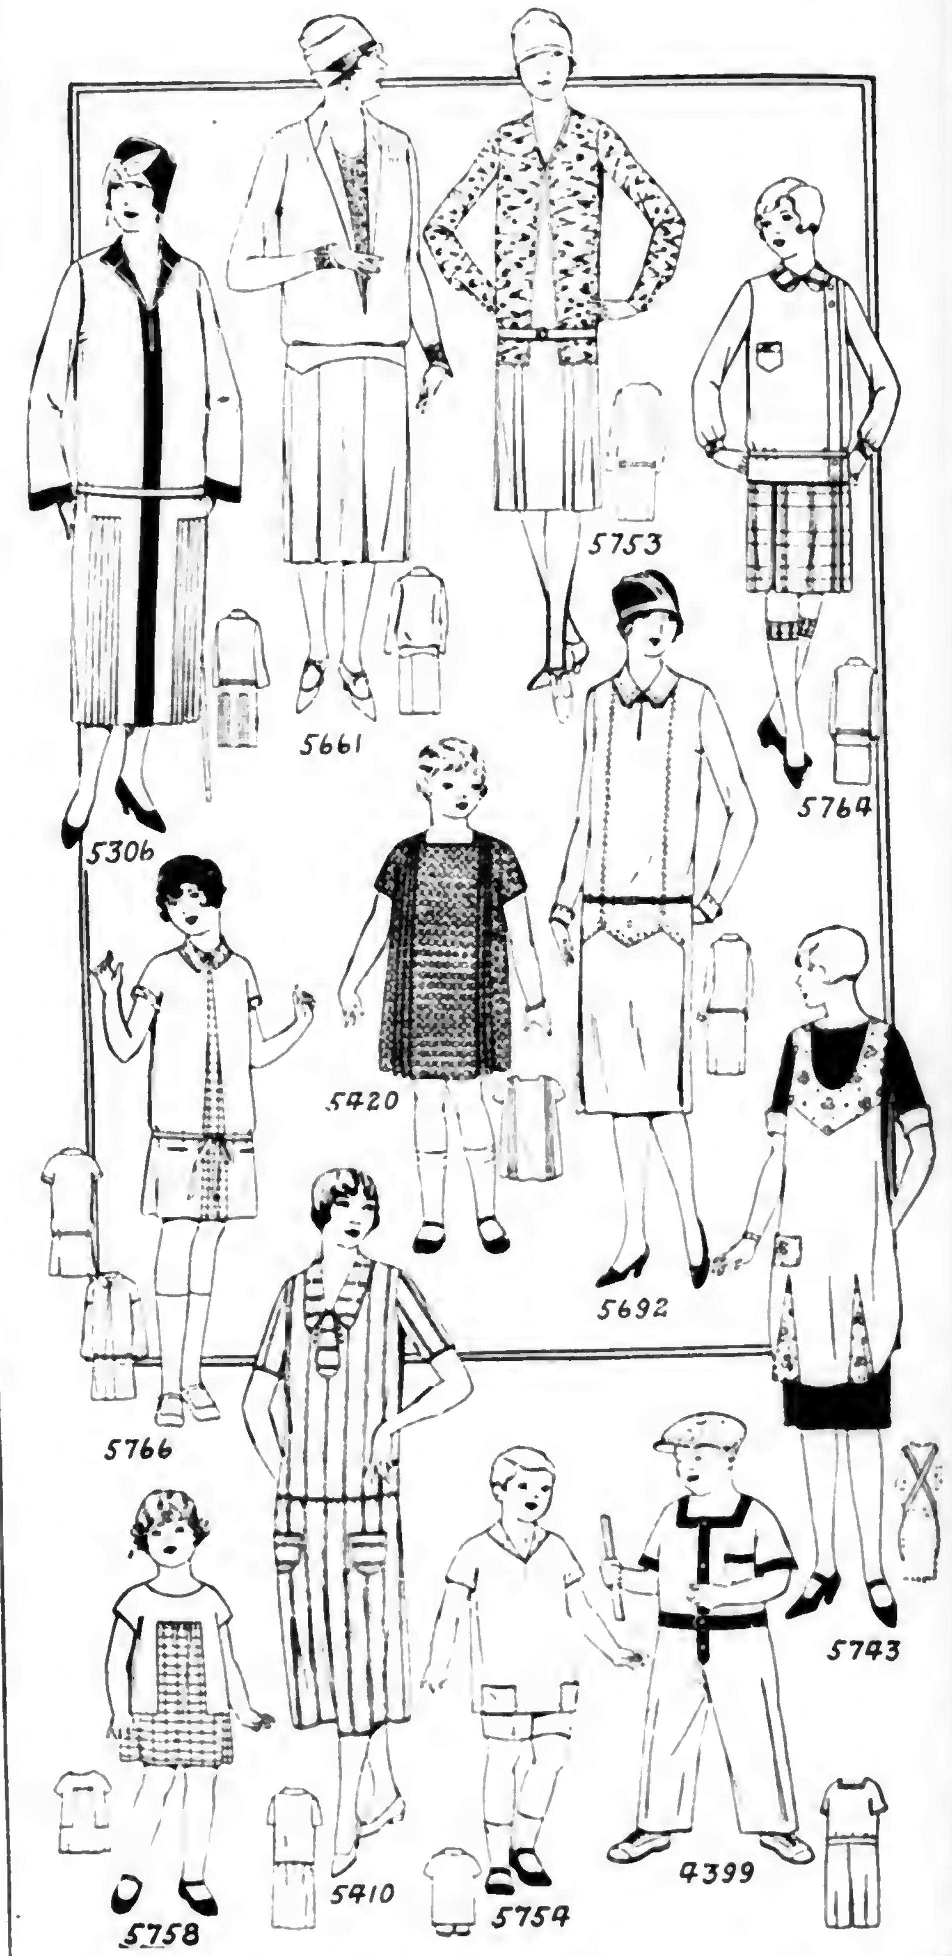
Since '78, millions of people have used Grandpa's Wonder Soap for toilet, bath, and shampoo. Nothing can take its place in caring for skin and hair. If your dealer can't supply you,

Send 10c for Big, Full Size Cake.

GRANDPA'S WONDER PINE TAR SOAP

Beaver Soap Co., Dept. D Dayton, Ohio

Here the Older Woman May Find What She's Looking For



Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5306.—For the Older Woman.—Nine sizes: 38, 40, 42, 44, 46, 48, 50, 52 and 54 inches bust measure. As illustrated for a 42-inch size will require 5 yards of 40-inch material with three-quarters yard contrasting cut crosswise for collar, panel, revers and sleeve facings. Price 10c.

5661.—Slenderizing Lines Are Best.—Eight sizes: 38, 40, 42, 44, 46, 48, 50 and 52 inches bust measure. A 42-inch size requires 4¾ yards of 40-inch material. Price 10c.

5753.—Up-to-the-Minute.—Seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 2¾ yards of 40-inch plain material and 1½ yard of figured material. Price 10c.

5764.—Lassies Like It.—Four sizes: 8, 10, 12 and 14 years. A 12-year size requires seven-eighths yard of lining for the underbody and 1⅞ yard of plain material 36 inches wide with 1⅛ yard of contrasting material. Price 10c.

5766.—With Contrasting Material.—Four sizes 6, 8, 10 and 12 years. A 10-year size requires 2¼ yards of 36-inch material together with three-eighths yard of contrasting material for facing. Price 10c.

5420.—Simply Made.—Four sizes: 4, 6, 8 and 10 years. A 6-year size requires 1⅝ yard of 36-inch material. Price 10c.

5692.—Stitches That Trim.—Seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 3⅜ yards of 40-inch material. Price 10c.

5743.—Ladies' Apron.—One size: medium. It requires one yard of 36-inch material with three-quarters yard of contrasting material. Price 10c.

5758.—For the Youngest.—Five sizes: 1, 2, 3, 4 and 5 years. A 2-year size requires three-quarters yard of plain material and 1⅜ yard of checked material 32 inches wide. Price 10c.

5410.—Around the House.—Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 3⅞ yards of 36-inch material. Price 10c.

5754.—Boys' Suit.—Four sizes: 2, 3, 4 and 5 years. A 4-year size requires 2⅜ yards of 36-inch material. Price 10c.

4399.—Summer Is Coming.—Four sizes 2, 4, 6 and 8 years. A six-year size requires 2⅝ yards of 27-inch material. Price 10c.

Send 10c in silver or stamps for our up-to-date spring and summer 1927 Book of Fashions.

Possession Prized

(Continued from page 20)

hearty luncheon or supper dish. Slice a layer of raw potatoes in an oiled inset dish, add a grating of sharp cheese and a layer of white sauce, continuing until the desired amount is prepared. Heat the cooker very hot, place a spoonful of fat in the bottom and in this slightly brown some pork chops. Place the browned chops over the potatoes.

When this is done add a small amount of water to the cooker, use the short legs to raise the rack above this, and process for fifteen minutes at fifteen pounds pressure. When the inset dish has been removed the gravy in the bottom of the cooker may be seasoned and thickened.

Bacon may be used in place of the chops; slices of ham are excellent. If preferred the meat may be browned in a skillet instead of the bottom of the cooker.

Steak with potatoes is another "whole meal" dish. Use flank steak, score it with a knife, dredge in flour and brown either in the bottom of the cooker or in a separate utensil as preferred. Slice raw potatoes and onion in an inset dish and season with salt and pepper. Over this place the browned steak and over all pour a pint of sifted tomatoes. Raise the pressure to fifteen pounds and cook for twenty minutes.—Alice Margaret Ashton.

Timely Tips

WHEN I have a day that I can devote to small things I like to prepare for the busy days by arranging articles in a way to save time and steps. I call them "wrinkle erasers":

Low, loose rubber overshoes near the kitchen door; a bright-colored sweater and cap, easy to look at, for the sake of the wearer and spectators. Mine are rose color and cost no more than somber-hued ones.

A large, clean apron handy, to be slipped on if a caller arrives.

An old couch with a chintz cover just inside the dining room, supplemented by the "rocker in my kitchen" helps me to relax during odd moments.

A package of sterilized gauze and some old boiled linen should always be at hand. We appreciated the fact when a man was caught in a machine and badly injured.

A telephone directory with calls on the local line plainly written in hangs by the telephone.

Kept on a ring, keys to the buildings should always hang on the same nail and should wear a gay ribbon when in use to prevent delay and loss.

A long, folded card on which I wind stray needles full of thread often furnishes just the right shade of color needed to mend a rent.

Dustcloths in all rooms.

Every housekeeper finds use for small tools—a hammer, a screwdriver, small pliers, tacks and nails. A drawer reserved for these in the kitchen will save many trips to the shop, garage or barn.

The time spent in hunting for various articles amounts to many hours in a year and hunting wears ones nerves "to a frazzle" as T. R. used to say, especially as one usually hunts when in a hurry.—M. C. S.

• • •

We think we must have a few fancy sofa pillows, but we must also have some for real use covered with a material that can be laundered. I find it useful to make these the same size as my bed pillows, for extra pillows are often needed in case of illness or guests, and it is a simple matter to slip a white case over a sofa pillow if it is covered with a material that can be laundered.—Mrs. Grace R. Deppen, N. J.

The Sins of Price

PRICE cutting sins against quality. Price cutting sacrifices serviceability — because low prices are often made by "skimping," by adulteration and substitution.

The United States Pure Food Law made the sins of price a crime. But this law protects you only on the things you eat.

In many other lines, the "manipulation" of merchandise to make price "baits" is not illegal—

For example, cutlery may be stamped and not hand forged. Aluminum ware may be made of light weight metal. Enamel ware may have two coats instead of the standard three. A price a few cents lower is always a tempting price.

In clothing, a cheaper lining saves 25 cents per coat; a cheaper sleeve lining alone saves 15 cents; composition buttons save 5 cents; cheaper pocket material 5 cents; a belt *not* interlined saves 5 cents.

A "skimped" pattern saves material. A leather lined coat can be made two inches shorter, with wide cloth facings—saving 50 cents per coat.

These are the sins of price.

For Fifty-five years, Montgomery Ward & Co. has sold only reliable, standard goods. Quality first — then low price —but we never sacrifice quality to make a seemingly low price.

A Price too low—makes the Cost too great.

An example of Ward Quality

This shoe has a second sole as good as the outer sole. Similar appearing shoes are sold at 25 cents less—by making the second sole of leather costing 20 cents instead of 45 cents. Such shoes are worn out when the first sole wears through. The saving in cash is 25 cents—the loss in serviceability at least $2.00.

500 N. Dearborn St. Chicago, Ill.

Letters from Forum Members and Friends

Dear Cousin Ruth and Forum Friends:—I received my Forum pin and like it very much. Yes, Cousin Ruth, we feed the little birds in the winter. Last winter when the snow was too deep for the birds to find food my father took wheat and put it in piles in the fields so the little birds could come and get it. This winter we always have wheat scattered under the overshot so they can come and feed when it is cold.—Freda F. Ruoss, (X), Berks County, Pa.

WINTER DAYS CONTEST
Honorable Mention

RIDING WITH MY SNOW BALL
Raymond Boles, (X), Tompkins Co., N. Y.

Dear Cousin Ruth:—Thank you very much for my membership pin. When I showed it to some of the girls around here and told them about our "Young People's Forum" they said that they would like to contribute a letter or two, too.

We do not get so much milk now because the cows cannot get any green grass, but they get chop.

I go to high school in Sunbury every day. I go back and forth on the train. Last night there was a wreck and my train was over one hour late so I had to wait just about three hours for it.

I wish you could come down on our farm and see us this summer. I am sure we would appreciate your visit very much. Good-bye.—Beatrice Rarig, (X), Northumberland County, Pa.

Thanks for the invitation. I should like to accept but I don't believe I'll be able to get away from the office.

COUSIN RUTH.

Dear Cousin Ruth and Forum Friends:—At school we have basketball teams and we practice certain nights at the Odd Fellows' Hall. There are only two girls out of the seventh grade. I am one of the girls that plays. There are fifteen girls that practice but only six on the team. They are the best ones. I am not on the team because I just started practicing this year. I like to play basketball.—Hazel Owlett, twelve (X), Tioga County, Pa.

Dear Cousin Ruth and Forum Friends:—We are having snow 14 inches deep and it is still snowing very fast. I received my pin and liked it very much. The Boy Scouts hiked 20 miles the other night. The Girl Scouts are doing good work this year.—Ralph Roe, (X), Westmoreland County, Pa.

WINTER DAYS CONTEST
Honorable Mention

MY SISTER, ESTHER, AND I
Anna B. Oberholtzer, (X), Lancaster County, Pa.

OUR YOUNG PEOPLE'S FORUM.

Dear Cousin Ruth:—I am going to write you a few lines about my pet cat but I am afraid you can't make it all out, so my foster sister is copying it off for me.

My pet cat is gray all over. His name is Tippy. Sometimes our dog bites him in the back of the neck and he just cries and cries till I make the dog let him go.

He is a little jealous sometimes if I rub the dog and not him, then he runs to me and scratches me so I rub him and play with him. Sometimes he wants to make up friends with the dog but then the dog doesn't and then she chases the cat up the tree or somewhere else.—Clayton H. Erb, nine (X), Lancaster County, Pa.

Dear Cousin Ruth:—For Christmas I got a five-foot sleigh, a doll that cries and goes to sleep. And I got a beautiful bassinet for her. I named her Ruth after you. Every day I go out sleighing with the children around our house. There aren't many children to play with where I live.—Alice Boggia, Morris County, N. J.

I hope my namesake is behaving herself and doesn't give you too much trouble!

COUSIN RUTH.

Dear Cousin Ruth:—Our pets are rabbits. We have only five just now. They are very pretty. We let them run around but they do not run away. We also have a little kitten named Tabby which we all like. I am sending you a picture of one of my schoolmates and me.—Myrtle Steffy, thirteen, Lancaster County, Pa.

I'M THE TALLER ONE
Myrtle Steffy, Lancaster County, Pa.

Dear Cousin Ruth and Forum Friends:—We raised two pigs for the first time. We killed one, he weighed 230 pounds. My sister, Edith Jean, has a cat and I have a dog. His name is Cherry. I had the measles and I am now well again. My father is a miller. It is snowing now. There is snow enough to coast.—Earl Horn, ten (X), Westmoreland County, Pa.

Dear Cousin Ruth and Forum Friends:—We have lots of fun skating. Our teacher takes all the pupils who wish to skate to a large pond about a mile from the school. He skates with us and we have lots of fun. I go to the same school my father and mother went to. On the 10th of February we are having a spelling bee at our school. I would like to win a prize. I won a box of good candy at a spelling bee this winter.—Elsie Metzler (X), Lancaster Co., Pa.

Riddle Answers

These are the answers to the riddles published on the page last week:

1. When is a plant like a pig? When it roots.
2. When are potatoes like gate posts? When they are put in the ground to prop-a-gate.
3. What has eighty-eight keys and still can't unlock a door? A piano.—Anna A. Smith, Berks County, Pa.

Dear Cousin Ruth and Forum Friends:—We live on a farm of 200 acres. I am very busy in summer. I work a team of colts all the time. I can hardly tell them apart, their names are Fred and Rex. We have 15 cows and 5 horses. I like to feed and tend to them.

Paul L. Kinch, (X), Huntingdon Co., Pa. Nick Baloy Washington Co., Pa.

I like to get up and milk my cow in the morning and evening.—Paul L. Kinch (X), Huntingdon Co., Pa.

A Bit of Everything

SEVERAL Forum friends have been sending in letters and haven't given their addresses. On my desk now are four membership pins which don't know where to find their owners: Gordon A. Black, Frederick Co., Md.; Moses Blank, Gap, Pa. (returned marked unknown); Emaline McGeary, Indiana Co., Pa., and Edith L. Myers, R. D. 6. Please everybody remember to give me the full address when you write.

In spite of the many notes printed on the page telling readers how to become members of the Forum I receive the question "Please won't you tell me how to join the Forum?" nearly every week. There is so much Forum mail that I can't possibly answer all of you personally, no matter how much I should like to do so, so you who have asked the question recently will find your answer here. I'm sorry Pauline Leech, Northumberland Co., was disappointed when she didn't receive a letter from me. I just can't write everybody, Pauline.

It costs nothing to join the Forum. Boys and girls who send in contributions, not of money, but of letters, pictures, drawings, original poems, recipes, etc., become friends of our page. Those sending in contributions which I think particularly good are made members and receive the membership pin. When writing try to tell the most interesting things. We don't want all the letters to be alike, you know.

Olive M. Surhart, Washington County, Pa., asks whether I want stories for the page. Yes, Olive, if they are original. Of course, you understand that there is room on our page for very few of the many contributions sent in so that unless your story is quite good it will not be printed. If you have some let me see them, I shall be glad to read them.

No, Geneva Shank, I don't mind telling you when I have a birthday for one has just passed and it will be nearly a year before I'm bothered with another! It comes February 7th.

OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—All of us are interested in magic, and here's a little magic square. Each of the rows of figures in the small square will make ten if you add the figures together, either across or down. Some of the figures are left out, and those are what you will need to find to make this magic work out. The easiest way will be to add whatever you need to the rows in which only one figure is missing—say the first one, going down,—and before you realize it, you'll have even the row in which I have given you no figures at all. When you have supplied the figures which will make each row equal ten when added up, send me your answer on a postal or in a letter so that it reaches me by March 26th. BE SURE TO SAY HOW OLD YOU ARE, and tell me the name of your county and when your birthday comes. The ten children, sending in the correct answer, whose letters or cards are the best in grammar, spelling, punctuation, penmanship and general appearance, will be awarded prizes. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

The answer to the puzzle about throwing a white stone into the Black Sea (published February 26) is: IT WOULD SINK.

The prize winners are: Kathryn Adkins, age 8, Salisbury, Md.; Henry G. Galebach, age 10, Lititz, Pa.; Edith Helen Gyger, age 10, Kimberton, Pa.; George Horner, age 9, Irvington, N. J.; Ida Malone, age 10, New Ringgold, Pa.; Mildred McCracken, age 9, Greenville, Pa.; Mildred M. Mellott, age 11, Warfordsburg, Pa.; Mary Pester, age 13, Waynesburg, Pa.; John Shenko, age 11, Smithfield, Pa.; Luke L. Weaver, age 9, Union Grove, Pa.

1 +	5 +	1 +	3	= 10

Judith of Blue Lake Ranch

By JACKSON GREGORY

Copyright Charles Scribner's Sons

The Story Thus Far

UDITH SANFORD, part owner in Blue Lake Ranch since the death of her father, Luke Sanford, fired Bayne Trevors, general manager, because he wasn't square. The men grumbled. Trevors made trouble in every way possible. Bud Lee, horse foreman, and old Carson promised to stay. Judith could depend on them and on "Doc" Tripp, veterinarian and a friend of her father.

Busy days followed. Mrs. Simpson took up her duties caring for the ranch house and Pollock Hampton, part owner of the ranch, arrived with his guests—Major and Mrs. Langworthy and Marcia, their daughter; Marshal Rogers, lawyer, and Frank Farris, artist.

On May 30 Charlie Miller, returning from Rocky Bend with the pay roll, was robbed. To avert a walkout, Bud Lee covered 80 miles in six hours and put the money into Judith's hands in time in spite of smokeless powder and a silencer that put his horse out of business. Next day, while searching for clews of the holdup, Bud Lee and Judith came upon three of the troublemakers. In the fight that followed Bill Crowdy was injured but Chris Quinnion, the man Judith believed responsible for the death of her father, escaped. Pollock Hampton captured Shorty, who, tho locked in the grain house that night, also escaped. Someone on the ranch was double-crossing.

Judith gave Marcia a farewell party. At the end of Lee's second dance with Judith he caught her in his arms and kissed her. "So this is the sort of gentleman into which a dress-suit has made Bud Lee, horse foreman." Laughing she left him and cursing himself Lee went over to the bunkhouse. Sandy Weaver had called him on the phone. Quinnion was in town. Without delay Carson set off with Lee for the Golden Spur Saloon in Rocky Bend. Quinnion had been talking, not only about Bud but about Judith. It was up to Lee to silence him. In a back room of the "Jailbird" he and Carson found Quinnion. As Quinnion's and Lee's guns spoke a third shattered the lamp. Steve, the bartender, had taken a hand.

Continued from last week

THE card room was plunged in darkness so thick that Lee's eyes could no longer make out Quinnion's head above the table, so black that to Quinnion's eyes the tall form of Lee against the wall was lost in shadow.

As Steve fired his shot into the lamp, Bud Lee understood just what would be Steve's next play; the bartender had given his friends brief respite from the deadly fire of the Blue Lake man, and now would turn his second shot thru the flimsy wall itself on the man standing there. Lee did not hesitate now, but with one leap was across the room, avoiding the table, seeking to come to close quarters with Quinnion and have the thing over and done with. In the bitterness still gnawing at his heart, he told himself again that it would be no calamity to the world if the two men who had insulted Judith Sanford went down together.

Again Steve fired. His bullet ripped into the wall, tearing a hole thru the partition where a brief instant ago Lee had stood. The light out in the barroom was extinguished. In the card room it was utterly, impenetrably dark now, only a vague square of lesser darkness telling where was the window thru which Shorty had fled.

A red flare of flame from where Quinnion crouched, and Lee stood very still, refusing the temptation to fire back. For Quinnion's bullet had sped wide of the mark, striking the wall a full yard to Lee's left. Quinnion's eyes had not found him, would not find him soon if he stood quite motionless. The fight was still to be made. Quinnion's friends would be taking a hand now, Steve had already joined issue. There were six of them against him and with one shot fired from his heavy revolver there were but five left. No shot to be wasted.

A LITTLE creaking of a floor board, a vague, misty blur almost at his side, and still Lee saved his fire. Quickly he lifted the big revolver, held welded to a grip of steel, throwing it above his head and striking downward. There was almost no sound; just the thudding blow as the thick barrel struck a heavy mat of hair, and with no outcry a man went down to lie still. At the same moment the dim square of the window showed a form slipping thru; one man was seeking safety from a quarrel not his own. And as he went, there came again a soft thudding blow and Carson's dry voice outside saying calmly:

"Shorty got away, but you don't pardner. Give 'em h—, Bud. I'm in the play again."

"Two men down," grunted Lee to himself with grim satisfaction. "And old Carson back on the job. Only two to our one now."

The form in the window crumpled and under Carson's quick hands was jerked out. Suddenly it was very still in the little room. Steve did not fire a third time; Quinnion held his fire. For Lee had made no answer and they were taking heavy chances with every shot now, chances of shooting the wrong man. Each of the four watchful men in the narrow apartment breathed softly.

Once more Lee lifted his gun above his head. As he held it thus, he put out his left hand gently, inch by inch, gropingly. Extended full length, it touched nothing. Slowly he moved it in a semicircle, the gun in his right hand always ready to come crashing down. His fingers touched the wall, then moving back assured him that no one was within reach. Lifting a foot slowly, he took one cautious step forward, toward the spot where he had last seen Quinnion. Again his arm, circling thru the darkness, sought to locate for him one of the men who must be very near him now. Suddenly it brushed a man's shoulder.

There was a sharp, muttered exclamation, and again a flare of red flame as this man fired. But he had misjudged Bud Lee's position by a few inches, the bullet cut thru Lee's coat, and Lee's clubbed revolver fell unerringly, smashing into the man's forehead. There was a low moan, a revolver clattered to the floor, a body fell heavily.

"A new situation," thought Lee. Three men down before a clock could tick off as many minutes and not a single man shot. It was a place for a man like Charlie Miller with his old pick-handle.

"Bud," called Carson's voice sharply, "are you all right?"

"Yes," answered Lee briefly, and as he answered moved sharply to one side so that his voice might not draw a shot from Quinnion or the other men. There came two spurts of flame, one from each of the corners of the room opposite him, the reports of the two shots reverberating loudly. But this was mere guesswork—shooting at no more definite thing than a man's voice, and Lee having moved swiftly had little fear. And he knew pretty well where those two men were now.

So did Carson, who from without fired twice thru the window. Then again it grew so silent that a clock ticking somewhere out in the barroom was to be heard distinctly, so that again the men guarded their breathing.

Lee thought that he knew where Quinnion was, in the corner at his right close to the rear wall. Not square in the corner, of course, for having fired he was fox enough to shift his position a little. True, no sound had told of such a movement. But Quinnion could be trusted to make no sound at a time like this. Lee, equally silent, again set a slow foot out, moving cautiously toward the spot where his eyes sought Quinnion in the dark.

He was calculating swiftly now: Quinnion had fired twice from the screen of the table just as Steve shot out the light; he had fired again just now, it was a fair bet that at least one of the other shots had been his. That meant that he had fired four times. If Quinnion still carried his old six-shooter he had but two shots at most left to him, for there had been no time which he would risk in reloading.

LEE swept off his hat and tossed it out before him to spot where he believed Quinnion was and dropped swiftly to his knee as he did so. There was a snarl, Quinnion's evil snarl, and a shot that sped high above his head. His hat had struck Quinnion full in the face. Then Lee again sprang forward, again struck out with his clubbed revolver. The blow missed Quinnion's head but caught him heavily on the shoulder and sent him staggering back against the wall. Lee could hear the bulk of his body crashing against the boards. And again leaping, he struck the second time at Quinnion. This time there was no snarl, but a falling weight and stillness.

There was a sound of a chair violently thrown down, the scuffle of hasty feet and in the door the faint blur of a flying figure seeking refuge in the bar. Lee flung the crippled door shut after the fugitive and then with his left hand struck a match, his revolver ready in his right.

Holding the tiny flame down toward the floor, he made out two prone bodies. One, that of the first man he had struck down, a man whom he knew by name as Lefty Devine, a brawler and boon companion of Quinnion. The other, Quinnion himself. Devine lay very still, clearly completely stunned. Quinnion moved a little.

Carson's weather-beaten face peered in at the window.

"Better do the hot foot, Bud," he grunted softly, "while the trail's open. Steve will be mixing in again."

BUD LEE seemed in no haste now. When the match had burned out, he dropped it and slipped fresh cartridges into his gun. That done, he stooped, gathered up Quinnion's feebly struggling body in his arms and carried it to the window.

"Here," he said coolly to Carson. "Take him thru."

"What do you want of him?" Carson wanted to be told. "Ain't going to scalp him, are you, Bud?"

"Take him out," commanded Lee with no explanation. Carson obeyed, jerking the now complaining Quinnion out hastily and unceremoniously. Lee followed as Steve threw open the barroom door.

"It's a new one on me, just the same," said Carson dryly as he watched Lee stoop and gather Quinnion up in his arms. "After a little party like this one, I'm generally traveling on an' not stopping to pick flowers an' gather sooveneers! You ain't got cannibal blood in you, have you, Bud?"

While Carson was cudgelling his brains for the answer and Steve was making cautious examination of the card-room, Lee with his burden in his arms passed thru the darkness lying at the rear of the saloon and out into the street. Carson followed to take care of a sortie should Steve and the rest not have had all they wanted for one night. He chuckled, remarking to himself that Bud Lee and Quinnion were the very picture of a young mother and her babe in arms.

Not until they again reached the Golden Spur did Lee's burden completely recover consciousness. Many a man on the street looked wonderingly after them, demanded to know "what was up," and, receiving no answer, swung in behind Carson.

In the Golden Spur the arrivals were greeted by a heavy silence. Sandy Weaver forgot to set out the drinks which had just been ordered by three men who, in their turn, forgot that they had ordered. Men at the tables playing cards put down their hands and rose or turned expectantly in their seats.

Lee put Quinnion down on the floor. The man lay there a moment blinking at the lights above him and at the faces around him. At length his eyes came to Lee.

"Damn you," he muttered, trying to rise, and slowly getting to his feet with the aid of a chair. "I'll get you—"

Then Bud Lee gave his brief explanation, cutting Quinnion's ugly snarl in two.

"This is Quinnion's farewell party," he said bluntly. "He is a liar and a crook and an undesirable citizen. I have told him all that before.

LEET

He took it upon himself to say about town that I am all of those things he is himself. I have almost killed him for it; I am going to give him ten minutes to get out of town. If he doesn't do it, I am going to kill him. And in that ten minutes he is going to find time to eat his words."

"I'll see you in—" began Quinnion.

"Shut up!" snapped Lee. "Carson, let me have your gun."

Carson, wondering, gave it. Lee dropped it on the floor at Quinnion's foot.

"Pick that gun up and we'll finish what we've begun," he said coolly to Quinnion. "I won't shoot until you've got it in your hand and have straightened up. Then I'll kill you. Unless first you admit that you are the contemptible liar every one knows you are, and second, get out of town and stay out. It's up to you."

Knowing Quinnion, the men moved swiftly so that they did not stand behind either him or Lee. Sandy Weaver, shifting a few feet along his bar, shook his head and sighed.

"It'll be both of them," he muttered.

QUINNION turned his head, his red-rimmed eyes going from face to face, his tongue moving back and forth between his lips. For an instant his eyes dropped to the gun at his feet, and a little spasmodic contraction of his body showed that he was tempted to take up the weapon. But he hesitated, and turned to Lee.

"It's up to you," repeated Lee. "If you're not a coward after all, pick it up." Lee's hands were at his sides, his own revolver in his pocket. Quinnion was tempted. The evil lights in his eyes danced like witch-fires. Again he hesitated; but his hesitation was brief. With his whining, ugly laugh he lurched to the bar.

"Gimme a drink, Sandy," he commanded.

"Neither now nor after a while," Sandy told him briefly. "I ain't dirtyin' my glasses that-a-way."

"There you are," jeered Quinnion, with a sullen sort of defiance. "You swat me over the head while I ain't lookin' an' then bring me in here where they're all your friends. If I drop you I get all mussed up with their bullets. No, thanks."

"For the last time," said Lee, and his low voice was ominous, "I tell you what to do. If you don't do it, I'll kill you just the same. You've got your chance. Count ten seconds, Sandy."

"One," said Sandy, watching the clock on the wall, "two, three, four, five, six seven—"

"Curse you!" cried Quinnion then, a look of fear at last in his eyes. "I'll get you for this some day, Bud Lee. Now you've got me—"

"Keep on counting, Sandy," commanded Lee.

"Eight," said Sandy, "nine—"

"I lied!" snapped Quinnion. "An' I'm leavin' town for a while."

And lurching as he walked, he made his way out of the room, his eyes on the floor, his face burning.

"Carson and I are riding back to the ranch as soon as our horses rest up and get some grain," said Lee, his fingers slowly rolling a brown cigarette. "We'll mosey out now, see Quinnion on his way and drop back to make up a little game of draw for a couple of hours. Strike you about right, Billy? And you, Watson? And you, Parker?"

They listened to him, took the cue from him, and allowed what lay between him and Chris Quinnion to lie in silence. But there was not a man there but in his own fashion was saying to himself:

"It's a good beginning. But where's the end going to be?"

AS JUNE had slipped by, so did July and August. On the ranch life flowed smoothly. Men were too busy with each day's work to sit into the nights prophesying trouble ahead. And in truth it seemed that if Bayne Trevors had ever actively opposed the success of the Sanford venture he had by now accepted the role of inactivity forced upon him by circumstance. He was with the Western Lumber Company, as director and district superintendent, seemingly giving all his dynamic force to the legitimate affairs of the company.

But there were those who placed no faith in the obvious. Bud Lee kept in touch with Rocky Bend and learned that Quinnion had not come back; that no one knew where he had gone. Carson's man, Shorty, was sought by Emmet Sawyer and his disappearance was like that of a pricked bubble; it seemed that Shorty had no actual physical existence or that, if he had, he had taken it into some other corner of the world. Quinnion's friends had also gone from Rocky Bend, like Quinnion leaving behind them no sign to show where they had gone.

Knowing Quinnion as he did, and having his own conception of the character of Bayne Trevors, Bud Lee said to himself that too great a quiet portended strife to come. If Quinnion was the man to carry in his breast the hate that drove him to the murder of Judith's father, then he was the man to remember the humiliation he had suffered at Lee's hands, to remember and to strike back when the time was ripe.

Judith had heard of the night in Rocky Bend, a lurid and wonderfully distorted account from Mrs. Simpson, who had received it in a letter from her daughter.

"So that was what Bud Lee did after he kissed me!" mused Judith.

She sent immediately for Carson and forced from him the full story. Dismissing Carson, she remained for a long while alone. Only one remark had she made to the cattle foreman, and that a little aside from the issue occupying his mind:

"Keep your weather eye open for what's in the wind," she told him briefly. "Behind Quinnion is Trevors, and the year isn't over yet."

(To be continued next week)

Your fence troubles are over— with
CAMBRIA FENCE

Standard Hinge Joint Field Fence

FLEXO JOINT

With Cambria Fence erected on your farm, your fence troubles are over!

Cambria Fence is easily and quickly installed. Its hinge joints permit uniform erection—its tension curves keep it taut. The long wraps at the joints hold the stays firmly in place.

Cambria Fence is made of good, clean, selected steel wire, heavily coated with zinc. A permanent bond between the steel and zinc is secured by passing the wires through especially long zinc baths, thereby keeping them in the zinc a longer time than in ordinary practice.

Fence with features such as these is the fence you've been looking for.

Order Cambria Fence from your Dealer, put it up, and your fence troubles are over!

LEADCLAD FARM FENCE

Good Fences make good neighbors

There'll be no trouble with your stock getting into your neighbor's field or your neighbor's stock injuring your crops if your farm is fenced with LEADCLAD.

LEADCLAD Fence, once up, is up for good. LEADCLAD Wire is protected with a coating of pure lead, seven times heavier than the coating of zinc on ordinary fence. Heat, frost or dampness has no effect on lead. Rust can't get through. Leadclad doesn't crack, chip or peel off.

Some of your neighbors may be using LEADCLAD; thousands of farmers are. Mr. Vankirk is one who knows what LEADCLAD means to his pocketbook—read what he says—

"Leadclad Wire Co.
Sirs:—I was among the first in this section to use your Leadclad fence. I put it up on my farm about four years ago and it still is free of rust and seems as good as when put up.
I believe it will last at least twice as long as galvanized fencing. I don't hesitate to recommend it to farmers as the best and most economical fence on the market.
Leroy W. Vankirk,
622 N. Main St.,
Washington, Pa."

Our big catalog shows all styles of LEADCLAD for farm, poultry and lawn use.

LEADCLAD Fence is priced Factory to You, Freight Paid. Write today for new 1927 catalog and prices.

at the Top-Always

ANY machine so important to agriculture as the spreader, is naturally the subject of many attempts at improvement. The first *big* improvement came when NEW IDEA originated the wide-spreading distributor twenty-eight years ago. And spreader history shows clearly that each succeeding forward step has always been exemplified first in

NEW IDEA Spreaders

For perfect distribution, light draft, easy handling, simplicity, durability and capacity, NEW IDEA is at the top—*always.* The Model 8 NEW IDEA, with its auto-bumper steel frame, rust and acid-resisting sheet metal parts, short turning, oscillating, auto-steer front axle, light weight and many other features, sets a pace that is difficult to equal. See it at your dealers or write us.

The New Idea Spreader Co.
Dept. 14 Coldwater, Ohio U. S. A.

Largest independent spreader factory in the world.
Not in any trust or combination.
Over 4,000 agencies. Branches everywhere.

New Idea Transplanter

All New Idea products are noted for their originality and invention. You will find them fully covered by patents. Leadership is a New Idea habit.

MYERS SPRAY PUMPS Mean More Profits Per Tree

ON fruit and truck farms—and on cotton and tobacco plantations, the use of Myers Spray Pumps means larger yields per acre.

Hand pumps with easy-operating cog-gear handles and self-oiling power pumps with automatic pressure control, give a powerful penetrating spray that reaches every leaf and blossom.

An investment in adequate Myers spraying equipment is an insurance for larger crops and bigger profits.

Take Off Your Hat To The MYERS
PUMPS—WATER SYSTEMS—HAY TOOLS—DOOR HANGERS

Honor-Built for 50 Years

Myers Self-Oiling Power Spray Pumps and complete Power Spray Rigs are built with the same exacting workmanship that has distinguished other Myers products for the last fifty years. Visit your nearest Myers dealer or write for our latest catalog. The Myers line includes Pumps for Every Purpose, Hay Tools and Door Hangers.

RADIO DEPARTMENT

"Sizzles" That Interfere with Reception

IF YOU hear sizzling and scraping noises in your radio set, here's a hint for finding the source of trouble. Sometimes it's at the broadcast station. Tune out the station and if it keeps on, you'll know it isn't. Next take off the aerial wire. If the noise stops, you'll know it comes from an outside source, such as defective insulators on electric light wires, wires touching, etc., or it may be dirty insulators on your aerial, poorly soldered joints in the aerial, bad ground contact.

If the noise continues when the aerial is discontinued, the trouble is probably in your own set. The first place to look is the positive pole of the storage battery. This gets corroded very quickly. If it is greenish colored and dirty, do a good job of cleaning and reconnect the wire. Coat the terminal and wire with vaseline or auto grease to retard further trouble. Don't use clip connectors if you can help it as these usually cause trouble.

Other sources of trouble would be in old "B" batteries (test them), bad contacts in sockets (wiggle the tubes in sockets), bad contacts in jacks (wiggle the plug), poor contacts in rheostats (wiggle rheostat knobs). In this way the loose joint can be found and cleaned. Fine sandpaper is good for such jobs. Of course, tighten all battery connecting wires.—B. F.

A Good Stunt

ALTHO the suggestion to use ordinary snow or rain water for the distilled water in the storage battery has often been given, you may not have run across it. This is a perfectly good stunt and very helpful to those far from a service station.

If you use snow, scoop off the first inch or so and don't go deeper than within two inches of the ground, as the first hour or two of snow serves to clear dust from the air. This is also true when it rains. Wait until it has rained heavily for an hour or more before filling your pans, otherwise you may get dust from the air along with the distilled water. If you use water from the roof, don't take it from the cistern, but wait until an hour's raining and then get it direct from the rainspout.—B. F.

Man Behind the Voice

THE chief announcer at Station WFI, the Strawbridge & Clothier Store, in Philadelphia, is John Vandersloot, known as J. V.

John Vandersloot,
Chief Announcer of WFI.

Mr. Vandersloot is a member of the Philadelphia Male Quartette, and a church and concert soloist of note. He has a deep bass voice and is well liked by the radio fans. He opens and closes his programs with: "This is J. V. speaking."

To Spend Million on Clean-Up

Jordan Addresses Delaware County Farmers

MORE than $1,000,000 will be spent in the eight northwestern counties of Pennsylvania during the great European corn borer clean-up campaign now getting under way, Secretary of Agriculture Jordan told Delaware County farmers at the annual meeting of the County Agricultural Extension Association at Swarthmore on March 10th. Just before Secretary Jordan left Harrisburg to attend this meeting Governor Fisher signed the bill which enables Pennsylvania to use part of the $10,000,000 fund set aside by the federal government for the corn borer war.

There will not be a piece of corn stalk or stubble more than an inch long above ground on May 15 if the officials accomplish their object. Remnants of last year's crop will be burned, shredded, put into silos or plowed under, in a desperate effort to kill every worm. Every authority considers the borer the most dangerous pest that ever threatened American agriculture.

Cities Will Ban T. B. Milk

Secretary Jordan also told the Delaware County farmers about the progress of the bovine tuberculosis eradication campaign. He believes that within ten years every city in the country will refuse to buy milk from untested herds. Some think that time will come within five years. The Secretary hopes that before another four years have passed every dairy cow in Pennsylvania will have been tested at least once.

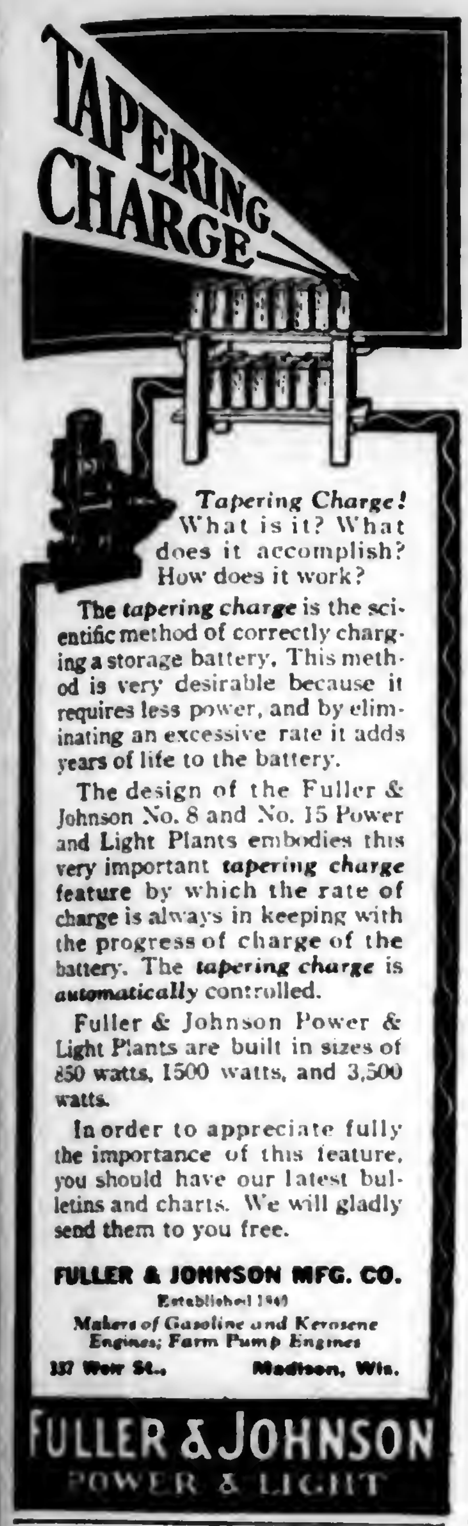
Miss Louise Evarts, of the National Dairy Council, entertained the women of the Extension Association with a happy talk on "Interior Decoration," the interiors referred to being those of improperly fed husbands and children.

Music Rounds Out Life

Mrs. Fances Clark, with the aid of one of the magnificent new-type phonographs, gave an illustrated lecture on music in the farm home and school. She made it clear that the person who hasn't an understanding and appreciation of music is missing one of the greatest pleasures of life.

Former Secretary of Agriculture Willits presented the many ribbons won by Delaware County farmers at the 1927 State Farm Products Show. Other speakers were County Agent H. O. Wilcox and former County Agent D. W. Atkinson.

The principal speaker at the morning business session was E. L. Moffitt, farm management extension specialist of the Pennsylvania State College. The officers of the Delaware County Extension Association re-elected for the coming year were: President, Arthur Linville; vice president, William Evans; secretary, Mrs. Robert W. Balderston; treasurer, Samuel Smedley, Jr.



TAPERING CHARGE

Tapering Charge! What is it? What does it accomplish? How does it work?

The *tapering charge* is the scientific method of correctly charging a storage battery. This method is very desirable because it requires less power, and by eliminating an excessive rate it adds years of life to the battery.

The design of the Fuller & Johnson No. 8 and No. 15 Power and Light Plants embodies this very important *tapering charge* feature by which the rate of charge is always in keeping with the progress of charge of the battery. The *tapering charge* is *automatically* controlled.

Fuller & Johnson Power & Light Plants are built in sizes of 850 watts, 1500 watts, and 3,500 watts.

In order to appreciate fully the importance of this feature, you should have our latest bulletins and charts. We will gladly send them to you free.

Rambles of a Pennsylvania Fruit Grower

(Continued from page 3)

ago, after the bubble burst, for $23,000. If we multiply this record of one orchard by several hundred we have a fair measure of the amount of water that was absorbed and subsequently squeezed out of the apple business during this decade.

I was interested in the varying attitudes of the banks toward the fruit grower, in his extremity. In one of the leading apple counties of the valley the banks have stood by him valiantly, even beyond the limits of conservative banking. I understand that loans have been made on some orchards up to $500 an acre. This is twice as much as these orchards would bring today. Good orchards can be bought in some parts of the valley for $150 to $200 an acre. In the heyday of their flush years these same orchards sometimes produced crops, in one year, worth that much. The banks have had to take over some of these orchards. They are finding, as most of the fruit growers are finding, that the only way they can hope to come out even is grimly to hang on.

Other Banks Offer Cold Comfort

In other counties the banks have consistently, both ten years ago and today, refused to lend more than the value of the land itself. They look upon apple growing as so highly speculative, and the opportunities for losing value thru poor management so numerous that the only assured asset is the agricultural value of the land. This is the prevailing point of view thruout the East. Doubtless it is wise, from the bank's point of view, but it is cold comfort to the harrassed fruit grower who has an investment in his trees greater than the value of the land.

Most interesting of all is the human equation—the varying reaction of different growers to adversity. Some of my jovial and optimistic friends of 1917 are down and out in 1927. They admit it, and look it. Others are down but not out. They admit error, but not defeat. They have an apologetic grin for 1917, and a courageous smile for 1927. These are the men who will continue to make the Shenandoah Valley famous for its apples.

Burn Not Yet Healed

One of the best posted apple men in the valley has burned much midnight oil preparing an elaborate series of charts which show the ups and downs of the apple industry. His charts point to another boom period about 1942. I predict that there will be no outburst of applause when he announces this prospect to the growers, not so much because 1942 is a long way off as because they do not want another boom, then or at any other time. Why should a man burn his finger twice at the same fire?

"We are going to tell our children," said one rueful grower, "so that they will never go wild on apples, as we did." I wonder. Perhaps each generation has to learn its own lessons, in the hard school of experience.

This is not a funeral sermon over a dead industry. The Shenandoah apple industry is very much alive, tho chastened in spirit. It will continue to grow. There will be a heavy shrinkage in number of trees, but the commercial production will increase. The long growing season, the open winters which facilitate pruning, and other assets are in its favor. Perhaps it is really destined to become what its enthusiastic partisans predict, "The Apple Bin of the East."

R4513
Sheepman's and Cattleman's Knife. 3 blades—a large clip blade, a long, curved, correctly shaped surgical or docking blade, and a punch blade for drilling holes in leather and general repair jobs. Stag handle. Nickel Silver linings, bolsters and shield. Length, closed, 3⅞ inches. Price $2.50.

KNIVES THAT BELONG ON EVERY FARM

THE FARMER and stockman puts his pocket knife to daily use, and often to hard use. He needs a knife with the finest steel in the blades of sturdy construction; and designed especially to suit his needs. That's why he needs a Remington.

Remington Knives are scientifically designed for cattlemen, stockmen, farmers, ranchers, sheepmen and hog raisers. Each has a correctly shaped blade for farm surgery, docking, dewlapping, marking or altering that make clean, quick-healing incisions. Other blades for general use. The blade steel is scientifically and uniformly hardened and tempered. The cutting edges are keen, strong and durable.

Knives with linings, bolsters and shields of nickel silver will not rust or corrode—preventing blood poisoning—a strong feature of the Remington Line.

Remington Stockmen's Knives are made in many styles, sizes and blade combinations, at prices that please.

"The crows went over and pulled up my neighbor's corn"

writes J. B. Meyers, of West Salem, Ohio. And from that day on Mr. Meyer's crow troubles were over, "for," he said further, "I tested your Crow Repellent and found it to be just as you recommended."

"Will never try to plant corn without it," is what C. C. Mulchmore, Pike, N. H., says about its value.

"I could not find a hill pulled," is the word we get from G. White, Whitehall, N. Y.

"I recommend it for every corn-raiser," is the way the letter reads from J. Putnin, Wolcott, Vt.

"Crows give my corn-field a wide berth," says H. Van Onlen, Catskill, N. Y.

Stanley's Crow Repellent

is the one sure cure for crow troubles. Not only crows, but moles, squirrels and all pests will leave your corn-field severely alone, if you coat your seed-corn in it, just before planting. You don't have to wait for it to dry, and it positively will not clog the planter. It is not poisonous, and therefore, will not kill birds or animals, but, it WILL keep your cornfields free from damage that runs into money and time, if you have to keep re-planting all the time.

Large can, enough for 2 bu. of seed-corn (8 to 10 acres), $1.50. Half size can, $1.00. If your hardware, drug, or seed store doesn't have it in stock, then order direct. Read our "Money Back" guarantee. Address, Cedar Hill Formulae Co., Box 500-R, New Britain, Conn.

Keep Out. This field is mined. Brothers of the Crow
And this used to be our best Cornfield too
Boo-hoo hoo

Plant An Orchard This Spring

Fruit growers who stick to the job year after year, high or low prices, make money from Peaches and Apples.

We are ready to Help You Start

Thousands of first-quality trees in our nurseries are ready now for shipping. If you order five hundred or more first-size Apple or Peach trees you may send as low as 10 per cent of the price with the order. You pay the balance Nov. 1, or earlier at your convenience.

We have Plums, Pears, Cherries, Small Fruits for orchards or home garden.

Prices are cheap this spring, but the quality of the trees is high. Whether large or small orders you want our prices and plan of buying fruit trees

Send for our special spring list.

Pay for the Trees Next Fall

There's profit in a better pasture

Have you ever stopped to figure how much a fine Kentucky blue grass pasture would save you in feed bills, in labor cost, and in land?

Perhaps what is holding you back is the question whether blue grass will grow well on your soil.

To find the answer to this question, the Pennsylvania Experiment Station made tests for 8 years on various types of soil. In their unimproved condition, none of these soils produced enough grass to justify the use of the land for pasture.

However, when limed and given a complete fertilizer, they produced a yearly average of 5½ to 7 tons per acre of first rate blue grass with an average acre value of $40.92. If you take off from this figure the $10.56 that was spent on lime and fertilizer, you will see that it leaves a *net profit* of $30.36 per acre. *You* might do even better!

Over three times as much crude digestible protein was produced with complete fertilizer on pasture as produced on the same acreage in grain rotation (average of three soils). Moreover the development of such a pasture will help accumulate fertility in your soil for other crops.

With the right treatment, you should be able to develop a highly productive blue grass pasture. Use lime every four years in the late fall or winter months and apply a complete fertilizer each spring.

Try 400 lbs. per acre of a 7-6-5 fertilizer this spring and compare with results from unfertilized strip. You'll find *it pays!*

How Is Your Seed Corn?

It's Taking a Chance to Plant Untested Kernels

THE man who takes a chance on untested seed corn this year will cause himself a lot of trouble, if we may believe reports from all sides on the condition of last year's corn crop. Farmers who are still holding part of the 1925 crop will be lucky. Now is the time to put the rag doll testers to work.

After a two-day search one county agent in southeastern Pennsylvania found only one lot of 1926 corn that tested as high as 63 per cent germination. But he found some 1925 corn that tested 93 per cent.

A central Pennsylvania county agent tested three cribs of mature-looking corn and found the germination to be only 12, 32 and 38 per cent. Another county agent in the western part of the state found only one crib of corn that wasn't entirely dead, and that one tested less than 60 per cent.

Much wasted effort will be saved if the germ of the kernel is examined. Kernels with amber-colored germs have been damaged by frost and are not worth testing. Kernels with white, waxy germs are alive, but only testing will prove whether they will make good seed.

Carrying Capacity Increases with Use of Fertilizers

Sometime ago I heard you tell how the English increased the carrying capacity of their pastures by using fertilizers. Were you responsible for the statement that grasses on fertilized pastures carried a higher percentage of protein or nitrogen? If so, can you tell me how much of an increase in protein percentage is obtained? If you have them available I should like some figures showing what the carrying capacity of such pastures is.—T. A. C., Mercer County, N. J.

The increase in the proportion of protein due to applications of nitrogenous fertilizers is a variable one depending on the crop, soil, season and the amount of nitrogen applied. Under natural conditions we find average crops carrying high percentages of nitrogen, for instance, in the blue grass regions of western Virginia, Kentucky and adjoining territory.

Analyses of young blue grass show 3 per cent of nitrogen which is equivalent to more than 18 per cent of protein. This is as much as is found in alfalfa. We understand, of course, that as the average crop grows on toward maturity the proportion of nitrogen in the crop decreases.

Putting More Protein into Crops

In fertilizer experiments carried on at a number of our experiment stations it has been found that the proportion of protein in average crops can be very substantially increased by the use of generous quantities of nitrogen fertilizer.

It would not be difficult to increase the proportion of protein by as much as 3 to 5 per cent by proper fertilization. It is for this reason that the top dressing of pasture lands where climatic conditions are at all favorable is one of the most promising means of making livestock farming more profitable.

Top dressing experiments of pastures in England are not new. Professor Summerville, of Oxford University, who recently retired, did much work in the early years of the century on the use of basic slag for improving pastures. Basic slag, as you probably know, is a by-product in the making of steel and contains 15 to 20 per cent of phosphoric acid and a very considerable proportion of lime. The use of basic slag has resulted in the bringing in of much more vigorous growth of white clover and the fixation thru the clover of very considerable quantities of nitrogen from the air.

"Manuring for Meat"

Professor Summerville referred to his experiments as "manuring for meat." In his method, nitrogen is not used directly. The phosphoric acid and lime in the basic slag serve to increase indirectly the supply of nitrogen in the soil by encouraging the growth of clover.

In the more recent experiments in England, nitrogen is used freely. This seems to be justified by the lower cost of nitrogenous fertilizers and the higher prices which farmers are obtaining for milk and meat. A recent report prepared by Major T. H. J. Carroll refers to experiments in Yorkshire and elsewhere in England that look decidedly promising. Among other things, Major Carroll says:

"At Tollesby Farm, where the experiment on twenty-seven acres was commenced in December, 1925, remarkable results are being obtained. The stock-carrying capacity of the grass prior to the experiment was about five cows to every six acres, and the 27 acres carried 22 head of stock. On June 15, 1926, the 27 acres were carrying 45 heavy milking cows and 21 head of dry stock, a total of 66 head, which is about equivalent to five cows to every two acres. Noteworthy features in connection with this Yorkshire trial are, that grazing commenced 30 days earlier than formerly, the manurial treatment and heavy stocking have eliminated from the pasture all the rough and coarse patches resulting from horse grazing in previous years, and the clovers on the whole of the 27 acres are more in evidence than formerly.

"With this and other preliminary great successes as a guide to future experimental work, there is every reason to believe that the new system of grass land management will become a simple and practical proposition for the British farmer, and there is no doubt that it will prove to be highly profitable both to the farmer and to the nation."

Experiment Follows Experiment

The English experiments just referred to are the outgrowth of earlier investigation begun by Professor Warmbold at Hohenheim near Stuttgart, Germany. Dr. Warmbold began his experiments in 1916 and was personally in charge of the work until about the end of 1918 when he became Minister of Agriculture for Prussia. Since that time the experiments have been continued as originally outlined by him. Before the beginning of these experiments, the land was maintained in a good condition. On the average, an area of 1.4 acres was required to maintain a cow of 1100 pounds from the end of April until the beginning of October.

The experiments provide for the use of a little more than an equivalent of 500 pounds of sulphate of ammonia per acre, amounting to about 107 pounds of nitrogen. There are also used phosphoric acid and potash. The nitrogen is applied in several successive portions rather than all in one application. Usually one-half of the nitrogen in the form of sulphate of ammonia is applied about February 1; the other half is

(Continued on next page)

Eastern States Farmers' Exchange

Do Farmers Cooperate?

Yes—if They Have a Sound Cooperative Enterprise

That "if" is the important word. "If," as interpreted by the Eastern States Farmers' Exchange, means: provided there is a real need for cooperation, provided the cooperative is managed solely for the interests of all the cooperating members, large and small alike, and provided the members are kept informed not only about the spectacular accomplishments but also about the problems and difficulties their organization faces.

The reports of the officers at the annual meeting in Springfield, Mass., February 23, 1927, mark the close of the Eastern States Farmers' Exchange business for 1926. Again substantial progress was made. Business in the older territories increased, new territories were added, the cost of operation per ton of commodities distributed was further reduced, nearly 2000 names were added to the list of patrons.

Eastern States service has grown to its present volume because farmers at 670 stations have learned from experience that this service offers them something worth developing. Every farm now being served through this great buying cooperative was previously supplied through some other source. Those farmers who have never given this service a trial must realize that their fellow farmers would not have swelled the volume of tonnage to 131,980 tons in 9 short years of Eastern States existence had they not found that the Eastern States commodities and service were more valuable. Farmers who thoughtlessly repeat the slogan "Farmers can't get together" should qualify that statement for the Eastern States Farmers' Exchange has proved conclusively to easterners that farmers are just as quick to get together and stick together when a sound proposition is presented to them as any other class of intelligent citizens.

For information on Eastern States Feed Service, a cooperative service which should not be confused with the car-door service offered by private manufacturers through dealers or groups of farmers, write the office.

Eastern States Farmers' Exchange
A non-stock, non-profit organization; owned and controlled by the farmers it serves.
SPRINGFIELD, MASSACHUSETTS
Advertisement.

split up into three separate applications and is employed in the form of urea, a very concentrated nitrogen fertilizer carrying about 46 per cent of nitrogen. The successive applications of urea are made in May, June and July.

Aside from the applications of phosphoric acid and potash, lime is also used at a rate equivalent to about one ton of ground limestone once in six years. The results of the treatment were already apparent in 1917 when an area of three-quarters of an acre was sufficient for one cow. Since 1918 the carrying capacity of the pasture has increased so that two cows are maintained on one acre of land during the grazing season.—J. G. Lipman.

Chance to Check Up

BETTER Farm Equipment Week, which this year began on February 28 and ended on March 5 was sort of a National Check-Up Week.

Better Farm Equipment Week is nothing more than an opportunity to take a few looks around the farm in order that a check-up on the farm equipment may be made. New parts for old machinery and new machines to replace the worn-out equipment should be given consideration during the week. Delay in doing this on the farm means delay all along the line. If you do not place orders for equipment and parts with your dealer, he does not place them with the factory and the factory does not make them up.

One Delay Leads to Another

If you wait until the last minute to order a needed piece of equipment, you often find that your dealer does not have it in stock. When he orders from the nearest branch house he finds that the item must be ordered from the factory and too often the factory has been cleaned out. That means that by the time you get your much-needed machine it is too late to be of any use to you.

Better Farm Equipment Week is a chance to bring some real cooperation into play. Dealers who can order now can place carload orders and save you freight on your merchandise. If they must order later, they must order in small quantities and pay higher freight rates, which they must pass along to the buyer. Look at the matter from any angle and you are the loser if you delay.—F. A. M.

All Dogs Quarantined

FOR 100 days, beginning March 1, parts of Allegheny and Westmoreland Counties are under a general quarantine against rabies (mad dog), the Pennsylvania Bureau of Animal Industry announces.

The quarantine states, "That each and every dog within the limits of the quarantine shall be securely confined or restricted on the premises of the owner or keeper at all times, except when being led under proper restraint and except when muzzled with a well-fitting muzzle that will effectually prevent biting."

Disobedient Must Pay Penalty

It likewise provides that "any dog (whether licensed or unlicensed and whether vaccinated or unvaccinated), found running at large in violation of the quarantine order may be killed and the owner or keeper of such dog shall be liable to prosecution."

A similar quarantine was established in portions of Luzerne County, effective February 15, as a result of the continued prevalence of rabies to such an extent that it is now a serious menace to life and property.

UNION COUNTY, KENTUCKY, is the first county in the United States to eradicate all scrub and grade bulls, keeping nothing but purebreds.

Why Milk By Hand?
Perfection increases both the amount of milk and the lactation period

Increase Your Milk Check

"THE first month after I gave up hand milking and began to use the Perfection my cows gave 501 pounds more milk. The second month I got an increase of 525 pounds", writes a Perfection user.

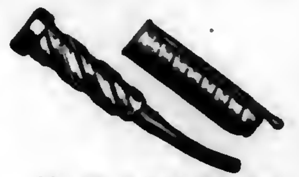
This is what the Perfection Milker has been doing month after month, year in and year out, for fourteen years. It not only increases the size of your milk check on your present herd because of increased milk flow, but relieves drudgery, saves time and allows you to increase your herd without additional labor.

Two of the reasons for these remarkable increases in milk production are the exceptionally low vacuum and the fact that you can regulate the milking action to suit each cow throughout the entire lactation period.

The new two piece teat cup makes washing easy and at the same time milks faster, cleaner and with less vacuum.

The Perfection is said to pay for itself more quickly than any other milker and we will arrange terms of payment to suit you.

Send for our new catalog and learn how to increase your milk check at once.



The new 2 piece Teat Cup. One Pull and it is all apart for quick and easy cleaning.

Radiator

Here's to Your Health

By Dr. FRANK McCOY

Copyright, 1926, McCoy Health Service

WHEN starches are discussed the potato is always referred to before any other starchy food. The other principal sources of starch in the diet are found in the various grains and flour produced from them. These grains are three to four times more starchy than the so-called Irish potato, but the common thought is to place potatoes the highest on the list. Those who are trying to reduce always eliminate from their diet potatoes first and then eat enough bread daily to keep up their poundage and wonder why they do not lose weight.

The average size potato contains only from 14 per cent to 20 per cent starch and the peculiar arrangement of its cells makes it more easily digestible than the starch of grains. Its common use today is, no doubt, due to several reasons. It may be made into many palate-pleasing dishes and mixtures. It is also comparatively cheap in price and lends itself easily to commercial handling.

In addition to these reasons the potato may be of great value for its nourishing qualities if used properly with other staple foods in the right amount and combinations. Altho it is rich in food value it is too often added to a large meal containing an over-abundance of rich food and in this way overburdens digestion and interferes with the digestibility of the other foods.

Potatoes Serve As the Hub

If you wish to enjoy and benefit by a meal containing potatoes make this food the principal article at that meal and use only such foods with it as the succulent non-starchy vegetables, both in a cooked and uncooked form. Do not spoil its digestibility by frying, but cook it by boiling or baking. The skin should never be removed and always eaten whether boiled or baked as this covering contains some of the most vital organic salts of great value as blood and tissue builders.

Do not use any other kind of starchy food at the same meal, such as bread puddings or cakes, or you will be creating a mixture of foods incompatible with each other. If you are especially fond of potatoes try a simple meal occasionally of such combinations as these:

Whole baked potato, raw celery, salad of lettuce and cucumbers.

Boiled potato, cooked spinach, string beans, and raw celery.

Season these vegetables and the potatoes as desired with butter and salt after cooking.

Rule for potato combinations: Use potatoes only in combination with raw and cooked non-starchy vegetables.

Neshaminy Gardens

(Continued from page 4)

has the price of farms. But there is one noticeable difference, and I say this in full realization of the criticism it may arise: The average young man of today is not willing to work as hard nor as long, nor practice the economy necessary to get a start as did his father and his grandfather. The modern desire is to start on top of the pile; in other words, to begin where parents left off after a lifetime of effort.

Let me close this discussion with this word: The first and most necessary thing a young man needs to start in business is a good reputation in his community. After that is established, and he has shown that he has good judgment and determination, "all things else shall be added unto him." Call that preaching if you will, but it is the accumulated wisdom of a short lifetime.

Free Trial of Proved Swedish Abortion Treatment

Famous Foreign Formula quickly relieves badly infested herds. Gives amazing results in cases believed hopeless.

Thousands of American Farmers say the Froberg Swedish Abortion Treatment has saved their herds from destruction. This remarkable treatment has been used with complete success in the big dairy herds of Sweden for many years, and has cleaned up whole districts over there literally rotting with contagious abortion.

It was only after great expense of time and money that this secret formula was made available to American Farmers. During the past nine years the treatment in American herds has given all the amazing results that made it so famous abroad. Herd after herd has been rid of this disease. Even cows considered hopeless by veterinarians have yielded to its healing qualities and been restored to health and produced fine vigorous calves.

SAVED HIS HERD

David Mohr, Jenison, Michigan, says: "Last year I raised only one good calf out of 14 cows had, all other calves were aborted. I was desperate. I used your C.C.C. treatment. This year with the same herd I have not lost a single calf. It's wonderful. My neighbor lost 3 calves in a few days. I gave him some C.C.C. and it stopped the trouble right there."

The fame of Cow Calf Control (C.C.C.) the name of this treatment has spread from breeder to breeder. Today it is put out only on an absolute binding guarantee that it will stop every case of abortion; that every cow treated will deliver a normal calf or the treatment cost is refunded. Two reliable banks stand behind our guarantee. You can't lose. C.C.C. is practically 100% successful.

SEND NO MONEY

Mr John W. Froberg, a native of Sweden and a large dairy owner, is responsible for introducing C.C.C. into this country. He has made the treatment easy to give, and at a cost per animal that every farmer will gladly pay.

Write today for full details explaining our free trial offer. Just send your name and address without further obligation to Froberg Remedy Co., 8 Lincoln St., Valparaiso, Ind.

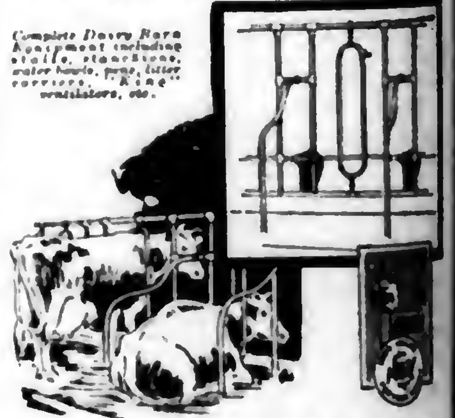
Make Your Milk Preferred

HAPPY, healthy cows require good feed, good housing and sanitary dairy barn equipment—Ney Equipment.

Preferred milk commands better prices and prompt remittances. That means more profit for you. And the added profits soon pay for the Ney Stalls and Stanchions. They reduce dairy barn chores to a minimum, save time and labor.

Sold by reputable dealers everywhere. Write us today for your copy of the Ney Catalog No. 8 and name of dealer ready to serve you.

Complete Dairy Barn Equipment including stalls, stanchions, water bowls, pens, litter carriers, Kine ventilators, etc.



THE NEY MANUFACTURING COMPANY
Established 1879 · Canton, Ohio · Established
Minneapolis, Minn. · Council Bluffs, Iowa
Complete line of Haying tools including hay carriers, hay forks, hay knives, etc.

REDUCE PUFFED ANKLES

Absorbine reduces strained, puffy ankles, lymphangitis, poll evil, fistula, boils, swellings. Stops lameness and allays pain. Heals sores, cuts, bruises, boot chafes. Does not blister or remove hair. Horse can be worked while treated. At druggists, or $2.50 postpaid. Describe your case for special instructions. Horse book 5-S free.

Grateful user writes: "Have tried everything. After 3 applications of Absorbine, found swelling gone. Thank you for the wonderful results obtained. "I will recommend Absorbine to my neighbors".

Save Your Baby Chicks

White Diarrhea can be Prevented

Millions of chicks are hatched each year to live only a few hours. White Diarrhea germs cause losses that B-K will prevent in 9 cases out of 10—if the incubator is thoroughly disinfected with B-K, the brooder sprayed before the hatch goes in, and B-K fed in the drinking water from the first drink.

B-K is effective also in prevention and treatment of cholera, dysentery—and of chicken colds, roup, canker, "flu."

B-K is clean, clear and non-poisonous. Chicks don't notice it in the water, but it gives them protection from infection. B-K is concentrated and very cheap. Costs only about 1c per gallon of dilution ready for use. Get a jug from your dealer today. Money back if not satisfied.

Write for Free Book containing a complete discussion of the infectious diseases common among poultry, their prevention and treatment.

B-K Bac-Kil

Stop Chick Diarrhea
White—any kind

When diarrhea appears in your flock, in any form whatever, stop it. Modern science has evolved a tablet to cope with this chick plague. You get it only in

Dr. Hess
WHITE DIARRHEA TABLETS

You use them either way, as a preventive, or as a remedy.

Lots of folks like to take no chances of backsets from diarrhea in their flock. For the first three weeks they give all the drinking water this scientific treatment.

You simply crush and dissolve 4 tablets to each gallon. Need never stir but once.

These tablets are inexpensive. You get 225 fifteen-grain tablets for one dollar. Or 100 for fifty cents.

Now mark this—You use these tablets at our risk, not yours. If any form of diarrhea attacks your flock that Dr. Hess White Diarrhea Tablets will not remedy, and do it most effectually, your dealer will refund your money cheerfully, because he knows we protect him fully.

Friendly Talks

By EDGAR L. VINCENT

THE other night I was out looking at the stars. It was a cold, clear night, with snow on the ground. The Milky Way stretched from horizon to horizon, a great, broad, mysterious collection of stars that nobody seems to understand.

It may be a good many of our farmer folks were looking up into the sky that night, just as I was, thinking how wonderful it all is. Nobody seems to know where the heavens begin or where they end. Lately there has been a great deal of speculation about the heavenly planets, and we are told by those who have studied longest and who have the finest instruments that we have not even begun to sound the depths of the planetary system. Away beyond the reach of the most powerful telescope the universe stretches, on and on and on into space, until the mind staggers and we are lost.

Back to Earth Again

And from the skies above me I fell to thinking how like this is the life we live here on earth. We are farmer folks. Who of us can say that we have sounded the depths of our possibilities as producers of crops? From year to year we have gone on doing our best to improve the old place and make it produce more bountifully; and we have done well. We grow bigger and better crops than ever before but we have not done all or the best we can.

It is a great business we are engaged in. We do not realize half of that we might do, or what we will do if strength holds out. Not a year comes that we do not say, "I mean to be the best farmer this year that I have ever been," and we keep that star in sight all thru the year. Sometimes we realize our dreams and then we find that there is another star still farther on to lure us to do better and greater work. Often the astronomer catches a vision of some star of greater magnitude than any yet discovered. There are just such stars in the farmer's sky; and it is toward these big stars that we press with might, mind and strength.

Star That Outshines All Others

And then, we may carry the same thought into the finer things of life. Who of us is satisfied that he is the best man he can be? We all have a great longing and a splendid hope that the time will come when we will realize to the fullest extent what perfection of character means. This big star in our sky outshines any and all others. What are farm possibilities compared to the thing we may do to make our lives count for the most and to help others to get up just as high in the scale of right living as they can?

Not a day dawns that we may not have this as our morning star, to be our help and our inspiration. Not a night comes when we may not look up into life's sky and say, "That big star is a little nearer than it was this morning."

This is the farmer's highest, most golden possibility. But while we press on toward the big star we must not pass by unnoticed the lesser stars that shine nearer by. It is possible sometimes for us to place so much stress on the things that seem most important that we lose sight of the little details that go to make life truly beautiful. It is fine to do all we can to help the world; but maybe there is some neighbor down the road a little way that needs help more than anybody else. The distant is glorious. The nearby is just as radiant if we have eyes to see it.

BAYER

Genuine ASPIRIN

SAY "BAYER ASPIRIN" and INSIST!

Unless you see the "Bayer Cross" on tablets you are not getting the genuine Bayer Aspirin proved safe by millions and prescribed by physicians for 25 years.

Yellow hominy	34.00
Gluten feed	28.85
36 per cent cottonseed meal..	37.00
41 per cent cottonseed meal..	40.50@40.75
43 per cent cottonseed meal..	42.50@43.25
34 per cent linseed meal.....	49.75@50.00

Dirty Apples Discounted

One of my orchards is near a railroad and the soot and smoke from the engines settle on the apples to some extent. A car of apples from this orchard was shipped on consignment. When he made returns the dealer said the low price was due to the soot. Would this condition make any difference on prices?—D. T., York County, Pa.

Under the present dull market conditions it is likely that the dirt would affect the sale of the apples. If the soot was very noticeable it would result in discounts which would vary with market conditions and the amount of soot on the apples. There have been several lots of apples of this kind on the Philadelphia market. They have been unattractive and hard to sell.—W.R.W.

Markets Show Some Improvement

Review of the Week Ending March 12

POTATOES—The market showed considerable improvement during the week and prices advanced. The strengthening of the market was due to lighter offerings and a better demand at shipping and consuming markets. Toward the close of the week trading was slow at the higher levels but dealers were able to hold prices firm. On Monday, March 14, the market was unsettled and showed a weaker tendency. Supplies were heavier and buyers were holding off in expectation of lower prices.

BUTTER—Trading was active on the butter markets during the early part of the week and prices advanced from 1c to 1½c. Receipts of medium and low grades were barely sufficient for the demand. The decline at the close of the week was due to the fact that heavy receipts of foreign butters were expected during the next few days.

GRAIN—Heavy shipments of wheat from Argentina and Australia combined with the report of heavier stocks on hand resulted in lower prices. Corn future prices were steady but cash grain was lower in several markets. Oats dropped about 2c on account of a light demand and prospects for a good crop in the southern and southwestern states.

HAY—The markets were quiet with receipts light. Top grades were scarce and sold readily but ordinary hay was dull. Timothy was about steady and prices advanced $1.00 in New York, but was steady at most other markets. Alfalfa hay held firm but the demand was slow.

FEED—The market was generally steady during the week. The production of wheat feeds was larger and offerings liberal. Bran for April shipment was quoted $1.00 below immediate shipment. Linseed meal advanced in the Central West but was lower in the East. Cottonseed was about 50c lower due to the limited demand.

LIVESTOCK—The Chicago hog market closed stronger than last week. Fed steers showed advances of 25@40c. Fat she stock were higher while stockers and feeders were steady. Vealers were $1.00 lower. Fat lambs and yearling wethers closed higher while sheep were steady.

EGGS—The New York egg market was steady under a moderate demand. Receipts of Pennsylvania and New Jersey white eggs were liberal but the best stock sold readily. Extra fancy eggs brought a premium.

POULTRY—The market for live fowls was unfavorable. The supply of light fowls was very small and these found a good outlet. Medium and heavy fowls were very irregular. Express receipts of fowl were easier and broilers showed a weaker tendency. The dressed poultry market was quiet.

County News and Comment

(Continued from page 7)

looking good. The fear that the warm spell in February would start the early fruit blossoms seems to be unfounded. Good seed corn will be at a premium and more than ever is there a necessity for testing it before planting. Hogs have made a decided drop but shoats and pigs remain high and scarce; good 8-week-old pigs as high as $6. Eggs cheap, 22c, potatoes scarce and high; apples plentiful with no demand.—R. J. W., March 7.

Jefferson County, Pa.—Winter has been quite mild. We have had no drifting of note. Farmers are buying lime and fertilizers. Farm meetings have been numerous and well attended. A number of very good Berkshire pigs were purchased at Harrisburg Farm Show and brought into the county. A good many potatoes are still in the cellars with very little demand, and prices are lower than at shipping time last fall. Much more interest is being taken in potato culture in many localities. New machinery is being bought, more spraying will be done this year, and more attention will be given to seed and care. A lot of corn still standing in the fields reported in a very bad condition. A number of farmers in the county are interested in feeding out beef cattle and several carloads were shipped in. Fall pigs are being butchered and sold at 16c per pound. The supply is exceeding the demand at present. Dairymen are assured that the milk station at Brookville is a certainty. Fifty-four cows in the county cow testing association made forty pounds or more of butterfat in January. With the exception of milk and butter, farm produce is suffering from a slump in the market just now. Prices: potatoes, $1.25@1.50; butter, 35@60c; eggs, 22@30c; apples, $1.—F. A. M., March 5.

Juniata County, Pa.—Have had solid winter weather the past two weeks with 12 inches of snow on the ground. Dirt roads in very bad condition. Hens laying heavily with egg prices very low. More farmers are planning to go into the poultry business this spring. Considerable corn to be husked yet. Hay is very scarce. Dealers are buying cows and paying good prices for good stock. Good seed corn is going to be very scarce. Home-grown clover seed scarce. Quite a number of farm sales to be held this month. A few farms changing hands this spring. Wheat is selling at $1.25; corn, $1; oats, 50c, hogs, 16c, dressed; eggs, 20c; butter, 35c.—C. B. L., March 3.

Lackawanna County, Pa.—February was spring-like during early part of month but a regular blizzard occurred on the 20th. Farmers finished hauling and packing ice. Farmers are hauling lime, spreading manure and getting out summer wood. Lackawanna County Pomona Grange met with South Abington Grange in Clark Summit on February 15th. There was a good attendance with visitors from Luzerne and Susquehanna Counties. Resolutions were passed favoring an increase of the "widowed mothers' assistance fund." Eggs, 50@55c; butter, 50@57c.—E. A. K., March 7.

Lancaster County, Pa.—Mild weather during February, except a few snow storms. Wheat fields in many places practically bare. Tobacco is nearly all delivered and was not a paying crop. There is still quite a lot of corn to be husked. Prevailing prices: butter, 50c; lard, 20c; eggs, 25c; chickens, 25c; potatoes, $1.40.—R. C. R., March 7.

Luzerne County, Pa.—We had a big snow February 20th. Drifts from four to eight feet deep. The storm delayed the reopening event of the M. E. Church at Bloomingdale, one of the oldest rural churches in this section. On March 2 the Berwick degree team of Grangers completed the third and fourth degree initiation of a class of 37 in the Bloomingdale Grange. The new mammoth Grange Hall is now practically completed. On March 15 a combined fruit and potato growers' meeting will be held at 1:30 P. M. in the high school at Huntingdon Mills. Dr. E. L. Nixon and Prof. Paul Thayer will be present. Prices: potatoes, $1.50@1.75; eggs, 40c; butter, 50@52c a lb. for farmers.—M. G. T., March 8.

Middlesex County, N. J.—Potato growers are getting ready to plant a slightly greater acreage than last year, probably about 10 per cent. Many growers are using the new dip method of seed treatment. Quite a few apples are still on hand but selling at slightly better prices in local markets. Ben Davis, 75c@$1. Eggs are plentiful and prices in local markets are from 28c to 40c. Seed corn situation is very bad and county agent is conducting a campaign to induce farmers to have samples tested by State Seed Testing Laboratory. Local baby chick producers are meeting a good demand, especially those with state tested flocks. Weather for the past week has been drying and roads are in good condition for this time of the year.—O. G. B., March 8.

Northumberland County, Pa.—Much snow remains. Wheat has been covered most of the winter. Considerable corn has molded in the crib. Seed corn is scarce and high. The 1926 crop shows very poor germination. Farm sales are in progress. Prices are good on machinery, cattle and horses, the latter selling much higher than a year ago. Quite a number of farms are not rented yet, tho help is more plentiful on account of many factories being idle or on part time schedule. Prices: wheat, $1.30; corn, 65c; oats, 40c; potatoes, $1.50; veal, 12c; chickens, 28c; pork, 14@17c; 3 per cent milk, $2.20.—W. C. G., February 28.

Susquehanna County, Pa.—We had very deep snow the last half of February so "back roads" were closed. When farmers "hang together" they are able to keep the main roads open for automobiles. Our supervisors will not pay for keeping roads open in the winter months. Farmers are hauling lime for spring use. The Alliance and Grange still have day meetings once in two weeks and the ladies are invited to bring well-filled baskets which are enjoyed by all. Public sales are numerous which means new neighbors or vacant homes. Flocks of wild geese have been seen flying northward. Potatoes, 90c; eggs, 26c; butter, 50c.—J. A. G., March 8.

Tioga County, Pa.—February treated us to a variety of weather. On the 20th about 20 inches of snow fell. A few venturesome spirits tapped a few trees when the last warm spell came but sugar making has not begun in earnest yet. There is a lively interest being shown in farm meetings. Two splendid meetings were held March 2 in Wellsboro. The men gathered at the Grange Hall where the meeting was held under the direction of County Agent P. P. Korb. At the I. O. O. F. home the ladies enjoyed lunch and were treated to a demonstration on house furnishing by Miss Gebhart and Miss Colt. A few prices are: eggs, 20c; butter, 50c; calves, 12@13c.—P. W. L., March 7.

From the Week's News

More than 800 children were killed in the United States last year by automobiles and motor trucks, according to the Keystone Automobile Club.

• • •

The Anti-Saloon League of America solemnly announces that, according to a survey just completed, about 2000 miles of bar fixtures, used before prohibition in the serving of intoxicating liquors, are now being used thruout the United States in the serving of food. The brass rails and wall decorations are said to have disappeared mysteriously. There is talk of starting a museum of old barroom fixtures at the national headquarters of the League.

• • •

The second triennial farm census will be taken in Pennsylvania late this summer when the assessors make their regular triennial assessments for county purposes. The first three-year state agricultural census was taken in 1924 and furnished a large amount of valuable information. The second census to be taken this year should be even more valuable, as it will reveal the trend of Pennsylvania agriculture during the last three years.

• • •

The Capper-Ketcham Bill was one of the victims of the Senate filibuster which marked the closing of the recent session of Congress. This bill, which had passed the House, would have provided $480,000 for the support of boys' and girls' club work and home economics extension during the next year, with an additional $500,000 for the ensuing year.

Do I Need a License?

Could I ship a carload of potatoes to Philadelphia and sell them myself? Would I need a license to do this?—A. J., Lancaster County, Pa.

You could ship a carload of potatoes to Philadelphia and sell them yourself but it would be inadvisable to do so. Dealers handling produce regularly have Mercantile Licenses but in your case it would probably not be necessary unless you planned to peddle them thru the city. In this case you would need a Peddler's License which is procured thru City Hall.

This project is inadvisable because you do not know the trade and they do not know you. Most of the business is done on credit and you would find it almost impossible to get cash. The regular dealer is in a position to handle credit business and has regular customers. In the long run it would pay you better to get in touch with reliable dealers.—W.R.W.

$98!
For this COMPLETE
Milker
Comes all ready to use!
Great Special Offer on a few rebuilt machines. Write Quick for Special Circular!
Offer good only while these few special machines last.
WHEEL IT IN ANYWHERE
$9.80 *a month* *(for 10 months)*
Yes, only $9.80 a month (IF all O.K. *after* free trial) for this complete Model H rebuilt milker including *latest* 1927 special type machines. It's the wonderful PAGE! So easy to clean, so simple! and portable! You wheel it in and start milking—not a cent of installation expense—so easy to find out on a free trial on your own cows. (We also have a few model G and E at a cut of $100.) These are newly REinspected and REfinished machines returned after free trial EXACTLY new except for new painting. Our ten year guarantee goes with these machines EXACTLY the same as with all others. Only a FEW! Write quick for special circular!
Free Trial
No C.O.D.—no deposit—no obligation. You try it—and your word goes! If not ABSOLUTELY satisfactory, returnable at our expense. The Page Milker does the work and does it right, if you'll use it right—you'll see after free trial on your own cows!
A Rare Chance: Having shipped a number of milkers on trial (in new territories only where we have no salesmen) some of these are returned by farmers who don't take time to learn to use them; some machines have not even been taken out of the crate, others were pumped two or three milkings and bingo back they come; of course, we must accept them because we so agreed. We reinspect all of them, put on new parts whenever needed, EVERYTHING done except that there might be a few scratches on the paint which every frame gets after a day or two of use. (The whole machine would have to be taken apart to dip the frame into fresh paint.) We offer the few we have at this *wonderful bargain.*
Offer direct from factory good only where we have as yet no salesman or agent—we'll be mighty particular, of course, in such new territory to send you only a Page machine that does the work *just* right.
Write for Book and Special Offer!
Offer good only while these few machines last. Our catalog explains Page Machines; our special circular shows you our amazing extra special quick offer. No obligation in asking, but if interested *at all* write *AT ONCE.*
Burton Page Co., 400 No. Michigan Avenue, Dept 8212 Chicago, Ill.
Without obligations send full details of your direct cut price offer on a few newest type rebuilt Page-Milkers at $9.80 a month after free trial. Also send all other offers and your free catalog.

"The Cutter That Does Not Clog"

PAPEC

"Most Trouble-free Machine a Farmer Owns"

Throws and Blows Saves One Man

THAT is how one user, C. A. Rogers, Harford, N. Y., describes the Papec Cutter. These features make a strong appeal to others.

"I especially like the ease and security of the adjustment of the knives to the shear plate. The third roll is great, especially on loose or crooked corn, and feeding millet or straw." . . . "It takes all the corn a man can throw off and practically does its own feeding" . . . "Noiseless and slow-running motion" . . . "Requires the least power of any filler I have knowledge of" . . . "The ¼ inch cut makes ensilage look like shelled corn." . . . "Will blow ensilage to the clouds, if necessary" . . . "It works perfectly in every way."

Your Dealer Will Show You a Model Suited to Your Power

Send for FREE 1927 Papec Catalog

It tells how to put up silage at less cost. How to make a Papec pay for itself in one or two seasons. Write for your copy NOW.

Five States Wage Fight

Battle Against Corn Borer Materially Aided by Large Federal Appropriation

ABOUT two and one-half million acres of corn land on about 350,000 farms in Pennsylvania, New York, Ohio, Michigan and Indiana will be affected by the $10,000,000 European corn borer clean-up campaign now being planned by authorities of the five states.

The federal appropriation of $10,000,000 for the fight against the borer becomes available as soon as necessary legislation is passed by the legislature of each state. Little difficulty is expected in securing this legislation. When the states act steps will be taken immediately to put the Federal regulatory organization in the field and begin the inspection of individual farms in the control area. The inspectors will notify farmers of the necessary measures which they must take according to the provisional regulations adopted by the conference of state and federal workers.

These regulations require the burning or satisfactory destruction of all cornstalks, remnants of stalks and corn cobs either in the field, the feed lot, the barnyard or around canning factories and other process agents, unless ensiled or shredded. The corn fields must either be plowed to such a depth that no stalks, pieces of cobs or other corn remnants appear on the surface when it is plowed, disced, harrowed, planted, or cultivated or, if not plowed, the fields must be cleared by pulverizing all corn remnants.

It is expected that individual farmers voluntarily cooperating in the clean-up will take these necessary measures by May 1st. Following May 1, all infested farms will be re-inspected. If reported as meeting all requirements as to control measures, the individual farmer will be reimbursed not to exceed $2.00 an acre for field corn and not to exceed $1.00 an acre for sweet corn on which he is obliged to undertake operations in addition to those normal and usual in farm operations at this season.

Where the regulations have not been complied with either intentionally or unintentionally, the Federal regulatory force under the authority of the State Department of Agriculture will conduct the necessary clean-up with its own special machinery and crews. The farm cost of such enforced clean-up will be charged to the individuals on whose farms the work is done and will be collected on the same basis as taxes by the state authorities under the authority which the state legislation now pending will give them.

Prior to May 1, according to the provisional program the Federal forces will also give a large number of local field demonstrations in the selection and operation of machinery most effective in borer control work.

The European corn borer war council. These officials from the affected states met recently in Washington to make plans for the spring campaign against the borer. U. S. Secretary of Agriculture Jardine is in the center of the first row. Director of Extension McDowell, of State College, and Pennsylvania Secretary of Agriculture Jordan are also in the picture.

Good Fences Make Friends

BEFORE the busy season in the spring farmers, as a rule, inspect and "fix" fences, as the farmers here say. There seem to be about as many methods, and results are as diverse, as there are farmers.

One goes forth and tacks a board or strings a bit of wire insecurely where he remembers that an animal broke thru last fall.

Another goes all around the farm tapping a leaning post with a maul; sticking in a slender post diagonally to support a swaying one, giving a loose stretch of wire a mighty haul toward the corner and nailing it to the soundest post to be found.

Then he goes to the house very satisfied with himself, having his fences all in repair. But soon after the stock is turned in the neighbors are calling him to come and get his cows, or whatever it is that tested his work and found it wanting.

This man's neighbor goes slowly. Each post receives individual attention; each rod of wire is carefully straightened and fastened; rotted posts are replaced and braces tightened in the fence corners. Then when the rush of work comes his stock stays in and he is bothered with that of his neighbor only.

A spring, in a field that was a meadow, but is used for pasture, supplied water for a pasture on another farm. If a short lane had enclosed spring and brook to keep the water pure and in its channel two men in our neighborhood would have been better friends.

One wonders why small gates—friendly gates some one calls them—are not placed where it is customary to go "cross lots." We find loose posts and a wire sagging loosely at the end of a beaten trail between two farm houses. What a store of energy would have been saved if, during the years the trail was being worn, a gate had been hung there.

Good fences do more than make good friends; they protect children from dangerous animals, keep scrubs from purebred stock, raise the value of the land they enclose, save the time that would, otherwise, be spent hunting stray animals. Last but not least there is the freedom from care that comes from knowing that the fences will hold.—M. C. S.

They're Killing
GROUND HOGS

ANYBODY can do it. Simply place a tablespoonful of Cyanogas A-Dust inside the mouth of each burrow and close carefully. Cyanogas A-Dust gives off hydrocyanic acid gas when the air strikes it, and the gas kills the groundhogs. It reaches all parts of the burrow.

Kill them with

CYANOGAS
REG. U.S. PAT. OFF.
CALCIUM CYANIDE

Just as effective against rats, moles and ants. Simple, cheap and sure. Ask your dealer for Cyanogas A-Dust or send us $2.50 for a five-lb. tin, express collect.

GLASS CLOTH
Est. 1916—Pat'd
for Wonderful Success with Baby Chicks

Never keep chicks behind glass. It stops the sun's ultra-violet energy rays, causing rickets, leg weakness and death loss. Build a GLASS CLOTH scratch shed onto your brooder house to admit these rays. Put GLASS CLOTH in the windows. Produces amazing health and growth. Experts everywhere recommend it. In a test at Ames College 25 per cent of the chicks under window glass died, while all under GLASS CLOTH lived and grew very rapidly.

Ideal for Hot Beds
GLASS CLOTH is the cheapest and best covering for hot beds. Violet rays make plants grow stronger and hardier. They transplant better, mature earlier and yield bigger crops. Holds heat. More than pays for itself. T.B.

Patented—Accept No Imitations
Genuine, durable GLASS CLOTH is made only by Turner Bros., under exclusive patents. No other concern can copy our process. No other has the same weather resisting formula. Avoid imitations. Real GLASS CLOTH is a strong fabric specially treated to make it transparent, waterproof and weatherproof. Originated in 1916 and proven by eleven years success. You will know it by its quality. So much cheaper than glass it has won wide popularity all over the United States and Europe.

SPECIAL TRIAL OFFER
Send $5.00 for big roll 45 ft. long and 36 in. wide, postpaid. (Cover scratch shed 9x15 ft.) If, after ten days use, you do not find it better than glass or any substitute, return it and we will refund your money. Common sense instructions. "Success with Baby Chicks," with each order. Catalog illustrating uses on request. (Many dealers sell Glass Cloth)

W. H. TOMHAVE
Staff Contributor and Adviser
Head of the Department of Animal Husbandry, Pennsylvania State College

Are the Horses Ready?

THE amount of farm work that will have to be done this spring on most of the eastern farms will be greater than in past years due to the unfavorable fall in 1926. With this situation in mind it will be necessary to have the horse power on the farm in the very best possible condition and if the horses are supplemented with a tractor it might be well to make all necessary repairs now and have it in good running order, too.

On the other hand it is just as important, or possibly more so, to have the horses in first-class condition when the heavy spring work begins. Horses that have been idle a good share of the winter should be put to work even tho it is necessary to change teams from day to day. In this way they will become accustomed to work and they will be in much better shape when the rush season comes on.

Five Out of Six Ride on Air

IN 1920 TWO farms in Pennsylvania out of every SIX had automobiles. Now FIVE out of every SIX have automobiles. There were 170,462 automobiles on farms in the Keystone State at the beginning of 1927, and 33,365 motor trucks.

The counties having more than 5000 automobiles on farms were:

Lancaster	9624
York	6718
Berks	5309
Crawford	5262

The following counties have more than 1000 motor trucks on farms:

Berks	1729
Bucks	1520
York	1343
Allegheny	1229
Lancaster	1203
Luzerne	1150
Erie	1142
Montgomery	1130

These figures are based upon estimates of the Bureau of Statistics, Pennsylvania Department of Agriculture.

Horses that have been fed very largely on hay and silage should have the grain allowance increased so that they will put on some additional weight. By following this practice they will also be better able to stand heavy grain feeding when put to heavy work.

The harness and collars may be in need of some repairs. To what extent repairs are necessary can best be determined by using all sets of harness on hand. Any repairs made at this time will save time and expense later.—W. H. Tomhave.

Sheep Swell Farmers' Coffers

WE HAVE frequently advocated the establishment of a small flock of sheep on the eastern farm. A considerable number of such flocks have been established during the past ten years and they have been a valuable adjunct to the farm when properly managed. A flock of sheep adds another source of revenue without very much increased cost.

The returns from the sale of wool and lambs from a small flock of about twenty-five breeding ewes, when properly managed, will range from $300 to $350 depending upon the number of lambs produced and the prices received. This estimate is figured on a conservative basis and can be made to exceed the amount given.

It must not be assumed, however, that this is all clear profit. It represents the price received for the feed given the ewes and lambs and the returns for the labor required in connection with the undertaking. It must be remembered that practically all the feed required for a flock of sheep can be produced on the farm so that an additional market is established for the crops.

Local Pool Best Selling Medium

The highest price is usually received for the wool crop when sold thru the local or county pool. The advantage of selling thru the pool is not alone in the higher price received, but thru it information can be secured about the grade of the wool and method of preparing it for market.

Eastern farmers should plan to put their lambs on the market early in the summer, so that they will not come into competition with the lambs from the larger producing plants in the middle and far west. Also they will go to market before the hot weather comes on and there will be less danger of losses from internal parasites which are usually more troublesome during the late summer months.

To put the lambs on an early market it will be necessary to feed grain in addition to pasture, but this additional expenditure will be a good investment because of the increased price received for the lambs. —W. H. Tombave.

Dirty Wool Docked

SHEARING time last spring found the sheep in my locality well thatched with burrs and other foreign matter which had accumulated during the feeding season. As the price outlook was not promising, farmers considered it a waste of money to put more labor on the wool than was absolutely necessary.

I had been skeptical of this practice for several years and a few days before shearing season opened, I drove my flock of fifty Merinos to a dry shed and went over each animal, carefully removing filth from the pelt. Loose fiber was brushed out, and soiled wool from around the hind legs was clipped and kept separate.

Brought the Top Price

This made the shearing job easier and I obtained 412 lbs. of nice wool which brought the top market price of 43c per pound. Other wool, but not so treated, sold for 34c a pound. I estimated the cost of cleaning my wool at $4, but even after this amount was deducted, I still had a net profit of $33.08, which rewarded me well for the work.

This experience taught me that dirty wool is the source of a big leak which a farmer can stop. Filth of all kinds causes dockage and local buyers often resort to this practice to get wool at a low price. Since the farmer pays the cleaning cost in the end, he might as well do the job himself and keep the profit in his own pocket.—F. R. C.

TELL the advertiser you saw adv. in Pennsylvania Farmer.

Veterinary

Conducted by Dr. J. F. Shigley
Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Livestock.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

PANCREAS AFFECTED.—I killed a hog that weighs about 150 pounds. After I opened it, I found the liver had a kind of grayish color and had small white blisters. The pancreas had sores on it, something like boils. The stomach and intestines were perfect. I would like to know if the shape of the liver and pancreas would have any effect upon the meat. S. M., Cedar Brook, N. J. The condition of the pancreas may have been due to larvae of parasites. If the infestation was severe some of the worms could have been seen in the intestine. In fat hogs the liver frequently shows fat deposits. This meat probably will be all right for food.

"KNUCKLES OVER" FOLLOWING INJURY.—A mare injured last May now walks on her toe. Is there any cure?—H. A. W., Milroy, Pa. The tendons have apparently shortened and this causes the animal to walk on the toe. These cases are usually operated on and the majority recover. The operation consists in severing the deep tendon of the leg and should be attempted only by a skilled veterinarian. A shoe with an iron extension at the toe is nailed to the hoof and this makes the animal bring the weight down on the heel.

COW HAS POOR APPETITE.—Since putting our cow on dry feed she doesn't eat enough to keep up her flesh. I fed carrots once a day until January 1st. I don't have any more and no turnips so I got beet pulp. She eats it once in two days with soy beans. Corn fodder and shucks is the main thing she will eat. I can't get her to eat much salt. Will appreciate any help.—Mrs. H. O. H., Salisbury, Md. Give this cow one teaspoon of elixir of iron, arsenic and strychnine daily for ten days. Wait ten days and repeat, then discontinue the drug. Give a variety in the ration to stimulate the appetite.

Philadelphia Office Loses Biddle

MR. E. R. BIDDLE, in charge of the market news service on fruits and vegetables in the Philadelphia office of the Bureau of Agricultural Economics has been promoted to take charge of the office in New York City. Mr. Biddle has been in Philadelphia for nearly eight years and during this time he has made a special study of the problems facing Pennsylvania potato growers. He has addressed meetings of potato growers in New Jersey and Pennsylvania on numerous occasions.

Mr. Biddle assumed his duties as Assistant Chief Marketing Specialist in New York on February 28th. He entered the service of the U. S. Bureau of Agricultural Economics in 1916 and previous to his work in Philadelphia he had charge of shipping point work in Maine and Wisconsin and later was stationed at Baltimore. Before coming into the Federal Service Mr. Biddle was in the wholesale fruit and vegetable business in Philadelphia.

Mr. W. G. Lensen, who was formerly stationed at the Chicago office of the Bureau, is replacing Mr. Biddle. Mr. Lensen has served on field assignments on white potatoes, sweet potatoes and berries in the South. Just previous to his coming to Philadelphia he was stationed in New York.—W. R. W.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 100,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (65 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

PEAFOWL, Pheasants, Bantams, Pigeons, free circular. John Hass, Bettendorf, Iowa.

LEGHORNS

WHITE LEGHORN CHICKS sired by pedigreed males, records 200 to 293 eggs. Low prepaid prices. Shipped anywhere c. o. d. and guaranteed. Hatching eggs, cockerels, pullets, hens, egg bred 27 years. Winners at 17 egg contests. Write for free catalog and special price bulletin. Geo. B. Ferris, 980 Union, Grand Rapids, Michigan.

SINGLE COMB White Leghorn Chicks from hens, Beams Strain direct. Real producers. Mated to Tancred Imperial mating males. $15 per hundred. 100% satisfaction guaranteed. Mountain Edge Farm, Dillsburg, Pa.

CHICKS Barron's large English White Leghorns. We import direct from England. Breed English Leghorns only. Catalog free. Willacker Poultry Farm, Box P, New Washington, Ohio.

HOLLYWOOD S. C. W. Leghorns. Famous for production of large white eggs. Baby chicks. Hatching eggs. Prices reasonable. White Wings Farm, Monroeville, Ind.

DAY-OLD CHICKS. Purebred S. C. White Leghorns from free range stock. Write for price list. Martin B. Search, Baptistown, N. J.

BARRON'S White Wyandottes, Males, hatching eggs from stock I imported direct. Records 262 to 313 eggs. E. E. Lewis, Apalachin, N. Y.

LARGE, vigorous Hollywood White Leghorns from 250-309 egg stock. 100 eggs $8.00. Postpaid. Circular free. Merrill Pease, Bowmansdale, Pa.

WHITE LEGHORN PULLETS—Order now. Ed Kroodsma, Zeeland, Mich.

MISCELLANEOUS

PREVENT LOSSES from Coccidiosis, Diarrhea, in your chicks. Use our prevention solution in drinking water. Money refunded if not satisfactory. Sixty cents per pint. Fox Hall Poultry Farm, Dover, Del.

ROOFING REMNANTS—Smooth surface 1-ply $.80; 2-ply $1.10; 3-ply $1.40; 80-pounds slate surface, $1.75. Buffalo House Wrecking and Salvage Company, 477 Walden Avenue, Buffalo, N. Y.

NEW 3 Bottom Vulcan Plow for sale. Cost $275.00, will sell for $100.00. Have sold tractor, therefore no use for it. Allamuchy Farms, Allamuchy, N. J.

WILSON SOY BEANS—$2.25 per bu. Missionary and Gandy Strawberry Plants, $4.00 per 1,000. Aaron Mast, Westover, Md.

CASH PAID for Dairymen's League Certificates of indebtedness, all series. L. F. Thornton, Dimock, Pa.

WANTED—Four row potato sprayer. Give description and price. C. E. Cassel, Hershey, Pa.

FISTULA HORSES CURED $5. Pay when well. Chemist, Barnes, Kansas.

PLANTS

CABBAGE PLANTS—My frost proof cabbage plants will head three weeks earlier than home grown plants and double your profits. Varieties: Copenhagen Market, Jersey and Charleston Wakefield, Succession, Flat Dutch and Golden Acre. Prices, by express in quantities $1.00 per 1000. By mail, postpaid: 500 for $1.25, 1000 for $2.25. Tomato plants, leading varieties, by mail, postpaid: 500 for $1.50, 1000 for $2.50. By express, 10,000 and over $1.50 per 1000. All plants wrapped in damp moss to assure safe arrival. Prompt shipments, satisfaction guaranteed. P. D. Fulwood, Tifton, Ga.

TIFTON'S RELIABLE PLANTS—Frost proof cabbage, Bermuda onion plants. Varieties: Copenhagen Market, Early Jersey and Charleston Wakefield, Flat Dutch, and Succession. Tomato plants. Varieties: Greater Baltimore, Bonnie Best and Livingston Globe. Prices postpaid, 250, $1.00; 500, $1.50; 1000, $2.50. Express collect: $1.50, 1000; 10,000 and over, $1.25, 1000. We guarantee to ship size to please you. References: Bradstreet, Bank of Tifton and Postmaster, Tifton Plant Co., Tifton, Ga.

FROSTPROOF CABBAGE PLANTS—Open field grown, will mature heads three weeks earlier than home grown plants. Early Jersey Wakefield, Charleston Wakefield, Copenhagen Market, Succession, Flat Dutch. Postpaid: 100, 40c; 500, $1.25; 1000, $2.25. Express collect: 1000, $1.25; 5000, $5.00. Bermuda onions same prices. Large plants, prompt shipment. Satisfaction guaranteed. Write for catalogue. Piedmont Plant Co., Albany, Ga.

BUY YOUR Grimm alfalfa seed direct from the introducer, and know that your foundation stock is pure, pedigreed seed, bred from the original Grimm strain. Acclimated to severe northwest temperatures since 1857. A. B. Lyman, Introducer, Excelsior, Minn. The House of Grimm Alfalfa.

SEED CORN—Yellow dent, 1925 crop. Sure to grow, hand selected, no tip grains, prize winner, New Jersey state corn show seed exhibit. 1 bushel $2.50; 5 bushels or more $2.00 per bushel. J. H. Croshaw, Wrightstown, N. J.

FROSTPROOF cabbage plants. Wakefields, Flat Dutch, Copenhagen, Succession. 300—$1.00; 500—$1.50; 1,000—2.25, prepaid. 10,000 collect, $12.50 cash. Good plants, satisfaction guaranteed. Maple Grove Farms, Franklin, Va.

BEAUTIFUL FLOWERS—Great value. 35 Gladioli, 4 Dahlias, 6 Cannas, 4 Iris, $1. Postage 15c. Lowest price list. Flowers, shrubbery. Guarantee quality, service. Stonroads, Yeagertown, Pa.

APPLE TREES 25c, peach 15c, pear, plum, cherry, quince, and apricot 40c, prepaid. Catalog free. Malta Nursery, Malta, Ohio.

CATALOG-64. New fruit varieties. Excellent, hardy, productive. Send farmers' addresses. Get presents. Vikla Nurseries, Lansdale, Minnesota.

MILLIONS, cabbage, onion and tomato plants, $1—1,000. Descriptive circular free. Clark Plant Company, Thomasville, Ga.

CABBAGE PLANTS—$1.00, 1,000; Collard $1.00; Onion, $1.50. Good plants. Quitman Plant Co., Quitman, Ga.

60 BLOOMING GLADIULI $1. None alike. 12 Dahlias, $1.25. Catalogue. A. Sherman, Chicopee Falls, Mass.

PLANTS—Strawberry $3.00, 1,000; Raspberry, Blackberry, Grapevines. Wholesale prices. Cloverleaf Nursery, Three Oaks, Mich.

BUY YOUR Grimm alfalfa seed direct from the introducer. Sam. Bober, Newell, S. D., and save money.

DAHLIAS—12 live bulbs, 60c. Anna Lesco, Forest City, Pa.

HELP WANTED

AGENTS—New plan, makes it easy to earn $50.00 to $100.00 weekly, selling shirts direct to wearer. No capital or experience needed. Represent a real manufacturer. Write now for Free Samples. Madison Shirts, 566 Broadway, New York.

WANTED—Single man, experienced in raising vegetables and small fruits for private family. Must be able to use horse. Wages $50 per month, and board. Apply to Laurel Locks Farms, Pottstown, Pa.

WANTED—Middle-aged man and wife, no children. Man to work on farm; the woman to assist housekeeper in boarding house. References required. Apply to Laurel Locks Farms, Pottstown, Pa.

SALESMEN—New invention beats vacuum sweeper and all its attachments. No electricity required. All complete only $2.95. Over half profit. Write O. P. Morgan, Mgr., 750 Grimes St., Fairfield, Iowa.

FREE OFFER—Fifty Bermuda onion plants or frostproof cabbage plants for few minutes your time. Write for proposition. Bell Plant Company, Cotulla, Texas.

OUR NEW HOUSEHOLD DEVICE washes and dries windows, sweeps, cleans walls, scrubs, mops. Complete outfit costs less than brooms. Over half profit. Harper Brush Works, 176 3rd St., Fairfield, Iowa.

MARRIED MAN WANTED to plow and cut wood. $50 month and house with garden and firewood. Middleville Co., Middleville, N. J.

WE PAY $200 monthly salary, furnish car, and expenses to sell our Guaranteed Poultry and Stock Powders. Bigler Company, X-345, Springfield, Ills.

FARMER WANTED—Married, capable, experienced man. References required. State full details, wages, etc. E. K. Bready, Bucks County, Chalfont, Pa.

ASPARAGUS

ASPARAGUS—Why not plant the largest, tenderest, most profitable—"The Washington", 100 roots $1.25; 1000—$8.00. Prepaid. Sunnybrook Farms, Lancaster, Pa.

ASPARAGUS ROOTS for sale. Washington rust-proof variety heavy yielder. Write for particulars. John E. Kennel, Gap, Pa.

ASPARAGUS ROOTS—Mary, Martha Washington. $1.25 hundred; $7.50 thousand prepaid. Pleasantview, Sadsburyville, Pa.

SAY you saw the advertisement in Pennsylvania Farmer when you are writing to our advertisers.

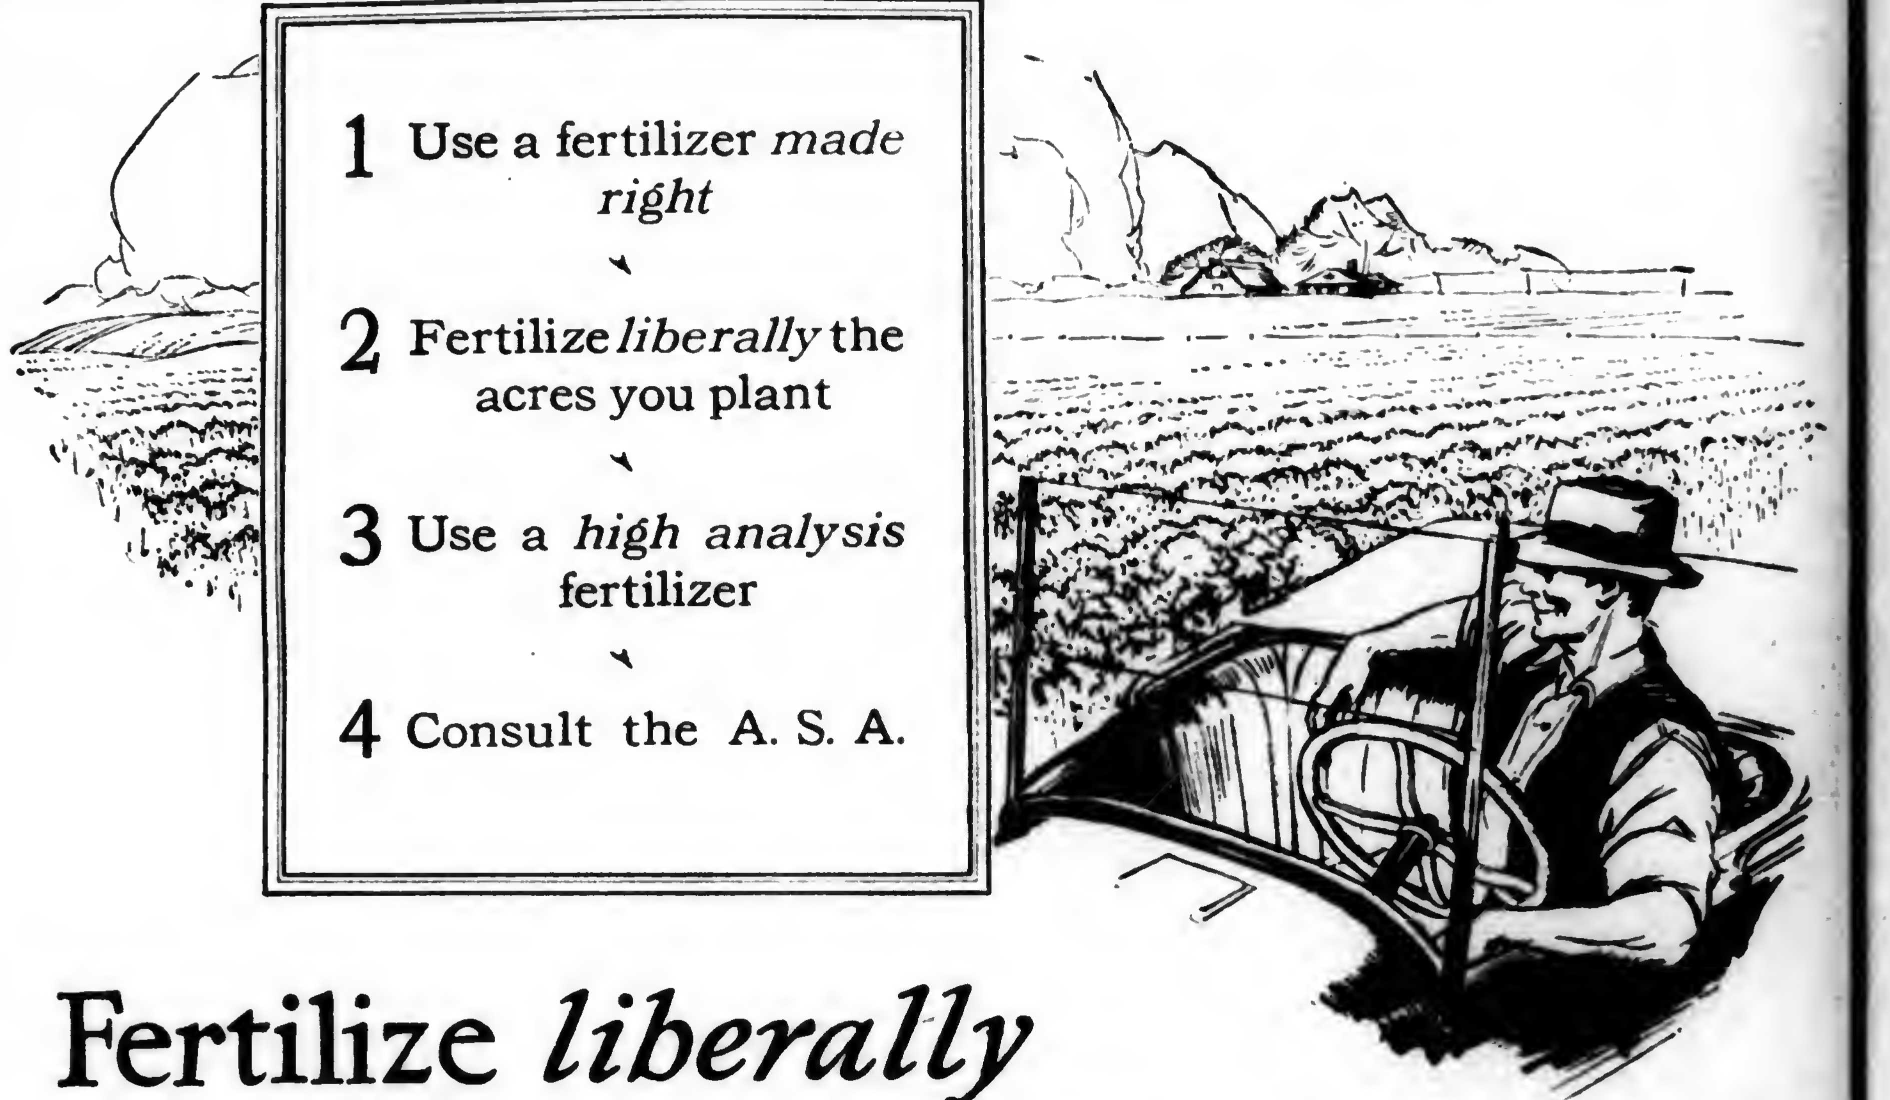
THIS YEAR successful farmers will demand larger yields *per acr*

1 Use a fertilizer *made right*

2 Fertilize *liberally* the acres you plant

3 Use a *high analysis* fertilizer

4 Consult the A. S. A.



Fertilize *liberally*
save labor — *follow this 4-point plan*

Successful farmers figure it this way: High production *per acre* saves labor and increases the *extra yield* on which they make their profit.

By fertilizing *liberally* with the right *kind* and *quality* of fertilizer they know they can get this *extra yield*—the yield beyond what is necessary to pay cost of production.

And by using *high analysis* fertilizer they get the amount of plantfood they want for less money, saving on costs of bagging, labor and freight. That is the reason more farmers are using high analysis fertilizer now than ever before.

On this experience of successful farmers and the advice of experts is based Swift's 4-point plan for securing larger *extra yields* on the acres you plant. Follow this plan, outlined above. It is your best assurance of success.

Take no chances with the quality of fertilizer you use. *The kind and quality of plantfood in the fertilizer you buy depends upon the manufacturer who makes it.*

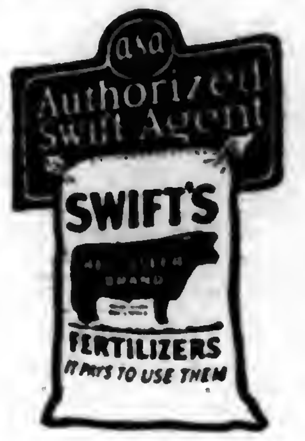
Put your faith in Swift's Red Steer Fertilizers, as successful farmers do. They know that the Swift name on any product means the best product of its kind—has meant that for 50 years.

Talk over this plan with the A. S. A. (Authorized Swift Agent). He knows good fertilizer practice in your locality. Get his advice. Look for his sign. It marks the place to get "the fertilizer the best farmers use."

Swift & Company
Fertilizer Works
Baltimore, Md.
Cleveland, O. Hammond, Ind.

Follow the advice of your Experiment Station

It is based on the results of years of careful study and field tests. Swift & Company's staff of fertilizer experts, adding their own knowledge to these results, have worked out recommendations for the profitable use of Swift's Red Steer Fertilizers. Ask your A. S. A. (Authorized Swift Agent) for these recommendations—the kind and amount of Swift's Red Steer Fertilizer to use on your soil.



Look for my sign

Come in and let's talk over this profit-making 4-point plan. I co-operate with Swift & Company and keep informed of the work of our Agricultural College. I can help you select the analysis and the amount of Swift's Red Steer Fertilizer that will make you the most profit.

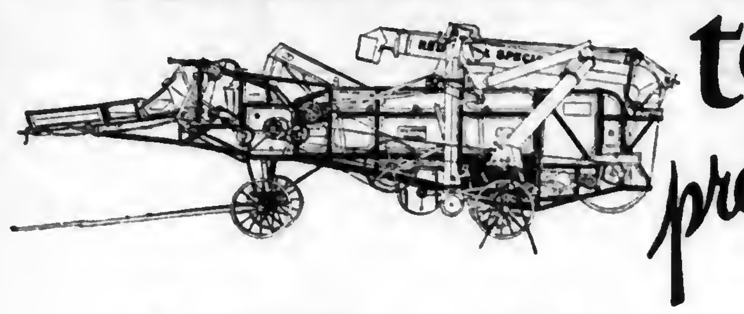
Basque shepherds in the Pyrenees Mountains, above the timber line and seven thousand feet above the sea. These men stay with their flocks all the time, enduring exposure and loneliness and living in stone huts scattered among the mountains. In winter the sheep are driven into the valleys below. The Basques are a distinct people, with their own ancient language and customs. Their home is this mountainous region on the border between northern Spain and southwestern France.

The farmer who "sells" his crops to his dairy cows can control the price he receives for them. Page 3.

—it SAVES the FARMER'S THRESH BILL

The Thresher that returns top profits



the 28 x 46 of the Red River Special Line

The 28x46 Thresher leads the Red River Special Line because of performance. It has proved the most profitable thresher in most localities.

For 1927 it is greatly improved.

Now it is a 5 shaker machine—a 25% increase in shaker capacity. It's the right size for use on larger farms; it has also the capacity to handle the runs of custom threshermen and farmer companies.

Only a moderate sized gang is needed to thresh with it. Hyatt Roller Bearings—Alemite-Zerk Lubrication at every main bearing point make power requirements very low.

This thresher, like all others of the Red River Special Line, is built with Armco Ingot Iron, the great rust resisting metal. Like every other Red River Special it is equipped with the famous 4 Threshermen, the most efficient combination of machinery ever devised for getting the grain from the straw, and the N. & S. Hart Special Tilting Feeder, that makes good feeding sure and the cylinder quickly get-at-able.

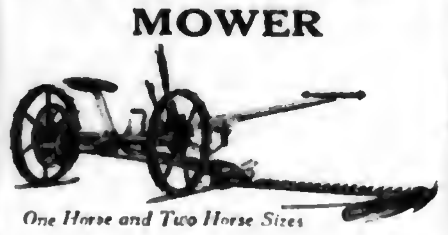
Make More Money Baling Hay

The Farquhar "Peerless" Baler does a nice, clean job of baling hay or straw, putting up straight, attractive bales. Has rigid baling chamber and adjustable tension plates, regulate weight of bales, solid steel saddle holds main bearings in perfect alignment. Baler is simple, strong, dependable and easily operated. A big money maker. Write for descriptive bulletin.

Also ask about Farquhar dependable Steam Power Sawmills, Threshers, Cider Presses. You can make money operating a Farquhar Rig—thousands have done it.

A. B. FARQUHAR CO., Limited
Box 846 YORK, PA.

Frost & Wood MOWER



One Horse and Two Horse Sizes

Popular throughout the world for many years. Thousands of satisfied users. Built for heavy crops and rough and hilly land. Roller bearings assure light draft. Its cutter bar strength and superior cutting mechanism give long service.

The Internal Drive Gear is always ready for work in heavy or light crops. Quicker response at knife bar, less wear on gears and fewer repairs. The knives keep on cutting when bar is raised to clear obstructions, saving time and crop.

Sizes 3½, 4, 5, 6 and 7 feet.

Write for catalog describing Frost & Wood Mowers; Sulky Rakes, with wood or steel wheels; Side Delivery Rakes; Hay Loaders, Corn Binders, etc.

Guaranteed by us and our dealers.

Are You Planning to Build?

SHOULD that new house have a bedroom on the first floor? Should the kitchen be large enough to serve as a dining room, or should it be one of those compact "efficiency" kitchens? Will a bungalow, a story-and-a-half or a two-story house be cheaper and more satisfactory in the end? How can we build a basement that will be more useful than the old dungeon-type cellar?

These are only a few of the questions that are discussed in the series of monthly articles on farm home building and remodeling which begins in this issue. Everyone who is interested in a home will find many helpful ideas in Mr. Page's articles.

Other farm buildings will be discussed in connection with this series, including barns, poultry houses, machinery sheds, etc. Readers are invited to write us about the building problems they would like to see discussed in these pages.—The Editors.

Plans for the New House Eliminate Undesirable Features in the Old

By ARTHUR C. PAGE

WE'RE going to build a new house. The old one has given valiant service and has done its best to keep up with the times but it just won't do any longer. We've fixed and endured for a long time, but every dollar we spend on the old house now might as well go on a new house, and will give us what we really want instead of one make-shift after another, with a poor job after all. So we're talking house plans, perhaps the most interesting subject of conversation for a middle-aged couple.

Planning a farm house takes a lot of experience. You can no more design a suitable farm house on a drafting board than you can bake an angel-food cake over the radio. We're going to gather all the experience we can find from everybody, and of course we want the best modern information about materials, cement, insulation, lumber, shingles, floor coverings, etc. So this is a standing invitation for you to send in your ideas.

First-Floor Bedroom Decided Upon

What kind of house shall we build? Well that brings up a lot of other questions first. How big is the family? We've positively determined that we will have at least one extra bedroom, maybe two, so we can entertain company without father having to sneak down the back stairs and bunk on the floor in the dining room.

And we are positively going to have one bedroom on the main floor. That's absolute. We decided it first when an institute speaker said mother should lie down and rest for fifteen minutes in the middle of the day. We decided it again when the boys had the whooping cough and mother had to take care of them and do all the housework at the same time, and you know how whooping cough is - - -. And we decided it for good and all when the last baby came, and he's the dearest little thing in the world, but quite ubiquitous, as his big sister in high school says. In English that means that he is under mother's feet everywhere she goes and her only chance to catch up a few winks of rest is when he is taking his nap in the afternoon. So the downstairs bedroom is settled.

Dust Farther Away in Buggy Days

Just where to locate the house is another problem. The old house is in about the right place, but it was built in horse and buggy days, and is a little too close to the road, so when the autos go by they send in a cloud of dust. When we get a cement road we won't have to worry about that, but we can't expect the best of everything. We think we'll set it back a little farther, and over to one side, so we can go on living in the old house while the new one is being built.

One thing we know about the location. We want to be able to see all over the buildings and most of the farm from the upstairs windows. Father is like a lot of people who have handled stock all their lives—he can't sleep well unless he can look out and see that everything is all right. And the same rule goes for the kitchen, but that's another story.

(Continued on page 17)

Field Stones Can Be Used If-

A READER has asked about the practicability of using field stones in concrete walls and floors since he has the stones in the way and is anxious to get rid of them and at the same time save something on the cost of the concrete.

Field stones, if hard and solid and clean, can be used very satisfactorily as filling in concrete walls, footings and so on. They should be washed clean with a hose and should be well soaked with water a short time before being used so as not to absorb water from the concrete, but the surface water should be given time to dry off. The concrete should be jelly-like rather than thin and watery, then a layer of concrete put in, several stones laid in so they do not touch each other or the forms, then another layer of concrete, and so on.

This is much better than laying up a loose wall of stones and then pouring thin concrete on top and working it down among the stones, as with the latter method it is difficult to get a wall that is solid and leak-proof. If put in as suggested and the sizes watched so they will fit in fairly well, a considerable portion of stones can be worked in and still have a solid water-tight wall. Twisted wire reinforcing can usually be used even when the stones are used for filling in.

Where the field stones are to be used in floors and feeding pavements, it is more difficult to use the larger stones and I have seen many floor failures where this was carelessly done. The smaller sizes are much more desirable and it is often advisable to sledge up the larger stones, then the stones can be used in connection with gravel for building the sub-grade or foundation for the floor; but if this is done, particular care must be taken to wet the gravel and to see that everything is tamped down good and solid.

As a general rule large flat stones should not be used in the floor itself, unless they are covered with at least two inches of good concrete. Woven wire reinforcing helps much in preventing heaving and cracks. —D.

The Cow Is the Farmer's Market

His Profits Depend on the Price She Pays for the Crops She Consumes

By E. B. FITTS

In Charge, Dairy Husbandry Extension
Pennsylvania State College

MODERN dairying is an industry where business principles are more and more coming into practice and where methods, equipment or animals not yielding satisfactory returns are being forced into the discard. We are living in a changing age and farming, too, must change from old time practices and methods. Fortunately the dairy industry contains within itself elements of improvement which, if developed, are sufficient to meet the situation. Those dairymen who are now using available information and are putting into effect modern practices are getting ahead. Their business is prospering and they see in it opportunity for further improvement and development. It is from these leaders we should take our lessons. The great mass of dairymen, however, are making but slow progress.

The dairy farmer, in common with other farmers, is primarily in the business of growing crops. Having grown the crop he must then convert it into cash,—and into a sufficient amount of cash to meet all expenses and leave some margin for profit. He must have good prices for crops if he is to prosper. Lacking good prices for crops he is doomed to failure no matter how hard he works or how many cows he keeps.

His cows are the market for his crops. They vary widely in their value as a market. Some cows pay less than $5.00 per ton for hay consumed and a correspondingly low price for other feeds. Other cows pay $30.00 or more for hay. Perhaps in no other line of farm work is so little attention paid to prices received for crops raised as on the average dairy farm and yet the dairyman's success is dependent upon this very thing.

All Goes Back to the Ability of the Farmer

Prices for crops fed to dairy cows are determined by the working or milk-making ability of the cows and this working ability in turn is determined by the skill and business ability of the farmer. In other words, the dairy farmer determines for himself, within rather wide limits, the price he will receive for his crops. He is in position to say for himself whether he will prosper or not. Weeding out the poorest cows, coupled with a good system of feeding and herd management, will raise average milk production per cow and thus automatically increase prices received for crops.

Good cows are born. The ability of a cow to produce a large yield of milk and thus provide a good market for crops is born in her. Here again we go back to the man in charge of the herd. He governs this inheritance thru his control of breeding. He can introduce into his herd, thru careful selection of the sire, influences that will vitally affect his future prosperity.

All investigations into the costs of milk production show that costs are in close relationship to annual milk yield per cow. As yields increase costs per hundred pounds of milk decrease. The establishing of a better breeding practice is fundamental to a greater success in dairy farming. Results in breeding appear rather slowly but "time and tide wait for no man" and if we would have a better business and more success in the future we must do something about it now.

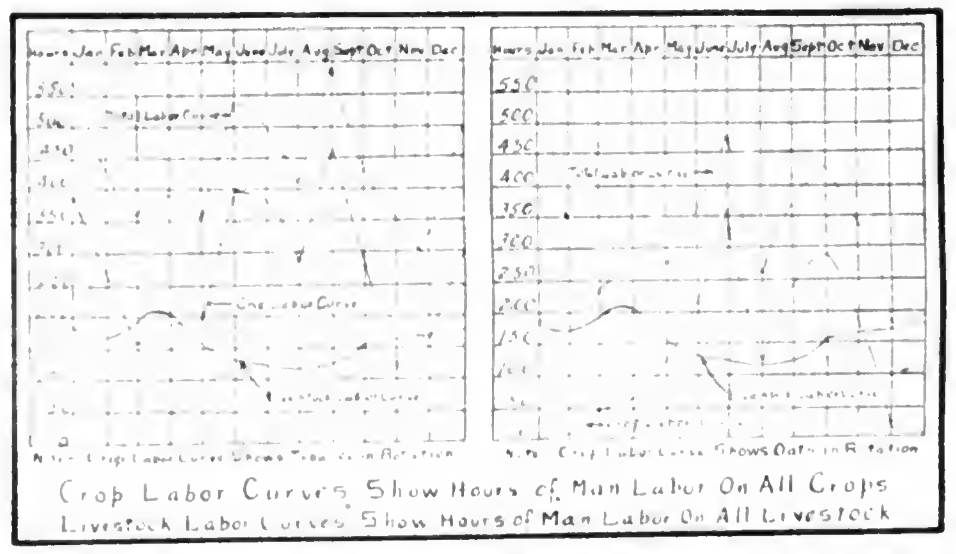
(Continued on page 14)

How Much Do You Work, and When?

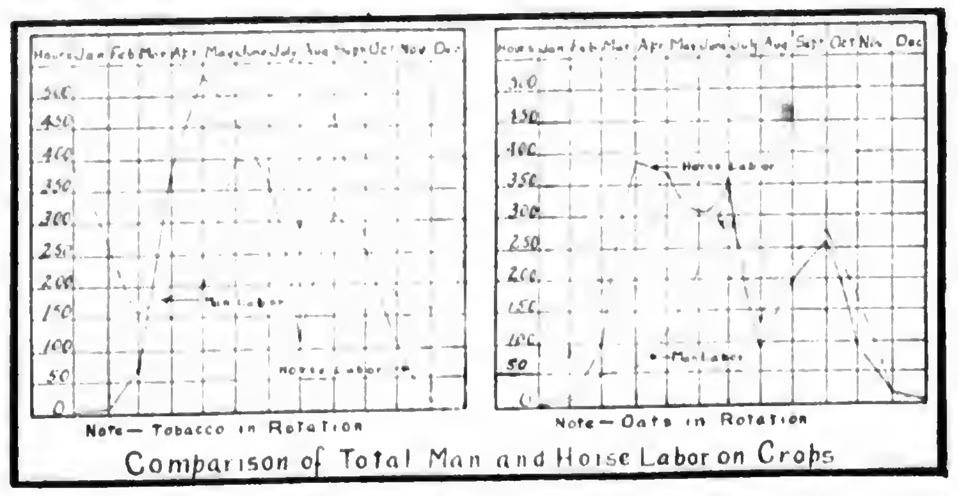
These Records Answer the Question for Lancaster County Farmers

THE average amount of labor expended on crops and on livestock during each month on a group of Lancaster County farms is shown on the accompanying charts. The figures on which the charts are based were drawn from summaries of cost of production records kept by Lancaster County farmers during 1925. These statistics were compiled by H. S. Sloat, of the Agricultural Extension Service.

The ideal, perfectly-managed farm would have its labor requirements represented by a straight line in the upper charts, since the ideal arrangement would be to have the same labor requirement on crops and livestock the year around. Physical obstacles in crop and livestock management, and the difference in the seasons in Lancaster County, however, would make the ideal farm a physical impossibility. It should be entirely possible, however, to obtain a curve that is more nearly straight than the two total curves shown.



Crop Labor Curves Show Hours of Man Labor On All Crops
Livestock Labor Curves Show Hours of Man Labor On All Livestock



Comparison of Total Man and Horse Labor on Crops

Better Farms Straighten Line

As these curves indicate the hours of man labor required on the average Lancaster County farm, it is entirely possible that in some of the individual cases from which the material for the graphs was obtained, the labor curve would be more nearly a straight line.

The average farm, represented by the graphs, has 18 acres of wheat, 18.6 acres of hay, 14.1 acres of corn, 4.3 acres of silo corn, 2.5 acres of potatoes and 7 acres of tobacco. The livestock on this average farm is as follows: 7 cows, 8.6 beef cattle, 11.1 hogs, and 280 poultry.

The curves at the upper right corner are the same as the ones at the left, except that eight acres of oats take the place of tobacco in the rotation. This rotation with oats is used in part of the lower end of Lancaster County, and the greater part of the state. The rotation with tobacco is used in the central and northern part of the county.

The solid line, representing the hours of man labor in caring for livestock, is the same on both of the upper charts. You will note that the livestock curve runs fairly regular, with the low dips in the summer months. The broken line, representing the man labor expended on crops, is higher during the summer months, and lower in the winter months. The dotted line represents the total hours of man labor spent on both crops and livestock and tends to make a curve that runs more nearly on a straight line.

The lower charts give a comparison of the total man and horse hours required on crops for the average sized Lancaster County farm. The left side represents a rotation with tobacco, the one to the right a rotation with oats.

Purpose of the Charts

These charts or graphs show how important it is that each farmer try to arrange his farm so that the total hours of productive labor each month will be fairly uniform. During the dull parts of the year, the labor may be employed on unproductive work as repairs to buildings, fences and equipment. This keeps the farmer and his help more evenly employed thruout the year.

The comparison of man and horse labor in the lower chart shows a high horse labor requirement during the spring, showing that on large farms, tractors and other power machinery can be used to advantage during that season. The rotation with tobacco requires much man and horse labor.

These charts can be made to serve a very valuable purpose if studied carefully. Check over the various amounts of labor required on crops and livestock for each month and see how nearly the conditions on your farm fit the average.

Here it is

a balanced ration

Quaker

PIG-N-HOG

MEAL

Here's a feed to delight any man who raises hogs—a feed that will enable him to give his entire herd, young and old, exactly the things he knows they should have. It's a complete ration (protein 18%) containing ingredients of proved merit—*tankage! oatmeal! cod liver meal! alfalfa meal! barley! minerals! iodine! and other valuable substances.*

The iodine prevents hairlessness, thick neck, and other goiter troubles. The cod liver meal builds bone and prevents rickets.

Feed Quaker Pig-N-Hog Meal to brood sows to get vigorous, strong litters and to insure a generous supply of nourishing milk. Used from breeding time on, Quaker Pig-N-Hog Meal gives the sow the minerals, proteins, and vitamins she needs to build a large litter of healthy pigs.

Give the young pigs this same good feed and see them take on size and weight. Corn or Sugared Schumacher Feed may be fed with the meal after the pigs reach 120 pounds. This combination will prepare your hogs for market in the shortest possible time.

Start now, this season, to get yourself the finest litters you have ever had. The results with your brood sows will urge you to use Quaker Pig-N-Hog Meal forever after.

LEADCLAD FARM FENCE

Good Fences Make Good Neighbors

Nothing will cause bitter feeling between neighbors quicker than weak, broken down fences, that let the stock wander at will.

A good fence that stays good will keep your neighbors' stock out of your field, and keep your stock at home, too.

Leadclad fences stay strong years after ordinary fences have rusted away. They last because they are protected from the weather and rust by a jacket or coat of pure lead that's Seven times as heavy as the coating on ordinary fences.

Leadclad Saves You Money Because It Lasts

It costs money to buy a fence.

And then you're not done, for it costs labor and money to put it up.

Why not save part of your money and labor by putting up a fence that will stay put up—as long as three ordinary fences?

Write today for catalog and the facts about this fence. They are free.

THE LEADCLAD WIRE COMPANY, 1202 Plainfield Ave., Moundsville, W. Va.

NESHAMINY GARDENS

WHERE AN EDITOR WORKS AND THINKS

BY R. P. KESTER

I HOPE I am not conceited enough to think that my querulous remarks on March weather made during the past few years have had any influence in bringing about the present fine March weather. I cheerfully acknowledge that the first two weeks of this month have shown how gentle and lamb-like March can be if it tries. Temperatures have been high enough to start grass, and early flowers are beginning to push thru. We can plow soon and plant some peas, if—. But I am trying to keep my ambition within bounds. I have lived thru several Marches and am inclined to be of the nature of the old lady who was something of a chronic invalid. When asked how she felt she said: "I always feel bad when I feel good for I know I am going to feel worse tomorrow."

◆ ◆ ◆

THE grapevines were pruned the second week in March and, altho the weather has been mild for several days, there is no sign of "bleeding." We trim back to two buds and since the growth last year was very vigorous the vines now look like mere skeletons. The peach trees come next on the list. There has been a decided reversal of opinion and practice among leading peach authorities on pruning peaches. From the severe cutting back of all branches recommended a few years ago, it is now believed that pruning bearing trees should consist chiefly of keeping the head well balanced and open, and that such trees should not be cut back much, if at all, except where it is necessary to balance the top.

◆ ◆ ◆

TWO or three people have written to ask what varieties of peas not requiring "brushing" are best. After trying several kinds we have settled upon "Little Marvel," and "Laxtonian," as the best dwarf peas. The vines grow only about fifteen inches high and are good bearers of excellent quality peas. The pods are three to four inches long and well filled. No supports are necessary.

A WRITER in the New England Homestead in telling of the low prices at which apples are selling in New England illustrates it in an interesting way. He says that if he were to make a railroad journey from Springfield, Massachusetts to Washington, D. C., and return, taking enough apples along to pay his bills for two days, instead of money, he would have to start from home with 167 bushels. The wholesale price in that section is about one dollar per barrel.

◆ ◆ ◆

I SOMETIMES wonder whether the apple boosters of twenty years ago are not somewhat conscience stricken in these times. A generation soon rolls by and those who followed the unreserved admonition to plant apple trees because it was a paying business and would never be over-done find that they received bad counsel. True, it is not often that there is a full crop in all parts of the United States as there was last year, but we are now suffering from overplanting and it will be several years before the population and the consumption of apples equals or exceeds the production in normal years. Will farmers ever stop the fool practice of rushing headlong into a branch of farming every time there is a temporary scarcity and good prices in a given line? Something can be done to help the present situation if growers will make use of the modern methods of increasing the demand for their product.

◆ ◆ ◆

BECAUSE we cannot be ready to take care of them, we shall not buy our baby chicks to be delivered before May 1st. Since they will be Leghorns we figure that by right feeding and good care we can bring them to maturity in good time for winter laying. We shall try to follow the feeding plans now advocated by the New Jersey Experiment Station. They have been experimenting with a view to finding a ration which will produce the most rapid and normal development, and have found the new formula efficient.

The Cheerful Plowman

Acting Young

MYSELF, and the Mrs., and both the McGills cut loose down at Stickney's and danced some quadrilles! You just should have seen us! Tho old as we are each one of us soon was a recognized star. "Hey, swing on the corner!" the caller would shout, "Then swing on the center and whirl them about! Go alaman left with a lumber-jack step, and grand-right-and-left with a torrent of pep! Salute to your partners with action and noise and show the young bloods that you're game with the boys! March down thru the center and cast away six and back to your places without any tricks; once more to the center and cast away four, then jig to your places and rattle the floor! Come on,—to the center and cast away two and back to your places and show them who's who!

"Once more on the corner show balancing step, once more swing the ladies with vigor and pep; now promenade right with your toe to the wax, then whirl around quickly retracing your tracks! Come, join the grand marchers encircling the hall, hold up your gray whiskers, don't totter and fall! Change partner and waltz to the sound of the fife, be game to the last in the dance of your life; be game in performing this gayest of feasts; now take your own partners and lead them to seats!"

You just should have seen us! Gray whiskers, my eye! If we are old fogies I'd like to know why! We showed the young fellows how limber we are,—each one of us birds was a recognized star!—J. Edw. Tufft.

Bills About Which Farmers' Interest Centers

THE three-cent gasoline tax proposal has met with real opposition during the past week. The State Grange is opposing the additional tax, branding it as unfair because large quantities of gasoline are used for commercial purposes by farmers, manufacturers and merchants. The Grange believes that sufficient revenue for road building purposes can be secured by the rigid enforcement of the present two-cent tax.

• • •

ASK AID FOR COUNTY FAIRS. The Wright bill asking for an appropriation of $125,000 for county fairs during the next two years has made its appearance in a new form. When first introduced, the bill said nothing about gambling or immoral shows at fairs, but this has been changed in the revised bill to make it impossible for any fair which permits gambling or immoral shows to receive state aid. It appears that the Stark bill appropriating $125,000 for county fairs for the past two years, will be enacted.

• • •

CLASSIFIES AND LABELS MILK.—A bill which has created considerable stir in market milk circles is the Hess Bill which provides that all milk offered for sale in the state shall come under one of the following four grades: 1. Certified; 2. Pasteurized; 3. Class A Raw Milk; 4. Raw Milk. The Class A Raw Milk would be milk produced from herds free from communicable diseases as determined by complete physical examination and tuberculin test. The "Raw Milk" would be milk from herds which have been subject to a careful physical examination within a period of six months, but not tuberculin tested. The bill would require that the container or bottle be labeled to show the grade of the milk.

• • •

NEW EMERGENCY FUND.—An emergency fund of $100,000 to be used by the Department of Agriculture for the control of unforeseen outbreaks of animal or plant insects or diseases is provided for in a bill introduced by Representative Haines. A similar fund was created two years ago.

• • •

WOULD PAY FOR DEER DAMAGE.—Relief for the deer damage sufferers is provided for in two bills just introduced. One provides for the creating of a special fund by taking $1.00 from the fee paid for each big game license and $5.00 from the fee paid for each non-resident hunter's license. The second bill provides that owners of property damaged by deer shall be paid from this fund. Claims for damage are to be presented in writing to the Secretary of the Board of Game Commissioners at Harrisburg within a period of two weeks after the damage is done. A game protector is then sent to the premises upon which the damage was done to interview the owner and arrive at a satisfactory settlement. If the two parties cannot agree, a third disinterested party is called in and the decision of the majority is considered as final.—J.

Marylanders Win Firsts

MARYLAND exhibitors won first prize for both white and yellow corn in the interstate classes of the annual state corn show recently held at Middletown, Del., under the auspices of the Delaware Corn Growers' Association. The show was the best ever held in the state as regards both quality and quantity of produce and the number of exhibitors.

Josiah Massey, Chestertown, Md., won first prize on white corn, and M. P. Prough, of Sykesville, Md., first on yellow corn.—Maryländer.

What makes a live town?

"That's a live town." You often hear that said about a place that has no advantages over any other town except one thing—*good motion pictures*—the magnet that draws the crowds from miles around, and keeps people and trade *in* town.

You want the best in entertainment, just as you want the best in everything else and you'll go out of your way, if necessary, to get it.

Who wouldn't go a few miles more to see such Paramount Pictures as Mantrap, Forlorn River, Born to the West, The Show Off, Kid Boots, The Canadian, The Campus Flirt, and The Quarterback?

Folks come from miles around when a Paramount Picture is showing and everybody benefits because anything that draws the crowds, draws trade and growth to the entire community. That makes better times for everybody and that's what makes a "live" town.

If Paramount Pictures aren't shown regularly at your local theatre, speak to the manager about it. He wants to show what you want to see.

"If it's a Paramount Picture it's the best show in town"

The buds swell, the pussy-willows show fur; flowers that bloom on the edge of the snow come out; and the first thing one knows there is a dandelion in bloom.—Edw. S. Martin

Many Changes in Grange Officers

SELDOM, if ever, have circumstances made so many changes in so short a time as have occurred in the official family of the Pennsylvania State Grange. Early in the year, the secretary, Fred Brenekman, resigned and took up the management of the Washington Grange Headquarters. In his place, John Light, who had been lecturer, was elected secretary, and a new man, H. G. Eisaman, was chosen lecturer. Then H. P. Dewey, who had been re-elected master, resigned to become head of the Workman's Compensation Bureau, and this automatically elevated J. A. Boak, the new overseer, of Lawrence County, to the mastership. However, there is no reason why the Grange work in the state will not proceed as satisfactorily as if fortune had made no changes in the corps of managers.

Egg Prices Low

THE price of fresh eggs this spring is lower than it has been at this time of year for a good while. This is because the greater number of hens and the favorable winter weather have increased the supply more than the consumption. But to partly offset this slump in prices is the decreased cost of feed and the larger number of eggs. We should be glad to learn from our readers whether or not they have made as much money during the past winter as they did one and two years ago. One thing seems rather certain,—there is no need just now for any noticeable expansion of the poultry business. On the other hand, demand and prices, coupled with the steady increase in per capita consumption of poultry and its products show that there is no excuse for discouragement and reduction.

Paying Senator Reed's Piper

ABOUT 490,000 pensioners of the United States will have Senator Reed, of Pennsylvania, to thank for the failure of pension checks to arrive from April 4 to July 4, this year. The filibuster conducted in the interest of Senator-elect Vare during the last few days of Congress prevented the passing of many appropriation bills, among which was the pension money. This means a hold-up in the distribution of $38,000,000, or the amount of two months' pay. In the meantime 12,000 will die, and consequently no pay will be received even by the heirs. What a noble game American politics is—not!

Pass the Election Bills

THE news from Harrisburg intimates that some of the Big Bosses are opposed to the election reform bills introduced with Governor Fisher's backing and are seeking to have them tempered down. In other words, they would emasculate the bills and leave the opportunity open to continue ballot-box stuffing, enrolment padding, and all other forms of crookedness for which some forces in Pennsylvania have become notorious. We hope Governor Fisher stands firm in his purpose to make honest elections possible in this state. The contest now on will show clearly whether he is the real, or only the titular head of the present administration at Harrisburg.

War on the Corn Borer Begun

THE fight against the spread of the corn borer, which was authorized by Congress in a bill carrying $10,000,000 for its enforcement, began in the affected states on March 15th. Work this year in Pennsylvania will be done in the following counties: Beaver, Butler, Crawford, Erie, Lawrence, Mercer, Venango and Warren.

The plan of the managers of the campaign will be to destroy all corn stalks, stubble or other refuse which may contain the larva of the borer. Field men will visit farms and explain the work necessary to full cooperation in carrying out the campaign. Farmers will be paid at the rate of two dollars an acre for field corn and one dollar an acre for sweet corn for all work they do in the clean-up campaign which would not be done in the regular course of farm operations. Notice will be given by visiting agents as to what is necessary on a given farm and the farmer will have until May 1 to do the work. If it is not done by that time, the State Department of Agriculture will conduct the necessary clean-up and charge the cost to the farmer, the amount to be collected on the same basis as taxes by the state authorities.

The Pennsylvania counties named are supposed to be most affected by the borer at the present time, altho it was found in small numbers in several counties to the south and east of these. It will be wise for all farmers in the northwestern half of the state to keep a careful watch and do the recommended work even tho the pest is not now prevalent. Only by complete and willing cooperation on the part of farmers can the spread of this most destructive pest be prevented. Let no one hold back a single season for the purpose of getting a slice of the $10,000,000.

Crow Shoots Held

THE farmers in some sections of New Jersey have received a good bit of publicity recently over their efforts to rid themselves of the pesky crow. We have no figures from the farmers interested, but the newspapers feature accounts of "crow shoots" in which as high as 2000 crows have been killed at one time by the farmer gunmen. These newspaper stories have brought forth more or less criticism from ornithologists and bird lovers. Others, not influenced by sentiment or learning, claim that the plan is ineffectual; that shooting some birds will not prevent others from appearing when crops are planted.

The crow is a difficult bird to handle. He is wise and sagacious, and while appearing both timid and bold is smart enough to scent real danger. The ordinary "scare-crow" has no terrors for him after he has had time to size it up properly. The two traits which make him feared and detested on the farm are his liking for little chickens, and his appetite for newly-planted corn. Of these two, the latter is easily overcome. Any coal tar substance smeared on seed corn will cause him to let it alone. But when crows start to carrying off little chickens, the poultry raiser has a real problem on his hands. There is only one sight we know of which seems to send a chill down a crow's back, and that is a dead crow hung on a pole in a field or chicken yard.

Observe Arbor Day

TWO dates have been fixed as arbor days,—April 8 and 22nd. Individuals as well as organizations should make special effort to observe these days by planting trees and renewing their interest in bringing back something of the primitive glory of the out-of-doors. The beauty of the forests of Pennsylvania when the tract was deeded to William Penn is well established. To settlers who sought to clear farms and build homes in those days the great trees offered the greatest difficulty to be overcome. Millions of them were consumed in log-heaps. Later, when lumber became increasingly valuable, tens of thousands of acres were ruthlessly denuded of every living thing. Today, Pennsylvania suffers from a tree famine.

While few individuals can plant forests, almost everyone may plant one or more trees. School grounds, home grounds, play grounds and public parks may well be given over to a more generous planting of trees. Children should be taught their value and shown their beauty. Governor Fisher in his proclamation uses these pertinent words:

"Trees are much more than columns of wood that lift their tops toward the sky. They are living creatures of a great creation. They bring many comforts to us. They clothe our mountainsides, adorn our valleys, beautify our roadsides, frame our homes, and bring beauty into our lives."

Editorial Sidelights

PROFESSOR FITTS is a Connecticut Yankee, we believe. At any rate he was born in Connecticut, which should lend authority to what he says (Page 3) about the economy of good feed and good cows. To back up his New England training, Professor Fitts observed and worked with dairymen in Louisiana, Connecticut, New York and Oregon before he came to Pennsylvania in 1922 and was placed in charge of the important dairy extension work of the Pennsylvania State College.

THE STRANGE THING about a "curve," in the sense it is used in the second article on Page 3, is that it may be a straight line, a jagged line, or almost any other kind. However, the curve will straighten itself out in the mind of anyone who reads this valuable article and studies the charts or graphs.

This subject of graphs and curves has fascinated us since our old mathematics professor put a few figures on the blackboard and said, "That is the curve of Halley's comet." He meant that if he had a chart as big as the universe, and if he plotted that mathematical expression on this chart,—just as the hours of labor have been plotted on the Page 3 charts,—he would have a line representing the exact shape of the orbit of Halley's comet.

That was the first glimpse we ever had of the kind of mathematics that enables astronomers to know that this heavenly wanderer will be back for a brief visit to our Solar System some 75 years from its last visit in 1910.

This is a long way from Lancaster County oats and tobacco, but it shows how far those obscure looking charts on Page 3 will take you if you follow long enough.

NO LET-UP PROMISED

Relief Bill Backers to Continue Campaign—Dairy Pilgrimage Next Month—Urge Restricted Immigration.

Washington, D. C.

PROMOTERS of the McNary-Haugen bill are making preparations for an aggressive campaign this summer. Representative Dickinson declares that there will be no let-up in the fight for the equalization fee. Chairman McNary, of the Senate Committee on Agriculture, apparently does not share with Representative Dickinson the confidence in the ability of Congress to pass the bill again in its present form. Senator McNary is preparing the draft of a new measure. The agricultural leaders from all parts of the country will be asked to aid him in preparing a bill that will meet the requirements of the farmers for relief legislation and be acceptable to the President.

Dairymen Are Invited

Representatives of all branches of the dairy industry are invited by the American Dairy Federation to come to Washington and take part in the activities of the second annual dairy pilgrimage on April 26, 27 and 28. Reduced rates, a fare and a half on the certificate plan for the round trip have been granted on all railroads.

In addition to the visit to the Bureau of Dairy Industry Experiment Farm at Beltsville, and a study of the activities of the government departments working on dairy production, marketing and consumption problems, there will be addresses by Secretary of Commerce Hoover and Secretary of Agriculture Jardine, and a reception at the White House by President Coolidge. The visits to the various government activities will be personally conducted thruout. All persons intending to make the trip are requested to notify A. M. Loomis, 631 Pennsylvania Avenue, Washington, D. C., secretary of the American Dairy Federation.

Will Publish Facts

Friends of government operation of Muscle Shoals and Boulder Dam projects have decided to conduct a publicity campaign to acquaint the public with the facts, as they see them, regarding the projects, and to expose the efforts of electric power companies to secure a monopoly of the water power in this country.

Short Session Going?

The Norris plan of having Congress convene the first of January every year, and continue in session until it has finished its work is gaining considerable support in congressional circles. This would do away with the short session and it is claimed would eliminate the hold-ups by one or two senators of important legislation during the closing hours of the Senate as now constituted.

Future at Stake

The feeling in the House of Representatives today is for more and more restriction of immigration, says Representative Albert Johnson, chairman of the House Immigration Committee, who declares that a very large proportion of our people want restriction, because they do not want this country to go the way the older countries have gone. They do not want us to divide into peoples speaking varying languages and hating each other.

Representative Johnson says he is convinced that the great bulk of the immigrants who have come to this country in recent years came with the best intentions toward the United States. But the traditions they brought here were those of other countries. Our customs, our traditions have changed. The schools, the drama and newspapers have sunk to lower standards.

Farm Bureau Backs Bills

The American Farm Bureau Federation was an important factor in the movement to secure the enactment of the McNary-Haugen plan of farm relief legislation, but this is only one of many legislative projects engaging the attention of the Washington representative of the Farm Bureau. The Gooding-Ketcham seed dyeing law, corn borer eradication appropriation, Lenroot-Taber milk importing law, potash exploration law, radio control law, and the law setting up a Division of Cooperative Marketing in the Department of Agriculture are a few of the measures favored by representatives of the Farm Bureau Federation.

Among the proposed measures backed by the federation representatives which failed in the last Congress are the Capper-Ketcham agricultural extension bill, Madden Bill accepting the offer of the American Cyanamid Company to operate the Muscle Shoals project for production of fertilizers, agricultural attache bill, Capper truth-in-fabrics bill, standard container bill, and the bill permitting insecticides and fungicides to be sent thru the mails.—E. E. R.

DIFFERENCES MAKE JAM

Appropriation Bills Representing Millions Held in Committee—Gas Tax Decision Still Hanging Fire.

Harrisburg, Pa.

THE jam created in Pennsylvania's Legislature by the differences between Governor Fisher and the political chieftains of the populous counties over bills to better elections and the bickering over details of the workmen's compensation measure has had a side "kick" rather disconcerting to the members of the two houses because the appropriation bills have been held up and they are measures which, after all, are closest to the lawmakers. Literally millions of dollars are tied up in bills still in committee which, if the April 14 adjournment date is to be kept, will be turned loose in bundles. Legislative progress has been so slow there has been much time for members to contemplate the appropriation measures and, in view of the declarations of Governor Fisher that they must be held within the revenues and the chairmen of the appropriation committees that they will be guided by the budget, there is some anxiety on Capitol Hill as to what is going to happen and resentment that the shadows of the 1928 election should be permitted to fall on the ordinary business of the Legislature of 1927.

Demand More Roads

The State Capitol has been under attack by delegations of people from all parts of the state demanding improvement of roads and there have also been showers of telegrams calling for building of new highways. Just what the program will be this year and next will be impossible of determination until the gasoline tax is fixed and meanwhile there is a struggle for and against the extra cent. The motorists are divided and some big organizations have declared for the extra cent, with the understanding that it be spent on highways. Incidentally, the biennial battle over the proposed reform of tax collection methods is commencing to loom up after much sparring.

Farmers Watching Seed Corn

According to reports reaching the State Capitol the farmers of Pennsylvania have been sitting up and taking notice of the danger of seed corn not inspected and the calls for tests of seed have been unusually large. In some of the southeastern counties where there are immense crops the testing is said to be occupying much attention.

School Money Study

Numerous studies have been proposed to this Legislature, but one of greatest interest is the movement for a general survey of the subject of state grants to education. One of the big points for study will be the fourth class districts, which comprise the rural communities. The general scheme is to go into the subject deeper than ever done before and to supplement what has already been gathered and present a plan which will meet state financial prospects better than that now in force.—T. C.

THIEVES PLY TRADE

Rural Sections Ask More Police Protection—All-Year Roadside Stands Probable—Erects Poultry Apartments.

Trenton, N. J.

REPRESENTATIVES of New Jersey farm organizations and the State Department of Agriculture met at Trenton on March 17 with officers of the New Jersey State Police, to develop a clearer understanding of police protection in rural sections. The meeting is in line with efforts of the farmers to work out ways and means for further assistance against the stealing of farm products, particularly poultry. Senator David H. Agans, Master of the New Jersey State Grange, Secretary W. B. Duryee, of the State Board of Agriculture, and other prominent agricultural men presented the viewpoint of rural New Jersey at the conference.

Winter Roadside Marketing

The persistence of roadside marketing as an all-year policy in New Jersey is indicated by a recent report of the State Bureau of Markets, which showed that a good volume of business was done by some of the larger stands during February in central and southern New Jersey.

The adoption of new regulations and by-laws, as well as a reduction in the membership fee of the Farmers' Roadside Market Association of New Jersey, has brought about an early-season interest in roadside markets, and indications are that more markets will be under state inspection and regulation this summer than at any previous time. The "honest pack" method of the association membership is rapidly gaining in favor among women's organizations and the auto-riding public.

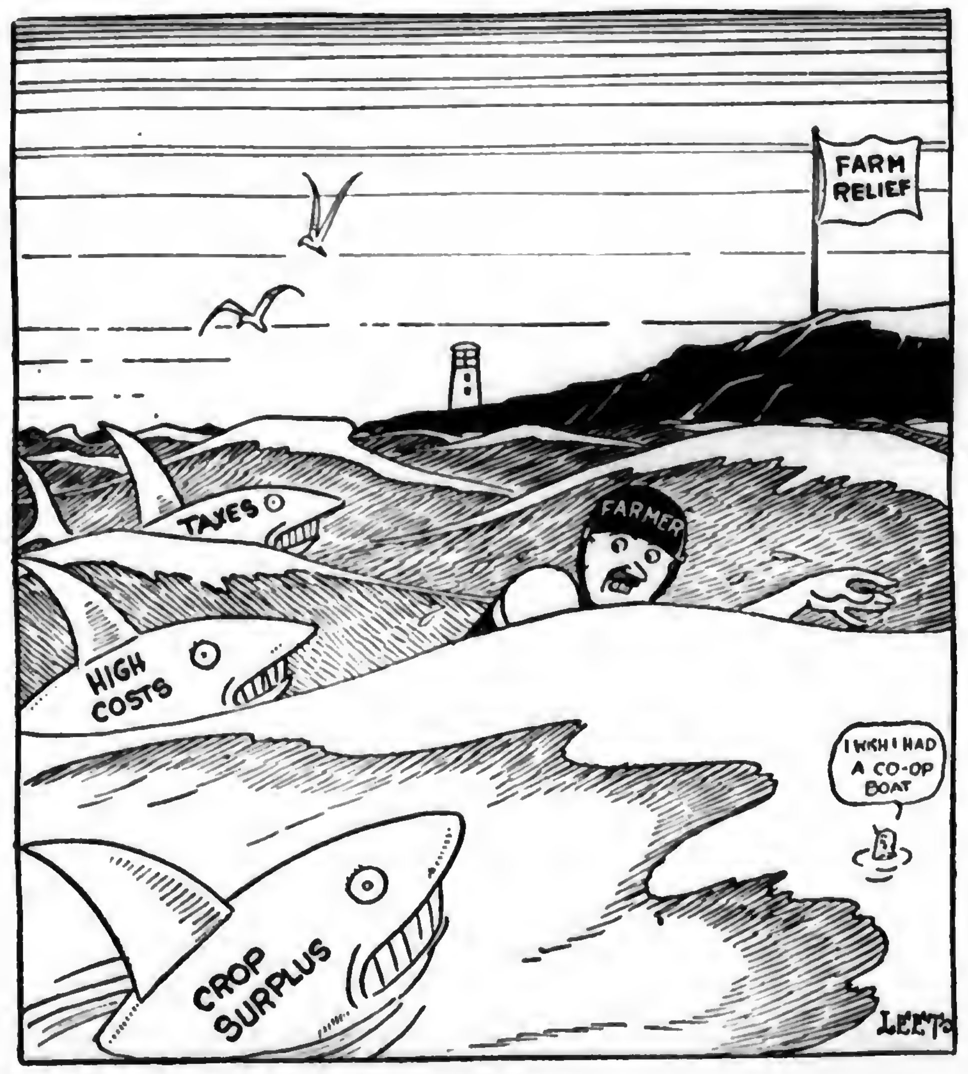
Cow-Testing Gains

The Flemington Cow Testing Association of Hunterdon County is showing results which are having a wide and direct influence upon dairymen thruout the county. During the last calendar month 31 herds were tested, out of which 45 cows made more than 40 pounds of butterfat and 25 produced more than 1200 pounds of milk in 28 days. The association located 17 unprofitable animals among its members and enabled several sales of breeding animals to be made on a production basis to customers in other parts of the state. The association is holding meetings to interest dairymen at other points in Hunterdon County and indications are that several new associations will be organized.

Builds Poultry Skyscraper

An innovation attracting considerable attention in central New Jersey is the four-story poultry house now being constructed by Paul Smith, at Vineland, in Atlantic County. High priced land and the need of intensifying the housing of layers has necessitated this rather unique building, Mr. Smith states. Labor-saving machinery and other features found in manufacturing plants, are being installed. The practicability of the experiment is questioned but nevertheless is watched with interest by poultrymen. The building will hold 9600 laying fowls.—B.

ANOTHER LONG DISTANCE SWIMMER



"MAPLE SUGARING" ON

Mild March Days Start Flow That Promises to Be Short—Milk Price Above Last Year—Ready for Thieves.

Ithaca, N. Y.

THE mildest March in history is half gone, and "maple sugaring," or the making of maple syrup is well under way. The season promises to be very short, as the weather is so warm it seems that buds must start unusually early. Also the frosty nights needed for good sap runs are lacking. Syrup may sell for more than usual if this weather holds, but more than $2 a gallon does not seem likely. Eggs are the lowest in years at this season, as are hay and straw.

February Milk Price Holds Up

A net pool price of $2.67 per hundred pounds was received by Dairymen's League members for their February milk. This is the same as paid in January, and is 31 cents above the 1926 price for February. Final reports on the annual withdrawal period which closed on March 1 shows 1943 contract cancellations, or 651 less than the total of a year ago. During the year 1474 new contracts were received, without any campaigning for members.

Vigilance Service Begins

The New York State Farm Bureau Vigilance service for the protection of farmers from thieving has begun for this year, with the issuance of directions to farmers as to procedure in case of thievery. More and bigger signs will be used this year.—M. G. F.

V-C Super Analysis Fertilizers

V-C
Super Analysis Fertilizer
Saves you half the freight
Saves you half the hauling
Saves you half the handling

Save You Money

Every bag of V-C Super Analysis Fertilizer you apply will save you money.

You get more pounds of plant food per ton at a lower cost per pound.

You save half of your freight bill. Your cost and labor of hauling is cut in half, and you save nearly half of the labor in applying.

In V-C Super Analysis Fertilizers for cotton, corn, tobacco and other crops are combined our manufacturing skill, the experience of practical farmers and the investigations of State Agricultural authorities.

The result is a product carrying twice as much plant food as an ordinary grade of fertilizers. You need use only half as much.

A V-C dealer is near you anxious to supply you. Let us introduce him if you don't know him.

For more facts about V-C Super Analysis Fertilizers and the experience of other users, write

A Little Tool Used Regularly Stops Leaks

MANY times it has been stated that the lead pencil is the most useful tool on the farm. On no farm can this be more true than on one devoted to the growing of a wide variety of vegetables with two or three plantings of each kind—perhaps as many as a dozen plantings to provide a succession of radishes. The faithfulness and accuracy with which we record results and observations will often influence future profits, and it is easy, very, very easy to slip in this connection.

If we plant this year three strains of celery and one of the three proves a better money maker than the others what will it be worth to be able to identify with certainty that particular strain for purposes of reordering? Last summer the planting record of a two-acre early celery plot was lost thru its being accidentally torn from a notebook. A second frantic search of a waste basket, which fortunately had not been emptied for several days, finally revealed the crumpled bit of paper. And it looked almost as good as a $500 bill! That is not putting it too strongly for there actually was that much difference in the return per acre between the two best and nearly equal strains and three that proved inferior.

Loose Leaves Are Very Handy

A modern type loose-leaf notebook to be carried in the field at all times and from which important records may be removed for safe filing in the desk, is almost indispensable. A moment serves to record that the first 9 rows of peas, beginning at the east side of the plot are Laxtonian, the next 8 World's Record, and the last 6 Improved Stratagem.

Field or garden labels driven at the beginning of each kind are very convenient when comparing varieties but may be missing when most wanted. The best of horses sometimes show a fine disregard for what they knock over or step on in turning, boys have been known to jerk out a handy stake upon encountering ground moles or garter snakes.

Complete records of plant growing operations provide the only absolutely reliable guide to another year's plantings. A dozen or so sheets of the same paper used in the field notebook bound together between cardboard or manila covers with cord and hung in the plant house or boiler room are very convenient. Number the sheets consecutively as the pages of a book.

A sample sheet taken from my last year's book reads as follows:

Penn State Earliana
Own sowing 1925

---

1 oz. sown in 5 flats
February 24, 1926

---

32 flats (3200)
transplanted 2"x2"
March 13, 1926.

Second Shift 4"x4"
April 19

Set in field May 20.

No. 7.

The number 7 identified plants from this particular sowing on the pot labels placed in seed flats, flats of transplanted plants, and on the field stake. It is a very simple form of record and gives all we want; variety and strain sown; source and age of seed; how much seed was sown in how many flats (or square feet bed) and when it was sown; number of plants secured; when they were transplanted and at what spacing. Such records over a period of several years enable one to develop a plant growing plan or a schedule that makes for systematic methods and uniform results.

I have found my lead pencil another great help in connection with a desk calendar which provides space for daily entries. A half day or evening in winter spent making entries such as those which follow with such variations as local conditions may warrant, will keep one up to the minute in getting things done on time.

May 10—Has a succession planting of radishes been made?

June 1—Have berry baskets been ordered?

July 15—Sow lettuce for fall use.

July 20—Is Virginia Blight Resistant spinach seed on hand for August sowing? If not, rush order.

August 10—Wonder if celery ought to be nitrated?

Certainly anything we can do to help us be on time all the time is well worth while.—Gilbert S. Watts.

Why Do You Buy Fertilizer?

WHY do you buy commercial fertilizer? Because someone said it was a good thing to do? Because the neighbors buy it? Because you have more money than you know what to do with?

In our issue of March 12 we asked readers to tell us about their experiences with commercial plant food, hoping that we might hear from a number of observing and progressive farmers about the experiences that convinced them it pays to fertilize. We have heard from some, but not enough. To give others an opportunity we have postponed the closing date of the prize contest. Write us about your experiences, using either of the following as the subject of your letter:

HOW I HAVE PROFITED BY THE USE OF
COMMERCIAL FERTILIZER
or
WHY I USE COMMERCIAL FERTILIZER

For letters which the judges consider worthy the following prizes will be awarded:

FIRST PRIZE	$15.00
SECOND PRIZE	10.00
THIRD PRIZE	5.00

Other contest contributions published will be paid for at space rates. All letters should be in our hands by Tuesday, April 5. Address them to the CONTEST EDITOR, PENNSYLVANIA FARMER, 261 South Third Street, Philadelphia.

Hotbed Located with Southern Exposure Is Best

I would like to have advice on making hotbed. I want to make one 3 feet wide and 45 feet long. How deep should I make it? How much manure will I use, if any, for sowing seeds to raise plants for sale? Also, I want to make a hotbed to lay up sweet potatoes for plants, let me know how and when to make this.—Mrs. L. C. B., Adams County, Pa.

It will be advisable to locate your hotbed in a well drained place with a good open exposure to the south. If you can make use of buildings, trees or a hill as a natural windbreak on the north and west more favorable conditions will be provided.

Run the bed as nearly east and west as possible making the top of the frame 6 inches lower along the south side than along the north side to shed rain and let in the maximum of sunlight. A depth of 24 to 30 inches will be about right.

At this season of the year about 18 inches of evenly heated horse manure, well firmed and just moist enough to pack down without being soggy, should carry thru your vegetable seedlings. These may be started in 4 to 6 inches of good soil placed on top of the manure. Straw or burlap mats or some other covering will be required at night and should be left on all day in especially severe weather.

Starting Sweet Potato Plants

In making manure heated hotbeds to grow sweet potato plants in the north 12 to 18 inches of manure is commonly used, the bed being started about 7 weeks before the plants may safely be set in the field. About 4 inches of loose soil or sand is raked level on top of the manure and a thermometer placed with the bulb an inch or so below the surface.

When the soil temperature drops to 85 degrees F. the seed is bedded as close together as possible without the roots touching one another. One or two inches of soil or sand is then placed over the roots and the bed is watered thoroly. Additional covering may be added after the plants are above ground to develop a stronger root system.—Gilbert S. Watts.

Evidence Against 1926 Seed Corn Piles Up

THE serious seed corn situation in southeastern Pennsylvania was very clearly illustrated at a recent community meeting of farmers of Philadelphia and lower Bucks County held at Eddington under the direction of the Philadelphia County Agent, Charles K. Hallowell. Corn from seven different sources that had been put in a seed germinator was exhibited to those present. Only one sample showed a 95 per cent germination test, and that was from corn grown in 1925.

Other samples, which were from corn grown in 1926, coming both from cribs and from lots of corn selected for seed last fall and stored separately, gave germination tests from 10 to 60 per cent.

Leading farmers in this section have learned that even corn that was put on drying racks last fall was injured by the low temperature in early December, before the excess moisture had left the corn. This was brought out very strongly to those present at the Eddington meeting by Jason Bowman, of Torresdale, who has run individual tests on over 1000 ears of field selected seed corn. He said that he is not getting over 75 per cent germination on that kind of seed corn.

Those who had investigated their seed corn went on record as saying that the supply of good seed corn was more limited in that section than ever before.—H.

Scientifically Designed BALLOON TIRE TREAD

CROSS SECTION OF REGULAR OR HIGH PRESSURE TIRE UNDER LOAD
CROSS SECTION OF GUM-DIPPED BALLOON TIRE UNDER LOAD
The Mark of Quality
Firestone

THIS type of tire rides more directly on the wide rider strip at the center of the tread. That is where the weight and wear come, so that is where extra rubber is needed. The walls and tread of this tire are thick and stiff, making necessary the use of large tread design for high pressure tires.

THIS type of tire—low pressure Balloon—carries the load on a wider surface, therefore grooves are cut directly in the center of the Firestone Tread to permit easy flexing. Greater amount of Rubber is placed at outer edges of tread where most of the load is carried. Instead of large, heavy rider strips and projections which retard flexing and cause skidding, the Firestone Tread is provided with small projections and narrow rider strips which increase flexibility and give greater safety and skid-protection.

Another Reason why—Firestone Tires are Better

When Firestone engineers were developing the Balloon Tire they found it necessary to design a tread altogether different from that which is required by High Pressure Tires.

The Firestone tread was not designed with large, massive projections for appearance or to make plausible sales argument. On the contrary, the projections of the cross-and-square tread are small and the rider strips narrow permitting the tread to yield to irregularities and cling to the road, giving the greatest non-skid surface. This tough, pliable tread has the wear-resisting qualities that give thousands of extra miles of service.

The tread, however, is not the only important part of the Balloon Tire. Such a tread as this, designed to yield to every depression of the road, must be placed on the carcass that also has the qualifications to withstand the terrific flexing that this design tread permits. Firestone provides this extra strength and endurance by dipping the cords of the carcass in a rubber solution. By this process, every fiber of every cord is saturated and insulated—to withstand the extra flexing of the Firestone tread.

If you want the economy, comfort and safety of Gum-Dipped Tires—see the nearest Firestone Dealer. He will gladly explain the many features that make Firestone Tires better.

Rambles of a Pennsylvania Fruit Grower

II. In Piedmont Virginia

THE Blue Ridge, which is South Mountain in Pennsylvania, divides the Old Dominion in more ways than one. It separates the Valley from the Piedmont geographically, but also is the boundary between two quite distinct types of people and of agriculture. The gateway to the Piedmont is the splendid highway over the Ridge, thru Rockfish Gap. There is no more beautiful panorama of scenery in the East than the view from Rockfish Gap, unless it be the view of the Moccasin Bend of the Tennessee River from Lookout Mountain.

The fruit growing of the Piedmont is mostly in coves tucked away in folds of the Ridge, and on rather steep slopes, as compared with the more open country and more gentle slopes of the Valley. The passerby gets an impression of steep orchards. Many have roads cut into the hillside every third or fourth row. A few are so steep that the fruit has to be hauled down in headed barrels, on sleds; the sprayer, likewise, is mounted on a sled.

Yours for the Asking

THE Pennsylvania Department of Agriculture has available for free distribution two bulletins which discuss the Japanese beetle and give control measures. Bulletin 390 describes the insect, its life history, extent of damage, etc., and shows an enlargement of the beetle in color. Bulletin 406 entitled "Sprays for the Japanese Beetle" gives spraying methods used to control the insect. Requests for these bulletins should be addressed to Geo. F. Johnson, Editor, Department of Agriculture, Harrisburg.

These steep orchards are at an increasing disadvantage as the element of human labor enters more and more largely into the cost of production. It is not necessary to have a site that makes a man dizzy in order to secure good air drainage. Were it not that the Piedmont grows to perfection two of the highest priced varieties of apples, the Winesap and the Pippin, some of these steep orchards would have been forced out long ago.

In the South, steepness means erosion, unless the land is protected by forest or a permanent sod. This is especially true of the red clay soils of the Piedmont. Even the hated broom sedge, or poverty grass, which is taking possession of the old fields and some orchards, is better than nothing to keep the soil from washing.

Soil Gashed by Open Wounds

The loss by erosion thruout the South is staggering. Nothing could be more disheartening to one who loves the soil than to see the hundreds of thousands of acres, once productive, now nearly, or quite, ruined for agriculture by a network of deep gullies or the surface soil "galled off," all blood red, like open wounds on the bosom of the earth. In some sections nearly every farm has one or more "old fields" which have been "turned out" to rest, like a broken-down old horse.

These worn-out fields are damning evidence of the wasteful farming and soil mining that has characterized our agriculture in certain sections since colonial days. It was easier to clear new ground and to profit by its virgin productiveness than to take the trouble to maintain the fertility of land already under the plow. As long as the new ground retained its life-giving humus it did not wash, even on steep slopes; when this was exhausted by robber farming, erosion began.

Ask Reclamation for South

The remedies are deep plowing, green manuring, permanent pasture and, in many cases, reforestation. Hundreds of thousands of acres of old fields thruout the South are returning to forest, mostly yellow pine, as is the case in some parts of Pennsylvania. Probably this is best, but it raises a question as to the wisdom of governmental irrigation projects, involving the expenditure of hundreds of millions, for developing high priced land in the West.

Recently the secretaries of agriculture of several southern states have requested the federal government to institute reclamation projects on the old fields of the South. This seems like common sense.

In the Old Winesap and the Albemarle Pippin the Piedmont has two of the best bets in apple growing. Both are high quality sorts, late keepers and can be grown to perfection only in limited areas. Good Pippins rarely fail to bring any less than $6.00 a barrel out of storage in April and May and Virginia Winesaps are nearly as comforting. The cost of production, however, is high, partly because more spraying is necessary.

It is customary to give several late summer sprays with Bordeaux for bitter rot. This stains the fruit and makes some people think it is poisonous. The chemist of the Virginia Experiment Station has not been able to find enough arsenic on these late-sprayed apples to cause any uneasiness. As a matter of precaution, however, he is endeavoring to perfect a method of removing the spray from the apples. The wiping machines used in the West are only partially effective. He finds that a practicable method is to place the apples in large wire baskets and dip them into a weak solution of hydrochloric acid. This operation costs less than five cents a bushel.

The Center of Community Life

I returned to the Valley to attend services at the century-old Tinkling Spring Church, near Fishersville. One of the most disturbing features of country life today is the decline of the rural church. The automobile is by no means an unmixed blessing. It has created social and religious problems that will require all the wisdom and patience of our generation to solve. Here, however, I found an old time country church such as our fathers knew—the center of the community life, social as well as spiritual.

The hearty greetings of friends and strangers alike, the men standing around in front of the church before the service and after, discussing neighborhood news; the women doing the same inside the church, only more so; the children everywhere; the dignity and reverence of the simple service—all was as I remember it as a boy. The country church is a saving factor in rural life that we can ill afford to spare. The town church, no matter how elaborate, can never take its place.—S. W. Fletcher.

Friendly Talks

By EDGAR L. VINCENT

IT IS a great thing to have a job. Of all the lonesome, hopeless men I know, those who have nothing to do are the most lonesome, the most hopeless. But what if one has a place and there is lack of harmony between the man and the job? How is it then? That may be fully as bad as to have nothing to do. It is serious when a farmer or his wife chafes all the time, as some men and women I know do. These folks feel that if they had the place someone else holds they could make a big thing of it. But the chances are they would not, unless by nature they are fitted for that particular line of business. No one can do another's job and do it right.

It must be one's own job, and he must love it if it is to be worth while. Ask yourself then, "Do I love my job?" Some folks do. My father went to the Civil War and he never came back. My mother had six little ones. We lived on a small farm, badly mortgaged. In the spring of the year mother and I, because I was the oldest, about twelve, worked alone in the sugarbush. We tapped the trees; we gathered the sap with a neckyoke, and we boiled it in a big iron kettle hung on a pole between two trees.

Mother Inspired Love for Work

But many and many a time while we would be at work, and we loved that work, I would be telling mother some little story that was running in my mind. One day she said, "Write it down, Edgar," and that started me to writing for it gave me the inspiration I needed.

Where did I get my love for that kind of work? My mother had been a school teacher when she was a girl and she had talent for writing. It was she who encouraged me all thru the years when my boyish mind was developing and ever since I have had a passion for that kind of work. Sometimes it has seemed to me that if I could not do it, I would die. It is so dear to me!

Now, I am sure you will pardon me for these scraps from my own experience. The thought I wish to bring out is that to win the best there is we must love our work with all our hearts. And many farmers do love their work that way. I have a boy on the farm now who would rather be a farmer than anything else, altho he is fitted for almost any kind of professional work. And these are the ones that are truly successful, whether they have a fortune or not.

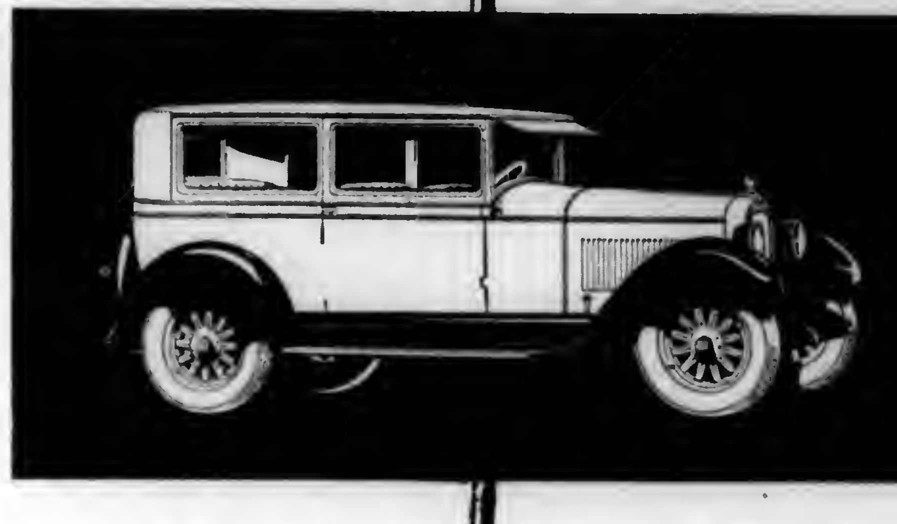
No Call to Be a Farmer? Why Not?

"But I have no call to be a farmer. Nobody could ever be called that way. Called to be preachers or missionaries, but farmers? Never!" And yet, it is my honest belief that God calls many men to be farmers, and they are doing their best work just where they are. Many a woman has a real genius for homemaking and mothering boys and girls. If any reader of this is in that class, be sure that God has put you just where you are, and He knows and will some day reward you for the good, earnest, faithful work you are doing.

A man can be called to plow a field just as truly as he is to write a sermon. And it is great to follow such a calling day by day, earnestly, confidently and with the best ability with which one has been blessed.

Let's try hard then, to believe that the job we have is God-given and do it the very best we can, without worrying or chafing, for that means the happiest and best life possible.

GENERAL MOTORS' LATEST ACHIEVEMENT
The New and Finer
PONTIAC SIX



SEDAN $775

Oakland announces an entirely new line of Pontiac Sixes, notably enhanced in beauty, incorporating numerous refinements in design and carrying new *low prices*.

New Fisher Bodies
Never in any low-priced six have been achieved such commanding beauty and luxury as in this latest achievement of General Motors. Lending luster to even the Fisher tradition of masterly craftsmanship, the new bodies by Fisher are longer, lower and superbly executed to the slightest detail.

All New Duco Colors
To emphasize their inherent smartness, all body types are finished in new combinations of Duco colors.

New Beauty and Style
Pontiac Six beauty has always been outstanding. But now in these new and finer models has been achieved not only new beauty but also an arresting rakishness—the results of a deeper radiator; larger, heavier, and more sweeping crown fenders; and more massive headlamps. Windshield pillars are narrowed to conform to the accepted custom-built vogue and to provide a wider arc of visibility. Window ledges are smartly recessed and finished in a contrasting color.

Mechanical Refinements
In addition, the new and finer Pontiac Six introduces many new features and refinements in engineering design—such as tilting-beam headlights with foot control, new transmission and brake levers, a clutch even smoother and more positive in action and an oil-sealed universal joint.

Two New Body Types
Two entirely new body types of characteristic beauty have been added to the Pontiac Six line. These are a dashing, youthful Sport Roadster, finished in Lucerne Blue, striped with Faerie Red; and a 4-passenger Sport Cabriolet, with Brevoort Green top and fenders, and body in Cherokee Gray, striped with orange to rival the vogue and smartness of the highest priced cars of the day.

AT NEW LOW PRICES
Sedan $775 Sport Roadster (With Rumble Seat) $775 Sport Cabriolet (4-pass) (With Rumble Seat) $835

Planet Jr.
How far do you walk behind a cultivator?

WHEN you hook the single-tree into the clevis of a walking cultivator you may be off for a few hundred yards through the family truck patch. Or for several miles between rows of corn, or potatoes; tobacco or beans. What sort of a job will it be when it's done? Don't wait until cultivating days are upon you to make up your mind that you'll have a Planet Jr. No. 8 Horse Hoe this year. Planet Jr. No. 8 is the most famous five-tooth walking cultivator made. It is the last word in easy handling; for strength and rigidity; for convenience in adjusting by handy levers to the just right depth and width of cut. It sure lays by clean crops.

Full information about this famous tool is given on pages 34-36 of the Planet Jr. Catalog. Mailed free on request with handy home gardening manual—"Home Gardens—How to 'Grow What You Eat'".

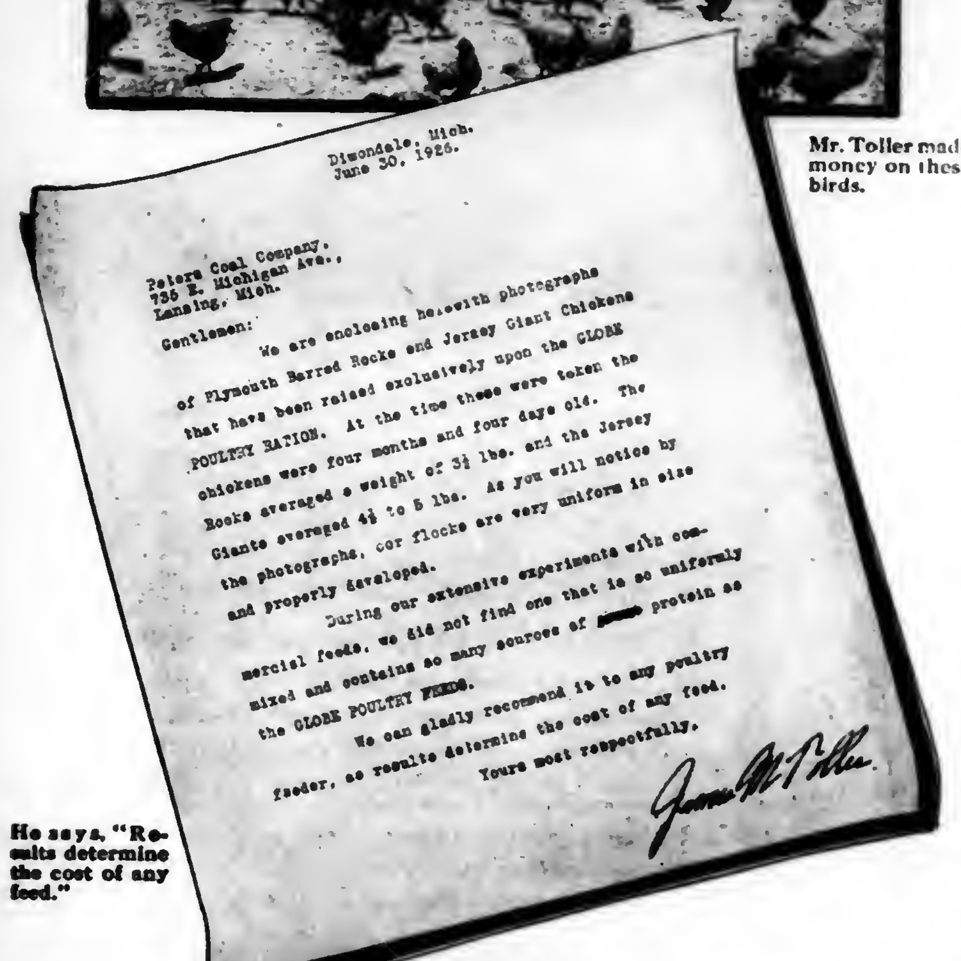
Does it Pay?

Mr. Toller made money on these birds.



Dimondale, Mich.
June 30, 1926.

Peters Coal Company,
736 E. Michigan Ave.,
Lansing, Mich.

Gentlemen:

We are enclosing herewith photographs of Plymouth Barred Rocks and Jersey Giant Chickens that have been raised exclusively upon the GLOBE POULTRY RATION. At the time these were taken the chickens were four months and four days old. The Rocks averaged a weight of 3½ lbs. and the Jersey Giants averaged 4½ to 5 lbs. As you will notice by the photographs, our flocks are very uniform in size and properly developed.

During our extensive experiments with commercial feeds, we did not find one that is so uniformly mixed and contains so many sources of protein as the GLOBE POULTRY FEEDS.

We can gladly recommend it to any poultry feeder, as results determine the cost of any feed.

Yours most respectfully,

James M Toller

He says, "Results determine the cost of any feed."

The One Thing You Want to Know About A Ration

Mr. Toller is right: if you are in the poultry business for profit, results—not price—determine the cost of a feed.

Globe Feeds are made for the poultry keeper who wants the biggest returns from his investment.

The Globe Method of getting the most out of chicks is described in the new booklet shown above, sent free on request.

Glenview Farm

Light Soils Better

Do you think it advisable to rear poultry on black loam soil?—Mrs. G. P. B., Cook County, Ill.

It is generally considered that a light type of soil is the best for poultry, as it seems to keep in better sanitary condition than the heavier types. The leading poultry sections of New Jersey are in a region of light soils, but a great many chickens are raised on heavy ground, my own included. Still, I believe that if I were to buy a farm primarily to go into the poultry business, I would try to locate one on a sandy soil.—R. L. Scharring-Hausen.

Where to Obtain Chick Feeding Schedule

How much cod liver oil should I feed baby chicks? Will you please send me pamphlets in regard to feeding baby chicks?—Mrs. M. S., Mercer County, Pa.

The proper proportion of cod liver oil for baby chicks is one quart of oil to 100 pounds of mash. This should be mixed in the dry mash; and as the vitamin that is very valuable in the oil is injured by prolonged exposure to air, it is best to mix up no larger quantity than will be consumed in a week.

The New Jersey State Experiment Station at New Brunswick, N. J., has just put out a very good chick feeding schedule which they will send you if you write in. This schedule was published on Page 14 of the February 19 issue of Pennsylvania Farmer.—R. L. Scharring-Hausen.

Fewer Cases in Spring

My chickens get a small hard lump under the eye. Eye generally swells partly shut. After awhile bill seems stiff so they can't eat very well. No pus forms but chicken tries to cough. Every one died that got the lump.—J. F. F., Westmoreland County, Pa.

Your chickens appear to be suffering from sinus roup, in which the cavity in the bone just in front of the eye becomes filled with a cheesy substance causing the swelling you mention. The best thing to do is to remove diseased birds to a warm place, which may help some of them to recover and also avoid the spread of the disease in your flock.

The house should be cleaned out thoroly and have new dry litter. Be sure the house is dry and free from drafts. There is very little that can be done in the treatment of this disease, but you might feed a poultry tonic in the mash for a while in order to build up the birds and help them resist infection. As spring approaches the danger from such diseases becomes less.—R. L. Scharring-Hausen.

Hurrah for the Black Leghorns

OTHER breed boosters can sing the praises of their stock all they want to, but there is just one best breed of poultry for me and that's Black Leghorns. I have kept Black Leghorns for a dozen years and have made more money with them than my neighbors with other breeds. I get about 50 per cent egg yield all winter.

Not only are they the greatest layers of nice large white eggs which sell for the highest price, but they are the healthiest and strongest breed. The chicks are very easy to raise and it takes poison to kill them. The Black Leghorns are always clean and nice looking, while a white-feathered fowl looks like a drowned rat when wet and dirty.

I keep about 800 of these black beauties and buy my chicks from one of your advertisers and have bought from him for years. As broilers the Black Leghorns dress a nice yellow skin and buyers pay as much for them as any other breed. Black Leghorns for mine.—J. E. H., Hunterdon County, N. J.

New Points in Brooding Chicks Outlined by N. J. Station

AT the meeting of the New Jersey State Poultry Association held in Trenton early in the year some new and interesting methods of brooding chicks were outlined by the Department of Poultry Husbandry of the New Jersey State Experiment Station.

In some sections where large numbers of chickens are raised in small areas, roundworms, tapeworms, and coccidiosis have become so prevalent as to threaten the poultry industry there. While it is possible to combat these troubles by the use of drugs, changing to new ground, etc., it has been found that treatments do not always remove all the worms from the digestive systems of the birds; and even where treatment is wholly successful from a removal standpoint, the intestines of affected birds are so changed by worms or coccidiosis as not to function properly, and to render birds liable to disease later on.

Round worms and coccidiosis come from infected soil, but tapeworms are transmitted by flies, in which they pass part of their life-cycle, so that no clean-up methods are effective so far as they are concerned.

To raise clean chicks in congested or infected areas, what is known as the "concrete slab" method was devised at the station. The chicks are brooded in a 10x12 brooder house, or better, a long house divided into sections of that size, which has been made fly-proof with bronze screen. The entrance consists of two doors with a vestibule. The floor of this vestibule is covered with two or three inches of sawdust saturated with a strong disinfectant in which the attendant shuffles his feet in order to kill any roundworm eggs on his shoes. These eggs are so small that Dr. Beaudette counted 200 of them in a sample of infected soil which was only 1-80th of a teaspoonful! All flies which get into the vestibule must be swatted before the inner door is opened, and of course none are allowed in the house.

Surrounded by Wire and Concrete

The chicks are allowed outdoors on a concrete slab raised six inches above the ground level and made fly-proof with a cage of angle iron fitted with bronze screen set in metal frames. The house and the floor are cleaned and disinfected at regular intervals. By providing the proper diet, it was found perfectly feasible to raise healthy birds free from parasites by this method. Pullets raised under these conditions in a fur-

White Diarrhea

Splendid Success of Mrs. Ethel Rhoades in Preventing White Diarrhea

Mrs. Rhoades' letter will no doubt be of utmost interest to poultry raisers who have had serious losses from White Diarrhea. We will let Mrs. Rhoades tell it in her own words:

"Dear Sir: I see reports of so many losing their little chicks with White Diarrhea, so thought I would tell my experience. My first incubator chicks when but a few days old, began to die by the dozens with White Diarrhea. I tried different remedies and was about discouraged with the chicken business. Finally, I sent to the **Walker Remedy Co., Dept. 518, Waterloo, Iowa,** for a $1.00 box of their Walko White Diarrhea Remedy. It's just the only thing for this terrible disease. We raised 700 thrifty, healthy chicks and never lost a single chick after the first dose."—Mrs. Ethel Rhoades, Shenandoah, Iowa.

Cause of White Diarrhea

White Diarrhea is caused by microscopic organisms which multiply with great rapidity in the intestines of diseased birds and enormous numbers are discharged with the droppings. Readers are warned to beware of White Diarrhea. Don't wait until it kills half your chicks. Take the "stitch in time that saves nine." Remember, there is scarcely a hatch without some infected chicks. Don't let these few infect your entire flock. Prevent it. Give Walko in all drinking water for the first two weeks and you won't lose one chick where you lost hundreds before. These letters prove it:

Never Lost a Single Chick

Mrs. L. L. Tam, Burnetts Creek, Ind., writes: "I have lost my share of chicks from White Diarrhea. Finally I sent for two packages of Walko. I raised over 500 chicks and I never lost a single chick from White Diarrhea. Walko not only prevents White Diarrhea, but it gives the chicks strength and vigor; they develop quicker and feather earlier."

Never Lost One After First Dose

Mrs. C. M. Bradshaw writes: "I used to lose a great many chicks from White Diarrhea, tried many remedies and was about discouraged. As a last resort I sent to the **Walker Remedy Co., Dept. 518, Waterloo, Iowa,** for their Walko White Diarrhea Remedy. I used two 50c packages, raised 300 White Wyandottes and never lost one or had one sick after giving the medicine and my chickens are larger and healthier than ever before. I have found this company thoroughly reliable and always get the remedy by return mail.—Mrs. C. M. Bradshaw, Beaconsfield, Iowa."

You Run No Risk

We will send Walko White Diarrhea Remedy entirely at our risk—postage prepaid—so you can see for yourself what a wonder-working remedy it is for White Diarrhea in baby chicks. So you can prove—as thousands have proven—that it will stop your losses and double, treble, even quadruple your profits. Send 50c for package of Walko (or $1.00 for extra large box)—give it in all drinking water and watch results. You'll find you won't lose one chick where you lost dozens before. It's a positive fact. You run no risk. We guarantee to refund your money promptly if you don't find it the greatest little chick saver you ever used. The Pioneer National Bank, the oldest and strongest bank in Waterloo, Iowa, stands back of our guarantee.

WALKER REMEDY CO., Dept. 518,
Waterloo, Iowa.

Send me the [ ] 50c regular size (or [ ] $1 economical large size) package of Walko White Diarrhea Remedy to try at your risk. Send it on your positive guarantee to promptly refund my money if not satisfied in every way. I am enclosing 50c (or $1.00). (P. O. money order, check or currency acceptable.)

ther experiment outlaid similar pullets raised on range.

To carry out this system completely, it would be necessary to confine the adult birds to the laying houses and observe the same precautions as to flies and roundworm eggs. Of course, such a system would not be necessary out in the country away from the congested poultry districts, but in such districts it may provide the only means of raising healthy pullets.

New Ration Proves Satisfactory

In order to meet the unusual demands of rearing chicks in confinement, and because the old chick ration was not entirely satisfactory for other reasons, a new chick ration has been designed. Results of last year's feeding trials on the Experiment Station Poultry Plant have made it possible to have Leghorns average 1 1-4 lbs. at eight weeks and to make steady gains to a maturing weight of four pounds. The ration is designed to meet all nutritive requirements of birds raised in confinement for the prevention of coccidiosis, blackhead, roundworms and tapeworms.

The following mash was found to be the most economical growth-producing ration:

20 lbs. wheat bran, 20 lbs. red dog, 20 lbs. whole yellow corn ground, 20 lbs. ground rolled oats, 10 lbs. meat scrap—50 per cent, 5 lbs. dried milk, 2 lbs. oyster shell meal, 1 lb. salt, 1 qt. cod liver oil.

The scratch ration fed consisted of two parts fine cracked corn and one part fine cracked wheat.

The Young Bird's Schedule

First Three Days.—Liquid milk to drink, either sour skimmilk or commercial condensed skim- or buttermilk diluted one part in seven parts of water. It is preferable to continue this practice indefinitely, thus promoting best possible growth.

Three Days to One Week.—Feed mash in pans twice daily, all the chicks will eat in twenty minutes; scratch feed 3 times daily, all they will eat in twenty minutes.

One Week to Twenty Weeks.—Furnish plenty of mash hopper space. Add fresh mash daily. Scratch feed three times daily. Green feed must be tender and succulent. Feed small amounts at start then increase to what the chicks will eat in fifteen minutes. Infertile eggs from incubator boiled hard make a splendid delicacy for the chicks.

Birds in Confinement.—300 chicks to a 10x12 brooder pen.

Birds to be Allowed Free Range.—350-400 chicks to the flock.

Remove all males 4 to 5 weeks of age. Furnish perching space early to prevent crowding.—R. L. Scharring-Hausen.

Nest Box Notes

IN talking with a representative from one of the large hatcheries the other day, he brought out the fact that many eggs were infertile during cold weather due to the fact that they had been chilled. We gather three times a day, and keep the eggs at about 60 degrees.

• • •

Coal brooders are usually more satisfactory than oil brooders during cold weather, as they hold the heat better, but oil brooders are more convenient later in the spring, when the fire is not needed during the day, as they are more quickly and easily fired up.

• • •

Peat moss makes one of the best litters for brooder houses. A bale sufficient to litter thinly a 10x12 brooder house several times costs around $2.50. The coarse grade is used.—R. L. Scharring-Hausen.

PAN-A-CE-A

Prevents and relieves little-chick ailments

GIVE chicks no feed until their systems are strong enough to receive it. Nature provides nourishment for the first 48 hours. Then raise them the Pan-a-ce-a way.

Pan-a-ce-a prevents indigestion and indigestion leads to bowel troubles which cause more chick losses than all other causes combined.

Pan-a-ce-a keeps the system free from poisonous waste materials, which are often the cause of fatal maladies. **No indigestion, no bowel troubles, no gapes, no leg weakness where Pan-a-ce-a is fed regularly.**

Pan-a-ce-a is a valuable nerve tonic which brings into healthy action every little-chick organ. It whets the appetite and enables chicks to get the good of their feed.

Pan-a-ce-a contains the best blood builders known. It supplies the important minerals so necessary to bone development, muscle making and feather formation. A Pan-a-ce-a chick outfeathers a non-Pan-a-ce-a chick every time.

Pan-a-ce-a your half-grown fowls

If you want early broilers, if you want pullets that will mature into fall and winter layers, you must prevent the backsets in your flock. Pan-a-ce-a is your insurance policy. Add it to the ration daily—one pound to every fifty pounds of mash or feed. Costs little to use. The price of one two-pound broiler will pay for all the Pan-a-ce-a 200 chicks will require for 60 days.

If Pan-a-ce-a does not do all we say, and if it does not make you a real profit, take the empty container back to the dealer and he will refund your money.

Dr. Hess & Clark, Inc., Ashland, Ohio

MARTIN METAL Brooder Houses

Stop Your Baby Chick Losses this year. Raise 2lb. broilers in 8 weeks—buy or hatch your chicks earlier and get higher prices. You can if you have a Martin.

Monroeville (O.) Hatchery writes—"Raised 97 per cent."
A. J. Swineford writes—"Had 2lb. broilers in 8 weeks."
Mrs. W. Leffler writes—"Expect to buy another Martin in the spring."

Brooding chicks in a Martin is safer, easier, surer, FIRE-PROOF, rat and weasel proof, sanitary, dry, warm—even in zero weather, stove in center, no corners—prevents crowding. **"Ray-Glass" Windows** let in the Violet Rays of the sun. Ideally ventilated—no drafts. Sizes, 500 chick and up. Shipped knocked down—easy to put up. Last a life-time. Write for illustrated folder and price.

The Martin Steel Products Co., Dept. 220 Mansfield, O.

Build with Concrete for economy and permanence. Get a better mixture and do away with hard hand-labor by using a **Peerless Concrete Mixer** Built in 2 sizes for farm use. One H.P. engine will operate. Built strong but priced low.

Free Test

For White Diarrhea

In few hours, disease is stopped and sick chicks full of pep.

It's easy to stop chicks dying from white diarrhea. All you need do is drop an Avicol tablet in the drinking water. Thousands of poultry raisers, year after year, raise nearly every chick by this simple precaution. Mrs. E. E. Franks, Ramsdell, Tex., writes: "I was losing 10 to 15 chicks a day before I received the Avicol. I haven't lost one since."

A free test of Avicol will show how easily white diarrhea is prevented and stopped. The way it makes sick chicks lively and healthy, in just a few hours, is positively amazing. If you have never tried Avicol, write for a free sample, or send 50c for a full-sized package to **Burrell-Dugger Co., 846 Postal Station Bldg. Indianapolis, Ind.** It costs nothing to try the 50c package, because Avicol is guaranteed to do the work or money refunded. But if you prefer, try the free sample first.

Ball-Bearing

Ball-Bearing

McCormick-Deering

(PRIMROSE)

The Ball-Bearing Machine

THIS is the wonderful machine that set the pace in modernizing the cream separator. From farm to farm went the good word about the new efficiency that eased the daily work and added to the daily cream saving. The demand for the *ball-bearing* machine—McCORMICK-DEERING—grew by leaps and bounds. Thousands upon thousands invested in the simpler, easier-turning, cleaner-skimming separator. Today these thousands are better friends than ever of the durable ball-bearing machine.

The best test of success and popularity is the testimony of owners. When you buy a cream separator, ask the men and women who use McCormick-Deering day in and day out. Satisfy yourself about every point—*cream saving, cleaning, turning, sanitation, lubrication, simplicity, durability,* and *service.* Go by what they say about the ball-bearing machine.

Made by the Harvester Company. Sold everywhere by the McCormick-Deering dealers. You will profit by investing in a McCormick-Deering Cream Separator.

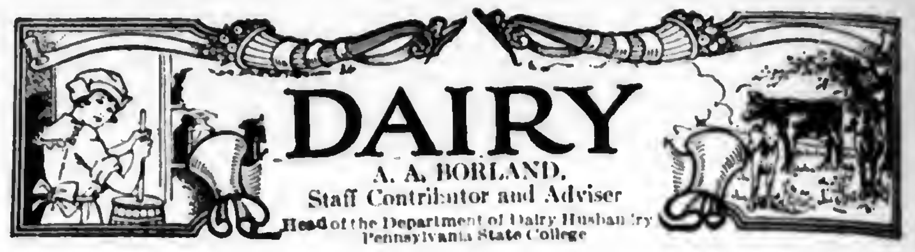
The Old Home Farm, Allamuchy, N. J.



DAIRY

A. A. BORLAND,
Staff Contributor and Adviser
Head of the Department of Dairy Husbandry
Pennsylvania State College

The Cow Is the Farmer's Market

(Continued from page 3)

Figures from Pennsylvania cow testing associations show that each 1000 pounds increase in annual milk production per cow has been accompanied by a decrease, on the average, of about 40 cents in cost of producing 100 pounds of milk. Does not this fact point the way to a more successful dairy industry? The price the dairy farmer receives for his milk is largely fixed by the general law of supply and demand and there is little the dairyman can do to increase the price beyond producing a good quality of product and in cooperating with other dairymen in selling their product.

Butter Stocks Are Low

THERE was less than one-third as much creamery butter in storage on March 1, 1927, as on the same date a year ago. Here are the figures on March 1 cold storage holdings of several commodities as reported by the U. S. Bureau of Agricultural Economics:

	This year	Last year
Creamery butter (lbs.)	8,056,000	26,313,000
Apples (barrels)....	2,162,000	2,288,000
Apples (boxes)	7,352,000	7,898,000
Meats (pounds)	823,579,000	715,708,000
Frozen poultry (lbs.)	129,608,000	95,397,000
Case eggs (cases) .	87,000	77,000

It is noteworthy that there are fewer apples in storage this year than last, despite this year's large crop.

On the other hand, by weeding out his poorer cows, replacing them with better ones and giving all good feed and care, he can continue year by year to cheapen costs of production, thus gaining exactly the same benefit as would follow if prices paid for milk were raised each year.

The following comparison of the returns from 10 cows and from 25 cows, representative of groups of cows in a Pennsylvania cow testing association, brings out in a striking manner the differences in value of the cows in the two groups.

	Ave. annual milk yield lbs	Total milk yield lbs.	Total feed cost	Total returns above feed cost
10 cows......	11,264	112,640	$1241	$1553
25 cows......	4,397	109,915	2016	[illegible]

It is thus shown that the 25 cows of about average producing capacity gave slightly less milk than did the ten better cows, that the feed cost of producing the milk with this group of 25 cows was $775 MORE than with the ten cows, and that the returns above feed cost were $670 LESS than in the case of the ten cows.

"Total" and "Net" Aren't the Same

There was also a further handicap, for the 25-cow group required a greater investment in cattle, in barn room, in labor, and in other items.

Then, too, "total returns above feed cost" should not be confused with NET returns. Other costs in milk production usually approximate costs of feed. If we were to apply this rule the 25-cow group would fail by $1147 to meet the cost of production, while the 10-cow group would still have a good margin of profit to its credit.

There are other factors that affect the value of the herd as a market for farm crops. The more important of these are calf raising, feeding and the crops raised on the dairy farm.

Dairymen should see in the heifer calf the future cow and should seek to develop it into a strong, vigorous cow. Many calves with an excellent inheritance for milk production are neglected during the period of devel-

(Continued on next page)

Ask Money for Research

FRIENDS of the Pennsylvania State College, particularly those interested in the School of Agriculture, made an impressive showing at the hearing on the State College appropriation bill before the Appropriations Committee in the House of Representatives at Harrisburg on March 15th.

Farmers in about two-thirds of the counties of the state were represented at this hearing where speakers for various farm organizations urged the passage without change of Senate Bill 537, providing funds for the operation of the College and its extension and research activities during the next two years.

The bill as introduced makes the following provisions:

For general maintenance.	$2,181,000
For agricultural research.	403,500
For agricultural extension	650,000
For buildings	1,000,000
Total	$4,234,500

The amount provided by this bill will not be sufficient to bring the Pennsylvania State College up to the standard of the state universities in many smaller states. It simply represents the amount that will enable the College to "carry on" during the next two years, with the addition of $403,500 for research on pressing problems of utmost importance to farmers,—problems resulting from the presence of new insect pests, new plant and animal diseases, new marketing problems, etc.

To meet the actual needs of the College an appropriation of $4,423,549 for general maintenance and agricultural extension, and $4,000,000 for buildings, would be needed, according to careful estimates. In the last ten years the state has provided for no additions to the academic physical plant of the College altho in that time enrolment has increased 50 per cent.

These and many other points emphasizing the needs of Penn State were brought out by the men who spoke before the Appropriations Committee. Special emphasis was placed on the importance of the item of $403,500 for research on new farm problems.

The speakers at the hearing were: S. S. Lehman, farmer and former county agent of Erie County; John Runk, fruit grower of Huntingdon County; Paul Guldin, president of the Pennsylvania Baby Chick Association; Morris Phillips, president of the State Council of Agricultural Associations; H. B. Steel, secretary of the Pittsburgh Dairy Council; John Light, secretary of the Pennsylvania State Grange; Fred Rasmussen, former state secretary of agriculture; Dr. Ralph D. Hetzel, president of the Pennsylvania State College; Miles Horst, secretary of the Pennsylvania Potato Growers' Association.

opment and as a result enter the working herd in a more or less stunted condition which lowers their milk production thruout their entire life. This neglect is costly to the dairymen. Good feed and care for the calf from birth to maturity is an investment that will pay big dividends thruout the lifetime of the cow. Inherited capacities for work or milk production cannot help the individual unless they are developed.

Space does not permit a detailed discussion of the principles of feeding but the subject is worthy of most careful attention. The source of milk is the feeds consumed by the cow, and the man who carefully balances his rations, or, in other words, adapts the feeds to the needs of his animals, will not only get more milk from a given amount of feed but will maintain his herd in a better condition of health. The cattle will also breed more regularly and live longer.

Feeding unbalanced rations is usually a wasteful and extravagant practice. Certain portions of such rations cannot be utilized by the cow in the production of milk and a long continued effort to make milk from materials from which milk cannot possibly be made results in depletion of the cow's vigor and lowering of her resistance to disease.

Feed Utilized in Two Ways

Mature cows use their feed mainly for two purposes, body maintenance and milk production. With the average cow the maintenance portion is high,—often two-thirds to three-fourths of the entire ration,—but this maintenance charge must be met; there is no escaping it. Its proportionate amount can be very materially reduced, however, thru the use of good cows and liberal feeding.

The amount of feed used for maintenance remains nearly constant regardless of the amount of milk produced but the proportion used for this purpose varies widely according to amount of feed consumed and to milk yield. For example, a cow producing 20 pounds of 3.5 per cent milk daily, and fed according to her needs, uses approximately 60 per cent of her feed for maintenance, while a cow producing 40 pounds of milk daily uses but 40 per cent of her feed for body maintenance or upkeep, converting the remaining 60 per cent into milk. Where good stock is kept the rule for feeding cows in milk should be to feed each cow up to her capacity to consume and digest feeds and thus keep the proportionate amount used for milk production at the highest possible point.

Rotation Includes Three Groups

The legume crops, alfalfa, clover, peas, soy beans, etc. are vastly important on the dairy farm and should be grown in the largest possible amounts. Corn too, for silage is very important. In addition such small grain crops as thrive best are desirable. A rotation including these three groups of farm crops helps to cheapen the ration and make easier the securing of balanced feeds. The legumes provide essential proteins and mineral matter; the silage, needed succulence and energy and the farm grains help to cut down the bill for purchased concentrates.

In reply to the question: Can dairying be made a success? we do not hesitate to answer in the affirmative, if a good market for milk is at hand and if the herd owner will weed out his poor cows, establish a good breeding practice, raise his calves well, feed liberally of a balanced ration and put into operation on his farm a crop rotation best suited to the business of his farm.

Allegheny Cooperators Dine

FIVE hundred Allegheny County farmers partook of a fine six-course dinner in the dining room of the Chamber of Commerce Building at Pittsburgh on March 5th. It was the second banquet of the Allegheny County Agricultural Cooperative Association.

The first of the after-dinner speakers was Mr. C. P. Shenot, president of the association, who reported that during the last two years the organization had done over $100,000 worth of business a year. He reviewed the work of the association, stressing its excellent financial standing, and then introduced the toastmaster of the evening, Mr. M. C. Black, the manager of the association.

A Good Time Was Had by All

Entertainment of a lighter vein was furnished by Herman Bandi, prominent Allegheny County poultryman, Bert Mustin and Charles Ray. J. A. O'Halloran, of one of the large milling companies, discussed the importance of providing the kind of feeds that will keep cows in good flesh and promote economical milk production. W. S. Krout, plant pathologist of State College, gave an instructive talk on spraying trees at the proper time to control orchard pests.

Mr. J. A. Runk, of Huntingdon County, told how he controls orchard diseases and produces fruit of the best quality with a power duster. W. H. Wehner, representing one of the large nurseries, discussed the importance of planting the right kind of trees.

Mr. Henry Eby, Allegheny County Agent, was greeted with hearty applause when he gave a short talk on his work in the county. Mr. Eby is known by the farmers of the county as the "dependable source of information."

The association plans to hold a banquet each winter hereafter and also a field day and basket picnic in August.—B.

Doesn't Tire on Hot Days

The cultivator attachment on this all-purpose tractor is guided by the operator like an ordinary riding cultivator.

"Too Much Selling and Not Enough Buying"

The above statement by Henry Ford appeared recently in the New York Times.

In the same article Mr. Ford said, "I sometimes wonder if we have not lost our buying sense and fallen entirely under the spell of salesmanship. The American of a generation ago was a shrewd buyer. He knew values in the terms of utility and dollars. But nowadays—They are sold; things are pushed on them".

I wish I could give you the whole article but this gives you the thought that set me thinking about the way users buy feed.

Do you buy your feed or does some one sell it to you?

Do you buy the feed you use because you have made a careful study of merit and dependability and know that it will give you the most profit, or do you buy because a salesman has induced you to buy what he wants to sell?

These are questions for you to decide; we can't decide for you but we do know that it costs several dollars a ton for the salary and expenses of a salesman to personally call and sell you feed. That expense must be paid and we know of no way to pay it without having it added to the price.

We work on the plan that if we help you make more money, you will use more Tioga Feeds and that in turn helps us to keep down the cost.

The foundation principle on which our business rests is "Help the Feeder make more Profit" and based on this principle of interest in your welfare, we urge you to study your needs and buy what will give you the most value rather than being sold that which some one else wants you to buy.

TWO Valuable Books for YOU

W. D. James
PRESIDENT

If you are thinking of building, remodeling, ventilating or buying any equipment for your cow or horse barn, hog or poultry house, write for these two books. These books tell how we help you plan and equip your buildings to make them more convenient, practical and economical—how we save you money by cutting down material and construction costs. These books also describe the complete line of Jamesway Equipment, Stanchions, Litter Carriers, Drinking Cups, Calf and Bull Pens—also Feeders, Brooders, Waterers, Steel Nests, etc.—a line of equipment that is unequaled for durability, service and economy.

Fill Out and Mail Coupon Now

Just fill out the coupon—tell us what you are interested in and we will send you the necessary literature containing full particulars of Jamesway Equipment and Jamesway service. Don't build, remodel or equip any farm building until you get these valuable books and learn how we can save you money. Mail coupon to office nearest you.

Fertilize As You Plant
For Best Results

Your corn will grow faster, yield more bushels per acre and be better able to resist the corn borer, if you sow fertilizer at the time of planting, with the

JOHN DEERE NO. 999 PLANTER
WITH FERTILIZER ATTACHMENT

You do both jobs in half the time it would require to do them separately and also save fertilizer.

Aside from saving time and fertilizer; you get the advantage of accurate planting with the John Deere Natural-Drop Seed Plate, the most efficient drop ever devised. Handles any kind of corn, peas; beans; feterita; kafir corn; shelled peanuts and many other kinds of seeds.

Fertilizer can be distributed in any quantity up to 700 pounds per acre—checked in hills with corn or drilled along the row. No choking. Attachment is easily put on and taken off.

Write today for folder describing this planter; also for booklet on corn-growing written by a group of the most successful growers. Address John Deere, Moline, Ill., and ask for Booklet SF-736

UNADILLA

Not a One Year Investment!

With grain prices sky high and your Unadilla filled with succulent, productive silage, you can enjoy a feeling of real security.

And a Unadilla *lasts so long*, is *so strong, so durable* that if you spread the first cost over the years it is in use, you'll find your yearly cost *out of all proportion* to the money you save by using silage.

It isn't so much can you afford to own a Unadilla—it's can you afford *not* to own one?

For years now, we've been making Unadilla silos. We put the result of these years in *every single silo*. We are perfectly fair in saying: You can't possibly buy as *good a silo anywhere near* the *cost* of a Unadilla, nor a better one at any price.

Write for our big illustrated catalog. It tells the story in detail and gives some information on our full line of storage tanks, water tubs and vats.

Liberal discount for cash.

The Portable
HINMAN MILKERS

The Hinman Gas Engine Milker & The Hinman Electric Milker

Here are two machines you ought to know more about!

Complete milkers—power and all—ready to go to work for you the minute they arrive.

So light and compact, you can easily lift either machine—roll them anywhere—turn in narrow spaces. And you ought to see them do that milking job!

Power? Hardly anything. Cleaning? These are milkers you can keep clean—with ease. Dependable? *Valve chamber guaranteed for life of machine.* These are Hinman milkers—the machines that have helped dairymen earn better profits for *19 years straight!*

The Voice of the People

This department is reserved for the use of our readers to discuss all problems and matters of general interest. Write your views and comments briefly on any question of social, economic or educational importance and thus share them with others. It will be necessary to limit such articles to 200 or 300 words. Publication of an article in this department does not signify editorial endorsement.

I Beg to Differ

TO THE EDITOR:—In reading your issue of January 22, my attention is called to some statements in the letter of G. F. R., Berks County, in regard to the care of the milking machine. He says some things in regard to sanitation with which I would differ.

I have been a user of the milking machine for the last twelve years. No one has convinced me that a machine can be kept in a fit condition to produce milk with once-a-week or once-in-two-weeks washing.

The solution used for pickling the germs and filth that collect in the teat cups and hose, while keeping them sweet and apparently clean, is only a chemical substitute for cleanliness. If a careful inspection is made with the cleaning rod in place of the brush commonly used it is likely to disclose a thick collection of corruption which T do not wish my milk to be run thru.

I have argued this question of solution with milk inspectors but have not yet been guilty of preserving the dirt for the next milking. I much prefer to spend twenty minutes or half an hour with rod and water to clean the machine.—F. E. A., Susquehanna County, Pa.

With Economy It Can Be Done

WE TAKE quite a few papers and greatly value Pennsylvania Farmer. Your 1927 Reference Number is worth more than the price of a year's subscription.

I am always interested in the Editor's Neshaminy Garden notes because those talks are like meeting a friend and talking over our problems. What he said recently to the young man who wanted help to start in the poultry business was especially good advice for many a young man today. If he really likes farm life a young man can get a start with little capital, but it means hard work and thrifty management.

Both husband and I were raised on the farm and had a little money saved up when we were married. For two years after that we both worked as hired help on the farm where husband was raised. Then we bought stock and equipment (with what money we had, giving our note for the balance), and rented that same farm on shares. Now, after six years of tenant farming, we have purchased a 70-acre farm on which we will move this spring. Our stock is paid for and we have more than half the price of the new home paid.

Of course, all this was hard work and discouraging sometimes and we didn't have as much as a "flivver" even until this last year, but we always had a roof over our heads and enough to eat and to wear (tho it wasn't always latest style), things which that young man isn't sure of if he goes to the city, and we will enjoy our home much more because we earned it ourselves.

Too many of the young men of today buy a flivver with the first few dollars they can scrape together and it, and the things it leads to, eat all their earnings, so that by the time they acquire a family they have no savings and no disposition to work and deny themselves anything. Then they expect somebody else to furnish the money for them to start at the top, and the advice the Editor gave that young man is the best one can give them.

Long life and success to your paper, in its efforts to help the farmers to get a better living out of the farm and more of the good things of life for the farmer and his family.—Mrs. H. P. H., Lehigh County, Pa.

RADIO DEPARTMENT

The Man Behind the Voice

A NEW voice, carrying with it the pleasant accent of the Southwest and the Pacific coast, has recently been heard by the fans of WEAF. This is the voice of Arnold Morgan, the latest addition to the staff of WEAF.

Arnold Morgan,
A new WEAF announcer

Mr. Morgan has an intimate acquaintance with every section of this country. Born in the Indian Territory, now the State of Okalhoma, he moved at an early age to the Pacific Northwest and of late years has spent his time in the East. His early youth was spent in Portland, Oregon, where he attended the public schools and planned to make pedagogy his life profession.

After graduating from the State Normal School, Mr. Morgan changed his mind and began the study of concert and oratorio singing. He served for one year as the director of the voice department of a small western university and did considerable private voice teaching. Three years ago he came to New York to continue his musical studies and singing. He soon became a member of the Stellar Male Quartet.

To a certain degree Mr. Morgan is no stranger to WEAF'S radio audience because he was a member of the original Eveready Group, one of the pioneers of broadcasting. He is now the tenor soloist of the Grace Episcopal Church of Brooklyn.

Paint Saves the Dollars

Wagons, Barns, Almost Everything I Can Lay My Hands On, Get a Coat Now and Then

PAINT on buildings and machinery indicates that the owner is looking after his business affairs, including his bank balances.

I want to admit right now that I am a crank on the care of the farm buildings. I have been a farmer all my life and I figure that I have made and saved hundreds of dollars because of the care I have given my buildings with the paint pail.

I read in a scientific magazine a short time ago that if the people of the country used paint as they should they would save something like $45,000,000 a year, and I believe it. Take a wagon, for instance. Are its sides cracked, warped, and filled with checks? Are its spokes and hubs in the same condition? Is the tongue weather-beaten and seamy? It means, according to statistics, that the life of the average farm wagon is not more than six years. It should last twenty.

Paint Prevents Checks and Cracks

For the first ten years of its life your wagon should hardly show a check or a crack. "Bah," you say, "how can this be accomplished?" Get out your paint pail and paint your wagon every other year. This sounds foolish to those who never paint their wagons; sounds like a lot of work and expense. But it isn't.

During the year 1925 I painted four of our wagons, accomplishing each job in about four hours' time. It cost less than $5. These four wagons have received a coat of paint every other year, since 1905, and today they are practically as good as new. I have figured that I have saved $150 by the use of $15 worth of paint and my saving has been so apparent that a dozen neighbors have taken the hint and are doing the same thing.

Ordinarily, the mower is exposed to rain and wind, sleet and snow. One hour and 30 cents worth of paint will protect the machine for at least a season. Usually the beam of the farmer's plow is checked and cracked. A single coat a season, ten minutes' work and five cents worth of paint will save it. Rake, hoe and shovel handles can be painted while the boy is harnessing the horses.

The scientifically prepared paint of today has two purposes, to protect as well as to beautify. Its chief value lies in its protection. One trouble with the home made mixture (which I used long ago) is the loose way in which it is mixed, and it soon begins to peel off.

Makes Fence Live Longer

The best kind of paint should be put on your fence within a week after its erection. It should be given two coats and after that one coat every three or four years will be sufficient. By doing this, a fence will be in good condition at the end of fifteen, years or more. If a first class paint is purchased it may be thinned with linseed oil for the first coat. This makes the paint thin enough for the wood to absorb a part of it. The second coat should not be applied until at least four days later; by this time the first coat will have hardened.

I saw in a report sometime ago that ninety per cent of the buildings being erected are being painted. Why? Simply because the farmer does not learn his lesson until he is compelled to pay three times as much for a barn as he did fifteen years ago. Or, in other words, it costs $1000 to build a barn today that could have been built of the same material, if not better, for from $250 to $350. I know this from my own experience.

The farmer who has not built since the big advance in the price of lumber naturally does not take this into consideration. There are thousands of barns thruout the country, now well on the road to ruin, that could be made to last ten years longer if paint were used this spring.

Your own barn may be so bad that you are worrying about building another within a couple of years. Instead of going to the expense of putting up a new one, use about $40 worth of paint and a little of your spare time on the old one. Take a dozen evenings, or two or three spare days early in the spring, and go over the building. See that the boards are on solidly, and repair the worst cracks and holes. Meanwhile go to some reliable paint dealer and buy ten gallons of the best prepared barn paint and five gallons of raw linseed oil, which you can get from any country dealer.

For your first coat take one gallon of paint and one of oil and mix them, and apply this liberally all over the barn. The first coat will be so thin that it will soak into the boards and into the cracks, acting as a preservative. Allow this first coat to dry and harden for four days. For your second coat use two of paint to one of oil, and by the time this coat is on you will regard the result with surprise. Your building will last and look as good as new. Why build a new barn when you can save your old one?—C. A. Umoselle.

Plans for New House

(Continued from page 2)

Everybody wants to know whether we're going to build a bungalow type house, most all on the main floor, or whether it will be two stories. We find there are things to consider on both sides of this question. For a small house with only four, or maybe five rooms, the bungalow type is almost necessary.

I guess the most important part of our new house will be the basement, and that's nothing to make a joke about, either. The old house has a cellar. It once had a window in it, but it was stopped up in an effort to keep out the gale that blew in and froze the potatoes. The foundation is of big heavy boulders—we can't imagine how they ever were placed, and they stand up on a clay shelf which is all the time crumbling a little and makes it impossible to keep the cellar clean. There are cobwebs which can't be kept out even by the most careful cleaning, and the whole effect is of a sort of dungeon where you go only when you have to. That's all going to be different.

There Won't Be Any Dark Corners

The new basement is going to extend under the whole house. It's going to have a concrete wall that comes down smooth and square, and it's going to have a cement floor that can be kept as clean as the upstairs floor. The house will be high enough to give plenty of basement windows so the sunshine and air can come thru them—sunshine in winter and air in summer, and the basement is going to be big, and light, and cheery, and useful.

Why should all that valuable space under the house go to waste, when it is so easy to have a fine workroom there? On washday the clothes are going to be dried there, and the boys are going to have a workshop. There'll be stationary laundry tubs, and the new heating plant that will warm the whole house.

There will be several rooms in the new basement, separated by solid concrete walls. For instance, the coal room will be all by itself, with no dust or dirt anywhere else, and will hold a whole winter's supply. More about plans later.

"The treated plants (tomato) came up and grew much faster than the untreated."
—Willard B. Kille, Swedesboro, N. J.

"The treated plants (tomato) were the first to be above the soil." — William Downham, Marshallton, Delaware.

"My peas were away ahead of his at all stages and matured fully ten days sooner."
—Roy I. Shaw, Twin Falls, Idaho.

Ahead of the market—
Ahead financially.

Early to plant and
Early to sell
Makes the farmer's
Money Bags swell!

FIRST to market is first to profit. You can work just as hard and just as intelligently as your neighbor, but if disease gets a foothold in your fields, your crops will get to market later and bring less.

Dr. J. B. S. Norton, plant breeder, has said, "At no point in the production of crops can greater results be secured with less effort than with the seed."

Farmers who disinfect their seeds with Semesan find that their crops are not only free of disease, but that the seeds germinate quicker, come to bearing sooner, and yield more and better produce.

SEMESAN
Makes Seeds Healthy

Destroying parasites on or in the seed and creating a zone of disinfection around the planted seed protects the germ's vitality to develop a strong, healthy plant.

Used either as dust or liquid, Semesan is effective without being in the least destructive of seed vitality. Easy to use. Economical.

Don't delay your own success: mail this coupon today. If you lay the coupon aside you may forget and go right on paying your tribute to plant diseases. Fill in the coupon and get it right into the mails.

"They're Good For Many Years More" Says C. W. Benton

Carleton W. Benton, Lawton, Mich., has something to say about disk harrows which will interest you. He recently wrote as follows:

"Thank you for your letter in answer to mine with reference to the weeder you manufacture.

"I have one of your 'Cutaway' Double Action Tractor disk harrows which was made before you made the dust-proof boxes and the frame and disks are in excellent condition. I purchased the harrow second-hand and it had been given very poor care, yet not a disk was even cracked or notched and while they are thin and sharp as a razor blade, yet they are tough and substantial and are good for many years of service. It is the best material I ever saw in any disk."

Clark CUTAWAY

Double Action harrows do a thorough and economical disking job because rear disks cut exactly half way between front disks and at same depth. Possible only with harrows constructed like the Clark "Cutaway." Light draft. Turns corners easily. Disks (Cutout or Solid) of cutlery steel, forged sharp for better work and longer service. Several sizes in tractor and horse-drawn models. Free: Valuable illustrated book, "The Soil and Its Tillage," and catalog of tillage implements. Mail coupon.

Judith of Blue Lake Ranch

By JACKSON GREGORY

Copyright Charles Scribner's Sons

The Story Thus Far

JUDITH SANFORD, part owner in Blue Lake Ranch since the death of her father, Luke Sanford, fired Bayne Trevors, general manager, because he wasn't square. The men grumbled. Trevors made trouble in every way possible. Bud Lee, horse foreman, and old Carson promised to stay. Judith could depend on them and on "Doc" Tripp, veterinarian and a friend of her father.

Busy days followed. Mrs. Simpson took up her duties caring for the ranch house and Pollock Hampton, part owner of the ranch, arrived with his guests—Major and Mrs. Langworthy and Marcia, their daughter; Marshal Rogers, lawyer, and Frank Farris, artist.

On May 30 Charlie Miller, returning from Rocky Bend with the pay roll, was robbed. To avert a walkout, Bud Lee covered 80 miles in six hours and put the money into Judith's hands in time in spite of smokeless powder and a silencer that put his horse out of business. Next day, while searching for clews of the holdup, Bud Lee and Judith came upon three of the troublemakers. In the fight that followed Bill Crowdy was injured but Chris Quinnion, the man Judith believed responsible for the death of her father, escaped.

The night of Marcia's farewell party, just after Lee had kissed Judith and cursed himself immediately for doing it, he and Carson rode into Rocky Bend. Quinnion had been talking, not only about Lee but about Judith. In a back room of the "Jailbird" Lee found his man and in the fight which followed injured him. Instead of getting out of town in a hurry as Carson urged, Lee took the half-conscious Quinnion over to the Golden Spur saloon and forced him to say he'd been lying and to leave the town without delay.

Continued from last week

FOR the first few days following the dance Bud Lee had within his soul room but for one emotion: he had held Judith in his arms. He had set his lips on hers. He went hot and cold with the remembrance. Being a man, he made his man-suppositions of the emotions that rankled in her breast. He imagined her contempt of a man who by his strength had forced her lips to wed his; he pictured her scorn, her growing hatred. He told himself that he should go, rid the ranch of his presence, take his departure without a word with her. For, already, he had fitted her into his theory of the perfect woman, lifting her high above himself and above the human world. It was a continued insult for him to remain here.

But, after careful thought, he remembered what Judith had already told him; he was one of the men whom she could trust to do her work for her, one of the men she most needed, a man whom she would need sorely if Bayne Trevors were lying quiet now but to strike harder, unexpectedly, later.

Judith did not dismiss him, as at first he had been sure she would. So he stayed on, remaining away from the ranch headquarters, sleeping when he could in the cabin above the lake, spending his days with his horses, avoiding her but keeping her personality in his soul, her interests in his heart. When the winter had passed, when she had made her sales and had the money in hand for the payments upon the mortgages, then he would go. Whereat, no doubt, the high gods smiled.

As time passed, there came about a subtle change in the attitude of the outfit toward Pollock Hampton, whom they had been at the beginning prone to accept as a "city guy." It began to appear that under his lightness there was often a steady purpose; that if he didn't know everything about a ranch, he was learning fast; that in his outspoken admiration of things rough and manly and primal there were certain lasting qualities. Whereas formerly his being thrown from a spirited mount was almost a daily occurrence, now he rode rather well. With tanned face and hard hands, he was, as Carson put it, "growing up."

He came to Judith one day serious-faced, thoughtful-eyed.

"Look here, Judith," he began abruptly, "I'm no outsider just looking on at this game. You're the chief owner and the boss and I'm not kicking at that any longer. Your dad raised you to this sort of thing and you have a way of getting by with it. But, on the other hand, I'm part owner and you've got to consider me."

Judith smiled at him.

"What now, Pollock?" she asked.

"You're the boss," he repeated stoutly. "But I've got a right to be next in authority. Under you, you know. Why, by cripes, I go around feeling as if I had to take orders from Carson or Tripp or any other of the foremen!"

"'By cripes' is good!" laughed Judith. "Go ahead."

"That's all," he insisted. "You can tell them, when you get a chance, that I am your little old right-hand man. Suppose," he suggested vaguely, "that you left the ranch a day or so. Or even longer, some time. There's got to be some one here who is the head when there is need for it."

Judith mirthfully acquiesced. Hampton's interest was sufficiently heavy for him to be entitled to some consideration. Besides, she had come to experience a liking for the boy and had seen in him the change for the better which his new life was working in him. Further, she meant to make it her business that she did not leave the ranch for a day or so, or an hour or so, when she should be there. Consequently, within a week Pollock Hampton was known humorously from one end to the other of the big ranch as the Foreman-at-Large.

MARCIA LANGWORTHY, visiting in Southern California, wrote brief notes to Hampton, intricate letters to Judith. The mystery of Bud Lee of which she had had a glimpse when the artist Dick Farris and Lee recognized each other as old friends had piqued her curiosity in a way which allowed that young daughter of Eve no rest until she had made her own investigations. She wrote at length, telling Judith all that she had learned of Lee. How he had been quite the rage, my dear. Oh, tremendously rich, with a great ranch in the South, a wonderful adobe hacienda of the old Spanish days, where, like a young king, he had entertained lavishly. How, believing in his friends, he had lost everything, then had dropped out of the world, content equally to allow that world to believe him soldiering in France or dead in the trenches and to take his wage as a common laborer. Wasn't it too romantic for anything?

In due course, following up her letters, Marcia herself came back to the Blue Lake Ranch, Judith's guest now. The major and Mrs. Langworthy were visiting in the East—it seemed that they always visited somewhere—and Marcia would stay at the ranch indefinitely. Hampton drove into Rocky Bend for her and held the girl's breathless admiration all the way home, handling the reins of his young team in a thoroly reckless, shivery manner.

"Isn't he splendid?" cried Marcia when she slipped away with Judith to her room.

Under the bright approval of Marcia's eyes Hampton flushed with pleasure. Could Mrs. Langworthy have seen them together she would have nudged the major and whispered in his ear.

THE ranch was stocked to its capacity. Carson had bought another herd of cattle; Lee had added to his string of horses. The dry season was on them, herds were moved higher up the slopes into the fresh pastures. Carson, converted now to the silos, was a man with one idea and that idea ensilage. Again the alfalfa acreage was extended, so that each head of cattle might have its daily auxiliary fodder. Carson now agreed with Judith in the matter of holding back sales for the high prices which would come at the heels of the lean months.

The man Donley, who had brought to the ranch the pigeons carrying cholera, was tried in Rocky Bend. The evidence, tho circumstantial, was strong against him, and the prosecution was pushed hard. But it was little surprise to any one at the ranch when the trial resulted in a hung jury. The ablest lawyer in the county had defended Donley, and finally, late in August, secured his acquittal. The man himself did not have ten dollars in the world; the attorney taking his case was a high-priced lawyer. Obviously, to Judith Sanford at least, Bayne Trevors was standing back of every play his hirelings made.

Doc Tripp had the hog-cholera in hand. And every day, out with the livestock whose well being was his responsibility, he worked as he had never worked before, watchful, eager, suspicious.

"If they'll drop cholera down on us out of the blue sky," he snapped, "I'd like to know what they won't try."

During the two months after the dance, Bud Lee and Judith had seen virtually nothing of each other. When routine duties or a necessary report brought them for a few minutes into each other's society there was a marked constraint upon them. Never had the man lost the stinging sense of his offense against her; never had Judith condescended to be anything but cool and brief with him. While no open reference was made to what was past, still the memory of it must lie in each heart, and tho Lee held his eyes level with hers and drank deep of the warm loveliness of her, he told himself angrily that he was beneath her contempt. The chivalry within him, so great and essential a part of the man's nature, was a wounded thing, hurt by his own act. The old feeling of camaraderie which had sprung up between them at times was gone now; they could no longer be "pardners" as they had been that night in the old cabin.

He told himself curtly that he did not regret that; that now it was inevitable that they should be less than strangers since they could not be more than friends. That the girl was ready to forgive him, that she had ever been as harsh with him as he was himself, that there was a golden, delicious possibility that she should feel as he did—so mad an idea had not come to Bud Lee, horse foreman.

A few days after Marcia's arrival there came to the ranch a letter which was addressed:

Pollock Hampton, Esq.,
General Manager,
Blue Lake Ranch.

It was from Doan, Rockwell & Haight, big stock-buyers of Sacramento, submitting an unsolicited order for a surprisingly large shipment of cattle and horses. The price offered was ridiculously low, even for this season of low figures due to the fact that many overstocked ranches were throwing their beef cattle and range horses on the market. So low, in fact, that Judith's first surmise when Hampton brought it to her was that the typist taking the company's dictation had made an error.

Judith tossed the note into the waste-basket. Then she retrieved it to frown at it wonderingly, and, finally, to file it. It began by having for her no significance worthy of speculation. It soon began to puzzle her. Finally, it faintly disturbed her.

HERE were two points of interest. First: Doan, Rockwell & Haight was the company to which Bayne Trevors, when general manager, had made many a sacrifice sale. Because the Blue Lake had knocked down to them before, did they still count confidently upon continued mismanagement? Surely they must know that the management of the ranch had changed. And this brought her to the second point: How did it come about that they had addressed, not her, but Pollock Hampton? Was this just a trifle?

Long ago Judith had told herself that she must keep her two eyes wide open for seeming trifles. In spite of her, tho she scoffed at her "nerves," the girl had the uneasy conviction that this offer had been prompted by Trevors; that Trevors, for purposes of his own, had given instructions that the letter be addressed to Hampton; that this was the first sign of a fresh campaign directed against her from the dark; that trouble was again beginning.

Thoughtfully she smoothed out the letter, impaling it on her file.

Pollock Hampton, Foreman-at-Large, came and went on the ranch, carrying orders, taking always a keen interest in whatever work fell to hand, an interest of a fresh kind, in that it was born of a growing understanding. The men grew to like

MH-MP!
MAH SOUL AN' BODY, MISSY ACRES DAT NO 'COUNT MULE KAINT READ!

him; Bud Lee tactfully sought to acquaint him with many ranch matters which would prove of value to him. Carson, however, grown nervous over the new method in stock-raising still in its experimental stage, was given to take any suggestion from Hampton in the light of a personal affront.

"D—— him," he growled deep in his throat when Hampton had ridden out with word to shift one of the herds into a fresh pasture, an act on which Carson had already decided, "some day I'll just take him between my thum' an' finger an' annihilate him."

THE bulk of the stock had been steadily shifted higher in the hills. The hogs grazed on the slopes at the north of the Lower End; cattle and horses had been pushed eastward to the little valleys in the mountains about the lake. Even the plateau, where the old cabin stood, was now stocked with Lee's prize string of horses. Then one day Hampton came galloping thru the herds of shorthorns, seeking Carson.

"Crowd them down to the Lower End again," he shouted above the din. "Cut out the scrawny ones and haze the rest into the pens."

Carson's steel-blue eyes snapped. His teeth showed like a dog's.

"Drunk?" he sneered. "What's eating you?"

"Do as you're told," retorted Hampton hotly. "Those are orders from headquarters and it's up to you to obey them. Get me?"

"If ever I do get you, sonny," grunted Carson, "there won't be enough of you left for the dawgs to quarrel over. Orders or no orders, I ain't going to do no such fool thing."

Hampton reined his horse in closer, staring frowningly at the old cattleman. The purplish color of rage mounted in Carson's tanned cheeks.

"You'll do what you're told or go get your time," he announced tersely. "We've got an order for five hundred beef cows and we're selling immediately."

Carson's jaw dropped.

"What?" he demanded, not quite believing his ears. "Say that again, will you?"

"I said it once," retorted Hampton. "Now get busy."

"Who are we selling to? I ain't heard about it."

"An oversight, my dear Mr. Carson," laughed Hampton, his own anger risen. "Quite an oversight that you were not consulted. We are selling to Doan, Rockwell & Haight. Ever heard of them?"

"Who says we're selling?"

"I say so. And, if you've got to have all the news, Miss Sanford says so."

"She does, does she? Hm-m. First I knew of it. What figger?"

"Really, does that concern you? If the price suits me and Miss Sanford, who own the stock, does it in any way affect you? I don't want to quarrel with you, Carson, and I do appreciate that you are a good man in your way. But just because you have worked here a long time, don't make the mistake of thinking that you own the ranch."

With that he whirled his horse, and was gone. Carson, with puckered brows, stared after him.

BUT orders were orders, and Carson tho the heart was sore, barked out his commands to his herders to turn the cattle back toward the lower fields. He had been converted to the new way, he had grown to dream of the fat prices his cow brutes would fetch in the winter market, he knew that prices now were rock-bottom low, that Doan, Rockwell & Haight were close buyers who before now had cut the throat of the Blue Lake ranch in sacrifice sales when Bayne Trevors ran the outfit.

"We're standing to lose thousan's an' thousan's of dollars," he told himself in disgust. "All we've spent on irrigation an' fences an' silos an' ditches, all gone to heck in a han'-basket. Not counting thousan's of more dollars lost in selling at what we can get this time of year. It makes me sick, d—— sick."

Riding down a long, winding trail, out thru a patch of chaparral into a rocky gorge, Hampton turned east again toward the higher plateau. Taking the roundabout way which led from the far side of the lake and along the flank of the mountain to the table-land, he came to a scattering band of horses and Tommy Burkitt.

"Where's Lee?" called Hampton.

Burkitt grinned at him by way of greeting, and then pointed across the plateau to a ravine leading to a still higher, smaller, shut-in valley. Hampton galloped on and a quarter of an hour later came up with Lee. The horse foreman was sitting still in his saddle, his eyes taking stock of a fresh bit of pasture into which he planned turning his horses a little later. It was one of a dozen small meadows on the mountain creeks where the canyon walls widened out into an oval-shaped valley, less than a half-mile long, where there was much rich grass.

"Hello, Hampton," called Lee pleasantly. "What's the word?"

The perspiration streaming down Hampton's face had in no way dampened his ardor.

"Big doings," he cried warmly. "We're cutting loose, Bud, at last and piling up the shining ducats! You're to gather up a hundred of the most likely cayuses you've got and shove them down to the Lower End. We're selling pretty heavily to Doan, Rockwell & Haight."

A new flicker came into Lee's eyes. Then they went hard as polished agate.

"I didn't quite get you, Hampton," he said softly. "You say we're selling a hundred horses? Now?"

Hampton nodded, understanding nothing of what lay in Lee's heart.

"On the jump, just as fast as we can get them on the run," he said triumphantly. "Judith wanted me to tell you."

"I see," answered Lee slowly.

HIS eyes left Hampton's flushed face and went to the distant cliffs. It was no way of Bud's to hide his eyes from a man, and yet now he did hide them. He did not want Hampton to see what they showed so plainly, in spite of his attempt to master his emotion. He was hurt. Long ago he had offended Judith, and she had waited until now to repay his rude insult with this cool slap in the face. She had not consulted him, she had not mentioned a sale to him, and now she sent Hampton and did not even come to him with a word of explanation. It was quite as if she had said.

"You are just a servant of mine, like the rest, Bud Lee, and I treat you accordingly."

Until Judith had come, there had been nothing that the man loved as he did his work among his horses. He watched them as day after day they grew into clean-blooded perfection; he appraised their values; he saw personally to their education, helping each one of them individually to become the true representative of the proudest species of animal life. Had he turned his eye now to the herd down yonder he could have seen the animal he had selected for a brood-mare next year, the three-year-old destined to draw all eyes as he stepped daintily among the best of the single-footers in Golden Gate Park, the rich red bay gelding that he would mate for a splendid carriage team. . . . Oh, he knew them all like human friends, planned the future for each, the sale of each would be no sorrow but rather a triumph of success. And now, to see them lumped and sold to Doan, Rockwell & Haight—even that hurt. But most of all did Judith's treatment of him cut, cut deep.

"You're a fool, Bud Lee," he told himself softly. "Oh, what a fool!"

"THE buyers will be here the first thing tomorrow," said Hampton. "Judith says we're to have everything ready for them."

"I'll not keep her waiting," answered Lee quietly. And with a quick touch of the spur he whirled his horse and left Hampton abruptly, going straight to the plateau.

"Round 'em up, Tommy," he said sharply. "Every d—— hoof of them. They go back to the corrals."

Tho quick questions surged up in Tommy's brain, none of them was asked just yet, for he had seen the look on Lee's face.

It was early in the afternoon when Hampton carried his messages to Carson and Lee. It was after dark when Lee, his work done, his heart still sore and heavy, came into the men's bunk-house. It was very still, tho close to a dozen men were in the room. Lee's eyes found Carson and he guessed the reason for the silence. Carson was in a towering rage that flamed red-hot in his eyes; under the spell of his dominating emotion the men sat and stared at him.

"Well, what's wrong?" asked Lee coolly from the door.

"Good goddlemighty," growled Carson snappishly. "You stan' there an' ask what's the matter. If they's anything that ain't the matter an' you'll spell its name to me I'll put in with you. The whole outfit's going to pot, an' I, for one, don't care how soon it goes."

(To be continued next week)

Did you ever hear this one?—

Diluted Scotch

Old Farmer Tightmoney wasn't stingy. He was merely economical in the management of his big farm and all his hired hands. One morning, while repairing the curb to his underground cistern, he very unexpectedly fell in, pulling the rope in with him as he went down. Having always been a good swimmer, he had no trouble in keeping afloat; but the water was cold and he couldn't climb out. His wife was helpless alone and without a rope.

"John!" she yelled excitedly down to him. "I'll ring the dinner bell so's the boys can come in and pull you out."

"What time is it?" he yelled.

"'Bout eleven o'clock."

"No, dang it, let 'em work on till dinner time. I'll just swim around till they come."

The Whole Doggone Family!

"Yes," said the teacher, "we have several plants and flowers named with the prefix 'dog.' Of course, the 'dog-rose' and 'dog-violet' are well known to you all. Can any of you tell me others?"

For some seconds the class remained dumb. Then a bright idea illuminated the face of an urchin, and up went his hand.

"Collie flowers, miss!"

An Opening Wedge

He (to fair stranger)—Pardon me, miss, but do you speak Swiss?

She—No, indeed. Why?

He—Neither do I. Let's get acquainted—that's one thing we already have in common.—Punch Bowl.

"I wish I had lived three hundred years ago."

"Why?"

"I shouldn't have had so much history to learn."—Buen Humor (Madrid).

Eastern Farmers Are Experimenting with the Disc Plow

What is the advantage of a disc plow in rather stony soil? How does the disc plow compare in draft with other plows? Why is it that the disc plow is not used more?—N. N., Lancaster County, Pa.

The disc plow substitutes rolling friction for the sliding friction of mouldboard, landslide and share and the draft is in general somewhat less than that for the standard plow. Tests at Ohio State University indicate that the disc plow pulled about 10 per cent lighter.

The disc plow gives less trouble in tough, sticky, gumbo soil, where mouldboard plows would fail to scour and be hard to penetrate. It is also used in hard packed or stony soil that could be plowed scarcely at all with the ordinary plow. Extra weight piled on the frame adds but little to the draft but is all used in securing better penetration when needed, but better than with the usual type.

Because this plow does not make so smooth a job of plowing, producing a less pulverizing effect, and fails to cover trash well, are probably why it is not used more.—D.

OUR YOUNG PEOPLE'S FORUM.

From Forum Members and Friends

Our Page

Come boys and come girls,
Come join us today,
And help make Our Page
Better in every way.

I should not say "better"
(It can hardly be beat);
I mean, send your letter,
Or a drawing, for a treat!

If you have a pet—
Bird, dog, cat or calf—
Send in an account,
'Twill sure make us laugh.

This Page is for pleasure,
As well as for fun,
To read in your leisure,
When all tasks are done.

Our Page contains knowledge,
It's instructive as well,
It's a letter from our friends
Who in other states dwell.

Now, then, boys and girls,
No matter your age,
Just sit down and write
To our dear old Page.

Send a rhyme, a riddle,
Drawing or a letter,
And still make Our Page
A little bit better.

—Lee A. Faylor, eleven (X), Cumberland Co., Pa.

Dear Cousin Ruth and Forum Friends:—My rooster that I have been planning to keep to go to the fair, has broken his tail feather and I feel very badly. I am a member of the 4-H Club. I like to sew very much.

We had a test in our school for the whole month. My pet dog died about two weeks ago. Now for a pet I have a horse, his name is Billy. He is big and black. Everybody likes him. I am selling candy to get a camera, then I will take some pictures for the page.—Letha Schutte, (X), Dutchess County, N. Y.

Dear Cousin Ruth:—I was born in New Jersey but live in Stockbridge, Mass. My grandma and uncle were here to see us. They went home Thursday. I live on a farm. It has seventy acres. Irving, my brother, just came home. He was skating with his friends.—Virginia Opperman, Berkshire County, Mass.

MY BROTHER AND I
Gertrude A. Schwartz, (X),
Schuylkill County, Pa.

Dear Cousin Ruth and Forum Friends:—One of my brothers works in a creamery and the other is a carpenter. For pets I have a dog, cat, and some guinea pigs. The dog's name is Rover, he likes to play. He barks when strangers come. Rover is afraid of fire and when someone fires off a gun he will run away. He is also a cow dog, when the cows run he will run after them and bark, thinking it great fun.

We have been having some very cold weather here for the last few days. There is some ice near the schoolhouse, and at recess and noon we go sliding on it. In the spring I am going to have a garden with many flowers. I like flowers.—Mary Fretz (X), eleven, Bucks Co., Pa.

I'm sorry, Mary, that you forgot to give your post office address because I can't send you the membership pin, which I have waiting for you.
COUSIN RUTH.

ALONG THE ROAD ABOVE OUR HOUSE
Ira G. Luce, Tioga County, Pa.

Dear Cousin Ruth:—For pets I have two dogs. One named Joe and the other Rover. Joe is very playful. Sometimes Rover gets cross and bites. Joe will stand up and will jump for meat or bread and Rover will, too. When Joe wants a drink he will go to the sink and whine. Joe is a poodle and Rover is a collie. Joe is about three years old and Rover isn't a year old and Rover is the bigger.

We have about twenty-five chickens. I do not feed them but my brothers do. Here is a recipe:

SNOW CAKE

¼ cup of butter
1 cup sugar
½ teaspoon vanilla
2 egg whites
1½ cups flour

Cream butter; add gradually the sugar and vanilla. Beat the egg-white to a stiff froth and add. Mix and sift flour and baking powder and add too.—Mary Alice Sherman (X), Tucker Co., W. Va.

Dear Cousin Ruth:—Last summer we had our Sunday school picnic in the woods. We had great fun. There were many amusements in the wood, see-saws, sliding boards and lots of other things. In the afternoon they had games, then it rained, but soon stopped. We learn many poems at school every Tuesday and Thursday we have them. It has been very cold and rainy weather this week. I am head in all my classes at school, so I do not want to miss and get sick. I have only missed two days. —E. Mildred Good, ten (X), Lancaster Co., Pa.

Dear Cousin Ruth and Forum Friends:—A doctor was at school on February 10 to examine us. I was the best one in the school for I did not have any bad teeth or tonsils. I was good in hearing and seeing. I was all perfect.

I am going to tell you about my trip to Philadelphia on November 14, 1926. We started out about four o'clock in the morning. We got to my uncle's place at seven o'clock. My uncle lives at 1734 Dick Avenue. He does not live in the city but in the outskirts. Then we ate our breakfast. Afterwards we went to the Sesqui.

The first building that we went to was the Government Building. Then we went to the Navy Yard and went on a big ship. We also went in many other buildings.

Then we went to our machine and went to my uncle's. We got home at 11 o'clock in the night. I am sending a poem called:

THE WORLD'S MUSIC

The world's a very happy place,
Where every child should laugh and sing,
And always have a smiling face
And never sulk for anything.

I like to make poems. I also like to read books about brave men and about Presidents.—Aldona Bulota, (X), Schuylkill County, Pa.

Dear Cousin Ruth:—We have a cat named "Goldie." One time she scared me. She jumped up on the piano and walked over the keys.—Evelyn Halteman, Northampton County, Pa.

Dear Cousin Ruth:—Our farm is near the Delaware River. I can stand on the front porch and throw a stone in the river.

For my pets I have two collie dogs. I helped my father in the fields last summer. I go to Belvidere Grammar School.—Beatrice Cole, eleven, Warren Co., N. J.

Dear Cousin Ruth and Forum Friends:—I have little peeps now to feed and water. I like little peeps and ducks but our ducks haven't laid yet. My brother and I take turns looking for duck and geese eggs. My dog goes along with brother and me all over the farm, but if we go to school he doesn't follow because he knows he mustn't.—Harry J. Edleblute, six (X), York County, Pa.

Dear Cousin Ruth:—I am going to help my father pick tomatoes this summer. He is putting out four acres. He plants for a large cannery at Chambersburg.—Hazel Lininger, Franklin County, Pa.

Dear Cousin Ruth and Friends:—For pets I have a little yellow cat and this morning it caught a ground mole and you should see how it played with it before he gobbled it down. Now I have to go and iron some clothes so I have to finish up my letter.—Helen Zavada, thirteen, Fayette County, Pa.

OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS.—This is the time when we all like to watch things grow. First one little plant pushes up, and then another—and another. In this week's puzzle you can watch some words grow. The little blank spaces in the story below are for the letters which build up the words. The first blank, for just one letter, must be for the letter "A". The first word that you will see grow from this one-letter word has two letters, which you will place in the two blanks, and one of these letters will be the "A" which you have already found. The next word to grow from the two letters will have three letters, and two of those letters will be the two you have already found. When you come to the spot where four letters must be used for a word, you are to add one letter to the three you have already found, and when you come to the five blank spaces, you add one more letter to the four you have found.

> — man said: "I — — going to eat some — — —. It will do me no — — — —. After that I shall see if I can — — — — — the snake with a little music."

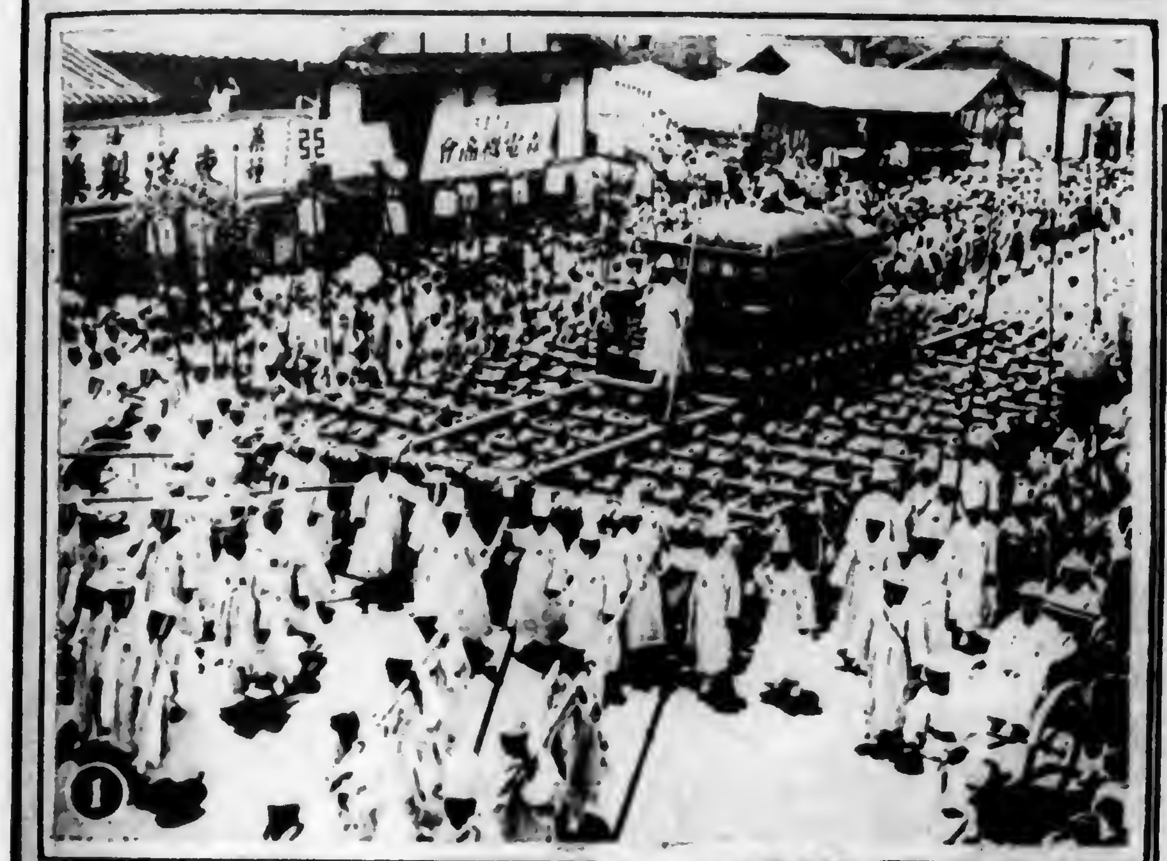
When you have found out the whole crop of five words, (the "A", which I told you, and four other words for each of the words left out in the story), send them to me on a postcard or in a letter so that they reach me by April 3rd. BE SURE TO SAY HOW OLD YOU ARE, and please tell me the name of the county where you live and when your birthday comes. This is a whole lot of things to tell me and every week somebody forgets at least one of them. It is good to hear so regularly from many of my little friends and I want to welcome all the new ones, too. The prizes go to the ten children, sending in the correct answer, whose cards or letters are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

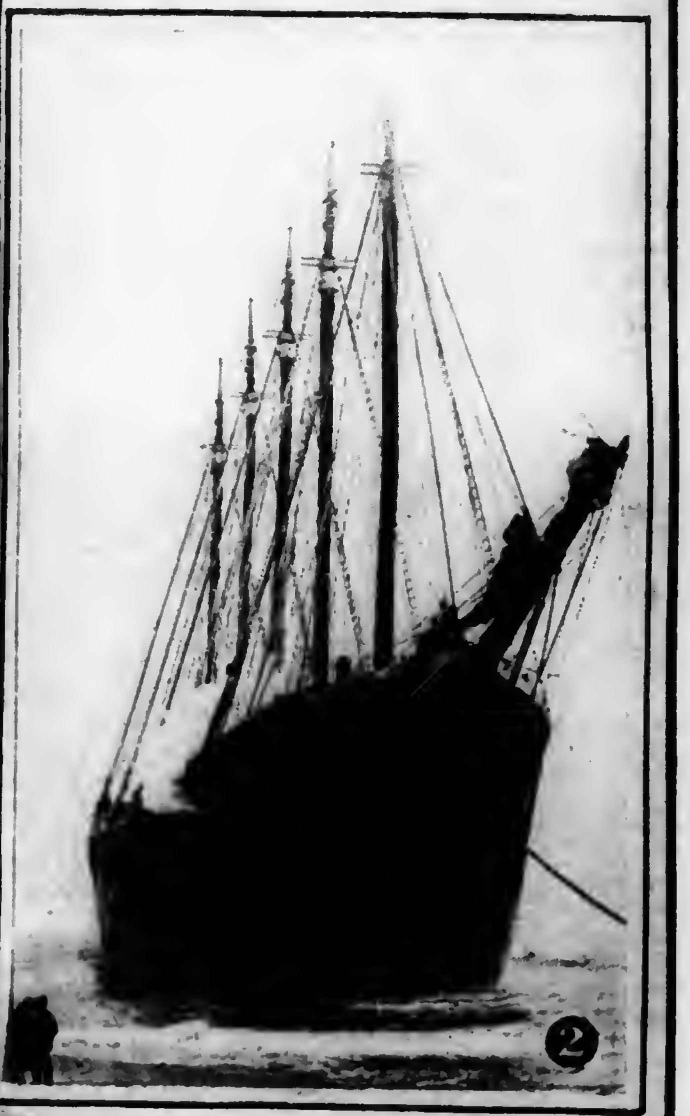
Those letters in the puzzle in the March 5 issue certainly flew around amongst a lot of Little Folks. The five months whose names these letters spell are: FEBRUARY, MARCH, APRIL, MAY AND DECEMBER.

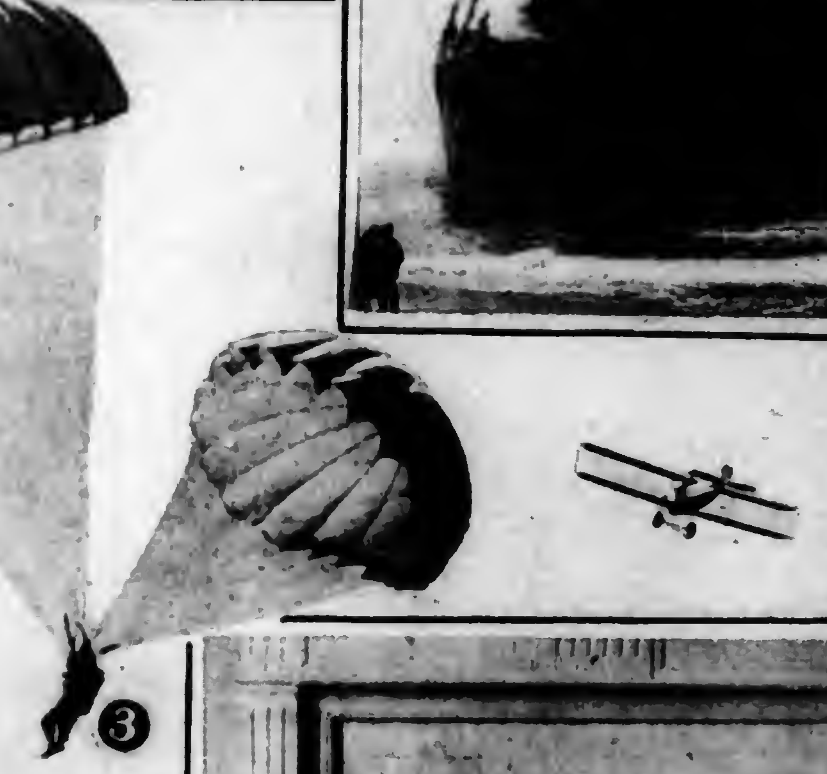
The best answers came from the following prize winners: Emily Branco, age 11, Brier Hill, Pa.; Joe Cwynar, age 8, New Castle, Pa.; Arlene Harper, age 10, Connellsville, Pa.; John A. Harvey, age 9, Oliphant, Pa.; Gordon Horner, age 8, Allentown, N. J.; Mae Johns, age 6, Freeport, Pa.; John Monosky, age 10, Forest City, Pa.; Kathryn B. Mount, age 9, Englishtown, N. J.; Cora E. Orr, age 1, Bridgeton, N. J.; Andrew Watson, age 12, Hudson, N. Y.

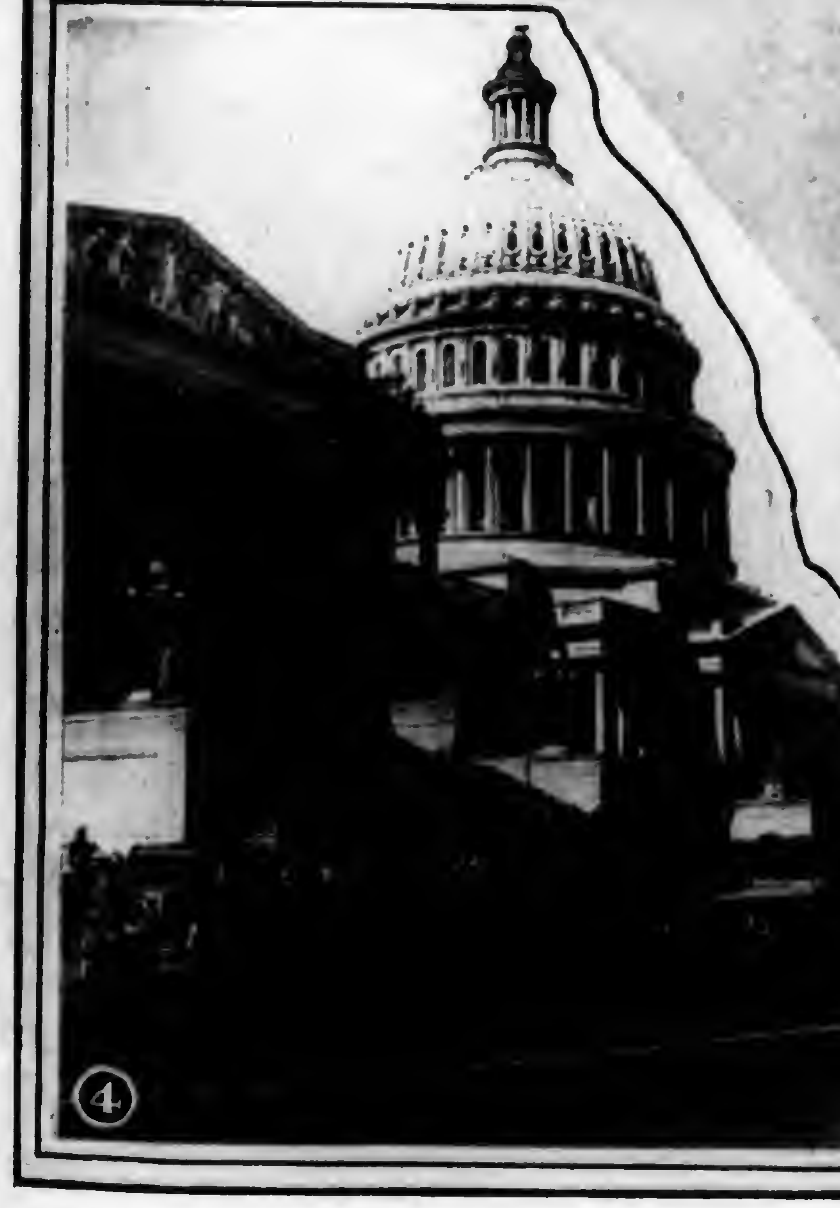
If any of you find that your prizes are a little bit late in reaching you, don't be discouraged. It is because I have been having my glasses changed and one or two things have had to wait while that was going on. I've not forgotten any of you. Your friend, The Puzzle Editor.

PASSING EVENTS IN PICTURES









1.—A royal funeral procession in Korea is made impressive by its lines of mourners dressed in the white native costume. The casket is carried on the shoulders of courtiers, followed by many notables.
2.—The five-masted schooner "Nancy," of Philadelphia, Pa., which ran ashore at Nartasket Beach, Hull, Mass., during a 70-mile gale last month.
3.—This daring aviator believes in taking no chances. He is descending to earth after his leap from a plane using two parachutes in case one should fail. He had to count ten before releasing the parachutes. What would happen if the two 'chutes should decide to go in opposite directions?
4.—When the 69th Congress ended at noon on March 4, the members, their wives and many other visitors who packed the gallery poured forth from the Capitol.
5.—Little Paulina Longworth, the daughter of Speaker of the House Nicholas Longworth and Mrs. Longworth, the former Alice Roosevelt, celebrated her second birthday on February 14th. She is called "the most photographed child in the United States."

If Mothers Only Realized the Value of Raw Sunshine There Would Be Fewer Twisted Little Bodies

DAY after day, winter and summer, long lines of women with babes in their arms stand in our hospital corridors waiting their turns to enter a certain mysterious room. The door opens and a nurse comes out carrying a tiny naked baby which she gives into the arms of its mother. Thru the open door the women may see a queer bluish light pervading the room, then they notice a large black machine with a big hooded lamp suspended over a baby's crib. The nurse takes another little naked child and the door closes again while the waiting women continue their gossip as they hush the murmuring infants.

In the group are all kinds of babies—Chinese and Irish, Negro and Italian, all Americans by birth, but of every race under the sun. Some there are with crooked legs, protuberant abdomens and bulging foreheads, others look beautifully healthy. What does it all mean?

Our Fashion Book

BEFORE you know it housecleaning days will be here and there won't be a chance to sew. Now is the time to order our Spring and Summer, 1927, Book of Fashions if you haven't a copy already.

We try to print on Our Home Page those patterns which we think you will like best but there are many others which never find room here. Ten cents sent to Pattern Department, Pennsylvania Farmer, 261 S. 3rd St., Phila., Pa., will bring our pattern book to you.

The Sunshine Poverty of Cities

These are the children from the crowded tenements of the city, shut off from the life-giving sunshine. Even when the days are bright, the city smoke filters out the sun's rays and few precious sunbeams ever enter the courts and dark rooms. Without sun, these little ones, tho they grow fat, do not develop strong bones. Instead, they get rickets, the marks of which stay with them all thru life. It is to prevent this that a machine has been invented to produce those light rays that the child needs.

Mothers in the country, what does this mean to you? You have day after day of brightest sunshine, yet many country children have rickets, too. At the age of three, four, or five and older, your child is always out-of-doors scampering in the sunshine, but many of the tiny babies get few advantages in their ideal environment. Many of them are left indoors in a crib or coach for twenty-four hours of the day except when they are bundled up tight and taken for a ride with the family. They might almost as well be living in a city tenement.

Do You Give Your Baby Its Chance?

Give the baby a chance! Put it in the sun! Let it sleep and play out-of-doors, so that every hour will be worth while. Each day put it in the sun with no clothes but a diaper—five minutes the first day, seven the next and so on gradually getting him hardened. In hot weather protect the head, and sun him before and after the intense heat of midday. Now that spring is here, start at once to use this old power for the health of your child.—Dr. Florence I. Powdermaker, Ill.

Note:—I would like to quote a sentence from each of two lectures given during the American Health Congress at Atlantic City. Dr. F. Tisdall said: "The sooner mothers learn to expose their babies to the sun until they are tanned as brown as bears, the better it will be for the youngsters." Dr. I. N. Harris said: "Shielding of children's skins against the sun is a crime against nature."

Why torment your children with bow legs, knock knees and flat feet when sun baths will prevent such distress? Why live in fear of rickets, anemia, bronchitis, pneumonia and infant convulsions with health-inspiring sunshine all about us? Let's start today with baby's first sun bath. Use your very brightest room to begin with and place the child in the direct sun coming thru the open window. Five minutes today with sleeves rolled to the elbow. Next week increase the time and remove a stocking also. In another week you may remove both stockings at a time and increase the exposure to ten minutes. Each week ten minutes longer may be added to the sunning time.

In merry May the little one will be ready to have more garments removed, and by June 1 only the diaper will be needed. At this time the bath length may be of an hour's duration for face, head, arms and legs, with the trunk exposed about ten minutes. During July and August the complete bath for the entire body may be increased gradually to the entire hour.

Bulletin Answers All Questions

No doubt you feel puzzled and would like to ask dozens of questions on this subject. I feel quite sure they are all answered by the Children's Bureau, U. S. Department of Labor, Washington, D. C., in their splendid free bulletin called Sunlight for Babies. Write for this useful plan of what to do and how to do it. Ask for folder Number 5.—Gertrude S. Stewart.

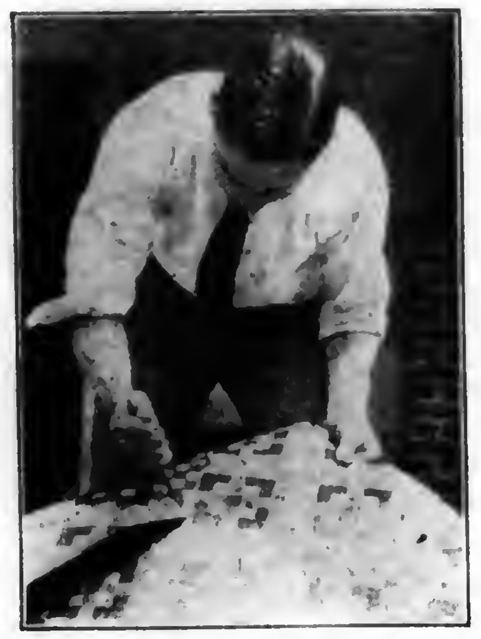
Spring Adventuring

HOUSECLEANING need not be unduly tiresome if cupboards, bookcases, closets, trunks and drawers are all thoroly overhauled and put in order before the heavy cleaning begins. It also helps immeasurably to have the necessary supplies assembled and the work planned and organized, so that there may be no needless waiting nor unnecessary confusion.

Everyone enjoys making things better and actually doing the work need not be dreaded if proper preparations have been made. In fact, the housecleaning season may be made an adventure.—Emma Gary Wallace.

It's All in Knowing How

LINOLEUM is a well-proven floor covering, durable, only slightly affected by changes of temperature and of a handsome appearance. Linoleum is made from cork that comes from Spain, Portugal and North Africa, with linseed oil pressed from flaxseed from the Argentine, with burlap woven in Scotland from jute grown in India, with kauri gum from the pine trees of New Zealand, with resin and other materials from elsewhere. When you do the fox-trot on your linoleum floor, you are globe-trotting with a vengeance.



Making the final cut.

Linoleum is sold in rolls, of either two-yard, three-yard or four-yard widths. It is somewhat brittle when cold, so if you receive your roll of linoleum in cold weather, let it remain unrolled in the house for a day or two.

If the floor is uneven or poor it will be advisable to paste down first an ordinary gray builder's felt, and for a superior job on any floor this is recommended.

Many floors are broken up with fixtures and irregularities. In such cases measure all the edges of the floor carefully and draw on paper a simple floor-plan, noting thereon the length of every edge from one corner to the next. Lay your linoleum on any floor face upward, and with a sharp knife, a rule and a straight-edge, mark out the pattern on the material with scratch lines, then cut these lines deeper into the hard surface with the knife-point, always using it against the straight-edge.

Brittleness Aids Cutting

The final cut may be made with the blade in the manner shown in the accompanying photograph. In the case of long, straight cuts, one may take advantage of the brittleness of the material and after cutting deeply into the surface as above described bend the material along the deep-scratched line, fold it back, and cut with the knife used like a paper-cutter.

The linoleum is so brittle that care must be exercised not to let bends come in the piece where not wanted. On this account it is well to keep the piece rolled as much as possible while handling.

Because of expansion due to temperature changes, it is well to leave an eighth of an inch between wall and edge. This gap can be filled with waterproof cement.

Now as to obstructions in the floor, such as fixtures and pipes. Remove, or at least raise slightly, whatever can be handled in this manner. It is usually possible to raise radiators slightly without uncoupling them, tho it is difficult to do so and still find space on the floor nearby on which to stand without standing on the linoleum you are trying to push under. The method that sometimes overcomes the difficulty is that of keeping the bulk of the linoleum piece quite solidly rolled while the edge is being pushed under the fixture.

There is no way of slipping a hole in the linoleum over a pipe that extends from floor to ceiling. The only recourse here is a neat, straight-line cut from the hole in the material to the nearest edge. The linoleum will bend sufficiently to enable you to force it past the pipe thru this cut to the hole, after which the edges of the cut are pressed together flat upon the floor. They can be cemented together if desired.

The linoleum may be cemented to the floor or the felt paper, or it may be tacked to the floor. Commonly it is quite satisfactory to leave it unfastened and cement about the edges. A waterproof cement can be obtained for this purpose.—Jerome W. Howe.—Mass.

Shad Delicacies

SELECT a fine roe shad. Clean well and wipe dry, then fill with a stuffing of bread crumbs, salt, pepper, butter and chopped parsley, mixed with beaten yolk of egg. Sew up the opening, season the fish with salt and pepper, and cover with bits of butter. Lay in a dripping pan with a little water and bake until the fish is thoroly done, an hour or more, basting often. When ready to serve cover with dressing made of drippings in the pan. Garnish with cress or parsley.

DRESSING

1 tablespoon browned flour (blend with cold water)
1 large spoon of catsup
Juice of one lemon
Salt and pepper

SHAD ROE CROQUETTES

Boil shad roe in salt water 15 minutes. Drain. When cold cut into pieces about two inches thick; season with salt, pepper and lemon juice. Dip in egg and crumbs. Fry in deep fat.

SCALLOPED SHAD ROE

Parboil the shad roe, then place in ice water, changing the water until the roe is perfectly cold, white and firm. Break in small pieces and put thru a vegetable press or colander. Season to taste with salt, paprika and kitchen bouquet. Then stir into the roe a cup of rich, drawn butter, beat well and pour into shells or buttered ramekins. Sprinkle with very fine crumbs, dot with butter, cover and place in a quick oven. After ten minutes remove cover and brown delicately.—Jane M. Bush, Pa.

A long-handled dust-pan works as well as a short-handled one and saves many backaches.

A cup made of a bright red apple is just the thing in which to serve fruit cocktail or a salad.

April First Is a Fine Time to Have an Evening of Merriment

NOTHING definite seems to be known as to the origin of April Fool's Day, yet it is a very old custom and generally celebrated in all parts of the world. Perhaps at no other time is it easier to entertain a company of young people, and no elaborate plans need be made.

If you send written invitations, get a sheet of colored cardboard, cut them out in the shape of a Fool's cap and use a nonsense rhyme, or something like this:

April First, is my party,
Your welcome will be hearty.
7 to 10 P. M.

If you have a clever brother willing to dress as a court jester and amuse the company, or a friend who will take the part, he can do much to keep up the merriment of the evening.

Stunts to be tried during the evening are many. Here are a few:

1. Turn out all the lights, announce that it will probably be sometime before they can be fixed, then suddenly flash them on. Some unwary one is certain to be caught in a foolish position.

2. Fill a pillow case with cloth, and a brick or two. Drop it down the stairs, having an accomplice stationed nearby to give a series of agonizing cries. As the company rushes out into the hall to see who is killed shout "April Fool."

What the Curtain Hid from Sight

3. Announce to the guests that you have a new picture to show them. When all have been brought to a proper stage of curiosity, draw the curtain that has concealed a mirror on which you have written with crayon, "April Fool."

4. Pile soft pillows, books, two or three small jars of plants on the floor with a path between along which a person could walk. Offer a small prize to anyone who will walk across the room, blindfolded without touching any of the articles. While some member of the party takes the volunteer into another room to blindfold him, remove the obstructions leaving the room clear. Much merriment will attend his careful progress across the room, and his efforts to avoid the supposed objects in his way.

Ribbons Join the Partners

An easy way to determine dinner partners, is to take as many pieces of ribbon as there are partners. Divide the company with girls in one room and boys in another, put the ribbons in the door, closing it on them so that each ribbon will have one end on the girl's side and the other on the boy's. When every one has secured an end of ribbon open the door, those holding the same ribbon being partners.

The menu may be as simple or as elaborate as the hostess wishes. White turnips may be served in the guise of mashed potatoes, a gold cake may be made of corn meal, pumpkin cubed, and dropped in pineapple juice just before serving, becomes April Fool pineapple sauce, and there are endless varieties of April Fool candy that can be placed in bon bon dishes at each plate.—Lalia M. Thornton, N. Y.

So It Will Stick

A FEW days after we had papered our walls, I heard a queer noise and looked quickly into the dining room to find the whole ceiling and some of the side wallpaper hanging down over everything. The same sight greeted me when I went upstairs.

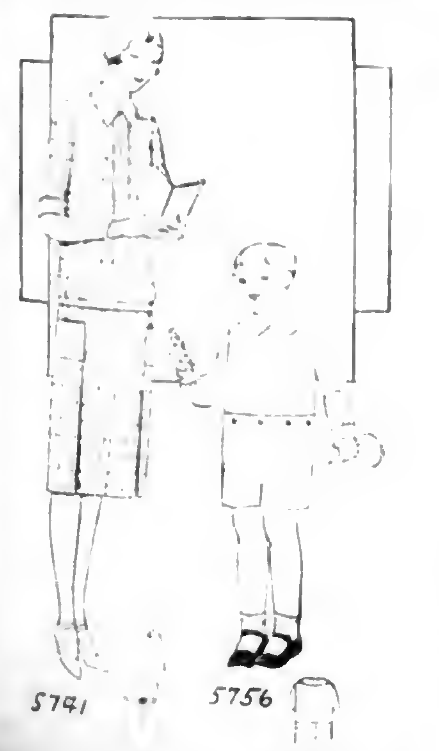
We had to cut the upstairs ceiling away but managed to stick the side wall back into place for a time. In the dining room, the walls had been calcimined and we painted the ceiling before papering again and found the paper would stick. We have also learned that in making paste for wall paper, a small quantity of good brown sugar added just before scalding will stick better than glue.—Mary Stewart Shuman, Pa.

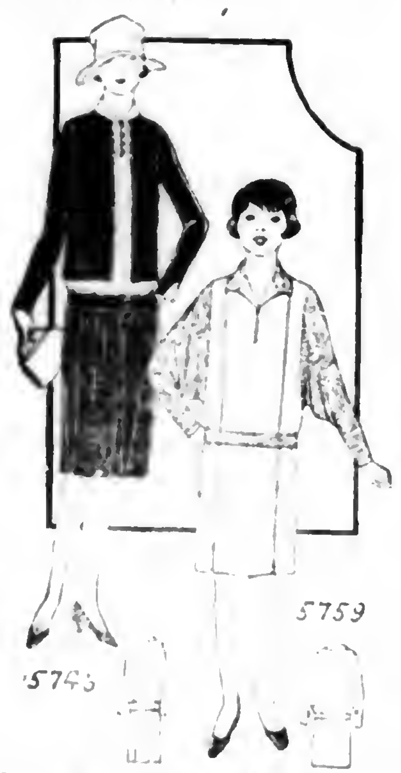
Daffys Are Out—Spring Is Here

Directions for Ordering.—Give number or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5741.—Seven sizes [illegible] 10, 12, 14 and 16 inches bust measure. A [illegible] size will require [illegible] yards of 36-inch material together with five-eighths yard of contrasting material. Pattern 10 cents.

5743.—[illegible] years. If [illegible] size, [illegible] will be required. [illegible]





5746.—[illegible] years. A [illegible] will require [illegible] yards of 40-inch material together with seven-eighths yard of contrasting material. Pattern, [illegible]

5759.—Four sizes, 8, 10, 12 and 14 years. A 1[illegible] year size will require 2[illegible] yards of material [illegible] inches wide together with one yard of contrasting material. Pattern, 10 cents.

Send [illegible] in silver or stamps for our up-to-date spring and summer 1927 Book of [illegible].

good fence prevents damage and loss

profit by buying PAGE

Write for interesting literature

A well fenced farm means better control of stock, protection for crops and, of course—bigger profits. To over three generations of farmers, "Good Fence" has meant PAGE—America's First Wire Fence.

Into the construction of Page Fence goes only the best and most uniform of wire. It is covered with a heavy coat of galvanizing to resist rust and may be obtained either in the staple tie or hinge joint type of knot. Easily erected over rough or hilly ground.

Ask your dealer to show you—he carries the pattern you need.

Seed Oats

Cleaned Right—Free From Weeds

GOOD Oats Seed is scarce this year, because of weather conditions last harvest. We offer sound, bright seed of strong germination. All dependable yielders. Cleaned so carefully as to be free from foul seed of all kinds.

"Silver Mine"—A standard "sprangle" variety of sterling merit. Very hardy. Strong, stiff straw that won't lodge easily. Kernels, bright with very thin hulls—popular with rolled oats makers. A good variety for heavy soils. Early. Often sowed with Canada Field Peas.

"Swedish Select"—popular for a quarter century. Great root development makes it drought-resistant. Does well on trying soils. Succeeds in all sections.

"Cluster"— A typical "horse mane" or "side" variety, kept pure by hand selection of the seed stock. Extremely early. Grain large and plump with medium thin hull.

Clovers, Alfalfa, Timothy, Pasture Grasses

Medium Red that is hardy and safe. Mammoth and Alsike of high germination. Genuine White Blossom Sweet Clover, scarified. Alfalfa—hardy strains—genuine "Grimm" and our own "Northwest" brand. Clean Timothy.

Other Field Crops: "Lancaster Sure Crop"—Corn—best double purpose . . silo-crib . . corn. Maine-Grown and Michigan-Certified Seed Potatoes, Soy Beans, Cow Peas, Canada Field Peas and other Specialties.

Herbs in Garden Corners Are a Lot Better Than Weeds

THE corners of kitchen gardens are too often left uncultivated, a fine place for propagating weeds that scatter their seeds along the planted rows. In waste spaces a variety of herbs may be grown and after the first year require but little care.

The sage is a favorite seasoning in many families, that sold in stores is frequently old and of poor quality. From one good-sized bunch of sage several pickings can be made and the season's supply, as well as some to give away, can be secured. Holt's mammoth sage is a good kind for garden growing and it never starts seeding prematurely, as some varieties will.

Sweet marjoram, sweet basil, thyme, summer savory and mint, are all desirable herbs for flavoring and should have a place in the corner of the kitchen garden where they can grow undisturbed by the plow, year after year. Dill may be grown as an annual. It has an aromatic pungent seed and is much used for flavoring pickles. Fennel is fine for flavoring sauces, and tarragon for seasoning salads.

Good for Kids and Kittens

Catnip is a mild nervine for small children, and a clump of boneset is not out of place in the garden.

As a hedge lavendar is advised. It needs a little protection in winter in northern gardens but its beautiful flowers repay one for all the care given it. Nothing is nicer for perfuming bed linens and for dresser drawers than dried lavendar.

Three other plants may well have a place in some corner of the kitchen garden—parsley, chive and perhaps watercress. If there is a damp edge along the garden, or one where you can make an artificial swamp by piping surplus water, plant watercress and you will no longer need to depend entirely upon lettuce for salads.—Lalia M. Thornton, N. Y.

Neighborliness Spreads Good Cheer

WITH maple sugar season approaching, I recall many happy hours spent in my childhood with a good neighbor. There never was a sugar season without at least two invitations to her home. She had no children and boiled sugar so we neighbor youngsters could eat all we wanted and then she let us stir little cakes to take home.

Sugar time is a busy time for the housewife who also milks and takes care of chickens and baby chicks and the garden, as this woman did. Few women are willing to do so much for small neighbors, and her loving example lingers with me.

Living on another nearby farm was a lonely old man who was as delighted as we children when he spent an afternoon with this dear lady. She played "Old Sledge" with him and listened patiently to his oft-repeated tales.

Yes, it takes time to be a good neighbor, but it is time well spent when you leave happy memories in children's minds and brighten an unhappy life.—Mrs. E. M. C., N. Y.

Little Care Required

MANY farm folks make the mistake of having too few flowers. They add so much to the beauty of the home and the happiness of home folks. Many busy women say they have no time to fuss with flowers. Then try those that need little or no attention.

I never boast of success with annuals but have many beautiful roses. Among them are Dorothies, a big yellow rose, the old-fashioned single pink, and several "hundred leaf" roses as old as the town itself. The only care they need is to be secured to their trellises occasionally, and some pruning.

We have also set out a white lilac, a mock orange, and several varieties of peonies. By choosing carefully it is possible for the very busiest housewife to have a fine collection of flowering plants that practically take care of themselves, and every farm home should have them.—Mrs. E. M. Anderson, N. Y.

Orange Marmalade Has a Flavor All Its Own

NOW is the time to make a supply of orange marmalade to last thru the summer months until citrus fruits are again on the market next fall. Select fruit which has a smooth, thin skin. As a rule, large fruits are thinly sliced, but it has been found equally satisfactory to put citrus fruits thru the food chopper, using the fine knife. This saves time. To retain the best flavor and a bright color the mixture should be cooked rapidly.

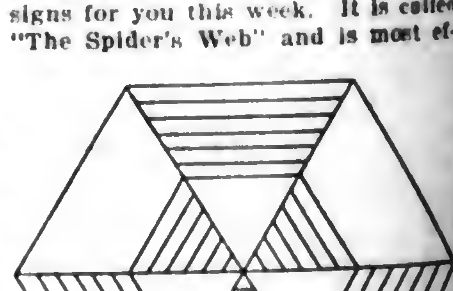
For orange marmalade, take three small oranges, one grapefruit, and one lemon—each with thin peelings. Wash, and cut into thin slices; or cut in sections, remove the seeds and grind in the food chopper. To each pint of fruit add 3 pints of water and let stand over night.

Should Stand Overnight

In the morning, boil one-half hour and let stand until the following day. Measure the mixture and take an equal quantity of sugar, but boil the fruit mixture one-half hour before adding sugar. Then add the sugar and cook until it jells. Test often after the sugar is added to prevent cooking the marmalade too long, which often results in a stiff, dark mixture. Cool the marmalade somewhat before pouring into sterilized glasses, as this prevents the particles of fruit from rising to the top. The finished product should be a beautiful amber-colored marmalade, having the consistency of good jelly.—N. J. College of Agriculture.

The Spider's Web

MANY of our quilters have been asking for patterns to use on plain muslin, and we picture one of the most interesting of old time designs for you this week. It is called "The Spider's Web" and is most effective when made up. You can carry out the bedroom's color scheme by using your favorite thread for the stitches. This design is so very adaptable, too, as it can be enlarged to almost any size you wish. Quilted sofa pillows are in vogue today and I saw one made with the Spider's Web design that was beautiful. Patterns are 15c each, ordered from Quilt Pattern Service, Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pennsylvania. Be sure to send a self-addressed envelope with your order.—Gertrude S. Stewart.



NO HOLD BACK

When the milk comes hard—when the cow is nervous and fidgety—you are losing milk you ought to be getting. Any disorder or hurt to the udder or teats, no matter how slight, can undo all of your efforts to get a full milk yield.

Bag Balm is a marvelous healer of all injuries to the delicate tissues of the udder and teats. Sore teats, chaps, cuts, inflammation disappear quickly under the soothing, penetrating action of this great ointment. For Caked Bag, Bunches, Cow Pox or any stoppage of the milk passages Bag Balm gives quick relief.

Bag Balm is a wonderful healer of all annual sores—and it *can't taint the milk*. The big 10-ounce package, 60c at feed dealers, general stores, druggists. Beware of substitutes. Order direct from us if you have difficulty in getting Bag Balm.

Here's to Your Health

By Dr. FRANK McCOY

Copyright, 1926, McCoy Health Service

WE can live many days without eating and two or three weeks without drinking water, but only four minutes without air. The function of breathing is so vitally important that if the inhalation and exhalation of air to the lungs is stopped for only a few minutes death must take place.

Most of the oxygenation of the blood used in the lungs is the air passing in and out thru involuntary breathing. It would be impossible for us to be constantly thinking of the necessity for taking deep breaths, but by systematic exercise of the breathing muscles, increased strength of these muscles can be attained and a better tone of the breathing apparatus developed.

The principal muscle used in breathing is the diaphragm, which is a flat muscle separating the lungs from the stomach and intestines. This muscle is never at rest, but is either contracting or relaxing every minute of the day and night. The usual contractions are about eighteen times per minute, with, of course, eighteen periods of relaxation or expansion.

Some Diaphragms Suffer Neglect

Because the diaphragm has not been sufficiently developed, many people take more than eighteen breaths per minute, due to the weakness of the diaphragm and the fact that only a small amount of air is taken in at each inhalation.

If systematic exercise of the diaphragmatic muscle is practiced, there will be a tendency to take deeper breaths each time, so that no more than sixteen or eighteen breaths per minute will be necessary to supply the lungs with all the needed air with its life-giving oxygen.

Such games as baseball, basketball, wrestling, boxing, etc., will induce heavy breathing and in this way tend to develop the diaphragm by a violent form of involuntary exercise which is forced upon the body because of extreme exertion. Such a small percentage of people, however, take up sports which compel deep breathing that I want to urge upon those of you who are in the majority to start at once taking some form of breathing exercise to develop diaphragmatic strength and control.

Simple Exercise Advised

One of the simplest exercises to take is inhaling and exhaling slowly while you are taking your daily walk. Contract the waist when exhaling and enlarge the waist and lower ribs when inhaling. Inhale slowly and swell up the waist and lower ribs so that your circumference around that section of your body is the very largest possible. Do this slowly while walking four steps, and while taking the next four steps force the air out of your lungs until your waist is of the smallest possible circumference.

Every few days increase the length of time of inhaling and exhaling, so that you take five steps while inhaling and five while exhaling; then increase these to six and so on, until even as high as fourteen steps can finally be taken while you are drawing the air in, and the same number while exhaling.

This is an especially good exercise for those who are recovering from tuberculosis or asthma.

Small fruits have been cultivated for a very much shorter time than the tree fruits but, even so, there are about 1300 varieties of strawberries, 708 of raspberries, 244 of gooseberries, 193 of blackberries, 183 of currants, and 48 of dewberries.

What Prof. Mapes Did in 1847 Distinguishes Mapes Manures Today

If you were asked to compare the values of two fertilizers you wouldn't do it on analysis alone. You'd make a crop test. You know that two fertilizers of the same analysis may produce widely different crop results, due to the difference in materials from which they are compounded. The crop knows what it wants better than the chemical laboratory.

Prof. James J. Mapes, originator of Mapes Manures, was a famous and expert chemist; but he also knew the difference between laboratory tests and crop results. So he bought a farm, in 1847, to check up in the field what he had learned in the laboratory. He asked the crop.

Mapes users know that this is what today distinguishes Mapes Manures. They are made to grow good crops. The materials are selected on the basis of the best crop results. We go to the crop; we ask it what materials it likes best; we put these materials into Mapes Manures. That is why Mapes users are so loyal to Mapes Manures. And that is why more good farmers every year are using Mapes Manures.

Just Mail This Coupon Today

Write today for a list of the crop brands and prices of Mapes Manures. You'll be surprised at the little difference in cost between Mapes brands and other brands. Mapes "costs little more—worth much more". Please tell us what crops you plan to fertilize so that we can be of the greatest possible service to you in selecting the right brand to suit your special needs.

Try Mapes this year. Compare the crop *yield*, the crop *quality* and the crop *profits* with the results from any other fertilizer you can buy. You'll learn what we mean when we say that Mapes Manures are made to grow good crops—not to sell at a price. They are first made right, then priced as low as possible. Mapes "costs little more — worth much more."

The Trend of the Markets

THE figures in the following table represent the approximate unweighted average prices of the commodities and grades specified. The prices are based upon quotations from the market page of Pennsylvania Farmer.

	This week	Last week	Month ago	Year ago
Butter, 92 score creamery extras (N. Y.)	$ .46	$ .50	$ .53	$ .42
Eggs, fresh gathered extra firsts (N. Y.)	.27½	.26¾	.29½	.31½
Potatoes, 120-lb sack (Philadelphia)	2.75	2.87½	2.87½	...
Steers, good to choice (Lancaster)	10.50	10.00	10.00	9.50
Hay, Number 2 timothy, baled (Phila.)	22.50	22.50	22.50	24.50
Wheat, No. 2 red winter (Philadelphia)	1.38½	1.44	1.46	1.68
Oats, Number 2 white (Philadelphia)	.56	.57¾	.57	.49¾

Commodity Prices Slightly Lower

Review of the Week Ending March 19

POTATOES—The market after a week of activity was again dull and prices dropped 10c to 35c. There was practically no movement at the higher levels and dealers were forced to lower prices to make sales. The demand was very indifferent except when something extra fancy was offered. The warmer weather also had a depressing effect on the demand.

APPLES—The market in the East was dull and weak on all but the fanciest stock. Stayman was the chief variety, altho some Yorks, Delicious and Paragon were offered. Some barreled apples sold at very low prices on account of scald.

BUTTER—The market was weak and prices on 92 score dropped 4c per pound. Liberal offering of foreign butter and the fact that large amounts are expected to arrive this week were the chief reasons for the decline. Buyers limited their purchases to immediate needs and stocks of the best grades accumulated.

LIVESTOCK—The Chicago hog market was weaker and prices were around 20c to 35c lower. Beef steers, heifers and cows also declined. Heavy calves dropped as much as 50c, but stockers and feeders advanced slightly. Fat lambs, yearling wethers and feeding lambs dropped sharply while fat ewes were steady.

HAY—The market was generally slow on all classes. The best grades moved fairly well but lower grades were very slow. Altho receipts were light they were more than ample for the demand.

GRAIN—Wheat prices declined during the week due to a dull export demand and favorable crop conditions. Corn prices held steady under a fair demand and lighter offerings. The oats market was generally firm.

FEEDS—The demand for feeds was dull and prices declined slightly on most all feeds. Production showed some increase. Stocks of cottonseed meal are smaller than last year.

EGGS—Receipts of nearby white eggs were rather liberal during the week and trading was fairly active. Small lots were being repacked for storage but most of the supply sold at prices ranging from 28c to 32c. A few lots of extra fancy stock went directly to retailers at a premium.

POULTRY—The warm, unseasonable weather had a depressing effect on the live poultry market. Receipts were heavy and trading unsatisfactory. Prices were irregular and closed lower. Chickens met a fair demand while broilers were firm. Receipts of fresh killed poultry were light and the market dull and weak.

Adams County, Pa.—Weather has been dry for past two weeks and snow is gone. Roads have been dragged and are in good condition. Not as many spring sales as usual with prices high for good cows and hogs. Wheat is looking fairly good. Farm work is starting. Much pruning to be done in the orchards. Our commissioners debated the question of allowance to our county agent for six weeks and finally granted $1600, the same as last year. He is now working on pork production, baby beef and chicken clubs, etc. Prices: wheat, $1.30; corn, 80c; oats, 50c; 4 per cent milk, $2.60; eggs, 20c.—A. R., March 15.

Chester County, Pa.—Wheat fields look poor. Young grass heaved out a good deal. Farm help very scarce. Very few public sales of personal property. Land selling for building purposes or speculation only. Prices, retail: wheat, $1.50; corn, $1.05; oats, 75c; butter, 50@60c; eggs, 30@35c; cows bring from $50 to $150; milk, retail, cheapest grade, 12c qt. —J. E., March 14.

Cortland County, N. Y.—A few farmers are making maple syrup. Some farmers are plowing. A lot of men are out of work. Shops are hiring very few. Prices: eggs, 26c; butter, 55c; potatoes, $1.15; apples, $1; fowls, 30c; young pigs, $6.—A. B. N., March 17.

Greene County, Pa.—Since our 20-inch snow of February 18 and 19, the biggest in 35 years, left, we have had real spring-like weather. Robins and swallows are plentiful. Fields are green. Fruit trees are budding. Farmers busy plowing for corn and oats, building fence, etc. About the usual acreage will be planted to corn and oats. Farmers' crop of hay nearly all gone. Buying western hay and feeding to livestock is not a very paying proposition. Hay and grain high in price. Seed potatoes, $2.75; butter, 40c; eggs, 25c; chickens, 25c.—C. M. K., March 15.

Lehigh County, (Upper) Pa.—For the last week or ten days we had very mild weather. People are hunting dandelion and geese have flown north. Some manure has already been hauled, fences repaired and brush removed. Public sales are in full swing. Many farms are changing owners or tenants. Prices realized at these sales are fair. Cows and pigs bring very high prices. Good dairy cows are in great demand. Roads are in very bad shape in many places. Not many potatoes were shipped the last month, due generally to a poor market and the bad roads. Eggs are plentiful and hucksters are paying only 22c; butter, 44c; wheat, $1.25; potatoes, 95c; corn, 80c; chickens, 26c, live weight.—G. J. R., March 14.

Mifflin County, Pa.—Weather warm and spring-like. Buds are swelling. Farmers not doing any farming yet as the ground is too wet. A few more warm and windy days will bring them out. Public roads have dried off and are improved by dragging and applying cinders. Some farmers selling off their stock and farm implements and taking up other work. Several good farms will lie idle. Taxes and labor consume all the profit. Dealers paying for wheat, $1.25; corn, 65c; oats, 45c; butter, 50c; lard, 15c; eggs, 22c; chickens, 23c; potatoes, $1.30; apples, 50c.—J. H. B., March 15.

Passaic County, N. J.—Weather for the past month has been a little above the seasonable average. The rainfall has been very light. The ground is very nearly settled. Some early ground is in a workable condition. The markets are small and slow. Very few trucks are coming in now and very few buyers are coming on the market. Old carrots are worth from $1 to $1.50 per bu.; parsnips, $1.25@$1.50; Savoy cabbage, $1.75@2 bbl. Leeks were in good demand and selling as high as 90c per dozen. Chickens are laying quite heavy now with the price of eggs down and a rather poor demand.—N. D., March 15.

Potter County, Pa.—Weather has been warm and pleasant this week. Fires have been started in the sugar camps and the first run of sap promises to be a good one. The dirt roads are breaking up, some almost impassable. **Drawing potatoes to** market and hauling lime is hard work for man and beast. Not many autos or trucks seen on these roads. Tractor school was held at the county seat March 3rd. In the afternoon a three-reel picture of the operations of the tractor was shown at the local theatre. We have a broadcasting station in this theatre now, (WKBY). Its first program, March 2, was fine and congratulations came pouring in from distant towns. Buyers are offering 90c per bushel for potatoes, and grocers give 20c per dozen for eggs.—M. C. S., March 12.

Snyder County, Pa.—Roads clean and snow gone. March thus far has been fair. Plowing being done in gravel ridges. Many farm sales daily with large attendance and good prices generally. A sale of western horses was held on the 12th in Middleburgh. Ex-Judge C. R. Savidge, eighty years old, of the Northumberland courts, has turned to breeding fancy Holsteins. Grade cows bring $75@100. Hogs scarce and command good prices at sales. Hundreds of bushels of stored apples are coming into market with demand low. Orchardists getting ready to spray. Wheat and oats passing into the market at something short of $1.50 for wheat and about 40c for oats. Many farmers spending sunny afternoons husking corn. Some looks O. K. Much is soft and will be left in the field. There is a brisk business in baby chicks of all varieties. Eggs plentiful and prices coming down.—W., March 14.

A Rhode Island Red hen, owned by Mr. and Mrs. Charles Krum, of Danville, Montour County, Pa., has laid an egg weighing 6¾ ounces and measuring in circumference 7¾ inches one way and 10 inches the other. Mr. and Mrs. Krum would like to know of anyone whose hen lays larger eggs.

The recent ice storm and heavy wind that visited this section broke down poultry fences made of the ordinary poultry netting. The woven wire stood up, however. This type of wire on steel posts makes the best poultry fence. The corner posts should be set in concrete but the line posts should merely be driven in the ground as they will not last forever but rust off at the surface of the ground in time.—R. L. Scharring-Hausen.

Ryde's Ryde's Ryde's Ryde's Ryde's Ryde's Ryde's Ryde's

THE HOUSE OF Ryde & Co.

GUARANTEES entire satisfaction with every bag of feed bearing the name "RYDE." Exhaustive tests have proven that better ingredients or better combinations of materials *cannot be had at any price.* Therefore, insist that your dealer give you RYDE'S FEEDS. Be sure the name is on the bag. Don't accept a substitute. Years of fair dealing and guaranteed satisfaction are typified in the slogan

RYDE'S FOR RESULTS

Ryde's "Startrite" Chick Food

With Buttermilk, will raise every normal chick to maturity. It is a safe, natural food and contains every element necessary to rapid, uniform growth. Includes choicest GRANULAR grains, hulled oats, selected whole seeds *with natural oil retained*, fresh meat scraps and a liberal portion of dried buttermilk. Easy to feed. Economical; one lb. will raise a baby chick well past the danger period. *At your dealer's in 25, 50 and 100 lb. bags.*

For the growing chick nothing equals RYDE'S HAV-TO-GROW Chick Mash. With Buttermilk. Has minerals, fats and best growing feeds in abundance. Makes broilers or layers in double-quick time.

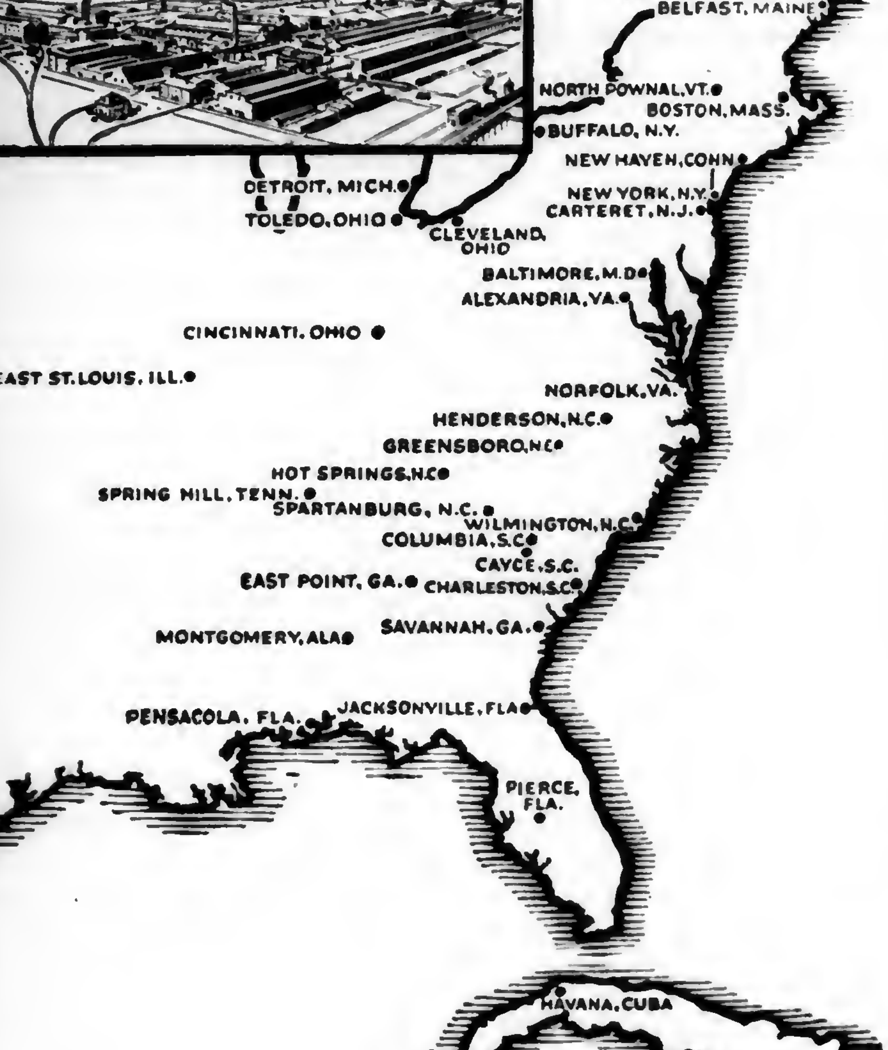
To make that hen "lay an egg a day" feed RYDE'S HAV-TO-LAY EGG MASH. *With Buttermilk.* Supplies egg making elements for maximum egg production in one convenient-to-feed, unequalled food. Contains choicest ingredients. Economical. At your dealer's in 25, 50 and 100 lb. bags.

Ryde's Cream Calf Meal

(with concentrated sweet skim milk)

is an economical milk substitute on which your calves will thrive and grow. *Save the milk and earn two profits:* one on milk and the other on the market value of the home grown animal. 100 lbs. RYDE'S CREAM CALF MEAL makes 100 gallons of rich, nutritious milk substitute. Choicest materials, not a "by product." Especially milled and steam cooked for easy digestion. At your dealer's in 25, 50 and 100 lb. bags, or write us.

RYDE & CO., MFRS., 5434 Roosevelt Road, Chicago, Ill.



These thirty-two modern plants guarantee *Production, Quality, Service*

THIS map tells its own graphic story. Thirty-two "A.A.C." factories in 15 states, from northern Maine to Florida.

Their convenient location assures you quick deliveries.

Their manufacturing equipment, unsurpassed in the industry, guarantees you quality fertilizers.

Their great storing capacity, the largest in the country, makes possible the proper ageing and curing that means perfect mechanical condition.

PRODUCTION — QUALITY — AND SERVICE have made The American Agricultural Chemical Company, since its beginning over sixty years ago, the largest manufacturer of fertilizers in the world.

And hand in hand with the business of making fertilizers The American Agricultural Chemical Company, through its Agricultural Service Bureau, has been gathering helpful information on all crops. Take advantage of this vast fund of knowledge. Your dealer will supply you, free of charge, books and pamphlets that will help you make more money on the crops you raise.

Doctor Lipman's Weekly Talk on Soil Fertility Problems

Dual Purpose Potato Planters Built Today

What concentrated fertilizer formula would you recommend for potatoes—medium to poor clay loam. Where obtainable?—W. H., Chester County, Pa.

For your conditions an 8-12-8, furnishing 28 units of plant food, should give good results. You could use an 8-16-8 but this would furnish you with a higher proportion of phosphoric acid than may actually be needed. An application of 800 to 1200 pounds per acre of one of these mixtures would represent a practically maximum quantity.

In using concentrated fertilizers the material should be applied on the same plane with the seed piece and about one inch away. There are several makes of potato planters on the market that apply fertilizer in the right manner. Your local dealer should be able to supply you with concentrated fertilizer mixtures.—J. G. Lipman.

Plan Outlined Has Proved Successful

Last spring I plowed down a clover sod, heavily manured. This spring I would like to seed to sweet clover. Would it be all right to sow with barley and if so, how much of each should I use? I have been liming heavy enough to grow a good crop of red clover. How much should this land need for sweet clover?—A. T., Lycoming County, Pa.

Barley and sweet clover have been grown successfully in the manner which you have suggested. It would be preferable to have a fairly thin seeding of barley of about 5 to 6 pecks per acre. The sweet clover seed should be used at the rate of 20 to 25 pounds per acre.

If your soil contains enough lime to grow a good crop of red clover, it should also grow a good crop of sweet clover. However, if the land had not been limed for more than 2 or 3 years, it might be desirable to apply 1000 to 1200 pounds of hydrated lime per acre or 1500 to 2000 pounds of ground limestone.—J. G. Lipman.

Sulphur As Fertilizer

I am making some inquiries regarding sulphur to be used in soil to exterminate cut worms. Also, is sulphur valuable for fertilizer to any extent to different soils?—A. G., California.

We have done a very considerable amount of work on the use of sulphur for the control of potato scab and of certain diseases of sweet potatoes. We have also carried on extensive experiments designed to show that soluble phosphates can be manufactured by composting ground brimstone with ground phosphate rock and keeping the mixtures sufficiently moist. In carrying on these investigations, we isolated a new species of sulphur oxidizing bacteria which is very efficient in changing sulphur into sulphuric acid.

When sulphur is mixed with soil, it is oxidized more or less rapidly by sulphur oxidizing bacteria into sulphuric acid. The process is hastened when the right type of sulphur oxidizing bacteria is added to the sulphur soil mixtures. When large amounts of sulphur are applied to any given area of soil, the amount of acid produced may become so large as to make the soil too acid for the growth of crops. It can be made acid enough to destroy soil infesting insects and nematodes.

In some of our experiments we were able to make soil practically barren by the use of something like two tons of sulphur per acre. Where the soil contains a relatively high proportion of lime, more sulphur will be required to bring about the accumulation of much acidity in the soil. You will note, therefore, that, theoretically, sulphur can be used for making the soil acid enough to destroy soil infesting insects. On the other hand, it may not be economically possible to use sulphur for the purpose since the cost of very large amounts may become prohibitive.—J. G. Lipman.

Taken from the Week's News

THE FINAL ENROLMENT date for the 1927 ton litter project is May 15th. Swine breeders who raise a litter of pigs to a weight of a ton at the age of 180 days will be eligible to membership in the Keystone Ton Litter Club. The rules and regulations of the contest may be obtained from any county agent.

§ § §

NOT ALL "IMMIGRANTS" are ignorant "foreigners," as we sometimes think of them. Last year 20,944 citizens of the United States emigrated to Canada and were, therefore, "immigrants," from the Canadian point of view. There were also 48,000 British immigrants and 66,000 from other countries.

§ § §

TWENTY-FIVE Dauphin County boys and girls have just received the baby beeves which they will feed and fit for showing at the Baby Beef Club round-up at the State Farm Products Show next January. The beeves average 490 pounds and the cost was $53.90 per head. The Harrisburg Rotary Club is sponsoring this newest baby beef club.

§ § §

A BOX of those shiny little blasting caps, so attractive to children, will blow a hole thru a 2-inch oak plank. One small cap will blow off a child's hand. About 500 children are crippled for life each year because of the carelessness of people who leave blasting caps where they can find them to play with.

§ § §

THERE ARE MANY more potatoes being held on farms now than at this time last year. The U. S. D. A. estimates the holdings on March 1 at 86,948,000 bushels. Last year on the same date the estimate was 68,709,000 bushels, and the year before 131,088,000. Heavy holdings seem to forecast heavy plantings this spring.

§ § §

THE SEED TESTING LABORATORY of the Pennsylvania Department of Agriculture recently tested a sample of six ears of what appeared to be good seed corn. One ear didn't germinate at all. The highest of the others tested 15 per cent germination. Test Every Ear of Seed should be the corn grower's motto this year.

§ § §

THE Dairymen's League Cooperative Association has announced a net pool price of $2.67 per 100 lbs. for February milk—31 cents above the February price in 1926. This is the same as the January price, altho the February quotation usually drops below that of the preceding month.

W. H. TOMHAVE
Staff Contributor and Adviser
Head of the Department of Animal Husbandry, Pennsylvania State College

A Collar Apiece

EVERY horse should have his own collar, which should fit snugly to the neck from top to bottom. The sore necks are caused by large collars or by draft being too low on the point of the shoulder. To fit a new or old collar to a horse, soak the collar overnight in water, wipe it off in the morning, fit it on the horse and adjust the hames carefully. Work moderately thru the day. The collar should be examined every morning and the bearing surface kept clean and smooth. The horse's neck should be kept clean. A good plan in hot weather is to wash it every night with a weak solution of salt water. Keep the collar and hames tight.—U. S. D. A.

Someone Lowered Average

THE average production of potatoes in Pennsylvania last year was 112 bushels per acre. Some growers must have had very slim crops to bring the average down that low, for

97 farmers grew over 400 bushels on a measured acre, the average yield being 450 bushels per acre on an average area of 12½ acres.

123 farmers, with an average of 11½ acres, grew from 385 to 400 bushels per acre.

235 others grew over 300 bushels per acre on an average of 10 acres.

Says E. L. Nixon, "Twenty per cent of the potato acreage in Pennsylvania produced two-thirds of the state's crop last year."

Form Partnership

OAKLEIGH THORNE, owner of one of the leading Aberdeen-Angus breeding establishments in the country, announces a newly formed partnership at Briarcliff Farms, Pine Plains, N. Y. W. H. Pew, formerly head of the Department of Animal Husbandry at the Iowa State College and more recently proprietor of Ravendale Farms at Ravenna, Ohio, joins with Mr. Thorne and W. Alan McGregor in the ownership and management of this breeding establishment.

Mr. Pew is a 1907 graduate of the Iowa State College. For two years he was the head of the Animal Husbandry Department at Durham, N. H. He returned to the Iowa State College in 1909 and became head of the Department of Animal Husbandry in 1912, a position which he held until 1918 when he took over Ravendale Farms where he developed a Shorthorn herd of international reputation.

Briarcliff Farms consists of 5000 acres of land well adapted to beef production, a herd of 1000 head of purebred Aberdeen-Angus being maintained at present. The program of development planned consists of the production of choice beef for the eastern market, a breeding ground for high class seed stock and the reestablishment of eastern agriculture on a profitable basis.—W. H. Tomhave.

Business Men Banquet Clinton County Farmers

THE third annual get-together banquet of Clinton County business men and farmers held early in March at Lock Haven brought together over 300 men interested in promoting a better understanding between town and country. This year the farmers were entertained by the business men, but the former are preparing to return the compliment.

State Secretary of Agriculture Jordan attended and in his address outlined the important work of the Department of Agriculture,—corn borer control, tuberculosis eradication, dog law enforcement, etc. Doctor Jordan sees a solution of the farm problem in the increase of about 2,000,000 people each year in the population of the United States.

To emphasize the quality of Clinton County tobacco, Ernest Moran gave Secretary Jordan two two-foot cigars made of locally grown tobacco, one for himself and the other for Governor Fisher. Among the other speakers were E. F. Heffner, president of the Business Men's Association; J. M. Williams, president of the Clinton County Agricultural Extension Association; C. T. Rothrock and County Agent John B. McCool.

The entertainment features included the awarding of prizes for the oldest single man present, for the parent of the greatest number of children (won by the father of 15 children) and for the winner of a memory contest. The program was broadcast by Station WPPL.—W.

How Corn Kings Grow the King of Crops

THE state of Indiana has a 100 Bushel Corn Club, similar to Pennsylvania's Ton Litter and 400-Bushel Potato Clubs. Following are some rules for corn growers that are based on the practices of the Indiana corn kings:

Provide a good rotation of crops in which clover or some other legume is grown every three or four years.

Conserve and apply all the stable manure and supplement it with acid phosphate.

Prepare a good seed bed and cultivate it early to kill weeds as soon as they start.

Use a high yielding strain of corn that is adapted and will mature in the locality where it is to be grown.

Test all seed corn with the use of the modified rag doll tester and discard all diseased and weak ears.

Change the farm layout to get larger-sized fields to economize on man and horse labor.

Last year most of the Indiana champion crops were grown on clover, alfalfa or sweet clover sod. And most of them received fertilizer in the row at the rate of 80 to 125 pounds per acre. The mixtures used were high in phosphorus and potash,—0-12-6 or 0-10-10. The records showed that the larger the field the lower the costs for labor and power.

DAIRY

Milking Shorthorns Some heifers and young bulls over one year, down to six weeks, for sale, price right. Herd sire Glenside Red Boy, sired by Glenside Red Clay by Joe Jonson. All are registered and tuberculin tested. D. N. REAVICK, SPRING MILLS, PA.

Veterinary

Conducted by Dr. J. F. Shigley
Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Livestock.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

COW FAILS TO COME IN HEAT.—I have a cow supposed to be eight years old which freshened November 14th, and has not come in heat yet. A week ago her hind quarter bag got hard and in about two days the one front quarter also hardened. I milk the other half but do not use the milk. I grease and rub the hardened half with hot fat. What caused this? Is it catchy? Can it be cured?—J. A. G., Reynoldsville, Pa. When a cow fails to come in heat it usually indicates the presence of a corpus luteum in the ovary. Your veterinarian should make an examination and correct the condition. The veterinarian at Brookville or Punxsutawney should be able to be of assistance to you in handling this case. The udder may be infected and this could be treated at the same time as the examination of the cow is made. Frequent milking is always suggested as a means of treatment. Care must be exercised as the germs may come in contact with the udders of other cows and cause a similar condition.

PROBABLY PARASITES.—I have a pig eight weeks old that has fits. It falls down, shakes and tumbles over. Is there any cure?—M. S., Beccaria, Pa. This pig should be given worm medicine. A capsule is to be preferred in cases like this one. Such capsules may be secured from your veterinarian. One might use santonin in doses in the feed. A good growing mixture consists of a ration of 100 lbs. corn, 10 lbs. tankage or fishmeal, 5 lbs. ground alfalfa and 5 lbs. oil meal.

DOG HAS WORMS.—I have a police pup (male) about eight weeks old, in good health, but has worms. What shall I do for him?—J. C. M., Phoenix, Md. You can secure from your druggist some worm tablets used for infants or young children. Follow directions and use one tablespoonful of castor oil as a laxative. Better results may be secured by using capsules obtained from your veterinarian.

HORSE UNTHRIFTY.—I have a horse with a badly swollen sheath. When I work the horse for a day or two the swelling reduces a little. I have kept the affected parts washed clean but this does no good. The horse is in an unthrifty condition. Can you tell me what to do to correct this condition?—J. A. L., Dayton, Pa. Add one handful of oil meal to the grain ration daily. Wash the sheath with warm water and toilet soap, being careful to get all material from the inside. Allow exercise in the feed lot or by driving daily. Try giving a tablespoonful of the following mixture three times daily: Glaubers' salt, 1 pound; soda, ½ pound; powdered nux vomica, 2 ounces; powdered gentian, 2 ounces.

Want Higher Tariff

RESOLUTIONS were passed by the Easton Local Farm Bureau that the representatives and senators for Maryland be earnestly requested to use all of their power and influence to increase the tariff on imported canned tomatoes and their products. The great quantities of tomatoes that are annually imported into this country materially lessen the prices for producers here. The Easton Local members are large producers of this vegetable. The state senators and congressmen from the first district were sent copies of this important resolution.

The following officers were elected: A. R. Marvel, chairman; W. J. Shortall, vice chairman, and Albert J. Fike, secretary.—Marylander.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 100,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (65 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.
